

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

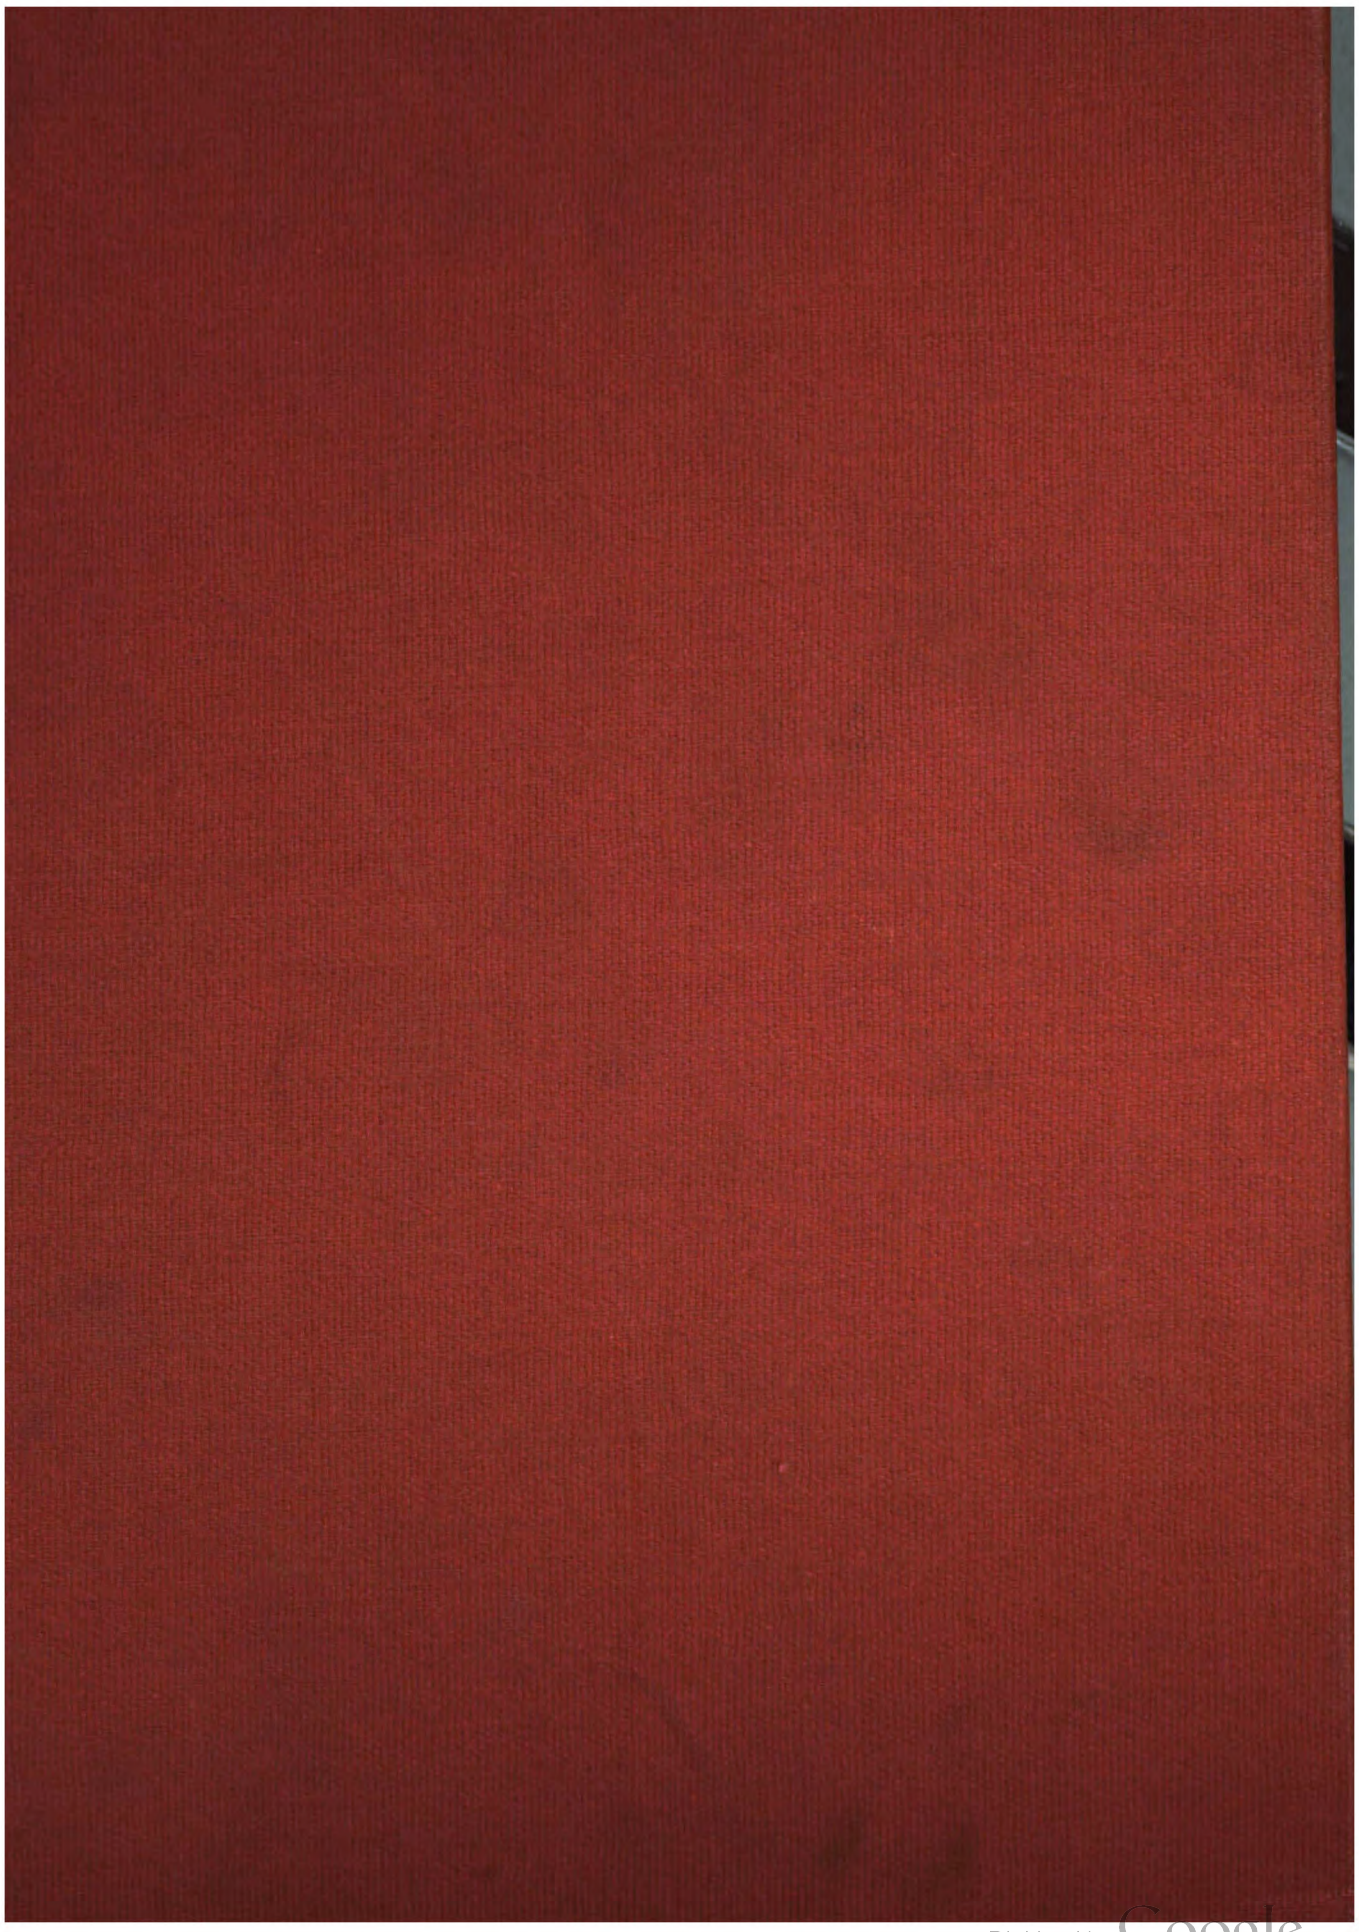
Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

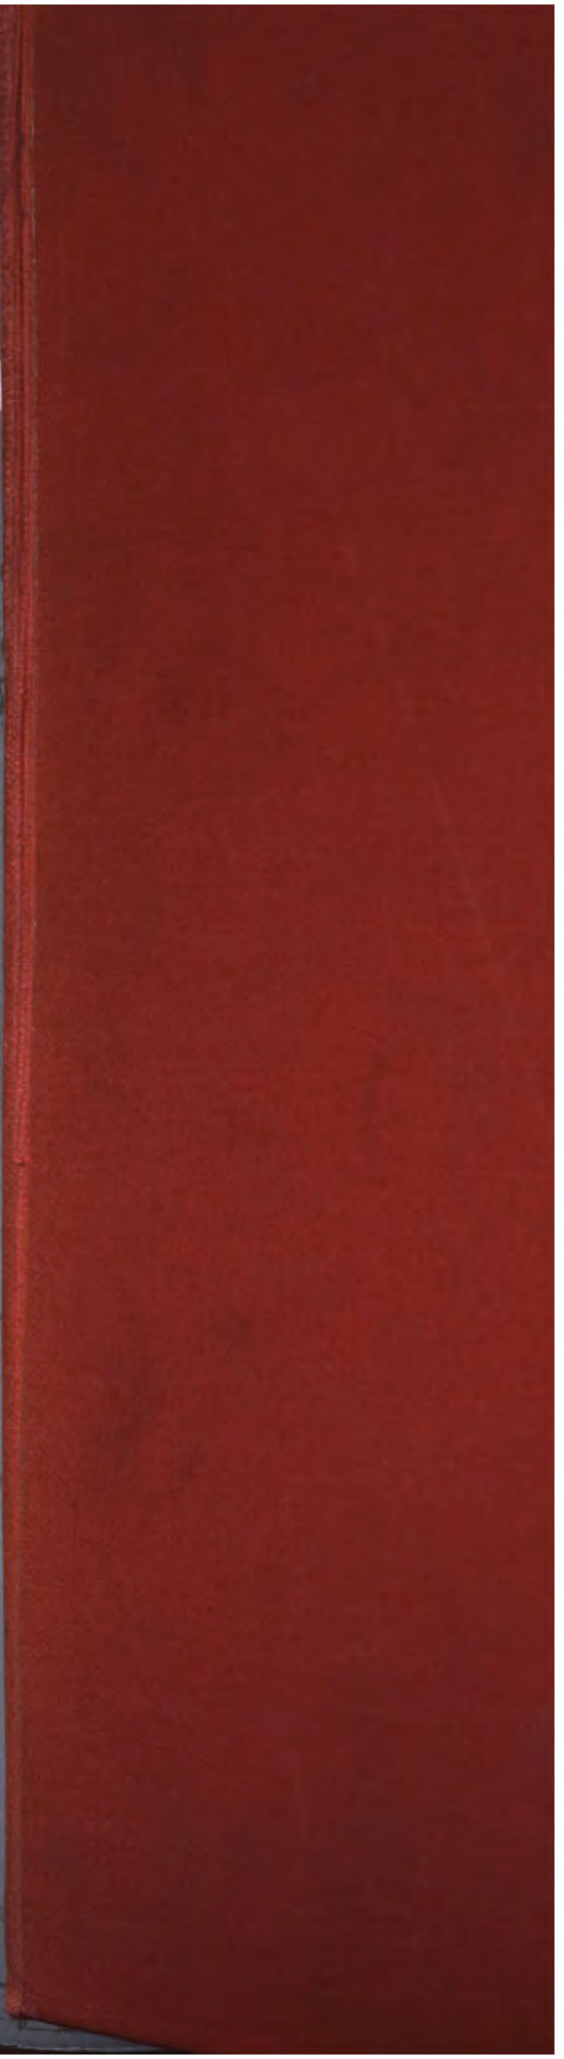
Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.



+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.



+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 209. Vol. IV.—No. 1.] SATURDAY, JANUARY 1, 1842. [Price 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the auspices and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed reports and bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which the printed hand-bills do not furnish, and that the Secretaries should from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any casual but of specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare at the West End of the Town, holding correspondence with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office should be furnished with geographical maps and charts of the Railways.

It is proposed that arrangements should also be made with the view to effect an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing under various objects at one place, a complete Emporium of information for obtaining that general information which Travellers so much require, and this concern founded on such an enlarged and comprehensive scale as to embrace the contemplated benefit and advantage to the various companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Chancery Street Chambers, Clement's Lane,
Strand, 12th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

ANDREW SMITH'S PATENT WIRE ROPES, for STANDING RIGGING, LIGHTNING CONDUCTORS, STROPPING OF BLOCKS, MINING, RAILWAY, and GENERAL PURPOSES; about half the Weight of Hempen Ropes, and 25 per cent. cheaper. Testimonials to that effect, with Specimens, may be seen, and every information obtained, at the Manufactory, Millwall, Poplar; and also of the following Agents:

[illegible] and Co., 13, Goree Piazzas Liverpool,
[illegible] Railway.....Newcastle-upon-Tyne
[illegible] Sykes and Co.....Wigan.
[illegible].....Truro.
[illegible] Kinsley and Son.....Dublin.
[illegible] Young.....Belfast.
[illegible] Rose and Co.....Glasgow.
[illegible].....Leith.
[illegible] Scales 14, Clement's-lane, High street, Dundee.

A rope has been in use for standing rigging in her Majesty's Navy, and a great number of merchant vessels, for upwards of six years, and is giving the highest satisfaction where also employed in various mines and railways in different parts of the Kingdom.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

This Day is Published in Royal Octavo, 3s. 6d. cloth, lettered, with four engravings,

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

BERDOE'S VENTILATING WATERPROOF for rendering every description of Woollen Cloth, &c., thoroughly impervious to rain, without confining perspiration, or imparting any objectionable property whatever. After more than three years' extensive and most successful trial, public attention is again invited to this invention, and which is confidently recommended to Travellers, and all who are exposed to the rain. Many of the principal Railway and other public Companies have already adopted it for their servants clothing.

W. B. also invites especial attention to his well-known and much approved

WATERPROOF CODRINGTON FROCK,

a light and gentlemanly garment, adapted for general use at all seasons, and described by those who have tried them as the most convenient and valuable protection from the weather ever invented. Also his

WATERPROOF SHOOTING JACKET,

made from a new, very strong, and much approved material, manufactured for this express purpose.

The above made only by
WALTER BERDOE, TAILOR, &c., 69, CORNHILL.
(Eight Doors from Bishopsgate-street.)

PATENT ROLLING AND COMPRESSING IRON COMPANY, UPPER ORDNANCE WHARF, ROTHERHITHE. — MR. JOSEPH CARTWRIGHT BRETTELL having succeeded Mr. JOHN ATLEE in the Secretaryship of this Company, all letters and orders for bolts, rivets, Railway pins, &c. &c., are in future to be addressed to the said Mr. Brettell at the above Works, or at Mr. W. A. Urquhart's Office, No. 27, Mark-lane.

December 23, 1841.

IMPROVEMENT IN THE RAILWAY SHARE-MARKET.—The attention of the Proprietors of Railway Shares is requested to an important reduction in the expense of working Locomotive Engines, which, if adopted, must have the effect of improving the dividends, and of course the prices of railway property.

The economy above-mentioned is effected by the use of coal (its smoke being consumed agreeably to Act of Parliament) in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation £100 worth of coal will evaporate as much water, and propel a train as many miles as £235 worth of coke. For the correctness of this statement, application may be made to Jos. Kearsley, Esq., Derby, Chief Engineer, on the above Railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawing, &c. &c., may be obtained of the Patentee (of the apparatus) Samuel Hall, No. 18, Kings Arms Yard, London.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors will be held, pursuant to Act of Parliament, on Wednesday, the 5th day of January, 1842, in the Sheriff-Court Hall, Greenock.

The Chair will be taken at Twelve o'Clock.
ROBERT D. KER, Chairman.

The Transfer Books will be closed on the 3rd January and will remain so until after the meeting.
WYNDHAM HARDING, Secretary.

Railway Office, Greenock, Dec. 23, 1841.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

TO CARRIERS, COAL PROPRIETORS, AND OTHERS.—To be Sold by Private Contract, a number of very superior FLY BOATS with Iron Knees, in thorough repair, complete with Cloths, Planks, &c., the whole built by Messrs. Kenworthy & Co., of the best materials, expressly for their own use in the London and Manchester Carrying Trade.

Application to be made to Messrs. Kenworthy & Co., Castle Fields, Manchester, where the Boats may be viewed.

FATAL ACCIDENT ON THE GREAT WESTERN RAILWAY.

A most deplorable accident took place on the Great Western Railway, on the morning of yesterday week. As we were compelled to go to press last week several hours earlier than usual, we could not notice the occurrence in that number. We had heard vague rumours of an accident, but the details appeared so exaggerated, that as there was not time to inquire into their truth, we deemed it better not to allude to the matter at all, earnestly hoping that the rumour would turn out to be, like many other rumours of the same kind circulated daily, wholly unfounded. Unfortunately it has proved otherwise. The following particulars are condensed from the notices in the daily papers. The occurrence is referred to in our leading columns :—

An accident, attended with more deplorable consequences than any we have yet had occasion to record, occurred on Friday morning (week), on the Great Western Railway, and has deprived no less than eight unfortunate beings of life, besides inflicting serious injuries on many others.

It appears that the luggage train, which leaves Paddington at half-past four, a.m., was proceeding downwards at the usual hour, with about 38 passengers, chiefly of the poorer class, who were looking forward to a Christmas holiday in the country, when, on reaching the middle of Sunning Hill cutting, about two miles and a half from Reading, it suddenly came in contact with a mass of earth which had slipped from the slope above, and covered one of the rails to the depth of two or three feet. On meeting with this obstruction the engine was immediately forced off the rail, dragging the tender after it; the next truck, which contained the passengers, was thrown athwart the line, and in an instant was overwhelmed by the trucks behind, which were thrown up into the air by the violence of the collision, and fell with fearful force upon it. The engineer, and the guard, who was in the same truck with the passengers, had just time to perceive the danger, and, springing from the carriages, escaped; but of the rest of the passengers no fewer than eight were killed on the spot, and seventeen others more or less severely wounded. These were conveyed, as soon as possible, to the Reading Hospital, where every attention which the dreadful circumstances of the case required was paid them. Four were sufficiently recovered to be enabled to proceed on their journey the same day.

The corpses of the deceased were conveyed to a neighbouring hut, where they remained during the day.

The spot where the accident took place is, as already stated, situated between Twyford and Reading. Twyford is reckoned, per road, thirty-four miles from Hyde Park Corner, and the station is close to the 30¾ milestone, per railway calculation, while Reading is 33¼ miles, but by road it is reckoned 39 miles, and, therefore, although by the high road it is about 2½ miles from either place, it is by rail only 1¼ mile from the Twyford station, being nearly opposite to the 32nd milestone. The height of the cutting is stated to be about 100 feet, and the extent in breadth of the slip is between 40 and 50 feet. A wooden footbridge crosses the line within a few feet of the spot and about 200 yards from the bridge, continuing the high road over the railway, close to which latter is the straw hovel in which the bodies have been deposited.

Mr. James May, solicitor, of Reading, being the county coroner for the district, no time was lost in summoning a jury to investigate the circumstances connected with the fatal and melancholy accident; but, owing to Friday being market-day at Reading, most of the respectable yeomen were absent from their homes. A jury was, however, summoned from the inhabitants of the parish of Sunning, within which the bodies were lying, who assembled at three o'clock on Friday afternoon, at a public-house on the London road, called "The Shepherd's House," about half a mile on the Reading side of the Sunning cutting, when, twelve of them having been empanelled, and Mr. Millard, a land-surveyor, appointed foreman, they accompanied the Coroner to the hovel to view the bodies, which presented a frightful and heart-sickening spectacle, scarcely any of their features being visible from the earth and blood with which they were covered.

On the return of the Coroner and jury to the inquest room, which was much crowded by persons connected with the railway, &c., amongst whom were Mr. C. Saunders (one of the Secretaries), Mr. Sadgrove (Superintendent of the line at Reading), and Mr. Collard (Superintendent of the Company's Police). Several witnesses were examined, the substance of whose evidence was as follows :—

Mr. E. May, surgeon, of Reading, deposed that on the morning of Friday, the 24th instant, while at his own residence, he was called about eight o'clock to come immediately to the station of the Great Western Railway, and on doing so was informed that an alarming accident had a short time before occurred in the Sunning cutting on that line of railway, where his presence was required. He instantly hurried to the spot, and on reaching it was shown the bodies of two men, who were lying on the north side of the line. He was also shown the bodies of three other men, who were still lying under one of the trucks forming a portion of a train which had been obstructed and stopped in its progress by a slip of earth from the south bank, and subsequently he likewise saw the bodies of three other men who had been removed from beneath one of the carriages. All of them were quite dead, and very much injured. He had since examined the bodies. The witness then described the injuries. These injuries were sufficient to have occasioned death.

Thomas Reynolds, residing in Dudley-street, Paddington, deposed that he was an engine-driver in the service of the Great Western Railway Company. On the morning of that day he started from the Paddington terminus, with the *Hecla* engine and a train, about 20 minutes to five o'clock, and reached Twyford about 20 minutes to seven o'clock. On leaving that station he saw nothing on the line to obstruct the progress of the train until he arrived near the wooden bridge which crossed the railway from Woodley to Sunning, which was the spot where the slip took place, when he found a quantity of loose earth on the line, which had fallen from the embankment, and threw the engine off the line. The engine was at that moment going at the speed of about 16 or 18 miles an hour, which was about the usual speed of luggage trains. When about half a mile from that spot he recollected having seen a police constable show a light, which it was his duty to do.

By the Foreman—Had noticed several little slips about that portion of the line. Did not, however, think them of any consequence, as they were covered with sward. The light was shown by the policeman to show that all was right.

George Hassam deposed that he was a guard in the service of the Great Western Railway Company, and resided at Paddington. On that morning he left Paddington terminus with the goods, or luggage train, drawn by the *Hecla* engine. The train consisted of the engine, tender, two carriages, a truck for the luggage, and sixteen luggage waggons, three of which were completely empty. The passengers' carriages were placed next to the tender. On arriving at the Sunning Hill cutting, which was about ten minutes to seven o'clock, at which time the train was on its proper (south) side of the line, the engine was thrown off the rails by a sudden stoppage, by which means the carriages were thrown on each other, and some of the passengers killed.

By the Jury—Had been in the habit of travelling with luggage trains by night, and had generally seen a watchman about that part to watch the line, but had missed him for the last week. The engine was travelling at the rate of 16 or 18 miles an hour. The engine-driver was perfectly sober. When the accident happened, witness was nearly smothered by the loose earth, and from the quantity of earth which had fallen upon the waggons behind the engine, he had every reason to believe that the slip fell as the train was passing.

Thomas Hardy Bertram deposed that he was assistant engineer to Mr. Brunel on that part of the line between Reading and Paddington, of which portion he had the superintendence. His duty was to watch the general state of the works, and he was therefore daily between Reading and Paddington. He also employed foremen at short distances on the line, whose duty it was to report to him anything that might be out of order, when he invariably gave orders for it to be attended to immediately, and if at any time he was unavoidably absent, he always empowered some person to attend to it. Subsequently to the late heavy rains his attention was called to several parts of that portion of the line, and among others to part of the Sunning Hill cutting, one of which places was by the side of the present slip, which was instantly attended to.

By the Foreman—Had inspected the slip where the accident had happened, and was certain that it was quite new, and had fallen without any previous indications of danger.

Thomas Bottrell deposed that he was one of the foremen employed by the last witness to inspect the railroad between Reading and Twyford. About five o'clock on Thursday afternoon he inspected the cutting when all was quite safe. At the same time he examined the embankments, to see if there was any slip, but could not discover any.

By the Jury—Had been there that day, and the slip was certainly a new one, and not the same that he had noticed before, although it was near to it. The former slip had been repaired and drained.

James Dickson deposed that he was a policeman in the service of the Great Western Railway Company, and was on duty at the Reading station. On Thursday night the last train which left Paddington was the nine o'clock train, which passed down on the south line with perfect safety. The mail train also passed up about five o'clock that (Friday) morning. Had examined the cutting on Tuesday last, but did not discover any slip then.

Thomas Bottrell re-examined—Upon the appearance of a slip at any time he always placed a watchman by night at the spot. Had done so when the former slip took place in the Sunning Hill cutting, and would have done so on Thursday night had he seen the appearance of any slip.

Thomas Carpenter, a hatter, residing at No. 35, Gray-street, Blackfriars-road, and John Nurse, stonemason, of Hannom, near Bristol, were next called in and examined. Their joint testimony was to the effect that they were passengers by the luggage train that morning; that after the train had stopped at Twyford they had not proceeded far towards Reading before they were stopped by a fall of earth. A confusion instantly occurred, and the hinder carriages ran on the foremost ones, and several persons were killed and others wounded.

All the witnesses concurred in saying that it was too dark at the time that they could not see distinctly what occurred.

Some conversation then took place between the jury and

Mr. Millard (the foreman) suggested that the inquiry should be adjourned, as he understood other witnesses could be called to prove that the attention of the Company's servants had been directed to the slip in question three weeks ago.

The inquest was accordingly adjourned until nine o'clock on Monday morning.

On Monday the proceedings were resumed.

Mr. Charles Russell, M. P., the Chairman of the Directors of the Great Western Railway Company; Mr. Saunders, one of the Secretaries; and Mr. Brunel, the Engineer, were in attendance during the inquiry. No professional gentleman appeared on behalf of the friends of the deceased.

Evidence as to the identification of the bodies was then gone into. The sufferers were principally persons, who had been employed at the Houses of Parliament, and were visiting their friends.

Robert Hatton was then called and sworn—I live at Sunning, Berks, and am a labourer. I know the Sunning Hill cutting, and pass across the bridge twice a day. I know the spot where the slip of earth took place on Friday morning last; it was on the south side of the cutting. I observed the appearance of a slip of earth and some draining tiles there a fortnight ago yesterday; it was at the very same spot where the earth fell on Friday last. It was about eight yards from the bottom of the cut up the bank. The appearance of it about a fortnight ago was, that the earth bulged and drove up some draining tiles, which I saw lying there. Three or four tiles were there, and I thought some one had been draining there. They appeared to have been driven up, and did not seem as if they had been placed there. I observed them from the wooden bridge. I cannot tell how far the bridge is from the spot.

Mr. Millard (the foreman of the jury)—The distance is about 270 yards.

The Coroner—We will take it at that distance.

Examination resumed—I did not observe any crack in the bank, but I saw the slip and the earth lying on the gravel at the bottom of the bank, between it and the rails.

By Mr. Millard—Do I understand the witness to say that he reckons the slip to have been eight yards from the top or from the bottom of the bank? I reckon from the bottom of the bank. The earth lay on the gravel, between the bank and the metal.

Mr. Millard—Did it fall down on the road?—the sward between the rail and the bank was covered with the fallen soil and earth.

In answer to questions put by Mr. Brunel, the witness said he had first observed the slips he had spoken

Digitized by Google

of about a fortnight ago. He passed by the bridge over the cutting twice every day, but had not seen a man employed in repairing those slips.

Mr. Brunel—Then you do not know whether it had been repaired or not?—No, I cannot say.

Mr. Brunel—Do you happen to know whether the end of a rail lying on the ground at the bottom of the slope had been travelled there?—I know nothing about that.

Mr. Brunel—At what time did you pass?—I passed early in the morning, and again late in the evening; it was dark then! I usually passed, but I went by on my way to church by daylight on Sunday, and I saw the slip then.

Mr. Brunel—The last time I saw the slip of which I have been speaking was yesterday week, and it was in the same state as when I saw it about a fortnight ago.

Thomas Chisholm sworn.—I live at Sunning, and am by trade a bricklayer. I know the Sunning Hill cutting, and a fortnight ago last Thursday I was passing the wooden bridge across the cutting, between nine and ten o'clock, and I looked towards Twyford, when I observed two slips—one on the right bank by the side of the railway, and the other on the left. They were nearly opposite to each other. The earth and rail on the right hand, or south side, where the accident occurred, had fallen between the bank and the six rails. There was more than a cart load, there might be about two waggon loads, and it lay in a sort of stack. It appeared to have slipped from the bank, and the top rested against the bank. When standing on the bridge, I was about, as far as I can judge, 200 yards from the spot. The slip appeared to have taken place ten or twelve feet from the bottom, up the bank.

By the Coroner—Did you observe that anything was afterwards done at this place?—I saw two men at work there that very morning; they seemed to me to be putting up the loose earth back.

The Coroner—Why, that was repairing it. Did they appear to be removing it?—They were removing it.

In answer to questions put by the Coroner, at the desire of Mr. Brunel, the witness said, he saw no tiles near the spot; I did not afterwards observe that the slip had been repaired; I passed the place every day in my way to my work, and it appeared to me to remain in the same position, except that the earth was put back off the rails.

A Juror—Do you mean to say that the slip was made good?—No, it was just the same; the earth was put back off the rails, but the slip was not made good.

Mr. Bethell—Do you not know that the practice of leaving a slip open is adopted as the best mode to detect it?—No, I do not know anything about that.

By the Coroner—How long did you observe the slip you have mentioned continue in the same state?—For six days from a fortnight ago last Thursday.

The Coroner—Is the slip you speak of on the same spot as that which occasioned the accident on Friday morning last?—I think it is, or thereabouts.

Mr. Millard—During the six days you say you went past the cutting to your work, did you observe any of the Company's servants trying in any way to remedy the rail by thumping or trying to prevent the slip?—I saw two men putting back or removing the earth—shovelling it back to the side of the line again.

Mr. R. Gosling was next called.—I reside at Home Farm, in the parish of Sunning. I saw two slips the day before the accident, one on each side of the cutting, precisely in the same spot as where the slip took place on the morning of Friday last. I have seen Sunday many times previously within the last week or ten days. I observed that the turf was cracked, and the earth was bulged out below, about the middle of the slope or bank. I was on the wooden bridge on horseback when I observed this. I have seen no persons at work at these slips, and I did not notice any deficiency in them until Friday. I saw them myself about half-past twelve o'clock the day before the accident. I did not go on to the line to look at them, but saw them from the bridge.

Mr. Millard—Was there, in your opinion, any danger to be apprehended from the slips of which you have been speaking?—If I had thought there had been any danger I would have given notice of the fact.

Mr. Thomas Stokes Salmon, of Sunning, barrister-at-law, was then called. In answer to questions by the Coroner, and—I have observed an appearance of a slip on that part of the bank where the accident took place. The bank appeared to me to bulge. I observed it on several occasions, and I went one day purposely to look at the cutting that I might see it better. I had observed it from the bridge crossing the turnpike road. On going nearer I saw that the bank bulged, and when I heard of the late accident I remarked to the person who told me, that it must have happened at the spot where I had noticed the slip I have described.

John Plant sworn—I am assistant gamekeeper to Mr. R. Palmer, M.P., and saw the slip precisely at the same place last Saturday fortnight; but I cannot say whether anything in the way of repair has been done to it; but it looked in the same state when I saw it two or three days before the accident.

By another Juror—Did you see the luggage train which came down along the line on the morning after the accident?—Yes, I did.

Juror—In what part of the luggage train of Saturday morning were the passenger trucks placed?—They were eighth and ninth from the engine and tender.

Juror—That is not the position in which the passenger trucks were placed on the morning of the accident?—It would have been more fortunate if it had been.

Mr. Gosling, sen., here informed the Coroner that there were other witnesses in attendance, all of whom were ready to give evidence to the same effect.

The Coroner remarked, that it would be useless to take them after the testimony which had been already given.

Walter Bridges sworn—I live at Sunning, and am employed on the line of the Great Western Railway by Mr. Thomas Bottrell, the foreman. I work in the Sunning cutting, and about a fortnight or three weeks ago I noticed a slip of earth near the wooden bridge, at the same spot where the slip took place on Friday morning last. Four men besides myself were employed to repair it. We made a drain by putting some tiles round it; and it was made secure, as we believed, under Bottrell's directions. Men were employed to watch by night during the time it was under repair. I myself was employed four nights, along with another man, in watching through the cutting. It was usual for the Company to put a watch in such cases.

By Mr. Millard—You say you watched four nights—did you watch the night before the accident?—No.

The Coroner—It was not necessary for him to do so, for the witness says, he and the other men made the slip secure, as they believed.

By the Coroner—There are policemen along the line in the day time, but I cannot say at what hour they came on duty.

By Mr. Millard—How long before the accident was it that the witness watched those four nights?—I think it was about a week ago.

Mr. Millard—What was the reason you ceased to watch?—Because we considered the slip to be quite safe.

Mr. Millard—Did your employer and you fall out about the remainder of your wages, and that in consequence you said you would watch no longer?—That is not so.

Mr. Millard—Were there no words between you and your employer?—Not half a word. I never had any words with him about my wages.

The Coroner—If the jury have any other witnesses they particularly wish to examine, I am quite ready to receive their evidence, but I really do not see the necessity for carrying this part of the case further. Is the policeman present who watches that part of the line?

Mr. Saunders—There is no watch by night. The policeman commences duty at six o'clock in the morning, and leaves at seven o'clock at night.

The Coroner—Is that man in attendance?—He is not.

The Coroner—We shall want him; let him be sent for.

The Foreman requested to be informed what was the depth of the cutting where the accident occurred, the breadth of the way at the bottom, and the width between each embankment at the top.

Mr. Saunders intimated that Mr. Brunel, the chief Engineer of the Company, who was in attendance, would be the best authority to supply that evidence.

Joseph Collard sworn and examined—I live at Paddington, and I am Superintendant of the Police of the line from that station to Hay-lane, four miles below Swindon. I employ policemen to watch the line the whole day, and for the night at the different stations, switches, crossings, and gates. Two policemen are employed between Reading and Twyford—Bearfoot and Gregory; Gregory would take charge of that part of the railway where the accident occurred, his duty extending between the station at Reading to Mustard lane bridge. That included the spot where the slip took place. He would go on duty at seven o'clock, I believe, but cannot say correctly. My sub-inspector regulates these matters. I should say, however, he would go on duty at seven o'clock. His duty lasted, with an interval for dinner, till ten at night. Bearfoot leaves Twyford towards Reading, at six o'clock, a.m., and comes to Mustard-lane bridge, within a quarter of a mile of the slip.

The Coroner—At what time ought the Reading policeman to be on the spot where the slip took place?—I should say he would not be at the slip till near nine o'clock. He comes on duty at seven o'clock. He is employed till about eight at the station, and it must be near nine before he could get to the slip.

Mr. Saunders—Are you not aware that watchmen cognizant of the place are employed by Mr. Bertram to walk through the Sunning cutting every morning before the train passes?—It is so.

The Coroner—We had better have that from Mr. Bertram himself.

T. H. Bertram, Assistant-Engineer, re-examined—I employ a man named Higgs, a ganger, to walk over and inspect the line the first thing after daylight. He goes through the Sunning cutting about a mile and a half, including the spot where the slip took place. He comes on the ground early—at half-past six. He has, in almost every instance, walked over this portion of the line previously to the passing of the luggage train, which usually arrives at Reading a few minutes past seven, p.m. On Friday morning the luggage train was earlier than usual.

George Higgs, examined by Mr. Saunders—I am employed by Mr. Bottrill, foreman of this part of the line under Mr. Bertram, to inspect the Sunning cutting, and repair the slips. My district extends from Mustard-lane Bridge towards Reading, about a mile and a half. The slip occurred within my inspection. I am on the line all day. I go over it always twice—sometimes four or five times a day, walking along the line, and returning by the top of the embankment. I inspected this part of the line the last time on Thursday, about half-past five, p.m. I well know the spot where the slip took place. There appeared then nothing at all amiss or unsafe. I had gone over the spot, up and down, six times on Thursday last. There had been a trifling slip of earth between a fortnight and three weeks ago, very near, but not exactly adjoining the spot where the accident occurred on Friday last. The bank, however, had been properly drained and repaired, and everything put to rights. After the repairs of the former slip, I left several tiles lying on the top of the bank. They lay there for three or four days after the work had been finished. When I passed over the line on Thursday last, at half-past five, it was too dark for me to see the state of the bank. I had previously been there at four o'clock, when I went down the line and returned on the embankment. Occasionally, when required, watchmen are placed on the line, who remain during the whole night. During the wet weather, about a fortnight or three weeks ago, a policeman was so employed for several nights on this spot.

By Mr. Saunders—Do you not pass through the cutting the first thing every morning, before the six o'clock train comes down?—I do.

By the Coroner—Where were you on Friday morning last?—I am generally on the spot where the slip took place about half-past six a.m., before the six o'clock train from Paddington passes. That train generally arrives before the luggage train. On Friday morning I was coming on the line, but had not reached it when the luggage train came down. The six o'clock down train was behind the luggage train. The luggage train, which is very irregular, was earlier than usual. I have known it so late as eight or half-past eight before it arrived. I was on the spot before the six o'clock train passed.

Mr. Saunders—The fact is, although the luggage train is advertised for half-past four a.m. from Paddington, it is near five before it can leave that station, and the six o'clock down train generally gets ahead of it at Slough.

The Coroner—The luggage train, it appears, was earlier than usual, and Higgs somewhat later.

George Higgs—I was not behind my proper time—seven o'clock. My directions from Mr. Bottrill are to be on the line before the six o'clock train comes down.

By the Coroner—If you had seen anything on the line which required you to stop the train, had you any signal by which to communicate with it?—No, sir.

The Coroner—What would your duty have been in such a case if the slip, for instance, had been observed as close as I you?—I must have run back, and got as the only means could, and held up my hat. As it was dark I could have given was by shouting.

Mr. Saunders—Is not the signal for stopping the

Digitized by Google

train to hold up both hands?—Yes; I have stopped the trains in that manner.

The Foreman—Yes; but not when it was dark?—I could see the engine coming, but the engineer could not have seen me till he came close up.

Mr. Brunel, the chief Engineer of the Company, sworn, deposed as follows:—With respect to the system of watching along the line, my different assistants have instructions to appoint night watchmen wherever there is any appearance of danger. In cases of slips in the cuttings, when they are superficial, it is found better to drain them well, remove loose earth, and leave the slip open to dry. The slips are then narrowly watched, and if no further movement takes place within a short time, experience has shown that draining is sufficient. In this particular case of the Sunning cutting, I saw a small slip about three weeks ago. I inquired of Mr. Bertram what had been done. I found it had been drained, and, as I observed it was only a superficial slip, I did not consider there was any danger to be apprehended. I have passed many times since, and have not observed any change. On Friday morning I arrived at the spot a few hours after the accident, when I examined the slip, which had then taken place. It was a totally distinct slip. I pointed out to Mr. Bertram the drain which had been cut round the former slip, and which was quite apart from the new one. The disturbed ground of the new slip touched the old slip; but the slips themselves commenced in different parts of the slope, and in different strata. The width of the cutting at the bottom was 40 feet; its depth 57 feet; and the width at the top 268 feet. The width of the spoil-bank on the south was 100 feet; on the north 67 feet. The spoil-bank at the slip commenced at about 15 or 20 feet from the boundary of the Company's land. I saw after the accident that there was room to walk between the spoil-bank and the edge of the slope, so that the spoil-bank had not moved. I think the spoil-bank had no influence on the slip. The spoil-bank was not 20 feet high at 30 feet distance from the top of the slope. The spoil would not stop at two to one. As there have been discussions here and in the public papers relative to the position of the passenger tenders, perhaps I may be allowed to mention that the reason for putting the passengers trucks next to the engine arises from the danger to which a luggage train is considered most liable—namely, its being overtaken by another train, in consequence of its being slower, and unavoidably less punctual than passenger trains. The danger arising from the breaking of axles is greater in the luggage trains from the great weight. In either case the front of the train is the best position for passenger trucks. The passenger truck was put in the middle of the train on Friday evening by my order, merely as a concession to an opinion, which I knew had been frequently expressed. On the evening in question I discussed the matter with the Superintendent and Mr. Saunders at Paddington. I thought it would have been better not to send down any luggage train that night; but there were so many applications for places, being Christmas-eve, that we thought it better to place the passenger truck in the middle, lest it should be considered a mere act of obstinacy if we adhered to the former practice. In my opinion to put passenger trucks behind would be extremely dangerous. Our feelings and interests are, of course, involved in providing the best place possible for passengers, and, upon the whole, my decided opinion is, that near the engine is preferable to behind the goods' trucks. Many accidents might arise to passengers, if placed in the rear of the luggage trains, of being run into; the lamp behind having gone out and trucks perhaps got uncoupled, and left behind.

Mr. Saunders informed the jury that the general opinion of scientific and practical men, and even of the Inspector-General, was that the best place for passengers in luggage trains was next the engine. Some trains went at the speed of 40 miles an hour, while others proceeded only at the rate of 18 or 20; and it was impossible where there were so many cuttings and curves to prevent a quick train from sometimes running into a slow one, notwithstanding every precaution. Accidents have been avoided in consequence of placing the passengers in front. The Company have no motive in this arrangement but the convenience and safety of the public. The luggage train should leave at half-past four, a. m.; but it seldom gets away before five, and [illegible] enough to allow the fast down six o'clock train to pass. Every precaution that could be thought of to ensure punctuality and safety had been adopted by the Directors; and if the control remained in his hands, he should undoubtedly adhere to the present plan of placing passengers' trucks in luggage trains.

[illegible] the whole of the evidence which had been adduced on both days, and called upon the jury to dismiss from their minds all they had heard on the subject elsewhere, and calmly and dispassionately attend only to the evidence which had been submitted to them. They would take the whole facts into their serious consideration, giving such weight to the statements of Mr. Saunders and Mr. Brunel as their importance deserved. He now left the case in their hands. They must consider their verdict.

The jury retired at three o'clock.

At a few minutes before five the Coroner, who had left the apartment where the inquest was held, returned and announced that the jury had agreed to their verdict, which was "Accidental Death in all the cases, and a deodand of 1,000*l.* on the engine, tender, and carriages."

Mr. C. Russell, M. P. inquired whether the jury had stated any and what grounds for their verdict.

The CORONER said they had assigned two reasons; but he was not bound to state them, and he would rather not.

The following, we have the best reason to know, were the reasons assigned by the jury for the above verdict:—

"1. The jury are of opinion that great blame is attached to the Company in placing the passenger trucks so near the engine.

"2. That great neglect had occurred in not employing a sufficient watch when it was most necessarily required."

READING, Tuesday.—On inquiry to-day at the Royal Berkshire Hospital, the reporter ascertained from Mr. Bulley, the surgeon in attendance, that the whole of the inmates whom the recent melancholy and fatal accident had consigned to this establishment, were proceeding towards recovery as favourably as their medical attendants could have hoped for. The patient Richard Woolley, whose case was for a long time considered perfectly hopeless, in consequence of the extent and severity of the injuries he had received, is much better, and though symptoms of erysipelas had presented themselves last night, they had been successfully combatted, and the danger apprehended in consequence, considerably, if not entirely, removed. The bodies of the eight unfortunate individuals whose lives were lost on the occasion were interred this morning in Sunning churchyard.

READING, Wednesday Evening.—The unfortunate sufferer, Woolley, died a little after three o'clock this afternoon. The 1,000*l.* deodand goes, by a grant made in the reign of James I., to the lord of the manor, Mr. Palmer, the member for the county. From the well-known benevolence of that gentleman there can be but one conviction as to the mode in which the money will be applied.—*Standard.*

ACCIDENTS ON RAILWAYS, *NOT* "RAILWAY ACCIDENTS."

FATAL EXPLOSION ON THE BRISTOL AND GLOUCESTER RAILWAY.

(From the *Times*,)

Bristol, Dec. 29th, 1841.

YESTERDAY a fatal explosion took place on the Bristol and Gloucester Railway, which is unfinished, at shaft No. 5, near the entrance of a tunnel, running within two fields of the town of Wickwar, about 15 miles from Bristol, and by which, we regret to say, three unfortunate men lost their lives on the spot, and five more were so seriously injured as to be obliged to be conveyed to the Bristol Infirmary. According to the best information I have been enabled to collect, it appears that on Saturday last a quantity of gunpowder (upwards of half a cwt.) which had been slightly damaged by damp, was placed in the blacksmith's shop of the works, close to the entrance of the tunnel, for security. The blacksmith having been ordered to sharpen some of the workmen's tools on the Monday, proceeded to do so, unaware of the presence of the powder in his shop, and while engaged in his work at the anvil a spark from the anvil, it is supposed, must have ignited the powder, which suddenly exploded, spreading destruction all around, blowing away the blacksmith's shop, the mill-ring, and a portion of the tunnel, together with the blacksmith, and seven other men, who were unfortunately at work near the spot, three of whom, viz. James Bennett, Matthew Stephens, and a man, name unknown, were killed instantly, the head of Stephens being blown entirely off his body, while the man whose name I have not been able to ascertain was blown to a distance of upwards of 70 yards, where he was seen by the distracted multitude who had assembled on hearing the explosion, in a burning state, his clothes being ignited and having burst into a flame.

The five other men who were near the spot were all seriously burnt, and conveyed to the Bristol Infirmary.

The shock of the explosion was distinctly felt in all the surrounding villages, and was considered by many persons to be the shock of an earthquake, and occasioned the greatest alarm. Some idea of its violence may be conceived, when I state that it was distinctly felt at a distance of seven miles and a half, and that it threw down an outhouse, which was loosely built, at a distance of five miles from the place.

On Thursday afternoon an inquest was held at the Ram's Head public-house, before John Hayes, Esq., Coroner, touching the death of Peter Taylor, the particulars of whose death have already been given. The jury returned a verdict of "Accidental Death," with a nominal deodand on the engine. *They also unanimously recommended that the railway Company should erect a foot bridge across the railway, and requested the Coroner on their behalf to make known their wishes in that respect to the Directors of the Company.*

RAILWAY ACCIDENT IN FRANCE.—The *Journal de l'Eure* of the 24th ult. states, that in consequence of a bank of earth having given way at Tourville, where the engineers of the Paris and Rouen Railway were constructing a tunnel, five labourers were cut off from all communication with the exterior. In order to extricate them, it was found necessary to dig through a bank of hard gravel to the depth of 30 feet. In less than 14 hours this operation was completed, and, thanks to the coolness and intrepidity displayed by Mr. Jones, the English engineer, the five men were saved.

ACCIDENT ON THE NORTH MIDLAND RAILWAY.—On Wednesday last a serious accident, which has resulted in fatal consequences, befel the down train which left Chesterfield for the north a little before two P. M. When within a couple of miles of Leeds, one of the wheels of the engine suddenly broke, the rail was cut in two, and the engine was twice overturned on a slight elevation at the side of the line. The engine-driver (whose name was Hinde) was so dreadfully injured that he has since died. By keeping on the tender the stoker escaped without injury, except a few slight cuts. The carriage next to the tender was overthrown by the shock, but most providentially none of the passengers were injured. The unfortunate engine-driver (who was formerly employed on the Sheffield and Rotherham line) has left a wife and two children, who reside at Owlerton, near Sheffield. The bereaved woman was only six weeks ago delivered of her children, who are twins.—*Derbyshire Courier.*

ACCIDENT ON THE DUBLIN AND KINGSTON RAILWAY.—The train which started from Dublin to Kingstown at half-past four o'clock on Sunday, was delayed upwards of half an hour, in consequence of the engine having strained her axle. Considerable alarm was felt at the Kingstown station-house, by those who expected to start by the five o'clock train for Dublin; but on the announcement that no harm was done, all alarm subsided.—*Dublin Evening Packet.*

NORTH MIDLAND RAILWAY.—Those of our readers who have travelled northward by the railway will be aware that wines and spirits have been for some time sold at the Masbro' station-house, which was not licensed for that purpose, along with the confections usually sold at those places. We understand this traffic has been permissively carried on. A few days ago, however, information having been given to the excise, the whole stock of wines and spirits was seized by one of the officers of excise stationed in the neighbouring district.—*Derby Mercury.*

RAILWAY COMMUNICATION WITH SCOTLAND.

[From the *Glasgow Herald*.]

In the Glasgow Town Council, on the 23rd ult., the Lord Provost in the Chair.

Mr. LUMSDEN said that in rising to submit to the consideration of the Council, the motion of which he gave notice at a late meeting, he was confident that it would receive their support, when they looked to the strong expression of public feeling given in favour of the object by the citizens of Glasgow, and to which they, as the representatives of the public, ought to yield a willing submission. They were never called upon to grant the public money to any object more legitimate than this. When they considered the increasing population and manufactures of the city, and saw a prospect of connecting Glasgow with the large manufacturing district of Lancashire and the West Riding of Yorkshire, and when they looked to the facilities which the shipping interest of Glasgow had for commercial intercourse with the continent of America, the rising republics of South America, and the British transatlantic colonies, it was a matter of great importance that they should secure such a mode of communication with England as was now proposed. And when they saw the concurrent opinion and the strong ebullition of the citizens of Glasgow of every class in favour of the proposed line, with the exception of a few individuals who support the interests of other railways, he thought the Corporation was called upon to support this great trunk line. They were told that the citizens of Edinburgh were averse to this line; now be had heard the sentiments of many of the citizens of Edinburgh on this subject, and was aware that although they were at one time opposed to having the line carried by the proposed route, a large proportion of them were now strongly in favour of that measure, and would consider it a gross act of injustice to Edinburgh to have the railway carried round by a circuitous route, to suit the Edinburgh and Glasgow Railway. At the meeting of the County of Lanark the other day, a strong feeling was expressed in favour of the western line. A letter was indeed read from Lord Corehouse, complaining that the railway would come through his property; but the meeting took up the question in the most fair and candid way, without the least reference to private interests, and without inquiring whose interests might be affected by it, were guided in their deliberations only by the consideration of this being the best line of communication betwixt Scotland and England. That meeting came forward promptly with a contribution of 200*l.* to defray the expense of the survey, and it was expected that another 100*l.* would still be forthcoming. His motion originally contemplated giving 250*l.* from the Corporation; but he was willing that this sum should be reduced, and therefore he hoped the Council would unanimously agree to his motion, when he proposed to limit it to 200*l.* They had received from the Chamber of Commerce 100*l.* The whole sum required of them is 500*l.*; but there would be no great harm if the contributions from Glasgow exceeded that amount, and the Merchants and Trades' Houses should enable them to do the thing at once and efficiently. He was quite confident that the money would be placed in good hands, and disbursed in the most satisfactory manner. Mr. Lumsden added, that without going into the question at large, he would content himself with simply moving that the Council grant the sum of 200*l.* towards the survey of the western line.

The DEAN of GUILD seconded the motion. He would have willingly supported the original sum of 250*l.*, but seeing the sum subscribed by the county and other bodies, he was willing that the contribution of the Council should be limited as now proposed, hoping that if the additional 50*l.* was required it would be granted. It would not be denied by any person acquainted with the communication betwixt England and Glasgow, that such a railroad was very much required, and it would be very strange if they were not to support the proposed line, instead of that which would add 140 miles to the distance betwixt Glasgow and Liverpool by going round the east coast. Whatever the people of Edinburgh wished, it was certainly incumbent upon the citizens of Glasgow to do everything they could to secure a direct line.

Bailie LEADBETTER said he felt somewhat the delicacy of his position in rising to express his sentiments on this subject, since they were likely to be at variance with those extensively held out of doors, and perhaps also by the majority of the Council. But the subject being one which had engaged much of his attention during the last two years, he felt it his duty publicly to state his sentiments on the proposition which had been made to the Council. He was aware that he stood in the equivocal position of having imputed to him that he was influenced by private interests, and it was certainly true that he was connected with two lines which had been spoken of in connexion with the route to England; but without denying that he might be influenced without being aware of it, still the attention which he had given the subject, and the knowledge he possessed of it, entitled him to come before the meeting and communicate the result of his experience. He would begin by referring to those measures which were taken in Glasgow two years ago in reference to a railway line to England. They had then a public meeting, at which especial care was taken that it should not be fettered by any reference to private interest, but their resolutions bore that they should endeavour to define the best line between Glasgow and Carlisle; and he had then the honour to propose the first resolution, with the view to the ultimate formation of this great trunk railway. [Bailie L. read the resolutions which were passed and published at the time.] In consequence of these proceedings, and the measnres which ensued the subject was taken up by Parliament, and certain resolutions were passed with the view to ascertaining the best line between England and Scotland. There were five lines then in agitation, each supported by their promoters; and with the view to decide which was the best, the inquiry was committed to Government engineers, and Sir Frederick Smith and Professor Barlow were appointed to this duty. It was important to observe, that the instructions of Sir Frederick Smith were to report on the merits of the Cumberland Railways, as regards their connexion with the western parts of Scotland and the north of Ireland, and also on the comparitive facilities afforded to the communication by railway between the manufacturing districts of Lancashire and Edinburgh and Glasgow, and the north of Ireland. Sir Frederick Smith gave it as his opinion that there was not a sufficient amount of traffic to support two lines from Scotland to England; and, assuming that there would be only one line, he gave the preference to the line from Carlisle by Lockerby, Beatock, Lanark, and Hamilton to Glasgow, with a branch from Thankerton or Symington to Edinburgh. It was evident, therefore, that Sir Frederick Smith had not before him the question as to which was the best line from Carlisle, but he had proceeded on the supposition that only one line would be formed from Scotland to the south. It was stated that his opinion was, that the Nithsdale was the best line to Glasgow, and decidedly preferable to that by Clydesdale, but the branch to Edinburgh being included induced him to give his preference to the latter line. Now although this proposed line by Clydesdale took in Edinburgh, the people of that city were opposed to it; or at least there had been no attempt to get up a public meeting in its favour. But they had already moved in furtherance of the Eastern route, and had raised 100,000*l.* to extend the line to Dunbar. It occurred to him, therefore, that the Corporation and citizens of Glasgow had already done all that public spirit required of them. They had subscribed 900*l.* to the survey formerly made, and which gave them all the information that was required, and he did not see that they were again called on to put their hands in their pockets for the purpose. He had yet to learn that there were any private subscriptions in futherance of this Clydesdale line, and he suspected there would not soon be any, for it was his impression that that line would never be made. Glasgow, he repeated, had already done its part; it had furnished the requisite information; and if this line was to be seriously taken up as the railway between England and Scotland, the Company which was formed to carry it into execution should provide the funds for their Parliamentary survey. So far as he had seen, no person was coming forward to aid the undertaking, with the exception of the landed proprietors along the line. He was glad to notice this change in public opinion, for they must be aware that the landowners had hitherto been the great opponents of railway undertakings, and it was not till now that they had had any distinct avowal from them in their favour. But he would ask if any great trunk railway had even been taken up and carried into execution by the landed proprietors? The fact was that these had been universally formed by tbe commercial and manufacturing interests and unless these interests took it up, the Clydesdale line never would be formed; and so far as he had heard public opinion expressed on the subject, it was not likely that they could offer much inducement to commercial men to embark their capital in it. This was the opinion of Sir Frederick Smith himself, for although approving of the line he says, "It is hardly to be expected that such a line would command much support, as an investment, from the general speculator. Unless the principal landed proprietors along the line should feel disposed to give the undertaking their hearty support, rather with a view to the increased value it would give to their property, than to a large remunerating dividend, there seems considerable doubt whether it will ever be constructed." Mr. Locke had estimated the cost at 16,313*l.* per mile. But it must be understood that this estimate merely included the expense of the construction of the line, and left out all the heavy charges which were necessary for station-houses, locomotives, &c. Taking 130 miles, therefore, as the distance between Carlisle and Glasgow, (for he had no doubt the line would be carried through between Carlisle and Lancaster,) the capital required amounted to 3,250,000*l.* Now, almost every line depended greatly upon its internal traffic; but he would ask any gentleman to look to the Clydesdale line, and say where was the traffic to come from? The Government Commissioner himself was aware of this, and had pointed it out. Bailie L. then called the members of Council to fix their eye upon Rugby as a central point, from which on one side a line diverged to Birmingham, Liverpool, Lancaster, and would, it was believed, eventually be carried to Carlisle. On the other, it went by Derby and York to Darlington, from whence it would soon be completed to Newcastle; and from this town it would be carried, under most favourable circumstances, along the east coast to Edinburgh. But to come back to Carlisle, a western line to Glasgow could be carried by way of Nithsdale, including the rich district around Dumfries, and from thence to Cumnock—(where there was a rich and ample mineral field, waiting to be disembowelled from the earth for the benefit of man)—from Cumnock to the populous district of Kilmarnock, and from thence the line to Glasgow was completed by the Ayr Railway, already in existence. Thus by means of the Edinburgh and Glasgow Railway, forming almost a circle, and as regards Scotland, running through her rich mineral and agricultural districts, instead of the most sterile parts of the country. Now, taking an enlarged view of this subject, he conceived that these two lines were decidedly those which it was most desirable to promote, both for the interest of Glasgow, and of Scotland generally. He was aware that it might be objected that one line of railway only could be formed and supported. (Hear, hear.) But he would carry the meeting back to 1830, when the Liverpool and Manchester Railway was opened, and had any individual ventured then to state that in ten years thereafter, from 1200 to 1300 miles of railway would have been constructed, and permeating every portion of England, he would have been held to be a castle-in-the-air-builder, unworthy of the slightest credit. Now it was not only in the bounds

Digitized by Google

of probability, but even likely, that these two lines will have made considerable progress in the course of a much shorter period of time. The line from Carlisle to Dumfries would likely be an independent one. That on the east coast would be pushed forward to Berwick; and as a line was now being formed from Edinburgh to Dunbar, it left only twenty-eight miles to be overtaken. And it was only under circumstances like these, when private individuals had done all that they could, that Government would be expected to come in, and aid in filling up the gaps. But the scheme of carrying through 202 miles of railway, through such a difficult and thinly peopled country, as would be the case with the western or Clydesdale line, even though patronised by the Grand Junction Railway Company, was so impracticable in its character, that it was not to be expected it would ever be executed. To the Nithsdale line, however, there could be no such objection; and on this subject he would read the opinion of Mr. Locke, to the following effect:—"The Ayrshire Railway being already constructed, the existence of such towns as Kilmarnock, Dumfries, and Annan, and of extensive beds of minerals on the Nithsdale line, are facts which are entitled to much weight; they are valuable not only because they would contribute to the success of the railway, but because they lead to the conclusion, that by affording to a large population the frequent means of intercourse, and to the owners of the soil facilities for working these mines, such an impetus would be given as would tend to multiply the couveniences of the people, and increase the riches of the entire district." It was true that Mr. Locke had given an equally favourable opinion in favour of the Beattock line; but he (Baillie L.) would take the liberty of also calling their attention to what had been said by Mr. Miller on the subject. He had expressed his opinion that two south lines would ultimately be required for the accommodation of the rapidly increasing population of Scotland. That engineer gave a decided preference to the Cumnock or Nithsdale line, and his reasons for doing so were summed up as follows:—"First, the line to be made is shorter (including the Ayrshire line already formed); second, the summit to be overcome is lower; third, the gradients are superior; fourth, the capital required less; fifth, the expense of formation less; sixth, the population accommodated greater; seventh, the districts traversed wealthier." It was true that the total length from Glasgow to Carlisle was more lengthy, but the superiority of the gradients of the Nithsdale, as compared with the Clydesdale line, would be held more than to counterbalance this. On this subject Mr. Miller had said—"The line by Beattock is above twenty-four miles shorter than the line by Cumnock; in this respect, therefore, the Beattock line is decidedly preferable, and were there no other elements for consideration, the question would be easily settled. On the other hand, the summit to be surmounted on the Cumnock line is 597 feet (which is the natural summit of the country), while the summit on the Beattock line is 965 feet (which is obtained by cutting upwards of 40 feet below the natural summit) making a difference in favour of the Cumnock line of 368 feet; and if the natural summits of the country are looked to, upwards of 400 feet. Looking again to the table of gradients it would be observed that on the Beattock line the ruling gradient is 1 in 113, and it is in length nearly 7 miles. On the Cumnock line the ruling gradient is 1 to 130, and it is in length 5¾ miles." On the whole, continued Bailie L., the Clydesdale or Beattock line would be one of the most extraordinary, in point of engineering difficulties, that had been projected. After a few further observations, he concluded by moving the following as an amendment:—

"Having formerly subscribed 100*l.* to a fund raised by the public bodies and citizens of Glasgow, for the purpose of ascertaining the best line of railway communication between Glasgow and Carlisle, and the Reports of Engineers thereby obtained having supplied the Government surveyors with the data on which they have recommended the Beattock line as the best line of communication between England and Edinburgh and Glasgow, it is inexpedient to make a further contribution, as it ought to be left to those who may undertake the formation of the line to make the Parliamentary survey. If a contribution is to be made, it ought to be to those citizens of Glasgow, who have contracted a debt in the prosecution of this object, which they are unable to discharge."

Mr. WRIGHT seconded the amendment. He was not interested in any of the lines, and therefore left all considerations of personal interest out of the question; but on public grounds he was opposed to their throwing away the public money, seeing that a survey of the proposed line had already been made, and they were not in a position to throw away 200*l.* of the public funds in carrying out that survey.

The LORD PROVOST remarked that Mr. Lumsden might perhaps modify his motion.

Mr. LUMSDEN remarked that it would be "disgraceful," as had been said on another subject at last meeting—it would be disgraceful for the city of Glasgow to refuse 200*l.* to this enterprise, and he would not retract his motion, although it should be thrown overboard. If they refused the grant, they would lose all dignity and esteem in the eyes of the country.

Mr. BELL said he had originally conceived that 100*l.* would have been enough to subscribe to the survey, but having thought more fully on the subject, he would support the proposition of Mr. Lumsden. The statement of Mr. Leadbetter had strengthened rather than weakened his faith in the Clydesdale line; though he (Mr. L.) had recommended the Nithsdale line, they found the county of Dumfries merging all private feelings and supporting the Clydesdale Railway. In this they had acted with impartiality and liberality. On a recent occasion, the Council had voted on the motion of Bailie Leadbetter, 500*l.* to the British Association, said to be for the "Promotion of Science," and surely they would not refuse the small sum of 200*l.* for this great national undertaking.

Mr. WINGATE recommended Bailie Leadbetter to withdraw his amendment. The feeling in favour of the survey of the Clydesdale line was unanimous out of doors.

Mr. CROSS supported the motion of Mr. Lumsden; and observed that they would see from Mr. Howard's speech that the minimum of the sum wanted from Scotland was 1,000*l.* Mr. Leadbetter had, no doubt, made a very able speech in favour of the Edinburgh and the Ayrshire lines; but it so happened that about two years ago he had made an equally able speech in support of a great western line. He would take the trouble of giving a few passages from the speech in question;—He had said, "it appeared to be of the greatest consequence that our communication with Lancashire should be as direct as possible. If it were completed, we should be able to communicate with Lancashire in ten hours; if not, and the east line were executed, our neighbours would obtain the advantage of a rapid communication with the important towns in England, and the communication with them would be *via* Edinburgh." He had further said, "it was of the greatest importance that the survey should be conducted on broad grounds, although he was inclined to think that the line through Nithsdale would be the best for the public." In the resolution proposed by Mr. Leadbetter, there was a clause to the effect, that a committee be named for the purpose of employing eminent engineers, one from England and one from Scotland, to ascertain from these materials, and such other inquiries as may be necessary, the best line for the public, and to obtain plans, &c., for depositation. Now what he (Mr. C.) most admired in Mr. Leadbetter's speech, was the earnest manner in which he had advocated a great western line, upon those broad grounds which were now wanted by the promoters of the present proposed survey. He (Mr. L.) continued to hold his opinion in favour of the Nithsdale line; but the question was this—would the public take Mr. Leadbetter's opinion in favour of the Nithsdale line, or the opinion of the Government Commissioners in favour of the direct line by Beattock?

Mr. BURNS opposed the motion. There never could be a greater misapplication of the town's funds.

Mr. H. DUNLOP supported the motion, and alluded with satisfaction to the manner in which the landholders were coming forward to support the undertaking.

After a few words from the LORD PROVOST,

Mr. LEADBETTER said Mr. Cross had cleverly alluded to a speech delivered by him more than two years ago, but he maintained there was no inconsistency in it with the opinions he held now; for it must be remembered that the question submitted to Sir F. Smith was not regarding the best line to Glasgow, but the best line to Scotland; and it was well known that had the question solely referred to the best route from England to Glasgow, the reply of Sir Frederick Smith would have been of a different kind. Colonel Graham himself had admitted two days ago, at Lanark, that, without the branch to Edinburgh, the Clydesdale line would not be entitled to public support. He (Mr. L.) still, as he did formerly, supported the Nithsdale line, on the broad ground that it was the best, and permitted them to open a communication with the north of Ireland.

Mr. BANKIER—If I understand the matter correctly, there were a number of different lines before the public at the time, and Sir Frederick Smith was required to report on the best of these between England and Scotland, which he has done.

After the subject had been prolonged somewhat further, Bailie Leadbetter, seeing the sense of the Council averse to his amendment, withdrew it, and Mr. Lumsden's motion was thereupon carried unanimously.

RAILWAY COMMUNICATION WITH SCOTLAND.

MONDAY afternoon, pursuant to an intimation by the Provost, at the suggestion of the Town Council, a meeting of the inhabitants of Greenock was held in the Town Hall, for the purpose of taking into consideration the subject of railway communication with England. The Town Clerk having read the requisition calling the meeting,

On the motion of JAMES TASKER, Esq., seconded by WILLIAM MACFIE, Esq., of Langhouse, the Provost was unanimously called to the chair.

On the motion of ROBERT DOW KER, Esq., seconded by WM. MACFIE, Esq., of Langhouse, it was unanimously resolved—

"That a railway communication between England and Scotland, and more particularly to connect London and Liverpool, and Manchester with the cities of Edinburgh and Glasgow, is a measure which cannot fail to be attended with vast benefit to both countries and the empire at large; and that from the report of Sir Frederick Smith and Professor Barlow, the Royal Commissioners appointed (in compliance with an address of the House of Commons to the Crown) to investigate into, and report to Government upon, the various projected lines, it appears that after a most careful, anxious, and impartial investigation, embracing the lengths, gradients, and costs, and the local and general advantages of each route, they have expressed a strong and decided opinion in favour of the line recommended by Mr. Locke, which is to run from Carlisle by Lockerby and Beatock, through Clydesdale to Symington, and from thence by diverging lines to Edinburgh and Glasgow. That this meeting view with satisfaction that the proposed line, so recommended and accredited, is such as combines public advantage, more than any of the other projected lines, with the interests of this town and the west of Scotland, and resolve that it is the duty, and will be for the advantage of the inhabitants to support an undertaking which will be attended with such great national public and local advantages."

JAMES TASKER, Esq., moved the next resolution, naming a Committee to collect money, to aid in defraying the expense of the survey.

Dr. TURNER seconded the motion, which was carried unanimously.

The PROVOST remarked, that the Committee would have an easy duty to perform, as the share which it was expected Greenock would contribute, was only 50*l.*, which, he was sure, would be got without difficulty.

ROGER AYTON, Esq. moved thanks to the Provost for his conduct in the chair, which having been carried by acclamation, the meeting broke up.—*Glasgow Constitutional*, Dec. 29.

MANCHESTER AND LEEDS RAILWAY COMPANY—SPECIAL MEETING.

YESTERDAY a special meeting of the shareholders in this railway was held at the Company's offices, Hunt's Bank, "for the purpose of taking into consideration a proposal that the said Company shall unite with several other Railway Companies, for the purpose of promoting the formation of a line, from Darlington to Newcastle; which line, when formed, will complete the railway communication between London and Newcastle, and also between Manchester and Newcastle; also to consider the propriety of proceeding with the extension of the Manchester and Leeds line to Hunt's Bank." There was rather a numerous attendance, about 50 or 60 shareholders being present. Amongst them we observed the Hon. Captain Best, R. N., Thomas Houldsworth, Esq., M. P., John Feilden, Esq., M. P., William Marshall, Esq., of Preston, James Heald, Esq., of Parswood, Joseph Pease, Esq., of Darlington, James Wood, Esq., William Entwistle, Esq., and nearly all the large shareholders, representing about seven-eighths of the entire stock of the Company. The chair was filled by Henry Houldsworth, Esq., the Chairman of the Board of Directors.

Mr. JELLICORSE, the Secretary, having read the advertisement,

The CHAIRMAN said, of the two questions they had to consider, that of the Hunt's Bank extension was so much the most important that it would be better to discuss it first. The Directors regretted that, since the last meeting of the proprietors of that Company, there had not appeared to be any change in the feelings of the Liverpool and Manchester Company, with regard to proceeding with their part of this project; and it could not be denied, from the short time which had now to elapse before the power of purchasing land expired, that they had every reason to conclude that the Liverpool and Manchester Company had determined not to proceed with the junction. Hence, this Company were placed in a situation of great difficulty; the whole question had been forced on the consideration of the Board, and must now be submitted to the proprietors, as the time allowed them for the purchase of land expired in July next. The views of the Board were unchanged with regard to the advantage of forming the junction, and all the experience they had gained by the working of the line, only tended to confirm their opinion of the great advantage that would result therefrom. This project originated in the year 1838; in July of that year, the first conference between the Liverpool Board and this Company took place. On the 23rd of that month, a letter was received from the Secretary of that Company, stating that the Directors were confirmed in their first impression of forming the junction, and were ready to enter into the necessary preliminary arrangements. On the 31st of the same month, they reported to their proprietors that a proposition had been made for a junction, and that it would receive their best attention. In September, they entered into negociations with the Bolton Railway Company, over part of whose line the junction line was to pass. On the 22nd October, the Secretary of the Manchester and Leeds Company sent them plans of the junction, and an estimate of the traffic, accompanied, however, with a request that they would consider the traffic estimate as the best opinion that could be offered at that particular time. In November, it was necessary to give notice of an application to Parliament, which the Liverpool Company did; the negociation with the Bolton Company was going on in the meantime, and there appeared to have been considerable difficulty in coming to an arrangement with them. The first proposition was, that the junction should be made by the three Companies: by the Leeds Company from their present station to Hunt's Bank; the Bolton Company should continue the line over the river to their station; and that the Liverpool Company should do the remainder. This was objected to, and the negociation was carried on on the principle of the Liverpool Company making the whole of the junction line from Hunt's Bank, and paying a toll to the Bolton Company; and the negociation with the Bolton Company was not settled when the parties went to Parliament. Both the Liverpool and Leeds Companies applied about the same time for Parliamentary powers. Mr. Gill, then the representative of the Leeds Company in London, was anxious that the Companies should enter into an engagement to complete the junction in two years; but the Liverpool Company declined to enter into such arrangement. This was the first intimation they gave of any thing like indecision on the subject of the junction; it was in March, 1839. About that time a request was sent to the Leeds Company for their estimates of the traffic. Mr. Stanway had been employed several months in making them out; but they were sent to the Liverpool Company on the 23rd March. On the 25th the Secretary of that Company addressed a letter to Mr. Gill, asking for explanations of certain items; and the same letter stated that one or two largely interested proprietors in the Liverpool Company had had a conference with the Directors, and had intimated their desire to have more definite and conclusive information with regard to the remuneration likely to be derived from the junction, and had stated that they would not oppose the Directors in bringing a proposition before the proprietors if they would agree to submit the whole question to them again at a future day. On the 9th April this Company received a letter from Mr. Loch, the representative of the Bridgewater interest in the Liverpool and Manchester Company, containing a copy of a letter he had addressed to the Chairman of that Company, calling attention to a junction of railways round the southern part of this town, and representing that he believed such connection could be made at a less cost, and would be more beneficial to the public. That communication came a very few days after the communication of Mr. Boothby, wherein he said that two or three largely interested proprietors were not convinced of the benefit of the connections. The letter was remitted to Mr. Gill in London; but the Liverpool Company proceeded in obtaining their Act for the northern junction, which they obtained in June of that year. In the mean time no more was heard of the southern junction, and they very naturally concluded that it had died a natural death, as it appeared to persons locally acquainted with Manchester, quite out of the question that such a line would ever be made, as, whatever benefits it might possess for other Companies, it was certainly not calculated to promote the interest of the Liverpool Company. In June, 1839, the half-yearly meeting of the Liverpool Company was held, when the Directors pledged themselves to bring the matter before the shareholders at a future period, before proceeding with the junction. No more was done till October, when the Liverpool Company pointed out some discrepancies in the traffic estimates, stating that they had derived information from other sources which showed that the amount of traffic was immeasurably less than was contained in the estimate of the Leeds Company. They could only refer to the principles, which were the same as had guided Mr. Stanway in making the estimate for this line and others. His estimate of the traffic passing along the Leeds and Liverpool canal was 89,000 tons per annum; and that 210,000 tons per annum passed through Manchester on the Rochdale canal. The mode in which he obtained these facts was to station, for a week, men at different points upon the canal, to take the tonnage of the vessels that passed, and to obtain from the captain or the men information as to the destination of the cargo. But to ascertain the traffic to Manchester was a matter of very great difficulty, because of the water communications through Manchester, there was a delivery at the lower end of the town, a delivery at the upper end of the town at Piccadilly, and goods passing through the town: He, however, took the traffic at the Castle Field lock, at the lower end of the town; at the Minshull-street lock, in the centre; and at the Islington lock, out of the town towards Yorkshire; and from the result obtained he considered that 210,000 tons were passing annually through Manchester from Liverpool towards Yorkshire. The estimate brought forward by the Liverpool and Manchester Company was, that instead of 89,000 tons there were only 17,000 tons passing along the Leeds and Liverpool Canal, and that 45,000 was the total tonnage between Liverpool and places east of Manchester. Every endeavour was made to discover the cause of this discrepancy, and deputations from the two Companies met for the purpose of conferring on the subject; but after a lengthened sitting, it was found impossible to convince the Liverpool Directors that there was any error in their estimates, and the Leeds Directors could see no good ground for supposing that there was any error in theirs; and that discrepancy remained to the present time. In January, 1840, the Liverpool Company drew up a minute referring to this subject, which might be considered as their manifesto, stating the grounds why they demurred to proceed with the junction line, which were principally the discrepancy in the estimates, and the projected southern junction. The conclusion from this necessarily was that the Liverpool Company not only were not desirous to move forward, but were anxious to find arguments for delay, and for postponing the formation of the junction indefinitely. This Company had always viewed it in that light, and though not much attention had been paid to the suggestions of a second junction, it did in some degree occupy the attention of the Engineers and Directors of that Company, and they had come to the conclusion that it would be more expensive than the Northern Junction, and that the Manchester and Birmingham Company would have no interest to induce them to join in making such a junction. If the Liverpool Company demurred to spend 250,000*l.*, the estimated expense of the Hunt's Bank junction, to secure the traffic of the Leeds Company, which there was no doubt, from the district their line traversed, must be three or four times the extent of that which they would derive from the Birmingham Company—it never could be the interest of the Birmingham Company to spend an equal sum, for the interest they would have in the junction. And they had come to the conclusion that it was not a line that would ever be made, unless the Liverpool Company would undertake to make the greater part of it, which there was no reason to expect. Plans, however, had been deposited previous to this, in order to go to Parliament, for this line. Two or three months after the publication of the document referred to, a deputation from the Liverpool Company waited on the Leeds Board, suggesting that they should get an Act to make their extension to that station of the Birmingham Railway; but this scheme appeared so impracticable that they were told it would be impossible for the Leeds Company to make such extension, unless the Liverpool Company were prepared, not only to bear a considerable part of the expense, but also to bear harmless the Leeds Company in the expense already incurred in the Hunt's Bank extension. And his impression was that the deputation of the Liverpool Company left them with the impression that the junction line they proposed could never be effected. Since then, however, a communication had been made from parties professionally employed in the Duke of Bridgewater's interest, to the effect that it was exceedingly desirable that the southern junction should be persevered in, and these parties were exceedingly anxious to have it carried out. Knowing that the Duke of Bridgewater's interest was so important at the Liverpool and Manchester Board, they were bound most carefully to consider this subject; and by showing the impracticability and improbability of its being carried out, they should much simplify the course of the Liverpool Company as well as their own. The length of the southern junction would be 5,000 yards of new work, while that of the Hunt's Bank junction was but 4035. It would be, in fact, two miles and eight-tenths wholly upon arches. It would cross the river Irwell, Water-street, Deansgate, Oxford-road, Garratt-road, London-road, Ancoats-street, and Oldham-road; seven of the principal streets in the town. It would cross the river Medlock four times, and at one point the river itself would have to be diverted; and as that river was thickly studded with works of all kinds, it might

Digitized by Google

easily be supposed that a line skirting that river would cut through a great deal of valuable prpperty. It would cross the canal five times between the Birmingham station and the Liverpool line, and he could not say exactly what number of times between the Birmingham station and their own. Then there were difficulties about the station which would have to be in Ducie-street: the existence of the canal, of coal yards, and of several large factories on the other side rendered it impossible to obtain adequate station room there. So far as his recollection went the Liverpool Engineers estimated the cost at 700,000*l.*, while the northern junction would be but 400,500*l.*; of this 700,000*l.* the amount entailed on the Leeds Company would cause to them a difference of 50,000*l.* in engineering; and, including the value of the land, the cost would be nearly doubled. The Hunt's Bank extension line passed over ground that was scarcely half built on, while the other would take in a great number of most important buildings. The further they looked into this question, the more did they see the impossibility of carrying out such a line; and the Liverpool Board could not entertain any expectation of its being completed in any reasonable period. The only other objection of any consequence was as to the traffic. It might be exceedingly difficult, by any statement of figures, to make it clear that the junction would be a remunerative one, but looking at the general circumstances of the case, nothing could be more clearly demonstrated. Mr. Stanway had taken the traffic estimate on the same principle as he prepared their estimate for their line. Their parliamentary estimate was 113,000*l.* per annum; and during the last six months they had received at the rate of 96,000*l.* per annum. And it was notorious, however much they might be deceived by estimates of expense, traffic estimates were in general exceedingly correct, time being allowed for the development of the traffic. On that ground they had a right to presume that Mr. Stanway's estimate would be borne out. But there was another way of putting the matter. The inhabitants of Manchester and the district around amounted to 8 or 900,000. The Liverpool Company had a traffic of 4,000 tons per week, and the water communications of probably 10,000 tons; making a traffic between Liverpool and this district of 14,000 tons weekly. Continuous to this line, in Yorkshire, was a population exceeding a million; these must consume as much as the same number of people in Lancashire, and must draw their supplies either from Liverpool or London. Now the estimate of the Liverpool Company would go to show that not one-tenth of the amount of produce and other articles which necessarily came from Liverpool to supply this part of Lancashire, did come to supply the million of people in Yorkshire. This led to the conclusion that there must be some error in the estimate on which the Liverpool Company relied. Now, were the inhabitants of Yorkshire supplied from Liverpool or London? If from Liverpool, the amount must be vastly greater than their estimate showed; if from London, it proved the importance of the Liverpool Company, increasing the facility of communication between their town and that largely consuming district. (Hear, hear.) Another consideration was, that traffic was limited in a most extraordinary degree by any interruption of the continuity of railways. Their traffic was now nearly double its amount when the line was but partially open. What was the communication between Yorkshire and Liverpool, but a partially opened railway? There was a blank here at Manchester; and what inconvenience could be greater than tumbling out of the carriages of one railway into an omnibus, and having to drive through the streets of a crowded town, at ten or twelve miles an hour, for the purpose of catching the other train? That inconvenience was increasing daily, as the number of their passengers increased. Then the expense of carting goods through the town, and re-loading them, and the delay which this caused, must materially diminish the amount of goods thus conveyed. Taking these two subjects into consideration, they believed a very large increase of traffic would take place if a junction line were formed; and it should be remembered that a very small increase would remunerate them for the outlay. An increase of 100 tons a day would secure to the Liverpool Company an interest of more than 5 per cent. on their outlay; and Captain Laws was prepared to state that more than double the necessary amount of remuneration would accrue to them, if they would form this junction. Looking at the question as one simply between the northern junction and no junction at all, and looking at it as a question of cost on the part of the Liverpool and Manchester Company, he had no hesitation in saying, that if that Company would put the question on that ground, the Directors of the Leeds Company would submit to their proprietors, at a special meeting, a proposition for guaranteeing the Liverpool Company, in the event of their completing the junction from any loss that might arise, and forgiving this guarantee on condition of receiving but one-half the advantage that would accrue from the junction. (Applause.) And we know enough of the sentiments of some large proprietors in this Company to say that they would cheerfully support the Directors in such a proposition. (Applause.) It had always been the wish of the Directors of the Liverpool Company to secure this junction: but in order to ensure its advantages it would be necessary that the most cordial and thorough understanding should exist between the two Companies, and that the mode of working the traffic should be most harmonious, and on that ground he had wished to avoid, in giving this historical detail anything which might seem to reflect on the Liverpool Company. They now came to the great question, what course this Company ought to adopt under these circumstances? Though it might be a question whether, if they were starting *de novo*, the advantage of the water communications would be such as to justify the expenditure they must incur in extending their line to Hunt's Bank; but in the position in which the Company stood, it was a fair question to consider whether it might not be to the interest of the Company, and might not ultimately bring about the communication they wished to establish, if the proprietary should acquiesce in the Directors proceeding with the junction. He did not present that as a resolution at which the Board had arrived without great difficulty, or as one of a very satisfactory nature, but he believed it to be the most satisfactory conclusion which they could come to under the circumstances. The communication by water had certainly increased very much of late; and there was the advantage of goods being carried by night, by which the time consumed might be said to be almost neutralised. Looking at the capability of the river for extension and improvement, and looking at the effect which it would have on the navigation if this Company decided on making the proposed extension, he thought the arguments decidedly preponderated in favour of such a course. The Board had anxiously considered the subject, and had come to that decision. They wished, however, to throw the question upon the proprietors, believing that they would deal with it in the way they thought best. They should be glad to give any further information in their power; but he thought there would be no advantage in further delaying the matter.

Mr. Marshall, of Preston, submitted a motion, authorising the Directors to proceed with the formation of the extension line.

The motion was seconded by Mr. Jas. Heald.

In answer to questions from Mr. Pease, of Darlington,

The Chairman said, that Mr. Gooch's estimate of the cost of completing the line, in the most perfect manner, as originally contemplated, was 124,000*l.* for his part of the works. Upwards of 30,000*l.* had been already expended in land, and it was estimated that nearly 40,000*l.* more would be required, the total being about 200,000*l.* By a more recent and economical estimate, the total cost might be brought within 160,000*l.* or 170,000*l.*, on the supposition that the buildings they were then in were made suitable for a station. Of this sum, 30,000*l.* had already been paid for land, so that the difference in expense, between remaining as they were and completing the extension, would only be 120,000*l.* or 130,000*l.*

Mr. J. Fielden wished to pledge the Directors to adopt the lowest estimate, but the feeling of the meeting was against their being fettered; and the motion was put and unanimously carried.

After a lucid statement from the Chairman, of the circumstances under which the Company were asked to join in a guarantee to the shareholders of the Northern Union Railway, from Darlington to Newcastle,

Mr. James Heald moved that the Company should join in the guarantee to the extent of 2,000*l.* a year, on certain conditions recommended by the Directors, the principal being that the cost of the railway should not exceed 500,000*l.*, that 6 per cent. should be guaranteed to the shareholders for 10 years, and that the overplus of the receipts should be divided amongst the Companies furnishing the guarantee.

Mr. Humphries seconded the motion.

Mr. J. Feilden strenuously opposed the proposition, contending that it was an infraction of liberty for the Company to bind the whole of their members in a guarantee; and declaring his intention to give it all the opposition in his power when the Northern Union Company came before Parliament for an Act to sanction such guarantee.

After a protracted discussion, the motion was put and carried with only two dissentients.

At the close of the business, W. Entwisle, Esq. read a statement showing that the net revenue of the Company, from the 1st of July to the end of the present year, would amount to 116,000*l.* The expenses of the six months, including the half-year's salaries, would be 40,000*l.*; the interest to loan-holders, minus the interest on the banking account, would be 31,000*l.*; making a total of 71,000*l.* of out-goings, and leaving a balance of 45,000*l.* net proceeds. Dividends of 3 per cent. on the old and the half shares, and of 10 per cent. for three months on the quarter shares, would require 40,000*l.*, leaving a surplus of 5,000*l.* out of the half-year's proceeds, as a depreciation fund, without touching any of the previous earnings. (Applause.)

Thanks were then voted to the Chairman, and the proceedings terminated after occupying three hours and a half.—*Manchester Courier*, Dec. 24.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—At the late meeting of the proprietors of the Manchester and Leeds Railway Mr. Entwisle stated that after paying 6 per cent. per annum, or 3*l.*, the half-year upon the old and the half shares, and 10 per cent. upon the last-created shares, there would remain with the Directors a surplus of 5000*l.* out of the half-year's dividends as a depreciation, *without touching any of the previous earnings.*

I am anxious to know whether the considerable balance arising from the weekly revenue of those months after the payment of interest upon bonds, &c. is added to this depreciation fund, or appropriated to any other purpose, or is now lying in the hands of the banker. There is no doubt that the Direction of this great railway has been conducted with consummate ability and an integrity of principle which has been the main stay of the undertaking under its unparalleled difficulties; but it must also be allowed that cases of the deepest private distress have arisen from the depreciation of the Leeds shares from 30 premium to 20 discount. Many who hoped long against hope, and are now rewarded for their confidence in the ultimate fortunes of the railway, made great sacrifices of other property to retain their original investment, and that some have a wreck only in this undertaking having been compelled to sell at the time of its adversity; so that the prospect of a quarterly dividend, and the appropriation of the *available earnings*, whether of this or a former half-year, must prove a source of satisfaction to the *present shareholders*, who have borne the anxiety of the last twelve months.

The Oldham branch was not mentioned, which I much regret, but it has been relet at an advance,

Digitized by Google

and will probably be opened in April. The injury to the railway from this delay is comparatively of no moment, but the silence of the Directors upon the subject gives rise to the most exaggerated and unfounded statements of the loss and inconvenience. Next week I shall address a few lines to you, Sir, upon the Manchester and Liverpool Junction, which you view in so just a light; but I should strongly deprecate any misunderstanding between the Companies.

I am, Sir,
A HOLDER OF MANY SHARES.

December 29, 1841.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—As the columns of your widely circulated journal are open to free discussion on the merits and demerits of all railways, for the information of *purchasers*, as well as *sellers*, of railway stock, I therefore beg to transmit the following statement of the traffic on the Manchester and Leeds line, for six months ending 31st instant, and to add that I am no shareholder in this or any other railway connected with Manchester, but am influenced solely by an earnest desire to see gambling and ruinous speculation checked, and to put the unwary on their guard, and those who cannot afford to be ruined.

I am, Sir, your most obedient servant,
JOSEPH WALKER.

Manchester, 29th December, 1841.

Traffic from 30th June to 31st December, 1841, as calculated at the late meeting of the Company, to be		£115,000
Off which working expenses, being within estimate	£45,000	
Six months maintenance of way and depreciation of stock	10,000	
Six months interest on borrowed money, 1,560,000*l.*	39,000	
Three months interest at 10 per cent. on 39,000*l.*, being 2*l.* deposit on 19,500 quarter shares	975	
		94,975
Will leave		£20,025

To pay six months dividend on 13,000 shares, 70*l.* paid; 13,000 shares, 30*l.* paid; being on 1,300,000*l.* about 1½ per cent.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The argument of Mr. Hood, that on a given curve, the leading wheels of a six-wheeled engine will form a greater angle with the rails, than those of a four-wheeled engine, and consequently will have a greater tendency to overrun the rails, must be admitted as unanswerable,—to the extent of the difference in the extreme length or distance of the axles apart,—*i. e.* if the distance between the axles of the six-wheel be ten feet, and those of the four-wheel six feet, the tendency to overrun will be greatest in the six-wheel—but, supposing the axles of the six-wheel to be limited to eight feet six inches, and those of the four-wheel to be extended to ten feet, then the four-wheel engine would have the greatest tendency to overrun the rails. And such a lengthening of the four-wheel would not necessarily take any weight off the driving-wheels because they might retain their present position, and the front wheels be extended, beyond their present position. And by this process the "pitching" tendency would be very materially reduced, for the frame would form a less angle with the rails horizontally, during the play of the springs. The lateral friction of the wheel flanges would of course be increased in proportion with the length, and in proportion with the lateral friction would be the tendency to go off the rail at a tangent; but, inasmuch as the lifting tendency would be reduced, and the "pitching" motion corrected, the decrease of risk by the one process would far outbalance the increase of risk by the other. Nor would the lengthening of the four-wheeled engine involve great increase of gross weight, because the weight of the front wheels would increase in value, as a means of keeping down the front of the engine, in proportion to the length of the leverage of the frame, measuring from the driving axle; and it must not be forgotten that it is the force of gravity alone which steadies the four-wheel engine vertically—while the six-wheel may be steadied vertically by leverage alone. Thus the whole weight of the body of a six-wheeled engine might be put on the driving wheels alone, just as a heavily loaded scale beam may, when balanced, be perfectly and firmly steadied by the lightest possible prop under each scale. But to steady a steelyard firmly, requires a preponderance of gravity, and this is the analogous case to the four-wheeled engine. Shortening the six-wheeled engine between the axles, must of course deteriorate its steadiness, and give it a tendency to "pitch," *i. e.* the vertical angle of the frame with the rails will increase in proportion as the base is diminished.

But there is yet another distiguishing point between the four and six wheeled engines. If the driving wheels of the six-wheel occupy an exact central distance between the leading and training wheels, which must evidently be the true geometrical position—the axle of those wheels, on a segmental curve, forming a portion of a true circle, must always be at a right angle with the rails, while the wheels are parallel to the circumference of the circle. Consequently, if play be given to the leading and training axles, equivalent to the radius of the curve, and the cones of the wheels find their true proportional diameters, the power of the engine will be duly applied to produce a true rolling motion of the driving wheels. In no case of curvilinear progress with a four-wheeled engine, can a true rolling movement of the driving wheels be produced, because the axle of the driving wheels can in no case be at right angles to the circumference, or parallel to the radius of the curve; and, play on the axles would involve too much unsteadiness to be safe, if a short engine, and be insufficiently availing, if a long engine.

In criticising the statement of Mr. Roberts, that the "vertical oscillations of a four-wheeled engine are occasionally increased by the strokes of the pistons beating in the same time," Mr. Hood's objection is mathematically true to his own assumption of the oscillation being vertical, and the motion of the pistons being horizontal; but that gentleman has everlooked the complex, and reasoned only upon the simple. There is yet another element to be considered in the propertics of motion—capacity for *deflection*. The practical examples of this are numerous.

Any one riding on an engine down an incline with the steam cut off, and the tender alternately advancing to, and receding from, the engine, with violent horizontal shocks on the coupling pins, will, if he stands on his heels, become painfully conscious how horizontal shocks may be deflected in a vertical direction.

A cannon shot striking the surface of the sea in a direction nearly horizontal, will immediately be projected upward at a considerable angle. This property of motion is taken advantage of for the purpose of striking objects behind defences, under the name of *ricochet* firing. When the flange of a railway carriage strikes the rail obliquely, during horizontal progress, one result will be a vertical dip of the carriage immediately above the axles, if the spring yields readily. If the spring be rigid, a jolt will take place.

In case of a collision between two trains, if there be sufficient longitudinal elasticity, the momentum will be absorbed, and the motion will not be deflected. If the longitudinal elasticity be insufficient, the horizontal motion will be converted into vertical motion, in the form of the hinder carriages turning over upon the roofs of those before them.

At the very outset, the horizontal motion of the pistons of a locomotive is converted to a continous circular movement, and that by a most rapid reciprocating action. There is a moment when the piston is exerting its full power, and another moment when it has no power whatever. This violent change cannot take place without deflection.

The vertical motion in the descent of water when it impinges on a hard body, is instantly converted into a very violent horizontal movement. These instances might be greatly multiplied if it were needed.

The various causes tending, or which may tend, to produce oscillation in an engine on a railway may be thus summed up:—

1. The irregular movement generated between the varying diameters of the wheels and the irregularities of the rails. This irregularity will increase, in proportion as the distance between the axles decreases—and be greater with a four-wheel than a six-wheel. The extra friction of the six-wheel will induce steadiness at the expense of engine power, averaging, if I may so phrase it, the inequalities, and counteracting the vertical dipping.

2. The violent changes from the state of motion to the state of rest, in the pistons; which may correct the oscillation produced by the irregularity of the wheels, or increase it, just as they may happen to be out of time or in time.

3. The oscillation of the water in the boiler, which may be either longitudinal, horizontal, or vertical. And the higher the boiler is placed above the rails, the more violent will be the oscillation. Reasoning upon this principle a high boilered four-wheeled engine ought to be more subject to "prime" than one of lower boiler, on six wheels.

If the irregularities of the wheels, the strokes of the pistons, and the oscillations of the water in the boiler, could all be timed to counteract each other, the engine would not rock, but if it should happen that they were all in time, the engine would probably be thrown off the rails.

At a former period, I stated the general principles which ought to govern the construction of locomotive engines. At a future time I will endeavour to show to what extent peculiar circumstances interfere with their full developement.

I am, Sir, yours obediently,
WILLIAM B. ADAMS.

Dec. 22, 1841.

FOUR AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—I have perused with interest the various letters which have appeared in your valuable journal on the subject of four and six-wheeled engines, and should have left its discussion to parties more competent from experience to decide upon their relative merits were it not that some of your apparently practical correspondents have lately shown a disposition to avoid the main question by playing upon words and misconstruing sentences in a manner frequently unworthy of their talents, and in all cases tending rather to injure than to benefit the cause which they espouse.

Amongst these I regret to rank as the first the gentleman who subscribes himself Charles Hood, and in pointing out the special pleading to which he has resorted, I need only instance his letter of 13th December. To begin with his reply to Mr. Roberts, he interprets a phrase used by that gentleman in a manner in which, if he be a mechanic, he well knows that it cannot be intended, and having refuted an absurd proposition of his own setting up, he boldly asserts that he has disproved the whole of a well-grounded argument. Mr. Hood calls it uncourteous to quote the words of an antagonist. Is it fair wilfully to misinterpret them, for Mr. H. is evidently too well informed to have done so through ignorance? I will leave your readers to judge for themselves in this instance by quoting the phrase in question, at the hazard of being deemed "ungentlemanly" by Mr. H. It is stated by Mr. Roberts that "unless the road is in bad order, each pair of wheels in a six-wheeled engine presses upon the rails with nearly an uniform weight throughout the journey." Any one at all acquainted with locomotion would understand this to signify that, *if at any time each pair of wheels shall press with a given weight* upon the rails, when upon a road which is in good order, *that given weight of each pair of wheels* will be nearly uniform throughout the journey. And yet

Digitized by Google

Mr. H. distorts these words to express that the weight upon *all* the wheels of a six-wheeled engine is equal! Even did not the expression bear the true meaning on its face, is it likely that Mr. Roberts could intend to advance a doctrine like that put into his mouth, and which his youngest apprentice would laugh at?

I will say nothing of Mr. Hood's reply to the statements of Mr. Roberts respecting the increased oscillations of the springs and engine body caused by each stroke of the piston. More able mechanics than myself will doubtless answer the objection of Mr. H., if after his last letter they do not consider him too slippery an antagonist. Yet, as a question of common sense, it would appear to me that the motion of the axle being rotatory, the horizontal pulls and pushes being limited by its bearings in the framing, whilst it has liberty to play up and down, when the perpendicular positions of the crank cause a strain in the latter directions, the idea of the stroke of the piston contributing to the vibrations in question, is by no means so ridiculous as Mr. Hood affects to consider it.

I have trespassed on your space beyond my original intention, and will be brief in my comments on the remaining observations of Mr. Hood.

In reply to Mr. Gray, he contradicts several reports of the accidents with four and six-wheeled engines. It remains to be seen who is in the right; but he does not stop there. He proceeds to condemn Mr. Gray's advocacy of the outside frame; and why? Because, as he asserts, Mr. Robert Stephenson has thought proper to abandon it. If a reason like this appears to Mr. Hood a sufficient one for abandoning a principle in mechanics or any thing else, I trust the day is distant when many shall be found to agree with him.

Lastly, he vents his satire on Mr. Cruckshank, or the person who adopts that signature, because in your journal his name is variously spelt at different times. Granted that his signature be fictitious, does that weaken his arguments?

If these remarks have the effect of bringing back the discussion of the merits of four and six-wheeled locomotive to its proper course, I shall not again trespass on your columns.

I am, Sir, your obedient servant,

A FRIEND TO RAILWAYS.

December 21, 1841.

THIRD-CLASS CARRIAGES AND MR. CRAWSHAY.

To the Editor of the Railway Times.

SIR,—I should have troubled you two weeks back, with a few remarks upon Mr. Crawshay's uncalled for and highly reprehensible (I should have added previously to the appearance of his explanatory letter something stronger,) conduct, at a meeting of the proprietary of the Northern and Eastern Counties' Railway, had I not almost feared to trust myself to speak of it—conduct, even with his explanation, I cannot but characterise as highly offensive in a Chairman of a public body.

I am at all times unwilling to use harsh or even strong language towards any public character, more particularly when writing under an anonymous signature; but there are times when public men so far forget themselves, as not only to justify strong language, but to render it an imperative duty upon all men who would not see gentlemen, every way the equal, except in the weight of their purses,—and in many things superior to such individuals,—scoffed at and ridiculed on account of that which they may perhaps want, but yet be more deserving of than the scoffers themselves. I cannot consider the explanatory letter of Mr. Crawshay as at all satisfactory. It is not because Mr. Crawshay is blessed with an extraordinary share of wit, or jocular *power*, that poor men are to be made the butt of his wit or the objects of his fun.

But it appears from Mr. Crawshay's letter, that he desires that all men may know what a fund of wit he has at command, and what a power of facetiousness he has ever trembling upon his tongue. Then henceforth be it known unto all men, that Mr. Crawshay is a wag; that he aspires to be a wit as well as an iron-master; that he desires fame from his jesting powers, as well as from his conduct as Chairman of the Northern and Eastern Railway Company. But Mr. Crawshay must not be offended at the thought which will naturally occur to men's minds, that the situation of court-jester or buffoon would be more in accordance with the talent he has displayed, than that of Chairman to a public Company.

Mr. Crawshay proceeds to justify his joke by such an argument as the following:—"I know of no bye-law to prevent a sweep with his soot-bag entering a third-class carriage, provided he pay his fare, any more than the itinerant fishmonger with his basket of fish." I, being unacquainted with the bye-laws of the different railway companies, would, in answer to this, beg to know whether there is any bye-law to prevent a chimney-sweeper with his soot-bag entering a first-class carriage, provided he pay his fare? I should imagine not; and Mr. Crawshay's reasoning would be just as pertinent in the one case as in the other.

But Mr. Crawshay, I suspect, would object to sit next to a chimney-sweeper, even *without* his soot-bag, in a first-class carriage, although the sweep should actually pay a first-class fare. And yet he cannot sympathise with a poor man, although of gentlemanly conduct and of gentlemanly feeling, travelling in a third-class carriage, and being inconvenienced, nay, insulted, in this way. Verily, I had used to think that the gentleman was shown as much in the feeling as in the conduct of a man; but a new light has broken in upon my brain, and henceforth the man who is possessed of the finer sensibilities and delicate feelings known only to educated minds, is as nothing when weighed in the balance against a heavy purse and merely outward gentlemanly bearing.

I would, before I conclude, wish to say a word upon the remedy which you, Sir, yourself, proposed to obviate the abuse (I admit it) of persons who can well afford to pay first and second class fares, travelling by third class carriages, but I think it an abuse almost inseparable from a system of first, second, and third class carriages. It is impossible to compel all people to pay a high fare when they have an opportunity of travelling at a low one; it is sure to be an abuse especially prevalent in short distances. But I do not, admitting all this, admitting the abuse carried to an even greater extent than it is at present, see the justice of depriving the poor of the benefits of railway travelling, (for speed is almost the only benefit arising from the introduction of railways, the fare being generally as high as that by coach, and in many cases higher,) which the remedy that you propose would do. I do not see the propriety, nay, I repeat it, the justice, of depriving the poor of the benefit of rapid travelling, because persons who can afford to pay abuse the system of railway proprietors, by using the conveyance which is especially provided for the poorer classes. The remedy which you proposed, "that of trains starting at longer intervals, and travelling at less speed," would entirely deprive the poorer classes of the benefits arising from a railway, for there is little or no difference, as I said before, with regard to the comparative cheapness of the different modes of travelling.

I am inclined to think that upon reconsidering the matter, you will be induced, if not to alter, at least to modify, an opinion which inflicts so serious an injury upon our poorer brethren; and which tends to make broader the distinction and line of demarcation between the rich and the poor, but which, in my humble opinion, it ought to be the object of all governments and governing bodies to render as indistinct and as invisible as possible, at all events in such matters.

I am, Sir, yours respectfully,

P. Z.

AMERICAN ENGINES—BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—A brother "Shareholder" in this railway, who writes in your last week's paper, with a very plausible air of authority, on the subject of the "Management" and the "engines," appears to hold opinions as opposite to mine as are our respective residences; and as I have the advantage over him, by my residence enabling me to see a little of what goes on, I may venture a few lines in reply.

Your correspondent would lead us to believe that "the goods' trucks were tracked by the passenger trains," only so long as the old Board of Management and the Superintendent remained, and that the new Committee discarded both the Superintendent and the goods'-trucks-with-passenger-train system at the same time.

He tells us further, that since the cost of locomotive power between January and June last, for a speed of 20 miles per hour, was 1s. 10½d. per mile, it follows that the cost of locomotive power between November and December present, for a speed of 12 miles per hour (for goods alone) must be also 1s. 10½d. per mile, together with 9d. (about 40 per cent.) in addition for depreciation. I believe the fact to be, that when the Superintendent was recommended to leave the line, the system of goods with passengers was still carried on for rather more than three months afterwards, and the irregular times of trains occurred (by my observation in frequently travelling by them) both before and after the era alluded to, and from a very natural cause, independent either of Managers or of engines—such as, for example, on arriving at Cheltenham the train was to receive three trucks going to Birmingham, but as there were already at the tail of the train two coke waggons going to Bromsgrove, the latter had to be pushed back, the former pushed forward, and the latter pushed to the tail again before the train could leave Cheltenham. At Defford again there was a fruit waggon for Birmingham, and the same operation had to be repeated. These occurrences, I believe, were well known to all travellers on the line.

The soundness of the second position, namely, that the separate goods' trains have cost at a *slow* speed more (for that is the statement) than the mixed trains cost at a *fast* speed, does not appear to me borne out by the premises stated, but we know that in all other like cases the contrary position has been found to result.

Your correspondent, then, generally calls (like Nelson) upon every shareholder "to do his duty," and to pitch either the Directors or the engines (and which of the two he means is not at all clear) off the line entirely, and the reason apparently given is, that the engines on the line "are not equal in power to those on other lines." If this recommendation applies to the "Management," which seems to be the principal antecedent to the paragraph, it may be a wise one or it may not, for I have not the means of comparing very accurately the "management" of the Gloucester with those of other lines; but if it applies to the engines, your correspondent, before he comes to such sweeping conclusions on his premises, should pay a visit to Bromsgrove, where, as I learned about three months ago from one of the "Managers," a trial was made with one of Bury's best and most powerful engines which could hardly drag a light train (about 24 tons I was told,) up the Bromsgrove plane at about 8½ miles per hour, while one of the American engines took the same train up at nearly 16 miles per hour. I think therefore your correspondent must have made some mistake as to "power," and in the hope that his further inquiries will lead him to that in which both of us are interested—the prosperity of the railway, I now remain

Your very obedient servant,

ANOTHER SHAREHOLDER.

Camp-hill, Birmingham, Dec. 23, 1841.

SUNDAY TRAVELLING ON THE EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—With reference to your earnest and truly valuable observations on the question of Sunday travelling, which is now agitating the fanatical portion of this community, I beg to call your attention to the constitution of the Edinburgh and Glasgow Company as to the manner of voting. This is a subject of deep importance, as the Puritans are boasting in all quarters that the constitution of the Company affords them the means of carrying their point, though they should only hold a very insignificant number of shares. And it is right the shareholders should know that already the work of buying up small lots, for the sake of votes has begun. The provision of the Act, section 132, is "for any *share* or shares not exceeding three, *one* vote; for more than three and not exceeding *five* shares *two* votes; for more than *five* and not exceeding *ten* shares *three* votes; for more than *ten* and not exceeding twenty shares *four* votes; when more than twenty shares then an additional vote for every ten shares, beyond the first twenty shares, provided that no person shall have more than ten votes in his or their own right." It is then obvious that the small holders have a great advantage over the larger holders; and if parties choose to split down their shares amongst relatives and dependents they may increase their influence to a degree altogether disproportioned to their stake in the concern. It cannot be known to what extent this practice may be carried—because the power of transferring may be exercised down till the 7th day before the general meeting (section 138), unless the Directors should fix an earlier day. All such splitting is attended with expense. But there is not so much expense in the case of new purchases. And the wild men are giving out very generally that they will have no difficulty in procuring funds sufficient to enable them to carry out their views. It becomes the shareholders in Lancashire to look well to this. You have no conception of the extent of the fanatical feeling on this question, but I am thoroughly convinced that, after all, the numbers who will really be influenced by it in their threats of not using the railway is perfectly contemptible—the proportion is not one in a hundred. The sober part of the community are indignant at the nonsense which is abroad, and the admirable example set by the majority of the Directors—assailed as they were by every species of influence to desert their trust—has gained them the approbation of the most influential though not the most noisy part of the public. Laying aside all other considerations, I shall never believe that the proprietary will sacrifice a full seventh of their returns on this very costly undertaking, in compliment to the feelings, or in compliance with the wishes, of the most miserably hypocritical opposition that ever was raised against the public good. The issue is, however, in the hands of Englishmen, and it will be a great source of satisfaction to all right thinking men in this quarter, to know that they are taking the proper steps to vindicate their interests.

I am, Sir, your most obedient servant,

AN EXTENSIVE HOLDER.

Edinburgh, December 28th, 1841.

CARRIAGE OF GOODS ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Few lines of railway would have justified the expenditure as a transit for goods only, but when laid down for the combined purposes of passenger and goods' traffic, most of them will answer well. The passenger traffic cannot be forced beyond the convenience and cheapness the line affords, and any great defect in its management gets remedied by the clamour of the parties who have suffered the inconvenience. Different is the case with merchandise. There are in most cases active competing lines offering cheaper transit, and consequently any irregularity or bad management on the railway neutralises all the professed advantage that can be offered in speed. A certain quantity of loading offers itself, but so restricted as to produce little returns. Many Boards of Directors have been careless and undecided in making such arrangements as would secure a large bulk of this trade, which is necessary to produce anything like a return expected or required as a revenue adequate to the outlay. Few Directors have ever made the applicability of rails as a transit for heavy merchandise their study, and consequently can form no calculation of the cost of tracking goods. I have always argued that this is a very desirable element in Railway Management, and have endeavoured to combat the erroneous idea that goods cannot be carried on railways with profit if reduced to canal rates. The absolute cost must of course depend upon the gradient, other things being considered the same; and the best authority we have on this is the experience of Mr. Bury, on the London and Birmingham line—see his Report to the Association, from which it will appear the cost of tractive power is one-third of a penny per ton per mile less than the wages per mile paid to a boatman on any canal calculated at per ton.

I am disappointed in the returns for goods on most lines, and more so as those lines having the most resources seem to secure the smallest portion of the trade. I take, for instance, the lowest in the scale, viz., the Birmingham and Gloucester. This line is not receiving a weekly average per mile for goods equal to one-seventh that of some others—as the Manchester and Leeds opened for this trade more recently. It cannot be contended that it arises from the trade in its locality being a restricted one: the amount of loading carried on lines parallel to this railway is greater than that of any other in England. A reference to the Parliamentary papers on the Severn Navigation Bill of last session, shows that for 30 miles in a line with it, viz., Gloucester to Worcester, 660,000 tons pass annually; and for the remainder, between Worcester and Birmingham, 380,000 tons. The other portion diverging at Worcester for Stourport, Manchester, Liverpool, and the north, part of this loading is more applicable, more profitably, and readily diverted into this line, and *via* the Grand Junction Railway to Manchester and Liverpool.

I am quite sure nothing but better Management is required to show the value of heavy goods' traffic for railways generally, and more particularly this line, which stands so miserably low in their returns compared with other lines.

I have, as my comparative table, taken the average receipts for the last four (published) weeks, which I subjoin.

I am, Sir, yours respectfully,

A SHAREHOLDER.

NORTH UNION, AND LANCASTER AND PRESTON RAILWAY COMPANIES.

THE following appeared in the *Liverpool Courier* of Wednesday week:—

SIR,—The paragraph in your last week's paper, relative to these Companies, only gives a very partial statement of the case; I therefore trust you will not object to insert the following:—

The present arrangement between the two Companies was for the amalgamation of their respective locomotive stocks, and the joint working of the locomotive power of the two lines, the expense being divided between the two Companies, according to the number of miles run by each; and an additional sum paid by the Lancaster to the North Union Company, for the management of the locomotive power. The arrangement was also for the accommodation of the Lancaster traffic, at the North Union Company's present station, and, as a natural consequence, the Lancaster trains ran to and from the North Union Company's present station.

This arrangement has been acted upon for nearly eighteen months, but it will terminate at the end of this year, the North Union Company having given notice of their intention not to continue it beyond that period, unless the Lancaster Company will pay them an extra annual sum of about 1,000*l.* beyond the sum which the North Union Company already derive from the existing arrangement. The North Union Company appear to put forth the expense of making their railway to the junction of the two lines, as an excuse for their demanding an additional charge from passengers travelling to and from the north; but the making their line to Dock-street, where the junction with the Lancaster line is effected, is merely performing that which they were bound to do by their own Act of Parliament; and, it may be further remarked, that the Lancaster Company offered to take powers in their Act and make that portion of the line; but the North Union Company opposed them in Parliament, and would not allow them to do it. It cannot be denied, that the North Union Company ought to deliver and fetch their passengers to and from the north, at the terminus of their own line, without any extra charge; for, with equal justice might the Lancaster Company only take their passengers to the outskirts of the town of Preston, and then say to them, "If you want to go forward to the North Union Railway you must pay us an extra shilling for taking you through Preston, as that portion of our line cost us nearly 100,000*l.*" There need not necessarily be any extra delay or expense attendant on the passengers from the north at Preston, unless the North Union Company choose to make them. The arrangements necessary for the accommodation of the passengers travelling through Preston by railway, as also the compensation to be paid for the accommodation of the Lancaster traffic, and for the management of the locomotive power, was left to the decision of a most competent referee—approved of by the North Union Company; but with whose decision they have now expressed themselves dissatisfied, and discontinued the present arrangement in consequence.

So satisfied am I that the Lancaster Company wish to act in the most fair manner, and afford the greatest possible accommodation to the public, I have no doubt they would agree to refer the whole question, relative to the interchange of the through passengers at Preston at the terminus of the two lines, to the arbitriment of Sir Frederick Smith, or any other competent and impartial referee.

A LANCASTER RAILWAY PROPRIETOR.

Lancaster, Dec. 20, 1841.

RAILWAYS IN FRANCE.—The *Journal des Debats* states, that from all parts of France the communes interested in the principal lines of railways continue to vote considerable sums in their favour. The city of Rheims has just voted 200,000 francs to the direct road from Paris to Strasburg. St. Quentin offers to guarantee an interest of four per cent. on a capital of 2,000,000 francs, for a branch to the north road. The town of Besançon gives 1,000,000 francs in capital for the road from Dijon to Mulhouse. A branch from the same line, to pass through Vesoul, has been subscribed for in that town, which contains but 6,000 inhabitants, to the amount of 75,000 francs; and the town of Gray has guaranteed four per cent. interest on a capital of 400,000 francs. In the Upper Saone all the communes traversed by this line of railway have have engaged to give the ground gratuitously. "Such demonstrations," observes the *Debats*, "on so small a scale, will no doubt exercise the most decisive influence on the opinion of the Chambers."

2. *Minus* toll to London and Birmingham 16*l.* 16s. 1d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and G. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 37*l.* 4s. 0d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

18. The returns are for eight days.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll. The returns are for eight days.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 4,004*l.* 7s. 0d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 29*l.* 11s. 0d.; horses, 25*l.* 17s. 0d.; dogs, 1*l.* 14s. 6d.; parcels, 245*l.* 5s. 1d.; cattle, 15*l.* 15s. 6d.; corn, 18*l.* 15s. 8d.; heavy goods, 467*l.* 5s. 2d.; coal, 146*l.* 16s. 3d. — Total, 961*l.* 0s. 2d. The dividend is from the time of opening.

28. The details of the receipts are as follows:— Passengers, 2,267*l.* 19s. 8½d.; parcels, carriages, horses, and mails, 368*l.* 9s. 11½d.; merchandise, 1,036*l.* 9s. 5d.; minerals, 274*l.* 0s. 1d.; cattle, 28*l.* 14s. 10½d.—Total, 3,975*l.* 14s. 1d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 98*l.* 16s. 5½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

32. The returns are exclusive of Man. and Bir. toll.

34. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Mr. H. G. *(Devizes).—It is nothing but want of space which prevents us from carrying our correspondent's suggestion into effect. We shall see what can be done in the matter by-and by.*

A Shareholder *can scarcely be such to any extent, to wish us to copy the articles to which he refers.*

M. N. X. *is thanked for his very kind feeling. We shall not fail to notice, at the proper time, the matter to which he adverts.*

Vitruvius Verticus. *—We hope our correspondent will approve of of what we have said on the subject of which he writes. The re-publication of his previous letter would not under all the circumstances be desirable.*

A Glasgow Citizen. *—Invariably the prices for the current week—the latest for the day, from Monday to Friday inclusive, and the opening prices of Saturday.*

In a notice of "A Hand Book for Mapping and Engineering Drawing," in the Railway Times *of the 18th ult., the name of the author was spelled B. P. Milne, instead of B. P. Wilme.*

Mr. J. M. *(Liverpool).—The "absurdities and ludicrous lucubrations" came to the office in the usual business-way as an advertisement. A moment's reflection will convince our intelligent correspondent that no Editor can fairly be held responsible for the puffing indulged in by advertisers.*

A Proprietor in Many Railways *would be very glad if we could influence the different Railway Companies to make up their returns of weekly traffic to the same days of the week and the months, viz., up to each Saturday night inclusive. This, he says, is a favourable time to make the alteration; for instance, they might all reckon up to last night, which will finish up the year—the following week all up to Saturday night. Of course the first week's return of the new year would embrace eight days, but that does not signify. Saturday will just fit in for the last day of 1842. We should be glad to see the suggestion carried out. The other suggestion offered by our correspondent was at one time acted upon, but there were serious objections to it.*

The suggestion of Locomotive the First *shall be handed over to the proper party.*

R. M. *(Stockport)—Unless the shares were regularly transferred, and the transfer registered in the Company's books, the seller is liable for the calls.*

Amicus *will find what he seeks in the* Railway Times *of December 18.*

A Railway Shareholder. *—After mature deliberation we must decline giving insertion to our correspondent's letter. His charges are much too sweeping, and the panacea which he proposes has already been before railway proprietors sufficiently often to enable them to judge of its merits.*

A Shareholder (Brighton). *—The vacancy has not yet been filled up. There are, of course, hundreds of applicants. The names of five or six, all of them well qualified, have been mentioned to us. We believe* merit *will be the* only *recommendation.*

Doctor. *There are no gradients of the steepness named by our correspondent. We doubt, however, whether it would not have been quite as well for the pockets of the shareholders that there had. It is quite certain that upon other lines, much worse gradients (worse, as they are called) are worked very easily, and, taking the first cost into consideration, with comparative economy.*

Mandubium. *We have reason to believe that the project will be vigorously proceeded with so soon as monetary affairs improve.*

A Proprietor in the South-Eastern Railway. *—We have heard nothing of the alleged rumour.*

Captain Watts's letter shall appear next week.

Our advertising space is already so fully occupied, that we must postpone the re-insertion of Mr. Coles's long advertisement till next week, when, if possible, it shall appear.

Observer *shall be given next week.*

The last arrival from America brings us, among other "Jonathanisms," the following, which we beg most earnestly to recommend to the notice of several persons who honour us with their correspondence. It is good advice with which to begin the year:—

"BRIEF RULES FOR THE GOVERNMENT OF ALL WHO WRITE FOR NEWSPAPERS.—Write legibly. Make as few erasures and interlineations as possible. In writing names of persons and places be more particular than usual to make every letter distinct and clear—also in using words not English. Write only on one side of the paper. Employ no abbreviations whatever, but write out every word in full. Address communications *not to any particular person, but to 'The Editors.'* Finally, when you sit down to write, don't be in a hurry. Consider that hurried writing makes slow printing."

TRAFFIC OMITTED LAST WEEK.

Grand Junction Railway.—*For the week ending December 18, 1841, passengers, parcels, and mails, 5,652l. 7s. 2d.; merchandise, &c., 1,627l. 12s. 10d.; total, 7,280l.*

North Union Railway.—*Week ending December 17, passengers (3,192) 755l. 19s. 4d.; goods, &c., 227l. 5s.; total, 984l. 4s. 4d.*

Eastern Counties' Railway.—*Week ending December 19 number of passengers, 10,397; receipts, 667l. 12s. 5d., including Northern and Eastern toll.*

Newcastle and Carlisle Railway.—*Week ending December 18, passengers, 413l. 3s. 5d.; goods, 1,005l. 6s. 10d.; total, 1,418l. 10s. 3d.*

Dundee and Arbroath Railway.—*Week ending December 19, passengers (3,085½), 117l. 15s. 2½d.; goods, &c., 74l. 6s. 6½d.; total, 202l. 1s. 9d.*

Brandling Junction Railway.—*Week ending December 19, passengers, (8,108) 325l. 2s. 6d.; goods, 319l. 19s. 5d.; total, 645l. 1s. 11d.*

THE RAILWAY TIMES.

SATURDAY, JANUARY 1, 1842.

It is our very painful duty to commence our labours for the new year, by giving the particulars of an accident upon the Great Western Railway — an accident the most lamentable which has heretofore occurred upon any line, whether as regards the great loss of life and infliction of injury which have taken place, or the concomitant circumstances of the occurrence. Full particulars of the lamentable event which instantaneously destroyed eight individuals, and seriously injured many others, will be found in another part of our present number, as developed in the judicial inquiry before the Coroner for Berks. It will be seen that the investigation resulted in a verdict of Accidental Death with "a deodand of *one thousand pounds* on the engine, tender, and carriages."

We have no doubt that the very horrible character of the calamity—the great number of persons killed, and the still greater number wounded—had its effect upon the feelings of the jury in settling the *amount* of deodand. Had only one life fallen a victim, it is more than probable that the fine inflicted would not have been nearly so large, although even in that case the culpability of the Company, —supposing such culpability now to exist— would have been equally great. The amount of deodand is, however, a matter of secondary importance. If the Company's arrangements are criminally defective, and punishment is to be awarded in the shape of a deodand, it is but reasonable and right that the amount should be such as to make it felt. The question then arises, *are* the arrangements such as to justify the view taken by the jury, that blame rests upon the Company or their responsible officers? We are sorry to be obliged to answer the question in the affirmative, and to express our own opinion, that, substantially, the verdict of the Berks jury is a just one. Let us briefly examine the evidence adduced before the Coroner.

The testimony given respecting the slip which actually threw the engine off the rails is very conflicting. Mr. BRUNEL, the Engineer-in-Chief, the Assistant Engineer Mr. BERTRAM, and other officers and servants of the Company, swore most positively that the slip of Friday week was perfectly distinct from, although in immediate contiguity with, other slips which it appears had taken place and been remedied several days previously. On the other hand, several witnesses, unconnected with the establishment, deposed that Friday's fall was in the very spot where the previous slips had occurred. We should be sorry to impute wilful perjury to either party, but really it is most unsatisfactory, and withal very painful, to hear statements so distinctly opposed to each other brought forward on oath. In our view of the case, however, it would be no valid defence of the Company's officers, even were it clearly made out, and admitted on all hands, that the slip of Friday was wholly new. It could not be said that a slip at that spot was unexpected. There had been previous slips at the same place, and the same cause continued in operation, namely, the extraordinary state of the weather, or rather the cause had been greatly aggravated owing to the sudden change from frost to thaw that had taken place within a few hours. Why then was not a strict watch kept up in the cutting? Here it is that the Company are open to the charge preferred against them by the jury, that they had shown "great neglect in not employing a sufficient watch when it was most necessarily required."

Nor is this, according to the evidence of the Company's officers, a solitary example of the "great neglect" which characterises that department of the establishment. Mr. SAUNDERS, the Secretary, says, "there is *no* watch on the line by night. The policeman commences duty at six o'clock in the morning, and leaves at seven o'clock at night;" so that for many hours, while trains are running, the line is left wholly unguarded! We confess we were extremely surprised on reading this part of the evidence. We had imagined that upon a line of so much importance, and with so much traffic as the Great Western, there was a night as well as a day police constantly perambulating; but such, it would seem, is not the case. Even with regard to the period of commencing day duty, there appears to be a lamentable ignorance among the superior officers of the Company. Mr. SAUNDERS says the policemen enter upon duty at six o'clock, while Mr. COLLARD (and he, too, the *Superintendent of Police!*) positively does not know at what hour the duty begins! "He [the policeman in whose beat the cutting lay] would go on duty at seven o'clock I BELIEVE, but cannot say correctly. My Sub-Inspector regulates these matters." Such is the evidence of Mr. COLLARD! Might we ask in what that gentleman's duties consist, as Superintendent of Police, seeing that he does not even know for how many hours the line is watched or unwatched? If his "Sub-Inspector regulates these matters," of what use is the "Superintendent," who draws, we presume, about this season of the year, a very handsome salary? We can easily see why very many local matters, such as the choice of men, or the fining or dismissing them for neglect of duty, may very properly be left to the regulation of a responsible subordinate on the spot; but really that a superior officer should be so grossly uninformed upon a general point such as the hour at which those whom he professes to "superintend" commence their labours for the day, is most unpardonable. But this is not

Digitized by Google

all. The "six o'clock" of Mr. SAUNDERS, and the "seven o'clock" of Mr. COLLARD, become, we find, in practice at least, eight o'clock, if not nine, so far as the watching of the line is concerned. "I should say (deposes Mr. COLLARD) he [the policeman] would not be at the slip till near nine o'clock. He comes on duty at seven o'clock. [The "belief" has, it will be seen, become certainty.] *He is employed till about eight at the station*, and it must be near nine before he could get to the slip." And yet it is sworn to by other witnesses that by or before *seven* o'clock TWO trains daily reach Reading from London!

But it seems there is at present a person employed on purpose to walk over this portion (and we suppose it is the same with other portions) of the line before the trains come down. Whether this arrangement is permanent, or merely consequent on the recent state of the works and the weather, does not very clearly appear; but let us see how the party referred to performs *his* duty. Mr. COLLARD's mention of nine o'clock as the hour at which the policeman would reach the slip, led to a remark that "watchmen cognizant of the place are employed by Mr. BERTRAM to walk through the Sunning cutting every morning before the train passes." Mr. BERTRAM being examined, states, that the "watchman" alluded to "has, *in* ALMOST *every instance*, walked over this portion of the line previous to the passing of the luggage train which usually arrives at Reading a few minutes past seven, P. M.," the six o'clock train arriving earlier. The man himself (a ganger named HIGGS) says, "I am GENERALLY on the spot where the slip took place about *half-past six*, before the six o'clock train from Paddington passes" — and yet in his cross-examination to account for not having seen the slip on the morning of the accident, HIGGS says, "I was not behind my proper time—*seven* o'clock!" Why should there be occasion to use such phrases as "*almost* every instance," and "*generally*," as applied to inspection of the line? Why not "*always*" and "*invariably?*" To show of how much use such inspection is likely to be, it is sufficient to notice the admission of HIGGS himself relative to his last inspection of the cutting on the previous day:—"When I passed over the line (he says) on Thursday last at half-past five, *it was too dark for me to see the state of the bank!*" A pretty sort of inspection this by "watchmen cognizant of the place!" But supposing this inspector to have gone over every portion of his beat before the arrival of the first train (and as it appears in evidence that it extends but about a mile and a half, this would have been no very great feat) of what benefit would his presence have been, even had he seen the slip? An extract from the evidence will supply the best answer:—

"By the Coroner—If you had seen anything on the line which required you to stop the train, had you any signal by which to communicate with it?

"George Higgs—No, Sir.

"The Coroner—What would your duty have been in such a case, if the slip, for instance, had been observed by you?

"George Higgs—*I must have run back, and got as close as I could,* AND HELD UP MY HAND. *As it was dark the only notice I could have given was by shouting.*

"Mr. Saunders—*Is not the signal for stopping the train to hold up both hands?*

"George Higgs—*Yes; I have stopped trains in that manner.*

"The Foreman—*Yes; but not when it was dark.*

"George Higgs—*I could see the engine coming,* BUT THE ENGINEER COULD NOT HAVE SEEN ME *till he came close up.*"

Can anything show defective arrangements more clearly than the fact that HIGGS had neither the means of discovering an obstruction on the line, nor of giving warning of it had he chanced to stumble against it? Supposing some miscreant to have placed an obstruction upon the track furthest removed from the part where HIGGS was walking, or to have removed a length of rail, is it at all likely that HIGGS could have noticed it in the darkness of a December morning? If he had, the train might have been thrown off the line if his "shouting" had been unheard or unheeded by the driver. Surely it would be easy to provide such watchmen with a light sufficient for the double purpose of inspection and signals.

This part of the evidence discloses another fact which shows further defective arrangement, namely, the admitted irregularity of the luggage trains. The down luggage train, Mr. SAUNDERS says, "should leave Paddington at half-past 4, but it seldom gets away before 5." Mr. BERTRAM states that on the morning of the accident "the luggage train was earlier than usual;" and HIGGS says, "the luggage train is *very irregular*." How is this? Mr. BRUNEL speaks of luggage trains as being "slower, and *unavoidably* less punctual than passenger trains." Slower they certainly are, but why they should necessarily be less punctual we cannot imagine. They ought to start at an appointed time, and travel at a fixed speed, and then they could not fail to be punctual; for if other trains for which they are obliged to make way were punctual likewise, the luggage trains would always have to remain a certain time at a certain place, and no longer and at no other points of the line, to allow the faster train to pass on. Mr. SAUNDERS says, "the fact is, that although the luggage train is *advertised* for half past four, a.m., from Paddington, it is near five before it can leave that station." We fear that this detention of third-class passengers, *and of them alone*, in uncovered carriages, or upon an unprotected platform, in the middle of a winter's night, will generally be attributed, as many other arrangements of Railway Companies are attributed, to a studied design of doing everything possible to render these humbler passengers uncomfortable, so as to *drive* them into the superior vehicles.

And this brings us to the other, and apparently the principal, reason (as semi-officially announced) of the conclusion to which the Coroner's jury came—namely, the "opinion that great blame is attached to the Company in placing the passenger trucks so near the engine." It is quite evident that in this particular instance no loss of life would have ensued had the passenger trucks been placed in the rear of the goods' waggons. We know that it is very easy to be wise after the event, and to suggest a thousand precautions, any one of which, if duly attended to, would prevent many, if not most, of the serious calamities that are not limited to railways: but we think that in this case the propriety of a different arrangement might readily have been seen from the first. Mr. BRUNEL (who we regret to find, from this and other instances, is extremely rash in his evidence) gives reasons for placing the passenger trucks first. Of these the principal one is, that it would be "extremely dangerous" to place them behind, lest they should be run into by a succeeding train. But *why* should they be run into, if the Company's arrangements are good, and their servants do their duty? We hope we are not to look upon accidents to either passenger or luggage trains as the rule, and safety the exception. We are to presume that in nine-hundred and ninety-nine journeys out of a thousand, no train will run into, or be run into, by another; and surely in that case something should be thought of the *comfort* of third-class passengers—neglected, nay, insulted, as some personages would wish them systematically and deliberately to be. As to being run into by a succeeding train, why not place the passengers in the middle; or, if in the rear, an empty truck or two with buffer-springs would mitigate the effect, supposing a collision to be unavoidable. The only semblance of a sufficient reason, that we ever heard, for placing the passenger trucks in front, is the necessity of leaving particular goods' waggons at particular intermediate stations, which would lead to a re-arrangement of the train at every station. Even were it so, far better would it be to encounter some small trouble and delay, than risk the loss of life, or render the third class travellers more uncomfortable than they must be; but neither delay nor trouble need be incurred: for as it is quite certain that, upon such a line as the Great Western, *some* luggage vans must be proceeding to the further terminus of the railway, immediate contact with the engine might easily be avoided; and if there should happen to be no such vans, a few empty waggons, as before alluded to, would answer the purpose. Mr. SAUNDERS is stated to have "informed the jury, that the general opinion of scientific and practical men, and even of the Inspector-General, was, that the best place for passengers in luggage trains was next the engine." This is assuredly the very reverse of the opinion *we* have heard from not a few "scientific and practical men" of no mean eminence. Mr. BRUNEL admits that a different arrangement was adopted on the night after the accident, "as a concession to an opinion which [he says] I knew had been frequently expressed."

We will not pursue this painful topic further. On all accounts—on account of the poor sufferers and their orphaned families—on account of its effect upon a noble undertaking—on account of Railway Companies generally—we most unfeignedly deplore the occurrence of so sad a calamity. We have no doubt that it will prove a warning to the Managers of the Company more immediately affected—we trust it will operate beneficially upon all. The Sunning cutting of the Great Western Railway is not the only spot upon that line, nor is the Great Western the only line, where slips of the character described are likely to take place, should the present weather continue; and nothing but redoubled vigilance can guard against results such as during the last few days have excited so deep and so distressing a sensation. Should similar accidents attended with loss of life occur frequently upon this or any other line, the consequences would not cease with the imposition of a heavy deodand. The public would demand the interposition of the Legislature, which although perhaps it might prove very little protection in practice, would unquestionably entail upon the Companies very serious inconvenience and loss. Were there no higher motives, therefore, for unceasing care, self-interest clearly calls for it here.

As usual, this occurrence has given rise to

Digitized by Google

[illegible] of the Great Western line, and [illegible] railway system generally. From the [illegible] of the Times to the garrulities of the [illegible], the press with but few exceptions has been loud in condemnation of the travelling [illegible] usually adopted. From reading the diatribes that have from day to day been put forth, a credulous person unacquainted with railways would be led to think that the Directors and officers of these undertakings are monsters in human form. Fortunately this intemperate conduct defeats its own object. It is too late now-a-days to raise a groundless clamour against an improvement of which the public have already so largely reaped the benefit, and from which, under due regulation, even greater good may be expected. To imagine for one moment that Railway Managements are indifferent to the safety or convenience of the public, much less that they are disposed wantonly or recklessly to sport with either, were indeed to ascribe to them an apathy in regard to self-interest, and a demoniac delight in human suffering, which not even the most furious of their opponents would venture openly to charge them withal. Every consideration—the consideration of self-interest above all others—prompts, and must prompt, Railway Boards to the utmost exertion in the working of their several lines, and although it is impossible wholly to guard against the occurrence of misfortune (in where is the means of conveyance in which absolute safety can be insured?) the qualities of skill, zeal, and care, are daily exhibited in a remarkable degree by the parties so shamefully maligned. Were it not so, the railway system, instead of being as it is incomparably the safest, as it is undeniably the easiest, the speediest, and most economical mode of locomotion, would become a dangerous nuisance, deserving, as certain parties greatly deliberate, to be instantly and irrevocably suppressed.

At the special meeting of the Manchester and Leeds Company, of which a Report appears in another column, some very interesting explanations were offered in reference to a matter which has of late been prominently noticed in this journal, namely, the construction of the proposed junction line between the Manchester and Leeds and Liverpool and Manchester Railways. The historical sketch given by the very able Chairman of the Leeds Company with respect to the steps taken by both Companies—by the one with a view to prosecute the undertaking, and by the other for the apparent purpose of impeding it—seems to bear internal evidence of being strictly accurate in its details, and cannot fail, we think, to be of important service at the present moment, when the conduct of the Liverpool Management is so freely canvassed and commented upon from all quarters. The particulars given as regards the traffic to be expected on the junction line, must, we think, carry conviction to every unprejudiced mind, that the allegation of the Liverpool Directors of the insufficiency of the estimates framed by the Leeds Directors has been put forth more with a view to account for and justify the course which they have thought proper to adopt than because they deemed it so at the time, or even now deem it, in have much intrinsic weight. In short, the whole proceedings of the Liverpool Company seem to have been conducted with no other object than to cause delay in the execution of the scheme, they knowing well that not only would their holding back have a tendency to prevent the execution of the other part of the project, but would cause the natural course of events to frustrate the entire scheme by allowing the Parliamentary period for the purchase of land to expire. On the other hand, the Leeds Directors have throughout shown themselves most anxious to carry out the object for which, in common with their then seemingly sincere allies, they sought and obtained legislative sanction; and of this no better proof could be adduced than the fact that they have already expended upwards of 30,000*l.* in securing a portion of the land. There seems to be no motive on the part of the Leeds Management for so zealously persisting in the scheme, except the desire to contribute to the convenience of the public, and the prosperity, as they believe, of the main work in which they are interested; whereas as regards the Liverpool Board, there may be reasons, and it has been not equivocally stated that there *are* reasons, why every impediment should be thrown in the way of executing the junction line. To these reasons we need not at present more particularly allude. The Chairman of the Leeds Company very judiciously abstained from attributing motives to those who had disappointed himself and his colleagues, wisely preferring to leave facts to speak, as they certainly *do* speak, loudly for themselves.

If anything could, further than it has already been evinced, prove the good faith of the Leeds Directors, and their confidence in the sufficiency of the traffic estimates, it would be the intimation of the Chairman that they are prepared to recommend to their constituents to guarantee the Liverpool Company against loss from fairly and fully carrying out their portion of the undertaking. Could anything be more straightforward than such an offer? Could anything prove more completely than its non-acceptance, that the Liverpool Board are seeking for evasions, unworthy alike of themselves and of the highly respectable body whom they represent? That the diversion in favour of another route to join together the lines centering in Manchester *is* nothing better than an evasion, is in our opinion fully made out by the apathy *of* the Board in endeavouring to carry even that scheme into effect—to say nothing of the very serious obstacles to its accomplishment alluded to at the Leeds meeting.

The matter at present then resolves itself into this, that the Liverpool Directors are determined to do nothing to redeem the pledge into which they voluntarily entered, and that the Leeds Board have obtained from their constituents power to proceed with their section of the work, so as, in conjunction with the existing Navigation Companies, to supply some sort of substitute for the boon which the Liverpool Company held out, and have now snatched away. We sincerely trust that the expectations of the Leeds Board will be realised in a most tangible shape. Should the public convenience still suffer, the fault is not theirs; *they* have done what they could, and the blame of culpable indifference and of preferring individual advantage to the advantage of the Company at large, and to the accommodation of the public, must rest with others. We fear that there is now but small hope of any change of conduct on the part of the Liverpool and Manchester people. Trusting to their position and their acknowledged influence, they appear resolved to trifle with their implied bargain with the legislature, and to set at nought all considerations of their own honour and consistency, or their compact with other Companies. We extremely regret it should be so, and this upon all accounts, but particularly on account of the Liverpool Company themselves. Their acts will sooner or later, we fear, recoil upon themselves.

THE anti-Sunday travelling gentry in Scotland seem determined to give no pause to those whose duty it is to expose their hypocritical pretensions. The last "move" of the party is one which we have no doubt will, more than any other, demonstrate how very different a thing profession is from practice. Under the sanction and signature of the same "JAMES FORREST, Lord Provost," one of whose manifestos we had occasion to notice last week, there has been circulated another canting appeal—another sickening (and most undeserved) eulogium on the religious and moral characteristics of "our beloved land"—meaning thereby the country of the Agnews, the Leadbetters, and the Bains—the country of those who have exposed to ecclesiastical penalties, and we doubt not would, if they dared, hand over to the tender mercies of the State, such *atrocious* criminals as would venture to "desecrate the Lord's Day" by solemnizing one of the most impressive rites of religion—the burial of the dead. All this, however, is not more than we were fully prepared for; but it appears that these persons, not content with fulminating their anathemas against "English" sinners, have recourse to a sort of threat of "exclusive dealing." They have sent forth a declaration which, *they say*, "has been agreed on by a meeting of merchants [*Scottice* we suppose, namely, petty shopkeepers] and others in Edinburgh and Leith," for the purpose of averting the threatened "national calamity!" After expressing a hope that Sunday travelling will not meet with the sanction of the Edinburgh and Glasgow shareholders, the "Declaration" proceeds:—

"In the event, however, of this hope being unhappily disappointed, however desirous we are to avail ourselves of the facilities which this railway is fitted to afford, and anxious to promote the prosperity of an enterprise so well entitled in other respects to public approbation, we shall feel ourselves constrained by a sense of duty to withhold our countenance and support from the Company, to encourage, by every means in our power, other modes of conveyance, conducted by Companies refraining from Sabbath desecration, and to give a preference to those modes, both in travelling, and in the transmission of goods, though at a sacrifice to ourselves."

We make small question that the "hope" *will be* disappointed, and that the proprietors of the Edinburgh and Glasgow Railway will prove, by their decision, that they are not insensible of, or indifferent to, the main cause on account of which their privileges were conferred—the accommodation of the public. An N.B. to the "Declaration" intimates that "application will be made for signatures in the course or a day or two after the circulation of this paper, and females as well as males are expected to sign." We wish means could be devised of preventing every party who has signed or may sign the "Declaration" from using the railway, until he has made a public recantation of his error. We can easily believe that some of the *soi disant* saints would gladly give a preference to other modes of conveyance—to the stage coaches for example of Mr. JOHN BAIN, one of the prime movers in the agitation, or to the snug and comfortable and exclusive carriage of the sanctimonious

Digitized by Google

Sir ANDREW. But the proprietors generally of the Edinburgh and Glasgow Railway, are too enlightened to be led away by those who, as the poet says, would "deal damnation round the land," upon "English" sinners first of all, and next upon every "Sabbath breaker" alike, (the aforesaid Mr. JOHN BAIN and Sir ANDREW AGNEW, Knight, not being included in either category), or to suffer these self-satisfied gentlemen or their adherents, clerical or lay, to plot, unexposed, against the prosperity of their undertaking.

IT is highly satisfactory to see that the French Government are at length taking up in good earnest the establishment of a great system of railways in France. The prominent mention of this subject in the Speech of the King to the Chambers at the opening of the Session on the 27th ultimo, gives assurance that these works will now be undertaken. The first in point of importance of the proposed lines and that for which the arrangements are definitively made, is the line connecting Paris with Lille and Calais. This line will form a connecting link not only between Paris and London *via* Dover, but also between England and Belgium by way of Calais and Lille, and by means of the Belgian railways with the Rhine and the whole of the North of Europe. Its importance therefore to England is very great. It will bring Paris within 14 hours, and Brussels within 12 hours of London, and in a few years this journey from London to Berlin will be accomplished without any interval of common road. The other line which more immediately affects British interests is that from Paris to Lyons. This will open new facilities to our overland passage to the East.

Such undertakings as these are the surest pledges for the maintenance of peace and good feeling, and in this view all the Continental Powers are interested in their adoption. It must be a wholesome lesson to some of those who at the dawn of the Railway System in England set all their strength and influence in operation to defeat it, now to see it arrived at the dignity of a paragraph in a King's Speech, as involving one of the essential interests of France.

WHETHER commenting on the reckless extravagance displayed by the Managers of one class of railways, or on the heavy outlay (disproportioned to the probable traffic) unprofitably incurred on another class, we have consistently adhered to the principle that "utility, not magnificence, should be the motto of railways." At all times strenuously opposed to the ruinous policy of constructing secondary lines on a scale of magnificence vying with the great channels of communication, we gladly welcome a champion of "the SINGLE WAY RECOMMENDED BY SAFETY, ECONOMY, AND EFFICIENCY, UNDER THE SAFEGUARD AND CONTROL OF THE ELECTRIC TELEGRAPH."

Such is the title of a work now before us, from the pen of WM. F. COOKE, Esq., the ingenious originator and successful introducer of that system of telegraphing. By a novel and extremely simple arrangement of the plan elaborately worked out on the Blackwall Railway, Mr. COOKE has produced a most complete telegraphic system adapted to lines of any length, by which the inexpensive, or rather the *economical*, single line of way may be rendered adequate to any amount of traffic—with this recommendation, that collisions between trains are rendered impossible. These all-important objects are attained without delay to the traffic, the system being independent of time-tables and regularity, yet possessing an unequalled power of enforcing vigilance by the immediate detection of neglect. The practicability of the plan is guaranteed by the daily, nay hourly, experience of the Blackway Railway, while the simplicity of the instruments and arrangements fits them for the hands of ordinary workmen.

We cannot but regret that 1841 had nearly elapsed ere these plans were promulgated; for a saving of millions of money would have resulted from their earlier adoption. There are still, however, many unfinished lines, in the completion of which vast sums may yet be saved, while fresh fields of enterprise will yet be opened by the economy of "Telegraphic Railways."

After an introductory summary of his objects, for which, as it is too long for our columns, we must for the present reluctantly refer our readers to the work itself, Mr. COOKE proceeds to show, from the evidence of the principal Railway Managers before the Select Committee on Railways, that safety from collision, the leading object of the double line, is but very imperfectly attainable by that costly preventive—that time tables, and laws for regulating following trains, afford only inferential probability of safety, since punctuality on the supposition of which they are framed is attainable only in a very imperfect degree. Hence alertness in the engineman supersedes to a great extent in practice all other safeguards. He gives a list of thirty-five accidents, taken from Sir FREDERIC SMITH'S Report to the Board of Trade, illustrative of the feeble protection afforded by existing precautions against these disastrous collisions. Of these thirty-five accidents occurring between the 7th August, 1840, and the 20th January, 1841, an interval of little more than five months, not fewer than twenty arose from collisions, none of which, we are ready to admit, could have occurred on a "telegraphic" railway.

To render these accidents of less frequent occurrence, and to diminish their ill effects when they do occur, has been a subject of the deepest anxiety to the Government equally with Railway Companies. No expense has been spared—vast sums have been expended in palliatives, alas! not preventives—vaster sums have been sacrificed directly by the destruction of property, and indirectly by loss of traffic consequent upon the panic and loss of public confidence; and Mr. COOKE justly maintains that all attempts to guard the trains can only be palliatives until some agent more rapid than themselves be made to pioneer their way, and that, in fact, "*the whole present system of double way, time-tables, and signals, is a vain attempt to attain indirectly and very imperfectly, at any cost, that safety from collision which is perfectly and cheaply conferred by the Electric Telegraph.*"

The author's description of the duties of the electric telegraph on the Blackwall Railway is graphic and interesting, and will be familiar to many of our readers:—

"It is well known that on the Blackwall Railway, to which I would principally refer, the carriages on each line are moved by what is called "a tail-rope," to which they are attached, and which is almost incessantly being drawn along the line, to be wound up on a drum at one terminus or the other, by the alternate action of the stationary engines. It is consequently necessary that, before the engineman applies the power of his engine to the rope for the purpose of giving motion to a train, he should have received a specific intimation from every other station that its carriage is attached to the rope and ready to start; otherwise an independent and uncontrolled motive power, acting from the terminus, would frequently cause dreadful collisions among carriages placed at stations so nearly adjacent as those at Shadwell, Stepney, Limehouse, the West India Docks, and Poplar.

"It is also necessary that the most perfect understanding should exist between the breaksman at one terminus and the engineman at the other, as a very skilful adjustment of the quantity of rope released is requisite to preserve the rope from injury. In a word, the condition of starting a train is, that the telegraph at the terminus to which it is going should express that the carriages at the six other stations are ready; and finally, that the breaksman at the starting terminus (on whose signal, in fact, the starting depends,) is ready also.

"The operation of stopping is still more delicate in its character and consequences; for, if the engineman were to turn off his steam before the breaksman at the other terminus had begun to apply his break, the rope must suffer from overslackness; or, if the breaksman were to put on his break while the engine at the distant terminus was still exerting its full power, it might be broken by the excessive strain. Even the ordinary stopping of a train could not be effected without danger to the rope; and an unexpected stoppage (now a matter of ordinary occurrence and perfect facility, even at full speed) would, without a telegraph, be attended with certain injury.

"On a railway which dispatches a series of trains in each direction every quarter of an hour, and has stations within a few hundred yards of each other, (not again to dwell upon the circumstance of a distant and independent motive power), accidental derangement would be more serious in its consequences, and of more frequent occurrence, if not prevented by the telegraph, than on any ordinary line. Now, in point of fact, millions of passengers have been carried in safety upon the Blackwall Railway, during the 18 months which have passed since the line opened, in upwards of half a million of carriages, starting and stopping independently of each other; and this through the intervention of a system of telegraphs, commanding only from two to eight signals each, and worked by lads, or porters, or breaksmen, performing regularly their ordinary duties.

"Here, then, the Electric Telegraph may be seen in daily practical operation, with the most beneficial effects. If an accident occur, the telegraph renders it harmless: a carriage, perhaps, loses its "grip" of the rope, and gives a signal of distress; the porter at the nearest station transmits a telegraphic order to stop the engine working that line; and within two or three minutes the train is again in motion, without alarm to the passengers, or interference with the working of the other line. By enabling persons at distant stations to converse with the speed (literally) of lightning, it substitutes a known certainty for an inferential probability of safety, or danger.

"To a system so nicely adjusted, but liable to such sudden inferences, as that of the Blackwall Railway, the best time-table would be evidently inapplicable. If, then, under circumstances of such extraordinary difficulty and complication, the Electric Telegraph, in the hands of ordinary workmen,

Digitized by Google

…rms its duties in the most perfect manner, it … necessary consequence that it is capable of …ring its benefits with equal certainty where … cases would be incomparably less arduous."

…ter describing the principles on which the …ectric telegraph is constructed, Mr. …KE enters upon his new system of tele…phing as adapted to the peculiar traffic of a …le way. We regret that the absence of …rravings must render the following extract … intelligible than it is in the original …k:—

…In proceeding to explain in detail my plans for …rolling and directing, by telegraph, the opera…s of a single way, I cannot submit them to a …re test than by applying them to a railway of …ost irregular traffic. Perhaps a better line …ot be selected for the purpose than the Mid…Counties Railway; which, forming the con…ng link between the London and Birmingham, …one of the principal northern lines, is affected …e irregularities of its great tributaries, as well …its own branches.

…To simplify the working arrangements of a …y, I should propose to divide it into dis…s of from 15 to 25 miles each; these grand …ons being subdivided into stages, which might …from 2 to 4, or even 5 miles in length. It …e found that with the occasional addition of a …ation, or rather of a siding or passing-place, …ated stations upon most lines would serve …e required stages or subdivisions. The idea …rking a line in grand divisions occurred to me …years ago while engaged on the Great West…ailway, and, accordingly, I divided the tele…upon that line into two main parts, one from …pton to Hanwell, and the other from Han… to Drayton. The same idea was further …d out in a plan which I prepared for the Bris… Exeter line, at a time when there was some …ility of its being opened with a single way. …ence having shown that short lines of rail…y be worked with very great regularity, I …e that by making the particular traffic of …vision dependent only upon its own terminal …ion stations, and by imposing upon those …e the whole responsibility of attending to the …l relations of the division, the ordinary traffic …ne would be divested, in a great measure, of …fusion caused by irregularities in the pas…the long trains.

…e Midland Counties Railway is about 50 …e length, and naturally arranges itself into …grand divisions; the northern from Derby to …borough, containing 17 miles; the middle …Loughborough to Leicester, 13 miles; and …thern, 20 miles, from Leicester to Rugby. …he northern division is already subdivided by …ating stations into four stages, the middle …ree, and the southern, with the addition of …n siding or passing-place, between Ulles…and Rugby, into five.

…e grand divisions, though in strict corres…ce with each other, may be regarded as dis…ailways. Selecting the middle one for our …s, we might call it the 'Loughborough and …er Railway.' The former terminal, or di…ion, would carry on the intercourse of the …with the 'Loughborough and Derby' line, …latter with the 'Leicester and Rugby.' …borough and Leicester would also, as the …ntral stations of the division, mutually direct and control the local concerns of their subordinate stations, Sileby and Syston.

"The annexed engraving represents an establishment of telegraphs, adapted to the divisions above supposed. Referring, as before, to the middle division, the reader must imagine a distinct system of telegraphs to be appropriated to each of its four stations. Thus, Loughborough has its system, representing it at each of the other stations of the division. By moving a handle to the right or to the left, the policeman at Loughborough causes a corresponding motion of the set of pointers throughout that system. So also the policemen at Sileby, Syston, and Leicester, can, by similar movements of the handles of the Loughborough telegraph at those places, produce the same effects throughout the system; with the addition (as intelligence is of course being transmitted to Loughborough, when the Loughborough telegraph is being operated upon at another station) of ringing the Loughborough alarum till attention is attracted to the communication.

"The other stations have, in like manner, their distinct systems of telegraphs. The wires of the different systems are for protection inclosed together in a tube; and their dials are arranged, as in the engraving, in the convenient form of compartments in a frame at each station.

"Suppose, now, the policeman at Loughborough has occasion to communicate with Leicester, he has before him the telegraphic representatives of all the four stations, but he uses only his own and that of his particular correspondent. By operating upon his correspondent's (in this case the Leicester) telegraph, he rings the Leicester alarum; and by giving a signal with his own pointer, he indicates the station from whence intelligence is coming. The two parties then carry on their telegraphic dialogue by means of the same two pointers. The signals are apparent also at the other stations, the compartments on which they are exhibited, indicating to each the two which are conversing. As the remaining systems are not affected by the communication the intermediate stations retain the power of forwarding any pressing intelligence.

"It will be observed that Loughborough and Leicester, as terminal stations of two divisions, have each two frames of dials, by means of which they superintend the business of the divisions on both sides. Matters of general interest are forwarded from the telegraph of one division by the telegraph of the other, while the local business of either passes no further than its division stations."

As our limits necessarily preclude us from following the train on its supposed journey, we must refer our readers to the work itself for the simple but efficient arrangements provided for passing and crossing trains, admitting ballast waggons on the line and obviating delays. We must, however, make room for the writer's remarks on the "mixed line," a combination of the single and double ways, because they appear to us especially applicable to lines of very large traffic, such, for instance, as a junction line with Scotland:—

"It is not necessary that a railway should be of one construction throughout a widely varied country. A *mixed line* would convey any quantity of traffic, and might at the same time admit of an enormous reduction of prime cost. On the principle on which the width of a canal is diminished at a lock or an aqueduct, the tunnels, viaducts, high embankments, and deep cuttings of a railway might be made on the scale of a single way, expanding into the double way in the more open and level country. Let this principle be carried a little further by submitting to a reduced speed at a few sharp curves and steep gradients, introduced to accommodate a line to the natural defiles of a mountainous district; and a million might be saved on 10 or 15 miles of heavy works in a line of 150 miles in length, which for the remainder of its course would be constructed with a double way.

"This combination of the single and double way would be peculiarly appropriate to the case of a Scottish junction line to unite the eastern or "western" capital of Scotland with our English railways: a line which must on either coast include several heavy works of so expensive a nature as at present to render it very doubtful that this great national union could prove a profitable undertaking. But let the expense of these heavy works be reduced nearly one-half by contracting their scale, and the main obstacle to the undertaking is removed."

We heartily concur in Mr. COOKE'S concluding remarks:—

"Another great advantage, which has been already touched upon, would consist in the more perfect adaptation of a railway to the wants of the country through which it passes. Passengers might be taken up, as on the Liverpool and Manchester line, at very short distances; and to save expensive stations, and prevent impatience when a train is late, a bell might be rung for some time before the arrival of a train, to publish to the neighbourhood its gradual approach. Passengers might be collected in horse carriages; and agricultural produce might be carried in waggons along the railway, in the intervals between the trains. Short branches might be worked entirely by horses, in correspondence with the trains upon the main line. Such minor sources of traffic would deserve the attention of a railway, in proportion as cheapness of construction enabled smaller returns to realise the same proportional dividend. Numerous little rills and streamlets would swell the tide of traffic; and the road-side population would at length participate in the convenience of the vast works which have deprived them of their local conveyances. In short, many lines of railway might become, what all were once intended to be, *highway-roads* open to the use of the public.

"As the basis of an essentially new system of railway communication, at once SAFE, ECONOMICAL, and EFFICIENT, the Electric Telegraph may diffuse the blessings of rapid intercourse to districts which can never otherwise enjoy them. It may increase the revenue of the greatest lines, by adding to them fresh sources of lateral traffic. It may permanently raise the price of shares, by opening important lines now destitute of the means of completion; and reduce indefinitely the expense of travelling on lines yet to be made. Above all, it may accomplish the otherwise scarcely attainable union by railway between England and Scotland; and perhaps realise the patriotic aspirations of those who see in an extended system of railways, employing her population, and developing her resources, a restoration of tranquility to Ireland."

We cannot leave the subject without urgently recommending it to the immediate and serious attention of all parties engaged in new and unfinished undertakings, so thoroughly are we ourselves convinced of the soundness and practicability of the author's views. Should our anticipations be realised Mr. COOKE'S

Digitized by Google

scheme will be the means of effecting a revolution in the Railway System, and of giving a fresh impulse to the extension of the new means of communication and its concomitant blessings.

THE aspect of affairs on the Brighton Railway promises well for the future. Yesterday week the four trains took from London, principally to Brighton, between 400 and 600 passengers.

—o—

THE country papers continue to afford proof of the effect of railways on common roads. The tolls on the turnpike road leading from Swindon to Christian Malford, Wilts, which last year let at 1992*l.*, were put up by auction at Swindon, on Tuesday week, and produced only the sum of 654*l.*; being a deficiency of 1338*l.*, or more than two-thirds. The opening of the Great Western Railway, which runs nearly parallel with the turnpike road, is the cause of the diminution.—At the toll-letting on the Sheffield and Wakefield turnpike road, a few days ago, owing to the railways, there was not a single tender delivered, and the Trustees of the road were therefore compelled to take the tolls themselves. There was a similar scarcity of contractors at the letting of the iron bridge tolls on the Wakefield and Denbydale road.

—o—

THE *Courier* thus notices a case which we reported last week :—

"A case which occurred in the Vice-Chancellor's Court, illustrates the mode by which the mistakes of professional men are made to operate as a heavy tax on suitors. In the cause of the "Attorney-General *v.* the Greenwich Railway," an application was made to the Court to allow the words of a decree to be altered. It was admitted by the Registrar that he had written down the words of the decree from memory, and that the Vice-Chancellor had actually used words which the Registrar had omitted. They were of great importance, for as he had stated them, they compelled the Attorney-General to proceed by indictment, whereas the words used left it optional with him so to proceed. The decree, as written and recorded, was, in fact, different from the decree as pronounced in Court; nevertheless, the application to make the written record conform to the actual decree was refused, because to rectify the admitted error "would establish a dangerous precedent." The Court could not possibly survive the plan of correcting errors without additional payment. The case must, therefore, be re-heard, solicitors must be again employed, council again feed, the clerks of the Courts even must be paid again, because it would establish a dangerous precedent in he Court of Chancery to do an act of justice without making the clients pay for it!"

RAILWAY OFFENCES AND OFFENDERS.

ON Thursday two men, named Brunston and Geary, were fined 20s. each by the magistrates of the Thames Police-office, for an assault upon Mr. Jeffrey, clerk at the Stepney station of the Blackwall Railway, who had very properly prevented them from proceeding by one of the trains, as both the prisoners were intoxicated.

LAST week a passenger was detected smoking in one of the Great Western Railway carriages, between Swindon and Chippenham; upon the arrival of the train at Chippenham he was given into custody, and taken before Thomas Clutterbuck, Esq., one of the county magistrates, and convicted in the mitigated penalty of 10s.

LAST week a respectable looking young man, named Samuel Heywood, a clerk in the service of the Manchester, Bolton, and Bury Railway and Canal Company, was brought before the magistrates at the Town Hall, Manchester, charged with embezzling certain sums of money from the Company. About three weeks ago a clerk of the same Company, at the Bolton end, decamped with 14*l.* belonging to his employers, and has not since been heard of. This circumstance led to further inquiries, and it was ultimately determined that the whole of the books belonging to the canal department should be investigated. As soon as the prisoner was made acquainted with the intention of the Company he left the town, and proceeded to Liverpool, where he took his passage on board one of the Philadelphia packets, which was to have sailed the same day, but owing to adverse winds she was detained in the river three days. As soon as the prisoner was missed suspicion fell on him, and on a little investigation it was found that he was a defaulter. The police were on the alert, and one of the officers proceeded to Liverpool, where he apprehended Heywood, on board the ship. He was brought to Manchester, and after several examinations was committed to the sessions.

WILLIAM PURVER was charged with wilfully obstructing Richard Farmer, one of the police officers of the Great Western Railway, in the execution of his duty. It was clearly proved that the defendant had conducted himself in a very riotous and disorderly manner, and he was fined 10s., including costs.

GLASGOW AND AYRSHIRE RAILWAY.—The annual meeting of the officers of this railway was held in the Claremont Inn (Mr. Murdoch's), on Friday evening last, when upwards of 50 sat down to supper. The chair was occupied by Mr. Wilson, supported as croupier by Mr. W. Hood. The usual loyal toasts having been discussed, the Chairman in a neat speech proposed the health of the Chairman and Directors of the Company, which was received with much applause. The following toasts were afterwards given, prefaced by some excellent speeches:—J. Miller, Esq., engineer, by croupier; W. Johnston, Esq., manager, by Mr. Bruce; Mr. P. Robertson and the engine department by Mr. A. Mackay; the City and Trade of Glasgow, Mr. Walker; the Lord Provost and Magistrates, croupier; the Town and Trade of Ayr with the health of Provost Miller, by Mr. Begg; the Memory of Watt, by Mr. Briton; and speedy and successful opening of the Edinburgh and Glasgow Railway, by the chair; the Glasgow and Greenock Railway, by Mr. Reid; the Absent Officers and those who are enjoying themselves in a similar manner at Ayr, by the croupier. The company separated at an early hour, gratified with the pleasant manner in which the evening was spent.—*Glasgow Courier*, December 28th.

GLASGOW AND AYR RAILWAY.—We learn that, at a meeting of the Directors, yesterday, J. F. Smith, Esq., W. S. Edinburgh, was unanimously elected to the situation of Secretary, vacant by the resignation of J. H. Humfrey, Esq. There were upwards of sixty applicants for the appointment.—*Greenock Advertiser.*

BLAYDON BURN RAILWAY.—On Monday amidst cannon firing and colours waving, took place the opening of this beautiful line of railway, made by Messrs. Joseph Cowen and Co., from their fire-brick-works and colliery at Blaydon Burn, through that rugged and winding valley to their depot at the river Tyne. This work was commenced not six months ago, and was thought by many to be impracticable; but by the perseverance and energy of the principal in the above firm, aided by Mr. G. G. Bell, engineer, it has been brought, without a single accident, to a successful conclusion.—*York Courant.*

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Yielding to no one in the possession of that feeling of distress which the intelligence of such an awful accident as that which occurred on the Great Western Railway last Friday has called forth, and with that feeling not the least subdued by the familiarity of the subject, I have closely and dispassionately watched the result of the inquiry before the Coroner, to ascertain if there was really any blame attached to the servants of that Company, or if the accident was one of those which human foresight could not have provided against. I have also perused the leading articles of the daily papers, together with the letters of their numerous correspondents, and I find, like all other accidents (it having occurred), in the opinion of these *Solons* it could have been prevented, "if such, and such, &c. &c., had been done." To enumerate, however, the ideas of these writers would occupy columns; but as specimens of their sayings, one recommends "charging 500*l.* per life," another, "criminal prosecutions," a third talks of the "laws of gravitation"—how "Nature has appointed sand and clay to move," and how he "follows Nature as her minister and interpreter;" a fourth, of "the cruelty of exposing third class passengers to the wind, the smoke and *smell*." But lamentable as the accident truly is, it is most ridiculous to follow the opinion of these would-be dictators of Railway Managements "for their country's good," and who, in their hasty judgments, pronounce not only Railway Boards and railway servants, but also railway proprietors, as the most unheard-of monsters whose delight only is human blood and human sacrifice.

To the really honest, impartial, and sensitive readers, accidents of all classes, whether involving the loss of life either by railway, by sea, by fire, or by other incidents, are each equally distressing, and it is enough for them to know and to feel that some of our fellow creatures have been suddenly and awfully deprived of their existence; but it is not so with these Editors and correspondents; railway accidents must stand pre-eminent, and judgments must as freely be given, whilst in the same columns we may read, "*dreadful catastrophe at Manchester, falling of a building—fifteen men buried in the ruins.*" "Fatal explosion in a coal pit, twenty-seven lives lost." "Appalling shipwreck, 107 lost." "Upsetting of a boat on the river, five people drowned;" these, and other almost every day fatalities, are passed heedlessly by as a necessary part of domestic occurrences. I do not, however, attempt to defend railway accidents upon the grounds that others equally dreadful take place under different circumstances; but I do protest against such dastardly attacks upon railways, especially as it is an admitted fact, that the lives of travellers have been preserved to a far greater degree than by any other system of journeying.

To you, Sir, as the solitary champion of railways, belongs the task of exposing the sophistry of these embryo railway legislatures. As regards the coroner's inquest in this case, it has been a pitiful abuse of its original intentions, and the writer in the *Morning Herald* faithfully describes these *honest jurymen* when he says, "they appeared to be in very humble circumstances of life, and with the exception of the foreman, whose questions to the witnesses were frequently of a very strange and almost incoherent character, they scarcely made inquiry." Now, I have it from an eye witness (to use his own expression) that he observed "that before it was concluded he could see how the dice would jump," for Mr. Gosling of 'Home Farm,' who is the steward of Mr. Palmer (a violent enemy to the railway) was taking an active part in opposition to the Company, and on purpose to obtain a heavy deodand." The jury consisted of poor tenants or labourers of this master, or his man Gosling; therefore we cannot be surprised at a verdict so unjust, especially as the incoherent foreman was also a dependant on this great man, and was more-

Digitized by Google

old a disappointed candidate for railway employment. It is a curious fact that no inquiry was made respecting the value of the engine, &c., and yet the round sum of 1,000*l.* was fixed, no doubt under the supposition that they would either divide the cash, or the lord of the manor (Mr. Palmer) would enjoy it.

The cunning up of the Coroner "to dismiss from their minds anything they might have heard out of doors that would bias their judgments" was as "throwing pearls to swine," for true to their ignorance and pot-house schooling their verdict (spite of the lapse of time they remained withdrawn to consider) *was prepared before the adjourned meeting took place!!*

I am sure you will agree with me, Mr. Editor, and hold up to the scorn it deserves the monstrous injustice of that venal press that asserts that the evidence of men of such standing in society as Mr. Saunders, Mr. Brunel, and his assistant engineers, are to be rejected as partial witnesses, whilst a superannuated barrister-at-law's, a bricklayer's, and a country labourer's testimony is to be taken and held up as disinterested witnesses!!

I remain, Sir, your obedient servant,
and Constant Reader,
K. H.

Wimbledon, Dec. 20, 1841.

GREENWICH, CROYDON, BRIGHTON, AND DOVER RAILWAYS.

To the Editor of the Railway Times.

Sir,—A Shareholder in the Brighton, Croydon, and Dover Railway Companies, strongly urges in your paper of 25th December, an amalgamation of the three Companies, as being highly beneficial in an economical point of view, besides enabling them to meet better the difficulties occasioned by the Greenwich obstruction. As the Greenwich line cannot be avoided, I do not see how your correspondent's plan would in any way diminish the unpleasant differences that have arisen on the toll question, nor do I see any other way out of them than by including the Greenwich line in the proposed junction, and thus uniting all the four Companies into what would then form the most important railway proprietary body in the kingdom. I am a considerable shareholder in the Greenwich line, but not in the other three, in which, however, from my continual use of them, I am almost as much personally interested, and in the character both of a shareholder and as one of the travelling public, I feel myself deeply injured by the consequences that now arise and will continue to arise by reason of the want of co-operation between the several Companies. Surely there could be no difficulty in estimating the value of the shares in each of the Companies, and in awarding to the combined body of proprietors, his due share to each member. Any plan for making an equitable arrangement of this important matter, so as to secure the end I have proposed, would meet with the hearty approbation of myself, and I suspect of most of my brother shareholders, as well as of all who wish well to the prosperity of railways in general.

I am, Sir, your obedient servant,
A GREENWICH SHAREHOLDER.

December 20, 1841.

THE LATE ACCIDENT ON THE CROYDON RAILWAY.

To the Editor of the Railway Times.

Sir,—The result of the second examination of the engine-driver, who with his engine ran into the Croydon train at the Sydenham station on Friday evening last appears remarkable. This man being in the permanent employ of the Brighton Company, the Superintendent of that line *insisted* on taking him into custody and giving the charge: at the second examination he abandons the charge. The Superintendent could not but have been quite satisfied that the man was drunk at the time of the accident. The stoker who accompanied him on the engine likewise admitted this fact to a Director of the Croydon Company and several passengers, and yet no case is made out against him. This is encouragement to passengers indeed to think that their lives are cared for. Some 12 or 15 are more or less seriously hurt, *and no one* appears to blame. Surely the matter is not to rest here.

I am, Sir, your obedient servant,
A DAILY TRAVELLER ON THE CROYDON RAILWAY.

December 23, 1841.

LONDON AND BLACKWALL RAILWAY.

To the Editor of the Railway Times.

Sir,—Your correspondent, Mr. Longworth, does not appear to be very well informed on the subject on which he writes, for he states that the new shares were issued at 6½ per share instead of 8½, and puts the amount of debentures at 250,000*l.* instead of 200,000*l.* The capital is correctly stated in your paper of the 27th ult. To prove the correctness of the calculation in the same paper, we will suppose a person wishing to purchase all the shares of the Company, thereby getting the whole concern into his own hands, and that the price of them is 25*l.* The old and new shares bear the same price in the market, consequently his investment would be thus—48,000 shares at 25*l.*, 1,200,000*l.* Five per cent. on this outlay would be 60,000*l.*, and 5 per cent. on the 200,000*l.* debentures. 10,000*l.*—together 70,000*l.* per annum, or 1,346*l.* per week, which, with the expenses, 480*l.*, makes 1,826*l.* In like manner, at the present price of 11, the receipts ought to be 1,180*l.* per week to pay proprietors 5 per cent. on their investments.

I am, Sir, your obedient servant,
NO SHAREHOLDER.

December 23, 1841.

LIVERPOOL AND MANCHESTER RAILWAY.

To the Shareholders of the Liverpool and Manchester Railway.

Gentlemen,—Adverting to a letter in last week's *Railway Times*, under the signature of "A Sheffield Carrier," it must be well known to the Grand Junction and Derby Companies that no such amount for carriage of goods from Sheffield to Liverpool has been received by them as would come near the deficiency which is stated. It must also be clear that no reduction which you could make would compensate for the additional inconvenience, risk, and expense of carting such goods across Manchester town. My object in noticing the communication is to put you as well as all other railway proprietors on your guard against the designing and incorrect assertion which are put forth by carriers, whose interest it will always be to take all advantages of opposing one line of rails to another, and for which purpose they have not hitherto, and consequently cannot, be expected to be scrupulous in what they advance.

A RAILWAY MAN.

Birmingham, Dec. 23, 1841.

GRAND JUNCTION RAILWAY.

To the Editor of the Railway Times.

Sir,—On Monday last I was charged 2s. 6d. for going from Newton to Warrington, the distance being about six miles, and the time occupied in performing it under fifteen minutes. I arrived at quarter past 9, a.m., and finding that I could have no train until quarter to 3, p.m., I was obliged to walk back.

Before this railway was purchased by the Grand Junction Company, the fare was 1s. 6d., and there were several trains in the course of the day.

On Tuesday a friend of mine took the Grand Junction train from Newton to Birmingham. On inquiring the fare by the mail carriages, he was told it had lately been raised to 24s. The extra charge for a mail carriage is, therefore, 4s., the distance being about 82 miles; the charge by the London and Birmingham Company being 2s. 6d.; the distance being 113 miles.

It appears to me that the Grand Junction Company are doing everything in their power to make the next application to Parliament for a competing line irresistible.

I am, Sir, your obedient servant,
TRAVELLER.

Macclesfield, 23rd December, 1841.

CAPTAIN WATTS AND PRINCIPLE.

To the Editor of the Railway Times.

Sir,—Æsop is said to have taken a lantern to look for an honest man, and Captain Watts is astonished at a Director of a Railway laughing at *principle*. Though honesty is reputed to be a scarce article amongst Yorkshire horse-dealers, I hope the Managers of the public Companies in that county are not without a sufficient stock of so important a commodity. I would however recommend the gallant Captain to take a cruise in search of principle amongst public men; and as he is already in the north, let his investigations commence there. As some of your readers may not be so learned as the gallant Captain, and acquainted with such great folks as "Boanerges" and "Jupiter tonans," it may also be desirable if he will state what "principle" means. Abstruse definitions not being comprehensible by people of plain sense, it will be more convenient if he would illustrate his meaning by example; or it may save him trouble were I to imagine a case and he to answer it. The following may serve as a specimen:—

A. B. and C. D. are Directors of a Company which has sustained great losses, but the circumstance is not publicly known. C. D. becomes alarmed, and gives all his shares to A. B., and several hundred pounds besides to take them off his hands. The shares are only allowed to be transferred upon the express understanding that they should not be sold for twelve months. A. B., notwithstanding this agreement, and knowing the losses of the concern, of which the public were then ignorant, goes and sells the shares, and to screen himself uses a fictitious name.

What principle has A. B., and of what kind is it?

I am, Sir, yours, &c.,
SPECTATOR.

December 22, 1841.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Allow me to inquire where is your correspondent "Ignotus," with his 6,000*l.* for weekly traffic on the Great Western line during the winter months. It will average 10,000*l.* I admit I have been much alarmed at "Ignotus's" *statements* from the plausible way in which those *statements* were advanced apparently based on some good information which no innocent shareholders did not possess. Deducting the receipts of the branch lines, about 1,200*l.* per week, we are still beating the Birmingham line the first winter they opened throughout. I now am convinced that "Ignotus's" *statements* have been advanced from interested motives, the more so as it is tolerably well known who he is. The Great Western will triumph in traffic over all other lines as much as it has already done in point of safety, security, and comfort, and that without exceeding the cost per mile of the London and Birmingham, if there is any truth in figures. The London and Birmingham, I have no doubt, will in three years pay 15 per cent., and I have no doubt the Great Western will, and in fact it is beyond doubt, will in two years pay 10 per cent., and in five years 15. With my regards to oracle "Ignotus,"

I am, Sir, yours,
A RAILROAD PROPRIETOR.

Junior United Service Club, Dec. 13, 1841.

BRISTOL AND EXETER RAILWAY—COMPENSATION CASES.

This Company have recently had to contend in two cases with the attempted extortion of landowners, but fortunately the justice of juries has in each case awarded not more than one-half the claim:—

Digitized by Google

An inquisition was held on the 28th ult., at Cullompton, before Charles Brutton, Esq., Under-Sheriff, and a highly respectable special jury of the county of Devon, Arthur Chichester, Esq., foreman, to assess the compensation money to be paid for the purchase of about seven acres and a half of land in the parish of Burliscombe, required of Richard Hurley, Esq., of Uffculm, and for damages resulting to him for the taking of such land. The sum of 500*l.* was awarded for the land and timber, including 140*l.* for the timber, and the sum of 230*l.* for damages, including 30*l.* for the tenant, making in the whole, the sum of 730*l.*, the Company providing a bridge in lieu of a level crossing. Mr. Hurley's claim for the items comprised in the award of 730*l.* amounted to 1,772*l.*

On the following day, another inquisition was held in the Town Hall at Wellington, before Edward Coles, Esq., Under-Sheriff, and an equally respectable jury of the county of Somerset, to assess the compensation monies to be paid for about eleven acres of land, in the parish of Sampford Arundel, required of Thomas Waltham Were, Esq., and for damages resulting to him; and the following sums were awarded to that gentleman; viz., 641*l.* for the land, 600*l.* for the house and buildings, 259*l.* for the timber, and 800*l.* for severance and all consequential damages; total, 2,300*l.*

Mr. Were's claim for the items comprised in this award, amounted to 4,621*l.*

In these jury cases, the Attorney-General, Sir William Follett, with Mr. Talbot, were the counsel for the Company, and Mr. Serjeant Ludlow, with Mr. Montague Beare, for the landowners.

FRENCH RAILWAYS.

We have procured the Ministerial Report, or preamble to the project of law, about to be presented to the French Chambers respecting railways.

The document commences by a comparison, showing the inferiority of France in these great enterprises. "Belgium," it says, "has 82 leagues of railway executed and open, out of 141 leagues projected; England has 1,398 miles out of 2,187 projected; Germany has 180 leagues out of 1,800; whilst France, out of 540 leagues of railway necessary, has but a few leagues, not worth noting."

It is only the Royal roads and great lines of communication that are at the charge of Government. Government, therefore, need only turn its attention to the railways that are to run in the line of Royal roads, connecting north and south, east and west, the ocean and the Mediterranean. These are the great lines, and the system of the Government is limited to them, leaving all embranchment lines to private speculation. Paris must be the centre of the great system, which comprehends the following lines:—

1. From Paris to Belgium and the Channel, by Lille or Valenciennes, Calais or Boulogne.
2. From Paris to the Mediterranean, by Lyons and Marseilles.
3. Paris to the ocean, by Tours and Nantes.
4. Paris to the ocean, by Bordeaux and Bayonne.
5. Paris to the German frontier, by Strasburg.

The sixth great line from Paris to Havre need not be mentioned, as a Company is already executing it.*

Three of the above lines exist merely in an inchoate state, and it would be impossible to estimate their cost; they must therefore be deferred.

The Anglo-Belgian line comes first. The surveys and studies for it can be finished before the end of 1842, as they are already completed as far as Creal. It is the most important in a political and commercial sense, and therefore ought to be the first railway undertaken.

The line from Paris to Marseilles is surveyed merely from Paris to Dijon, by Chalons-sur-Saone, and from Marseilles to the Rhone. Until the resources of the Treasury permit the execution of the whole line, these portions of it may be first executed, they moreover being connected together by the steamers which navigate the Rhone and Saone. The difficulty of finding a sufficient number of skilful engineers is also a reason for not commencing five great lines at once.

Government, therefore, confines its demands to credits for the following lines:—

1. For the Anglo-Belgian line.
2. For the line between Marseilles and the Rhone.
3. For the line from Paris to Chalons-sur-Saone, by Dijon.

A million of francs, over and above, will be demanded, in order to complete, before the end of 1843, the surveys of the three other lines.

The Report and preamble then proceeds to consider the best mode of execution, and the legislative measures necessary for the realisation of the gratuitous cession of the land required.

In 1837 the Government proposed to cede several railway lines to Companies. The Chamber decided that, for moral and political reasons, these great ways of communication ought not to be entrusted to private Companies. Accordingly in 1838, the Government brought forward a vast project, by which the state was to execute the principal lines; but the Chamber had changed its mind. As many objections were now found against the tardiness and prodigality of the Administration undertaking these lines, as the year before, against the insecurity of private Companies, and the result was the cession of two great lines to two Companies, formed part of the financial notabilities of the capital. The first of these Companies was forced to abandon its task; the second had recourse three times to the Chambers, and even when supported by the credit of the State, it has not been able to keep its shares up to par.

Bearing these facts in mind, the present Minister of Public Works now proposes a mixed system, to obviate, first, the evil of entrusting such vast operations to Companies and individuals not equal to the task; and secondly, the evil of overburdening the Treasury with an expenditure so much exceeding its nominal limits.

The Government will itself undertake to execute or get executed the great lines, abandoning embranchments to private industry, without now examining in what proportion private industry may be aided.

The localities interested must furnish the value of the ground required. The State will execute the embankments, excavations, works of art, bridges, stations, &c.; and then private Companies will be called to undertake the laying down of rails, and preparing the roads for the duties of public conveyance, according to a certain tariff.

According to calculation this plan will divide the expense into two equal parts, the State getting rid of one-half of it, and thus meeting the objection of overburdening the Treasury.

The basis for the repartition between the departments of the land to be furnished, or its value, must be the length of the line. But for communes or parishes, their interest in the line is to be considered; for poor and merely agricultural localities cannot derive the same benefit from it as rich and commercial ones. The proprietors of ground are not to be treated with isolatedly. This would open the door to arbitrary decisions. The departmental association must bargain and decide on these points.

The plan of each line throughout the whole department will be subjected to the procedure laid down in the law of March, 1841. A judgment of expropriation will be demanded for the whole line, and a jury in each district convoked to fix the quota of indemnity. All cession or purchase of lands shall be effected judicially, and some by private bargain. Mortgages are to be met in the usual way.

The total of the sums awarded by the juries of each district will be levied on the whole department. The Consul-General of the department will partition out the sums between the districts, and each Consul of district between the communes or parishes.

The sums will be levied on the four branches of direct contributions.—*Morning Chronicle.*

* The great project of railroads presented by the French Government in 1838, mentioned nine great lines, of which Paris to Toulouse by Orleans was one, Bordeaux to Marseilles another.

EDINBURGH AND GLASGOW RAILWAY.

On Friday, the 17th ultimo, a party of the Directors paid a visit of inspection to the works on the line—their last probably before the opening—examining the whole from end to end. As the public are looking forward with much interest to the completion of the work, some account of its present state and progress may not be unacceptable. Commencing at the east end of the line, the party, after inspecting the station-house, containing the booking and other offices, proceeded to examine the capacious sheds for passengers, goods, engines, and carriages, repairing shops, &c. The ample space which the Company have secured at this terminus, will afford abundant accommodation for a very extended traffic. A locomotive and *train*, consisting of a first and second class carriage, being now ready for a start, the party took their seats, and dashing off at a good speed, did not come to a halt until they had passed the Great Almond Valley viaduct, being a distance of about nine miles. Between this and the smaller viaduct to the west, is an embankment of upwards of 100 yards in length, and of great breadth and height. From the enormous quantity of material originally required to complete this portion of the work, and as Messrs. Gibb and Son, the able and spirited contractors, were until recently only enabled to procure their supplies of *stuff* from the eastward, there still remain a few feet to bring up the embankment to its full height. But as the communication from the west to this point is now complete, Messrs. Gibb are levying their contributions from the grounds in that direction also. The work is therefore rapidly advancing to completion, and there is little doubt that, with tolerable weather, it will be finished by the middle of January. As the great body of the embankment has already been well-tried and seasoned, by the long continued wet weather during the last season, it may be considered as in a great degree consolidated. After walking over this space, and a portion of the Craigton cut, where the laying of the rails for a short distance was not completed, the party found another train awaiting them, in which they proceeded westward to Linlithgow. Here a short pause took place, to examine the station house and other arrangements. Moving onwards, the train glided along the Avon Valley viaduct, a beautiful structure of not less than 100 feet in height, from the bed of the river, but owing to the straightness of the line here, not seen to advantage from the railway. The next halting place was the Polmont station. As there will be a considerable traffic at this point, a permanent station house has been built. The steam being again set on, the train, after passing through the Calendar tunnel of 800 yards in length, arrived at the Falkirk station, also one of the permanent buildings. Here are erected the ovens for the manufacture of coke, a considerable supply of which is already prepared. An article of an admirable kind is formed from the admixture of the Kilsyth with one of the neighbouring coals, and at a reasonable rate. As so much depends on the quality of this article, the Company may be considered very fortunate in this respect. At this station the traveller enjoys one of the noblest and most extensive views of which Scotland can boast. In the foreground, at his feet, lies the town of Falkirk, with its picturesque spires; beyond it a rich strath or vale extends down to the Firth of Forth, which, emerging in its serpentine course from its parent hills in the west, is seen stretching away to the eastward, until lost in the distant ocean. On its northern shores rise the Ochil hills, and towering away beyond them to the west and north are Benlomond, Benledi, and the Grampian range. After examining every point of interest at this station, the party proceeded, at a rapid rate, to the Tamfuirhill viaduct, a remarkable structure of great solidity, and showing much engineering skill. For the next five miles, as nothing

Digitized by Google

of particular interest occurs, the train moved rapidly at attaining a speed of probably not less than 30 miles an hour, till it reached the Redburn viaduct, also about a hundred feet in height from the river. Adjoining to this is the Castlecary station, being the point at which the traffic from Stirling and the south for Glasgow will come in upon the line. A little more than three miles to the westward of this the train reached the great ridge of whinstone rock at Cuy. About the centre of the ridge the rock rises to a height of 70 feet above the level of the line. As every effort has been made by the Directors to get this heavy and difficult portion of the work pushed forward, it was with much pleasure that, as the train approached, they found they could distinctly see through the vista of the cut. On alighting and walking along it, the great progress made since their previous visit was very striking. Indeed, so nearly is the Herculean task overcome, that it is confidently anticipated that one line of rails will be laid entirely through it by the 1st of January, and that the remaining portion of the rock will be cleared out, and the rails laid within a fortnight thereafter. A new locomotive and train in the west of this carried the party forward, and, after an agreeable run, set them down at the head of the incline at the Cowlairs station. After examining the spacious sheds for locomotives, with the workshops below, and the building containing the fixed engines, the party again mounted a carriage, and descending the incline, passed through the tunnel (which, as well as the Callendar tunnel, is entirely whitewashed and lighted with gas), and were safely landed at the Glasgow station.

The Directors were highly gratified with the result of the day's proceedings. The easiness of the motion of the carriages was observed by all. There was none of that motion from side to side, or disagreeable vibration, which is felt on some lines, and we may mention that one of the party, while the engine was at its speed, wrote a note with nearly the same ease as if the carriage had been in a state of rest. After the unavoidable delays that have taken place from the extreme wetness of the past season, and other causes, it is now considered beyond doubt, that the whole line will be completed in January. We have not heard any particular day named yet for the opening, but have reason to believe that it will be about the 1st of February.—*Glasgow Courier*, Dec. 30.

RAILWAY ADJUDICATION.

THE NORTH UNION RAILWAY COMPANY *v.* THE BOLTON AND PRESTON RAILWAY COMPANY.

Before Vice-Chancellor Wigram, Dec. 24.—This was a motion for an injunction to restrain the Bolton and Preston Railway Company from making a communication from the end of the North Union Railway with the Lancaster Railway.

Mr. Sharpe and Mr. Follett appeared for the plaintiffs: Mr. Temple and Mr. Wood appeared for the defendants.

The plaintiffs contended, by reference to maps and the Bolton and Preston Railway Act, that this Company ought to be restrained from using a point of junction between the two lines for any carriages except those coming from the Lancaster Canal; and as they alleged that the line was about to be opened on the 1st of January next, they urged the Court to give them immediate protection.

The defendants, by their counsel, stated, that what had been done had been done openly and with full notice; that the Bolton Railway Company had a right under the Act to permit Lancaster carriages to come to their stations, and that they had no intention to interfere with the traffic of the North Union Railway.

The case of the plaintiffs had been partly opened, when it was arranged that the hearing of the motion should stand over until the first day of next term, the defendants undertaking not to allow any carriages to pass from the easternmost or westernmost branches of the North Union Railway until that time, and that such undertaking should be entirely without prejudice.

LUGGAGE OF RAILWAY PASSENGERS.

A CORRESPONDENT of the *Morning Post* writes to the editor as follows:—

I observe in your paper of Tuesday some remarks on the defective system adopted on our railroads with regard to the luggage of passengers, and, having often remarked the utter carelessness of the guards in placing it on and taking it off the cars, I could not help being struck with the superiority of the plan pursued in the United States of America.

The baggage is put in different cars, which are numbered and marked with the names of the stations along the line. The guards are provided with a quantity of brass or block tin tickets, all numbered and in duplicate. These are strung on wires, each duplicate pair being together, and the guards, when they put in the baggage, have merely to slip off the first pairs of tickets on the wire, when they fix one ticket on to each article and give the duplicate of it to the owner of the baggage. One of each pair of duplicates has a string attached to it, by means of which it is fastened to the baggage in a moment.

A kind of platform, surrounded with a railing, and about five feet above the ground, is erected on each side of the railway at the stations, and on arrival, the car with the name of the station being opened, one or two of the guards, standing on the platform, receive the baggage as it is taken out, calling out the number attached to each article. The owners, hearing the duplicate numbers, answer at once, and giving up their ticket, receive their baggage. No time is lost, as, if the answer is not immediately given, the guards call out the next article, and so on. No one but the guards is allowed on the platform, and, as the passengers must be supposed to look after their own baggage as soon as they arrive at the station where they leave the train, they have nobody but themselves to blame if they lose it.

The following is the article above referred to:—

Every one who travels by the railways in England complains of the want of due regulation respecting the luggage of passengers. It is surprising that the managers of railways, who are for the most part clever persons in their way, and who must naturally desire to attract customers by giving them every reasonable accommodation, should up to the present time have neglected to "give satisfaction" in the matter of luggage. Some people talk of the risk of travelling by railway; but it seems to be pretty generally admitted that the risk of losing life or limb is by no means considerable. The risk of losing luggage, however, is by all considered to be imminent. It is snatched away from the distracted traveller at the moment that he is thrust into his seat, fearing that if he delay half a second he will be either left behind or killed. He knows not where his luggage has been put, and, alas! it is very probable he never will know. When the train arrives all is confusion. If he regain all his luggage without much trouble, the traveller is very fortunate; if he regain a part of it, he is better off than some of his neighbours; if he lose it all, where is his redress? The great railways have very arbitrary Acts of Parliament on their side, and as they are sole possessors of the means of getting from one place to another, we must be content to bear with the consequences of great power upon which there is no efficient check. But as the Managers are powerful, may we not entreat that they would be merciful also? Will they not have pity upon passengers, and not rend asunder those ties of tender affection which commonly subsist between a man and his luggage? To be parted from it during a journey is enough of trial for ordinary sensibility, but to be separated from it for ever is too cruel. They manage these things better in France, or at all events in Belgium, which comes pretty much to the same thing. There you deliver up your luggage when you come to the railway, and you get a receipt for it. If beyond a certain weight, you pay something for the surplus, but you have your receipt, and feel quite comfortable about your trunks. There is a luggage apartment attached to each train, and your trunks are deposited therein, each box or bag having chalked on it a number which corresponds with that on your receipt. The luggage is numerically assorted in the apartment assigned to it, and a guard is appointed who attends to the luggage and nothing else. Surely there is nothing in this so difficult but what it might be copied in England, and the additional comfort in travelling would be very great. We entreat the Managers of our railways to take this matter into their serious consideration. We know they need not do it if they don't like, for they have their Acts of Parliament and their "exclusive right of way." But if they would be pleased to like to do what the public would like to have done, they would set about reforming the luggage grievance directly.—*Morning Post.*

THE RAIL *v.* THE ROAD.

EVERY town, village, and hamlet in the kingdom, however remotely situate, is now beginning to feel the effects of railways. In some places they destroy labour; other localities are beneficially acted upon by an equalization in the cost of both food and fuel. Chapel-en-le-Frith, although more than 20 miles distant from any completed railway, is shaken to the very centre. Heretofore there has existed a considerable traffic in the conveyance of goods by land carriage, by which rents and wages have been here maintained, both of which have now received a shock which will eventually be severely felt by all classes. Land which, in the vicinity of this town, has been let to carriers at enormous rents, will fall at least 30 per cent. as soon as the present tenants are made to feel their sinking condition. Innkeepers, publicans, wheelwrights, blacksmiths, saddlers, and "pikekeepers" will be acted upon by the general depression. A coach called the *Champion*, which which has deservedly gained for itself the appellation of respectable, has daily passed through this place from Manchester and Nottingham for a great number of years, but it has been rapidly sinking under a gradual decline ever since the opening of the Leeds and North Midland Railways. The proprietors, anxious to avert so fatal a malady, and if possible to restore the sufferer to a sound and healthy state, had recourse to amputation, notwithstanding which, there are still evident symptoms of approaching mortality, and the public greatly fear that a dissolution will take place before the end of the year. The *Peak Ranger*, too, a coach which has also stood high in the estimation of the public, commenced many years ago running between Manchester and Sheffield through this town; and during this time, the profits have very handsomely rewarded the proprietors for the spirited manner in which it has been conducted. Latterly, however, this coach has exhibited symptoms of approaching decline, and on Saturday last, when drawing near to Sheffield, its inevitable dissolution became more apparent, and Mr. Clark, who was driving, almost despaired of reaching the terminus before death put a period to its existence; fortunately, however, the task was accomplished, but upon reaching the Tontine Inn, the symptoms of dissolution assumed a more decided character, and in few minutes after its arrival it quietly departed this life without a struggle or a groan. Report says that its remains are about to be sent by railway to the British Museum in London, where it will be exhibited as a relic of antiquity for centuries to come. Unfortunately for the coachman, he was, owing to this dreadful calamity, left at Sheffield, a distance of 24 miles from home, and he being anxious for the solace and consolation which none but a wife can impart, every inquiry was made for a vehicle to convey him home. The Leeds Railway was recommended as a suitable conveyance, but this he rejected in terms of bitter resentment; when fortunately it was discovered, that one solitary waggon was still permitted to travel on that road, by which he was determined to go; advantage was therefore taken of this homely conveyance, and having been snugly packed in the tail of the waggon, he was safely delivered at his own door within twenty-fours after the fatal catastrophe.—*Derbyshire Chronicle.*

THE TOLL QUESTION—THE CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have carefully perused the correspondence you have published between the Greenwich and the Croydon Railway Companies, on the subject of tolls, under the assurance given in a demi-official notice in your paper, that it contained the pith of the whole subject. And I find it does.

Now, between the two Companies, it seems the Croydon Company complained that the toll charged by the Greenwich Company was so high that they could not afford to pay it for their second-class passengers, whom they accordingly stop at New Cross. The Greenwich Company, in order to avoid this loss of toll, offered to bring these passengers on to London, on being charged the same toll per mile for the use of the Croydon Railway that they are receiving for their own. This is refused. The passengers are consequently turned out of the carriages three miles before they reach London, though they are desirous to proceed, the Greenwich Company willing to convey them, and the Croydon Company able to derive a considerable profit thereby, without any risk or interference with their present traffic. And why? Either because the toll offered is too low (and in that case there is no ground for complaint against the toll charged by the Greenwich Company), or the Croydon Company wish to direct against the Greenwich Company's toll the discontent which the passengers justly feel: whilst the real obstruction is the still more exorbitant toll demanded by themselves. They will neither convey the passengers themselves, nor allow others to do it for any reasonable toll. And who are the gainers by this course? The Croydon shareholders!?

But apart from mere disputes between these two Companies the whole principle of tolls laid down by the Croydon Company is evidently fallacious. This principle is, that *all the parts of a continuous line of railway are of equal value*, in other words, that the toll charged for the use of any one mile should be exactly the same as for any other. A very convenient doctrine truly for country lines wanting a metropolitan terminus. But as soon as the principle is applied to themselves, they shrink from it. A toll of 1½d. per passenger is offered for the use of the line from New Cross to Corbett's-lane, which they refuse, though willing to treat for the use of their whole line at this rate. Their objections as to the "unfair proportion" which the Greenwich Railway Company would get, are a distinct admission that the portion nearest London will bear a higher fare (and of course a higher toll,) than the rest. And it is impossible to combat the quaint truth, that

> "The intrinsic value of a thing
> Is just as much as it will bring."

Moreover it is an undoubted fact, that if the receipts on any line of railway are apportioned mile for mile, there are many portions on which the receipts will never pay the interest of the money expended. The return for this outlay is to be sought for in the additional value thereby conferred on the rest of the line. Such is the case with all the great tunnels, and the termini in the centres of large towns. Take for instance the London and Birmingham, the London and Blackwall, the Liverpool and Manchester, and the London and Greenwich, (the only completed lines where large sums have been expended for the latter object,) and the same result is obtained in every case:—a loss on that particular portion abstracted from the rest of the line. And unless a Company using another's line can show some claim to be placed on a more favourable footing than the owner of such line, it follows as a matter of course, that the toll they ought to be charged must be more than the net earnings of that single portion; and the "fair" or "equitable" payment must be more on such portion than the average profits (or toll) per mile of the whole line of traffic.

I am, Sir, your obedient servant,

SPECTATOR.

London, 21st December, 1841.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company, will be held, pursuant to the Act of Incorporation, on Thursday, January 20, 1842, at the London Tavern, Bishopsgate-street, in the City of London, at One o'Clock precisely, when the five following members of the present Direction will go out of office, and, being duly qualified, will offer themselves for re-election, viz.—Francis Parker, John Gould, Michael Gibson, Newman Smith, and John Entwisle, Esqrs. And at which Meeting certain Shares upon which the Eighth and Ninth Calls have not been paid, and which have been in consequence thereof declared forfeited under Minutes of the Board of Directors of 19th November, 1840, and 5th May, 1841, will be submitted for confirmation of such forfeiture.

The Transfer Books of this Company will be closed on the 6th of January, and remain shut until after the Meeting.

JOHN HARMAN, Chairman.

London and Brighton Railway Company,
No. 10, Angel-court, Throgmorton-street,
December 24, 1841.

CROYDON RAILWAY—WINTER TRAINS.—On and after SATURDAY, the 1st January, 1842 the following Trains will run:—

DOWN TRAINS FROM TOOLEY-STREET.
Morning—5 minutes after 9, 10, and 12.
Afternoon—20 minutes after 2, 4, 5, 6, and 8 o'clock.

UP TRAINS FROM CROYDON.
Morning—5 minutes after 8, 9, 10 and 11
Afternoon—20 minutes after 1, 3, 5, 7 and 9 o'clock.

SUNDAY TRAINS.

DOWN TRAINS FROM TOOLEY-STREET.
Morning—5 minutes after 8 and 10.
Afternoon—20 minutes after 2, 4, 6, and 8 o'clock.

UP TRAINS FROM CROYDON.
Morning—5 minutes after 9.
Afternoon—20 minutes after 1, 3, 5, 6 and 9 o'clock.

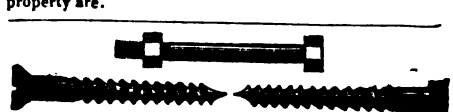
R. S. YOUNG, Secretary.

205, Tooley-street, 24th Dec., 1841.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.



Immediately adjoining the Iron-works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-engines, Sugar mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.

In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.

A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W. S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title deeds of the property are.

T. H. RYLAND AND CO., OZELL'S STREET, BROAD-STREET, BIRMINGHAM, Patentees and Manufacturers of Wood Screws and Screw Bolts, for Railways, &c.

The quality of these Screws is acknowledged to be superior to that of any other maker, and T. H. R. and Co. have, by their improved means of manufacture, so greatly reduced the price, that they will be found not to exceed in cost the common driving pin; and that they are more efficient for the purpose will be obvious, from the fact that one of these screws will require a force equal to from 2 to 4 tons weight, to tear it from the wood.

T. H. R. & Co. have to dispose of
A 12-horse high-pressure engine, metallic piston with or without boiler.
Two boilers, quite new, 18 feet by 4 feet.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Fraser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R.E.	B. G. Windus, Esq.
G. Palmer, Esq.	

STANDING COUNSEL—R. Ryder Dean, Esq.
SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,

THOMAS DODGSON, Secretary.

Just published, 7th edition, price 3s., and sent free on receipt of a Post-office order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and others may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road, London.

RAILWAY COMMUNICATION WITH SCOTLAND, AND THE STOCKTON AND DARLINGTON AND CLARENCE RAILWAYS.

To the Directors of the Stockton and Darlington Railway.

Gentlemen,—I am aware that some apology is due from me in thus obtruding upon you, unsolicited, the present report. Circumstances have arisen, however, which point out its propriety, if a sense of my duty to you has its proper weight with me.

When I solicited opportunities of you to take levels and investigate the line of country north of Darlington, with reference to the facilities for the formation of a railway in extension of yours towards Newcastle, and subsequently to the general results of those investigations being communicated to you and others, my attention has been pointedly drawn to certain paragraphs in the public journals, which are either ingeniously or designedly so drawn up as to misrepresent your conduct and my proceedings, and thus deceive the Clarence shareholders and the public at large. The first of these paragraphs appeared in the *Gateshead Observer*, and has since been copied into other papers. It assumes a predetermined scheme to obstruct and injure the public interest in their anticipated line of railway beyond the present terminus at Darlington, and ascribes to me, and those connected with me, motives which I wholly repudiate.

The second is a statement which has been widely circulated in like manner, purporting to be an account of a meeting recently held at York, in which it is represented that a gentleman unconnected with either you or the Clarence Railway Company, made a distinct offer, therein more particularly mentioned as emanating from you and the Clarence Railway Company. The latter paragraph has, however, occasioned a public contradiction, which assures me of the correctness of my belief that no direct offer of any kind whatever has been made on this subject either by the Stockton and Darlington or the Clarence Railway Company. As these false statements may greatly mislead your proprietors and others who are made acquainted with their contents, I propose to bring before you, as clearly as I can, and as briefly as may be, the results of the investigations I have made.

In carrying the progress of the survey made by Thos. Storey, Esq., then Engineer-in-Chief of the Great North of England Railway, through the county of Durham in 1835, I had the advantage of becoming acquainted with its general features, the instructions given to that gentleman respecting the amount of traffic likely to come eventually on a great main line through the county of Durham, together with the importance of many gradients and a very direct line, induced him to select a country and encounter works of an extraordinary magnitude, in order to effect them. His line received the sanction of Parliament in 1836.

At the further developement of railway science, the wants of a much larger amount of capital being required than had been previously contemplated or provided, induced the promoters of the Great North of England Railway to pause in the execution of their Parliamentary line through the county of Durham, the southern portion of the main York to Darlington having been admirably completed.

Instead of pursuing the most direct line, or even making the independent one, was essentially abandoned upon the advice of a gentleman whose judgment others as well as myself must ever regard with the utmost respect.

It appeared to me, and it was in fact a most important step, embracing the admission that it was not essential to the entire success of the Great North of England Railway Company's undertaking that the line to Newcastle-upon-Tyne should be wholly a new and independent line, that existing lines of railway, although not so direct, might be enhanced and adopted as a part of the general line, that the existence of a large amount of traffic on an incorporated railway could not be deemed an obstacle to forming a link in the chain of international communication, that the Great North of England Railway Company, placed in abeyance powers and privileges conferred upon it by the Legislature, was prepared to make a transaction to other parties ready to ensure to the public an improved line of communication from their terminus at Darlington to Newcastle-upon-Tyne. The adoption of a line of policy embracing all these propositions having been confirmed and confirmed by a large meeting of influential gentlemen conversant with the practical working of railways, could not but be accepted by me as the strongest confirmation of the views I had entertained.

Instead of commencing on the banks of the Tyne west of Newcastle, and pursuing a course southwards through the county of Durham, it was resolved that the Brandling Junction Railway should be traversed for a distance of 3¼ miles—from this point, that a new line should be formed, about 5 miles in length, uniting the Durham Junction and Stockton Junction Railways; that the Durham Junction Railway should then be used for a distance of 3 miles and 1320 yards, and that a further new line should be laid from the Durham Junction to near Thrislington Gap or Shincliffe, the extent of the latter portion of new line being 10 miles, making the total distance from the Brandling Junction at Gateshead to a point near Thrislington Gap, 22 miles and 220 yards. The whole of this new line is within the Northern Union Railway. I am aware that a deviation in the southern portion of this line has been surveyed, and plans deposited with the Clerk of the Peace, however being immaterial as respects my present report, I shall confine my attention, for the sake of clearness, to the Northern Union terminus near to Thrislington Gap. From the latter point it has been proposed to pursue the parliamentary line of the Great North of England Railway to Darlington, with more or less deviation, according to the nature of the country.

The argument could be addressed in favour of the adoption of various gradients from the Parliamentary line now laid, which may apply with greater force in reference to the use of other existing railways, nor, as respects their use, can there be any objection which does not apply with increased weight against the former.

Immediately north of Darlington, the Stockton and Darlington Railway travels in a direction parallel to the Great North of England Railway for a distance of 5¼ miles, at an average distance therefrom of about 1740 yards, or nearly one mile. The Clarence Railway pursues its northerly course at a short distance from the line of the proposed Great North of England Railway, and nearly parallel thereto, for 4 miles; in fact, these lines are together parallel to the Great North of England Railway for a distance of about 10 miles. I have taken the levels of the country between the Stockton and Darlington Railway, a little to the north of the Aycliffe-lane station, and the 14th mile post of the Clarence Railway, near Nunstainton, and with works of a very easy character, I have been able to obtain the following gradients;—1 in 425; 1 in 744; 1 in 255; 1 in 402; the whole length of the line being five miles and 44 chains. The deepest excavation being 25 feet, and there is no curve less than half a mile radius

This junction I estimate to cost 80,000*l.*, inclusive of ordinary Parliamentary expenses and the purchase of land. Provided the land is purchased for the sum I have estimated, I do not hesitate to say, the cost of the line will not exceed the amount stated. By making then a new line of 5¼ miles in length, and using the Stockton and Darlington and Clarence Railways, we shall be able to reach Thrislington Gap, or the point of junction with the Northern Union Railway. The distance from Darlington to Thrislington Gap, by this route, is as follows :—

	Miles.	Chs.
By the Stockton and Darlington Railway.....	5	8
,, New Junction Line.....	5	44
,, Clarence Railway.....	3	20
Total distance.....	13	72

Being about ¼ mile more than the direct Parliamentary line, which passes through a difficult country. The distance from Darlington to Gateshead, by the proposed route is—

	Miles.	Chs.
Darlington to Thrislington Gap	13	72
Thrislington Gap to Gateshead	22	10
Total distance.....	36	2

The distance from the point where the Parliamentary line of the Great North of England Railway crosses the Stockton and Darlington Railway to its northern terminus, near Askews Quay, on the banks of the Tyne, is 31 miles, the proposed route being a detour of about 5 miles; but of this increased distance of 5 miles, 3¼ are produced in the proposed union north of Thrislington Gap—whilst, by uniting the Stockton and Darlington and Clarence Railways, a circuit of only 1¼ mile is entailed.

The gradients of these lines are such as to insure as speedy a rate of travelling as can be desired. The proofs are also full and satisfactory, that there is nothing in the amount of the existing traffic which can be adduced as an objection to their adoption: on this point I wish to observe that the whole of the Grand Junction and North Union traffic to and from Liverpool and Manchester, passes on the Liverpool and Manchester Railway. The Stockton and Darlington Railway has now been open for many years, during which period no fatal accident has occurred to a single passenger in the coaching trains. Experience is also daily proving on your line, that on one part thereof ten and on another eighteen passenger trains pass and repass, at speeds varying from twenty to thirty miles an hour, without any delay or interruption, the number of passengers often exceeding 8,000 per week.

It is also practicable to pass along the Clarence Railway to Coxhoe, in lieu of joining the Northern Union at Thrislington, its proposed terminus, and then pursue the line of country northward, nearly in the direction of the survey made by W. A. Brooks, C. E., and laid before the Government Commissioners for reporting on the best line to Scotland. The line surveyed by this gentleman, soon after crossing the road from Sherburn to Durham, falls into the Northern Union Railway, the northern portion thereof being common to both; whether it will be more feasible to adopt Brooks' line, or the entire Northern Union, is a question I have not fully considered, nor do I think it my duty to enter upon the subject at present.

I have now laid before you an outline of the route which I believe calculated to secure, at the least possible expenditure, every object in contemplation, or that can be effected in securing a continuous railway transit from Darlington to Newcastle.

Assuming, then, that this route was perfected, and so regulated as to ensure safe travelling at the rate of twenty-five miles an hour, including stoppages, the time occupied by the proposed route will be, from Darlington to Newcastle, one hour and twenty-six minutes; by the Parliamentary line, one hour and fourteen minutes. Now, let it be remembered, that of the additional time of twelve minutes, three 3-5ths minutes are occupied in using the Stockton and Darlington and Clarence Railways, instead of the direct route, the remaining eight 2-5ths minutes being lost on the Northern Union, Durham Junction, and Brandling Junction Railways.

I am fully aware that you have one gradient for some distance north of Darlington, which is inferior to those found on the rest of your line purposed to be passed over, or on any of the others; but I would call your attention to the Grand Junction, Eastern Counties', North Union, and Newcastle and Carlisle Railways, upon the whole of which lines, gradients of a worse character than any on this portion of your line are daily worked over, without the majority passengers being even aware of the fact. On the Leeds and Manchester also, a gradient of a nearly similar inclination is constantly worked, with heavier passenger trains than the Great North of England Railway can calculate upon.

I trust I have now shown that the arguments in favour of the adoption of the railways north of Thrislington Gap, apply with much greater force to the use of the Stockton and Darlington and Clarence Railways; that the objections against the use of the latter fall with increased weight against the adoption of the former; but, after weighing both, the reasons which have induced the recommendation of the former, are most conclusive as to the expediency of taking advantage of the latter.

I have not estimated the expense of the line north of Thrislington Gap, with reference to the new line required to the south thereof; I can only repeat, that I fully believe I shall be able to find contractors to execute it for the sum I have estimated; and this amount, recollect, brings us to a point, 12¼ miles North of Darlington, in a direct line.

On the question of general facilities I shall not enlarge; every important object to be attained by the one, appears to me obtained in a most satisfactory manner by the other. A very large amount of capital is saved,—landed estates are less interfered with,—the country is less disfigured,—and those who have liberally invested their capital in the magnificent undertaking already executed, will participate in the advantages of a further extension of the system to which their spirited energies have given the impulse and the foundation.

In conclusion, I am justified in adding, that it is my firm opinion, that in whatever point of view the route I have laid before you is regarded, there cannot be a doubt in the mind of any dispassionate judge, as to what your interest, the general good, and a proper economising of the resources available to railway enterprises would suggest.

I am not ignorant of the arguments used to induce conclusions widely different from those here suggested, or the basis on which adverse views are founded; but I could not so far lose sight of the interests of your Company, as to avoid calling your attention thereto; being satisfied that in a more public point of view my opinions will abide any test, however severe, before any impartial tribunal, as to their general soundness and the value of the conclusions I have thus imperfectly deduced.

I remain, Gentlemen, yours most respectfully,

JOHN HARRIS,
Engineer to the Company.

Darlington, 12 mo., (December) 15, 1841.

LONDON, EDINBURGH, AND DUBLIN GUARANTEED MUTUAL and PROPRIETARY LIFE ASSURANCE COMPANY, 3, Charlotte-row, Mansion House; St. Andrew's-street, Edinburgh; Fleet-street, Dublin.

DIRECTORS.

Alexander Anderson, Esq.	John Johnson, Esq., Ald.
John Atkins, Esq.	Kennett Kinstord, Esq.
James Bidden, Esq.	John M'Guffie, Esq.
Captain F. Brandreth	John Maclean Lee, Esq.
James Hartley, Esq.	J. Marmaduke Rosseter, Esq.
Vice-Admiral Robert Honyman	Alexander Robertson, Esq.,
Benjamin Ifill, Esq.	Managing Director.

Solicitors—Messrs. Palmer, France, and Palmer.
Secretary—F. Edgell, Esq.

Important improvements have been introduced into Life Assurance practice by this Company.

The Policies are indefeasible and indisputable, unless they have been obtained by fraudulent misrepresentation.

The Board of Directors satisfy themselves upon the various questions proposed before they enter into contracts of Assurance; and frame their Policies in such terms as to preclude all future questions as to their validity, and thus render them indisputable and negotiable documents of future debt against the Company.

Parties may be assured either upon the participating or non-participating plan; the assured are relieved of all responsibility, and the participating class is entitled to the whole of the profits upon that branch of the business.

Table to assure £100, with addition of Profits.

Age 25.	Age 35.	Age 40.	Age 45.	Age 50.	Age 55.
£2 2 7	£2 15 10	£3 5 0	£3 15 5	£4 10 7	£5 18 8

Persons interested in the Lives of Nominees or Debtors may, for a trifling extra Premium, be relieved from the risk of their Policies being forfeited by the parties going to foreign countries.

One-half of the Premiums may remain unpaid for seven years, affording a greater facility for loan transactions and family provisions than any other plan which has been suggested.

Credit Table to assure £100, payable at death.

Age 20.	Age 25.	Age 30.	Age 40.	Age 45.	Age 50.
£0 18 0	£1 0 7	£1 3 7	£1 11 5	£1 16 6	£2 3 0

The usual Commission allowed to Solicitors and Agents; and Medical Gentlemen are in all cases remunerated for their reports.

This day is published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Terminl, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

MANCHESTER AND LEEDS RAILWAY.—TENDERS for BUILDINGS at OLDHAM STATION.—The Directors will meet at their offices, Clowes' Buildings, Hunt's Bank, Manchester, on Monday, the 24th of January, 1842, for the purpose of receiving TENDERS for the erection of Offices, Goods Shed, and other Buildings, at the Oldham Station, including a Shed, with Iron Roof, over the platforms.

The Plans and Specifications will be ready for inspection at the Engineer's Office, Palatine Buildings, Manchester, on and after Monday, the 10th January.

Printed forms of Tender may be obtained at the Engineer's Office, and none others will be attended to.

The Tenders must be delivered at the Offices in Clowes' Buildings, on Monday, the 24th January, 1842, not later than Ten o'clock, in the forenoon, and parties tendering will be required to be in attendance at Three o'clock in the afternoon of the same day.

Engineer's Office, Palatine Buildings, Manchester.
December 30, 1841.

MANCHESTER AND LEEDS RAILWAY.—At a Special General Meeting of the Proprietors of the Manchester and Leeds Railway, held at the Offices, Clowes' Buildings, Hunt's Bank, in Manchester, on Thursday, the 23rd December, 1841,

HENRY HOULDSWORTH, Esq., (Chairman of the Directors) in the Chair;

The advertisement convening the meeting having been read, the following resolutions were passed:—

Moved by William Marshall, Esq.; seconded by James Heald, Esq., and resolved unanimously:—

1st. That the Directors be authorised to proceed with the execution of the works for the extension of the Manchester and Leeds Railway to Hunt's Bank.

Moved by James Heald, Esq.; seconded by John Humphreys, Esq., and resolved:—

2nd. That the Directors be empowered to unite with any other Railway Companies in taking a lease of a proposed railway from Darlington, to join the Durham Junction Railway, and to take any measures, with reference to the formation and establishment of the said proposed railway, upon the principles and terms now submitted to this meeting.

H. HOULDSWORTH, Chairman.

The Chairman having left the chair, the cordial thanks of the meeting were, on the motion of James Wood, Esq., seconded by Lewis Loyd, jun., Esq., unanimously voted for his conduct in the chair.

GREAT YARMOUTH AND NORWICH RAILWAY.—Mr. Robert Stephenson's Line.—This line (for leave to make which a bill is intended to be introduced into Parliament in the next session) is 20 miles long, and presents such extraordinary facilities of construction, that, according to the estimate of Mr. Robert Stephenson, the Engineer to the London and Birmingham Railway, it may be made with ease in 12 months, and at a cost of £7,000 per mile.

Great Yarmouth, as is well known, is the port to the city of Norwich and the surrounding districts, as well as a favourite watering place. The population of the two towns and of the intermediate places adjacent to the line of railway exceeds 100,000, and the traffic, taken at a low estimate, is calculated to produce at least 40,000*l.* per annum. The profit, therefore, of the intended undertaking is likely to equal, if not exceed, that of the most successful railways now in operation.

The shares are to be of £20 each, on which a deposit of £2 will be payable at the time of subscription, in compliance with the standing orders of Parliament, but this deposit will be returned to the subscribers if the proposed application to Parliament should not be made in the next session.

It is also intended to pay interest after the rate of five per cent per annum on all calls made prior to the completion of the railway.

The capital is to be £150,000, of which a large proportion has been already subscribed for. Applications for the shares remaining undisposed of may be made to Messrs. White and Borrett, 35, Lincoln's-inn-fields; Messrs. Rackham and Cooke, and J. O. Taylor, Esq., Norwich; and to C. R. Palmer, Esq., Great Yarmouth; of whom detailed prospectuses of the undertaking and any further necessary information on the subject may be obtained.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,
J. F. BELL, Secretary.
Leicester, 29th November, 1841.

KING'S COLLEGE, LONDON.—DEPARTMENT of CIVIL ENGINEERING and ARCHITECTURE, and of SCIENCE applied to the Arts and Manufactures.—This DEPARTMENT, under the superintendence of Professors Hall, Moseley, Daniell, Wheatstone, Hosking, Dyce, and Anstead, and Mr. Bradley, Mr. E. Cowper, Mr. J. Tennant, Mr. A. Moseley, and Mr. H. J. Castle, will be RE-OPENED on TUESDAY, the 18th of January.

The Junior Class, for Pupils of the age of fourteen years or upwards, will also be re-opened on the same day.

J. LONSDALE, Principal.
Decemb 841.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.
Office, 30, Broad-street, Bristol.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

In connection with the above lines of Railway, Places can be secured by

LARCH TIMBER FOR SALE.—The LOW PORTION of the KNOCK PLANTATION of MONZIE, situated near Crieff, in the county of Perth, and within 16 miles of the shipping port of Perth, will be exposed to SALE by Public Roup, on the spot, on Wednesday, the 12th day of January next, at Twelve o'clock, noon. It consists of 38 imperial acres, and will be exposed in one, two, or three separate lots. There are 5,169 trees of Larch and 991 of Scotch Fir. The other intermixed Timber is to be reserved. The Larch is of very superior quality, and is upwards of 60 years old. Much of it is of very large scantling, and well suited for Railway Sleepers, Ship-building, and other purposes requiring heavy Timber. There is a ready market in the neighbourhood for the Tops and Brush, and also a good situation adjoining for a Saw-mill, with a plentiful supply of Water.

For further particulars application may be made to Messrs Davidson and Syme, W. S., Edinburgh, or to Mr. William Blackadder, C. E. Glammis, Forfarshire; and the Timber will be shown by James Taylor, forester, at Monzie.

November, 1841.

TO CAPITALISTS, &c.—A Gentleman having invented a project for the improvement of Holborn Hill, (which is applicable for other purposes,) by which neither the present houses nor street would be interfered with, and without imposing any tax on the public, will pay £7 per cent. on the capital expended. The inventor intends taking out a Patent for the same, half of which would be given to any Gentleman that would bear part of the expenses.

Further information will be given on application to C. E., F.R.S., care of M. Bynghan, 9, Broad-street, Bristol.

N. B.—None but principals need apply.

PEOPLE'S EDITION OF SIR WALTER SCOTT'S NOVELS.

On Saturday, 1st January, 1842, was published, and to be continued each Saturday till the whole is completed, No. 1, price Two-pence, containing One Sheet, Royal Octavo, double columns, of

WAVERLEY; OR, 'TIS SIXTY YEARS SINCE. With all the Author's Introductions and Notes; to be immediately followed by GUY MANNERING, THE ANTIQUARY, and all the other novels and romances of Sir Walter Scott.

N.B.—Part One in a stitched cover, containing four numbers, will be published on Saturday, 22nd January, price Ninepence.

The Proprietors are anxious to meet the wishes of many intelligent correspondents among the working classes, who represent that, notwithstanding the great circulation and unparalleled celebrity of

THE WAVERLEY NOVELS,

thousands upon thousands of our industrious countrymen have yet to form acquaintance with the Baron Bradwardines and Fergus M'Ivors, the Meg Merilees and Dominie Sampsons, the Edie Ochiltrees, Old Mortalities, Die Vernons, Rob Roys, Jeanie Deanses, and numberless other immortal creations of the Prince of Novelists. The Edition now announced will, it is hoped, be allowed to put these marvellous performances within the reach of the masses.

It is expected that the entire Novels will comprize about 260 sheets; and, besides the Weekly Issue, a Monthly stitched Part, price Ninepence, will be delivered with the Magazines.

ROBERT CADELL, Edinburgh; HOULSTON and STONEMAN, London.

Edinburgh, January, 1842.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

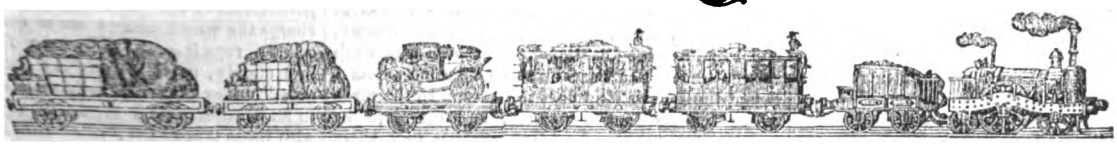
IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.



TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TO RAILWAY CONTRACTORS, &c.—WANTED to purchase from 150 to 200 Tons of Iron Rails, suitable for a Contractor. Any person having either of the above quantities to dispose of, naming the weight, shape, and price, may hear of a purchaser, by addressing a note to B, care of Messrs. Holt and White, Drysalters, Manchester.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 1, 1842.

The Railway Times.

Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 210. Vol. V.—No. 2.] SATURDAY, JANUARY 8, 1842. [Price 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a *like Register* be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to su h inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some centrical point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralising these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
17th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

TO RAILWAY CARRIERS, WHARFINGERS AND OTHERS.—To be let on Lease a Twelve Room House and Large Wharf, 90 feet frontage, next the Regent's Canal, and immediately opposite the London and Birmingham Railway Depot; also ground for eight third rate houses, possession forthwith if required. For full particulars, apply to the Proprietor, Stanhope Arms, Oval Road, Camden Town.

LONDON AND BIRMINGHAM RAILWAY.—Notice is hereby given, That all articles which have been left in the Carriages of the Company, or have been found upon the Railway, between the 1st July, 1839, and the 31st December, 1840, and which are not claimed within one month from the date hereof, will be sold to defray expenses.

By Order,

R. CREED, Secretary.

Office, Euston Station, 5th January, 1842.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

This Day is Published in Royal Octavo, 3s. 6d. cloth, lettered, with four engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

MANCHESTER AND LEEDS RAILWAY.—TENDERS for BUILDINGS at OLDHAM STATION.—The Directors will meet at their offices, Clowes' Buildings, Hunt's Bank, Manchester, on Monday, the 24th of January, 1842, for the purpose of receiving TENDERS for the erection of Offices, Goods Shed, and other Buildings, at the Oldham Station, including a Shed, with Iron Roof, over the platforms.

The Plans and Specifications will be ready for inspection at the Engineer's Office, Palatine Buildings, Manchester, on and after Monday, the 10th January.

Printed forms of Tender may be obtained at the Engineer's Office, and none others will be attended to.

The Tenders must be delivered at the Offices in Clowes' Buildings, on Monday, the 24th January, 1842, not later than Ten o'clock, in the forenoon, and parties tendering will be required to be in attendance at Three o'clock in the afternoon of the same day.

Engineer's Office, Palatine Buildings, Manchester.
December 30, 1841.

MIDLAND COUNTIES' RAILWAY.—The Directors of this Company are receiving Money on their Loan Notes, in sums of not less than £400, for either Three, Five, or Seven Years, to be exchanged for Debentures in September next. Interest, after the rate of Five per Cent. per Annum, is allowed and paid half-yearly, on the day it becomes due.

By order,

J. F. BELL, Secretary.

Leicester, 29th November, 1841.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,

J. S. YEATS, Secretary.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 2d0, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TEMPLETON'S RAILWAY STATISTICS, containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

THE LATE FATAL ACCIDENT ON THE GREAT WESTERN RAILWAY.

On Friday, the 31st ult., at 10 o'clock, the following residents of Reading were empanelled at the Royal Berkshire Hospital, before Mr. Blandy, the Coroner, to enquire touching the death of Richard Woolley, aged 40, who died on Wednesday last from the injuries he had received on the occasion of the accident on the Sunning-hill cutting on the morning of Friday, the 24th inst.—Messrs. William Ferguson (foreman), Daniel Jones, William Justins, John Smith, William Claxson, John Cocks, Henry Walsh, John Fall, Charles Hewitt, Richard Merrit, James Trendall, and John Middleton.

After viewing the body of the deceased, which lay in the dead-house of the hospital, the coroner and jury adjourned to the Public office, near St. Lawrence's Church, where the investigation was proceeded with.

Mr. C. Russell, M.P., the Chairman of the Board of Directors of the Great Western Railway Company; Mr. Saunders, one of the secretaries; Mr. Brunel, the engineer; Mr. Bertram, the assistant engineer, were again in attendance to watch the proceedings.

Some medical and general evidence having been adduced—

Thomas Reynolds sworn and examined—I live at No. 23, Dudley-street, Paddington, and am an engine-driver in the employ of the Great Western Railway Company. On Friday, the 24th inst., I had charge of the *Heela* engine, which left Paddington with a luggage train about 20 minutes before 5 o'clock on that morning. The train consisted of engine, the tender, two trucks for passengers, and I cannot say what number of luggage carriages. It was not a long train. There was not more than one engine. The passenger trucks were placed behind, and next to the tender. We reached Twyford without any accident occurring, and there we stopped. In proceeding from Twyford to Reading, when we came to the Sunning-hill cutting, the engine ran into the slip of earth, or the soil which had fallen from the slope into the road on the south side. The consequence was, that the engine went off the line, and the tender partly followed it. There was a concussion among the waggons, and one of the passenger trucks was turned over, and the other one came upon the top of it. The first luggage waggon also ran and was forced upon the truck by the sudden concussion. The second luggage waggon was also thrown off the rails, but the remainder kept their position on the rails. This happened at about a quarter or ten minutes to 7 o'clock. It was not then light enough to see the obstruction in the road. The fire of the engine would not have enabled me to see the obstruction if I had been looking out; my position at the engine was such as would have enabled me to look out, but it was too dark to see the obstruction. We had a green lamp with us on the engine, but it showed us no light on the road.

By a Juror—Had you received any orders to go carefully through the Sunning Hill cutting?—No, none whatever.

Juror—Did you see any watchmen between Twyford, and where the accident occurred?—I saw a policeman at Land's End.

Juror—How far is that from where the slip at Sunning took place?—About a mile, or thereabout.

By the Coroner—We went along at the usual rate at which the luggage trains travel. The fireman was on the engine with me, and the train was also accompanied by a guard and a conductor. The conductor was in the truck next to the tender, and the guard was on the train behind. There are policemen stationed on different parts of the line, and one of them I saw at the Land's End, between Twyford and the Sunning Hill cutting. The Land's End is about a mile from where the accident happened. His duty is to walk over the ground to see that all is safe, and to give the engine-men signals as they pass if anything is wrong. He gave the signal that all was right.

By the Jury—The first messenger that was sent to Reading for assistance after the accident was one of the plate-layers employed on the road. I remained upon my engine after the accident. I did not jump off. After the accident I turned off the steam. I go through the Sunning cutting twice in 24 hours, then I rest a day, but I always pass in the dark. I had no idea there was any danger, and I had not been cautioned to go carefully through this cutting. The beat of the policeman whom I saw at the Land's End does not extend to the place where the accident happened, and therefore he could not have given me any warning that there was danger. There is another policeman on duty in the Sunning cutting in the day time, but not at night. The passenger trucks are not quite as heavy as the luggage waggons. The luggage trains are not so easily stopped as the passengers' train.

The Coroner (at the suggestion of Mr. Bartlett, who appeared for the friends of deceased)—If the passenger trucks had been placed behind at the end of the train, instead of next the tender, and another train had overtaken you, would the concussion have been so great, or would your train have been propelled forward?—I think it would have been quite as bad, as many or more lives would have been lost.

By a Juror.—If I had received a signal of danger, I could, at the rate of speed at which we were travelling, have stopped the train in about 300 or 400 yards. The earth did not extend so far across the road as to prevent the up-trains from travelling. I turned off the steam after the engine struck the earth. A red light is placed at the back of the train, and if another train was coming after it, the red light would be seen so as to enable the following train to be stopped in time. It might be seen a mile off on a clear night.

By the Foreman.—I cannot say if the slip had taken place before I came to it. I think it must have been so, but I cannot say positively.

By a Juryman.—How do the watchmen give you the signal?—By holding out a lamp.

How far can you see that lamp?—I might see it 400 or 500 yards.

Then there would have been sufficient time to enable you to stop the engine?—Yes.

George Hassam, sworn.—I live at No. 13, Church-strret, Paddington. I am guard of the luggage train on the Great Western Railway, and was in charge of it on the morning of the accident. I was in the first truck with the passengers at the time. I am termed conductor as well as head guard. There was another person with me. He was behind. There are only two of us in charge of a train. When we came to the soil which had fallen on the line, some more was still falling. A good deal of dirt fell upon me and splashed over the truck. The train was suddenly stopped, and I was thrown out, and doubled up nearly, and dirt rolled down from the slip of the cutting upon my back. I had no previous intimation of the slip. After I recovered from my fall, I took a light from the engine and carried it a-head, to stop the up-train, to prevent it coming upon us. I did not stop it. I gave the light to a workman, and directed him to do so, while I went back to stop the down-train. I then sent a policeman towards Twyford for that purpose. By that time we had got 12 or 14 hands to assist us. The engine of the down-train came from Twyford, leaving the train behind, and took back part of the luggage-train, which I accompanied to Twyford, whence I sent the engine on to London for more assistance. I took some men from Twyford, and we walked back to the place of the accident. I remained on the spot until all the bodies were moved, and a portion of the line was cleared. I generally pass the Sunning Hill cutting in the dark.

By Mr. Bartlett—The engine forced away a great deal of the earth which was on the line.

Would not the removal of the earth cause the superincumbent part to roll down?—Not such a body of it.

Are there any policemen by night, from dark to light, between Bristol and London, employed on the line to give signals?—A great many, and between Reading and London in proportion.

Mr. Thomas Henry Bertram, sworn.—I live at No. 2, Portland-place, St. Giles's, in Reading. I am an assistant-engineer to Mr. Brunel, on the Great Western Railway. My duty is to visit the portion of the line under my charge, from Reading to London, generally twice daily; to employ competent foremen on short distances, under whose charge the workmen are employed in making all necessary repairs. These foremen also inspect the line closely, and employ other men, called "gangers," under them, who also inspect the line closely, in all weathers. I am in constant communication with those foremen, and make them detail the examination of any portion of the work observed by myself, or reported by them as presenting any unusual appearance, or requiring anything beyond the usual processes of reparation.

By the Coroner—On the day previous to which this accident happened, had you been on that portion of the line where it took place, to examine it?—On Wednesday afternoon I had remarked particularly the whole of the Sunning cutting. It presented no change of appearance from that of the previous three weeks. I had received daily reports from the foremen employed under me, as to the state of several small slips which some time before I had instructed them to drain and repair in the usual manner. I satisfied myself that these slips were quite superficial, and such as had been successfully treated in the same way in the previous season.

Did you receive any report from your workmen that they had so repaired them?—I did. I also sent my assistant, Mr. Charles Owen, to ascertain if the repairs had been properly made.

The Foreman.—But did you not go yourself to examine the works?—I did not; I have seen them in passing.

A Juryman.—Then you do not think it necessary to make a proper survey of the works you direct?—No; I received the reports from the workmen.

The Coroner—Well, stop. Is it part of your duty to take a superficial view, having various persons employed under you, or to take such a close view as that of which the jury speak?—That view of which the jury speak it is the duty of my foremen to make, and they have a perfect opportunity of calling my more close attention to anything that may require it.

The Foreman—I am not at all satisfied with your evidence upon this point.

A Juryman—Nor am I.

Another Juryman—Having these foremen under you then, you think it is their duty, or that of other people, to examine the state of the works in a proper manner?

The Coroner (to the Juryman)—How can you jump to that conclusion? You may as well say that it is the duty of an architect to build a house.

The Juryman—It is the duty of an architect to see that the house is built in a proper manner.

The Coroner—His evidence goes to show that.

The Juryman—No, it does not.

Another Juryman—I think we should not make remarks of this kind here. Whatever comments we have to make upon this gentleman's evidence we should make by and by in another room.

The Coroner—I am anxious to elicit the whole of the facts. I must say that I cannot see how you are to jump to conclusions in this way. He has not yet finished his evidence. I have a vast number of questions to ask him, to which I was going if I had not been interrupted. I will read over the evidence of Mr. Bertram to you, and then you will see that there is no ground for such observations as have been made. The Coroner then read over the evidence, and on coming to that part where the witness stated that it was his duty to survey the line from Reading to London twice daily, observed,—Now, you see it is quite impossible, since he has to inspect the line twice a day, that he can examine it so minutely as you speak of. The witness then goes on to state that he employs foremen under him to do the work, &c. (The Coroner read to the end). I think gentlemen of the jury cannot come to the conclusion that it is any part of Mr. Bertram's duty to go and examine minutely all the work he gives directions for; that would be impossible. It ap-

Digitized by Google

the Directors employ not one person sufficient number of persons to which may from time to time be this gentleman. We have not got workmen yet; we can examine them, and if we find that they have constantly reported to him, the jury must come to the conclusion, I think, that he, at least, has done his duty. I will now go on with the evidence.

Another Juryman—Before you re-commence, allow me to ask if I understood rightly that Mr. Bertram rode the whole line from Reading to London daily?—Yes, twice.

Do you go along the whole of the line?—Yes.

By the Coroner—Mr. Charles Owen reported to me that the drains ordered by me had been made, and that he had made a further drain in one slip, which slip was in the immediate neighbourhood of the great slip which took place on Friday last. I received from Mr. C. Owen no communication which made a more detailed examination of the cutting necessary on my part. There are various portions of the road which have required and received from me special attention. There are points of the line which I visit periodically for the purpose of making a report to Mr. Brunel, such as the Brant embankment, the viaducts, and generally the leading structures on the line. I am not aware that in the Sunning cut there are any parts which have given cause to the Company for more anxiety in regard to safety than any other part of the road. Such has not been the case during the two years it has been under my care. The reports with regard to the cutting of those employed under me have always been perfectly satisfactory in respect to safety.

By the Jury—No portion of the slopes are, in my opinion, dangerous. During the small slips, men were employed to watch the cutting. The slopes throughout the cutting are all equally safe. I do not consider the spoil-bank at the top of the cutting at all contributed to cause the slips. I have examined the slip since the accident took place, and in my judgment the slip is to be attributed to water percolating from a small seam of gravel near the top. That seam had not attracted my attention before, as it only showed itself since the fall of the earth. There was no appearance of this slip indicating the probability of anything of this kind taking place. In my opinion it was an entirely new slip. It is probable in a wide cutting, where there are various strata of earth, that water may force itself through those strata. I knew there were springs in the cutting, but it was well drained, and I did not apprehend any danger. The alternation of strata in this cutting, renders it less likely that such a slip would occur, and renders a sudden disruption of the earth less likely, as the ingress of the water is much more rapid, and does not, therefore, collect in any quantity.

By the Jury—The police are not under my notice, but I am authorised by Mr. Brunel to put special watchmen on any part of the line, by day or by night, on which the state of the works may appear to require. The reports made to me by the foreman are made personally, and not in writing. My attention was called to this particular slope three months ago, as I have already stated.

By the Coroner—In my opinion no better system of precaution to forearm the Company against accidents of this kind, other than that which is adopted can be established.

Mr. C. Owen, sworn and examined—I am employed by the Great Western Railway Company, under the last witness, as his assistant, to see that the repairs in different parts of the railroad, and in the Sunning cutting in particular, were properly done. I was instructed by him, about three weeks ago, to go to the Sunning cutting and examine the slip which had then taken place, and to see that the instruction he had given the foreman had been carried out. I did so, and I found that the drain Mr. Bertram had ordered had been made. I reported to that effect to Mr. Bertram, and I ordered the foreman to make two more drains, and of that I also informed Mr. Bertram, and I have seen since that those drains I so ordered had been made. Since then I was not at the slip until Friday morning last, the day on which the accident happened. About 16 days had elapsed since I had seen it before. It was the duty of Bottrell, the foreman, to visit and examine those drains and the cutting when I did not. Bottrell makes his reports to Mr. Bertram and likewise to me. I frequently inquired of him during the 16 days as to the state of the slips, and he said, they were just in the same state as I had seen them when repaired.

By Mr. Trendell (a juryman)—My attention was not more particularly directed to the state of this cutting, than to any other part.

By the Coroner—During the time you were attending to the works directed by Mr. Bertram, did any thing happen to call your particular attention to this cutting?—No.

By the Foreman—There was a former small slip about 30 feet off from this last slip, and it brought down part of the cutting in this place.

The Foreman—Then I want to know how he reconciles that with saying his attention had not been directed to this part?

By the Coroner—I cannot account for the larger slip taking place afterwards, unless it was by the quantity of water running through the layer of gravel. The large slip took place at the top of the slope, and the smaller slip near the bottom.

The Coroner (to the foreman)—Do you see any inconsistency now? A small slip may take place, and give no indication of a larger one coming.

The Foreman—The inconsistency is in saying that his attention had not been directed to this matter, when he acknowledges that he had been superintending the repair of a previous slip on the same spot.

William Bottrell sworn—I live in the Caversham Road. I am employed by Mr. Bertram to go from Reading to Twyford to look after the road and the slips, and such like. I am called an overlooker, or foreman, or something of that sort. I did not receive any particular directions about this part of the cutting from Mr. Bertram. There had been several little slips which I observed myself, and I drained them. There was one near where the large slip took place, and where the accident happened. I drained that and got it all right.

By the Coroner—How lately before the accident were you over the Sonning cutting?—On the Thursday two or three times I went up and down over the slopes, and meadows and all, to see if anything was the matter. I did not observe any thing which attracted my attention with regard to repairs. I repaired the small slip which was below just outside the last large one, with draining tiles, flints, gravel, or ballast. The small one dropped into the large one.

During the time you were repairing that small slip or afterwards, previously to the accident, was there any indication of another slip taking place?—No, Sir. About 5 o'clock on the evening before I was going over the line, there was a man "quicking," and he said, "I wish master would give me 15*l.* and I would take all this muck away and 'quick' it all along." And then there was another man we call "Squint," and he looked at the slope and said—"Master, what had we better do? There's nothing the matter."—I said "No, there's nothing the matter to night." The other man looked and did not see anything wrong.

The Coroner—Then your attention was particularly drawn to this part that evening?—Yes.

By the Foreman—The small slip was below the large one. Is it not likely that after a slip at the bottom, one from above may take place?—Not as I knows on.

The Coroner repeated the question.—I can't say; I never know'd it afore.

The Coroner—Well, then, in your experience?—I never saw it before.

By the Jury—The cutting was watched all the time we were repairing the small slip, and all the time of the floods we had six watchmen on the line from Reading to Twyford. There have been watchmen there within the last fortnight. We took 'em off when the frost came on. They have not been put on since.

Were there any watchmen put to this particular slip?—No, not more than to the rest of the cutting. During the floods there were two watchmen in the Sunning cutting, two to Reading up to the Shepherd's-house bridge, and two from Twyford up to Duffield's bridge. They were to report if the floods did any damage to the embankments, or the bridges.

By the Foreman—There were two men placed in the gullet?—Yes. They were put there to watch the slopes, to see that nothing came down.

The Coroner—The distinction he makes is this—that they were placed there during the flood to watch against danger, and not to watch any particular slip.

The Foreman—Is it not likely that slips will take place after a frost?—Not as I knows on.

Coroner—He does not speak of a frost, but of the floods.

A Juryman—But he says that when the frost came he took off the watchmen. Besides, the flood could not interfere with the cutting.

The Coroner—That is an inference I cannot draw.

The Juryman—It is an elevation of 18 feet.

The Coroner—It may be so. Did you consider that it was necessary to keep the watchmen on in consequence of the frost?—No; cos these ere slips were all drained, and I didn't see any cause for the men to be kept on at all.

The Coroner—Any more questions?

The Foreman—No; I think that there is more danger of a slip after a frost.

A Juryman—No doubt.

Another Juryman—Is it not more likely that slips will take place after a frost preceded by heavy rains?—No, cos the wet was dried out on it by the frost. When I drained it I didn't see any danger whatever, and so I didn't keep the watchmen on.

By Mr. Bartlett—I don't know how many policemen are employed by night between Reading and Twyford.

Mr. Bartlett—Are there any?

The Coroner—You must not ask him that; he does not know, and therefore cannot tell. Ask some officer of the Company.

Witness—Two men watched the cutting one night, and two others another. Their names are Bridges, Hinges, Hancock, and Graves.

Mr. Thomas Stokes Salmon, barrister-at-law, repeated his previous evidence. Since the accident I have walked to the spot, and my conviction on seeing it more closely is, that the slip which I had seen previous to the accident was at the same spot, and is comprehended in the larger slip which has since taken place. I never was nearer to the place at any time before the accident than the wooden bridge which crosses the cutting. The distance from the wooden bridge to the slip is stated to be, and I think, in fact, is, about 270 yards. At that distance I could see the slip so well as not now to have the slightest doubt that the slip which caused the accident took place at the same spot. My opinion in this respect would not be shaken by the evidence of three persons who may have stated that the larger slip had taken place at a distance of 40 feet, from and had comprehended, the smaller one.

By the Foreman—I have visited the place since the accident, and my conviction remains the same as I have stated.

By another Juror—I never mentioned what I saw to any of the officers of the Company, though I did point out the bulge to a person who was with me at the time.

By Mr. Bartlett—I never saw, nor did I know, that any repairs of the slip had been made.

Joseph Collard, sworn and examined—I am superintendent of the police employed by the Great Western Railway Company. I superintend the London division of the line from London to Haygreen and Cirencester. There are six policemen on the Twyford district; by day there are two policemen on duty between Twyford and Reading, but none at night. One man comes on duty at Twyford at 6 o'clock in the morning, and comes along the line to Mustard-lane bridge, within about a quarter

Digitized by Google

of a mile from where the accident happened; the other leaves Reading at 8 o'clock, and proceeds along the line to meet the other man at Mustard-lane bridge. There is a foreman appointed by the assistant-engineer, who patrols and inspects the line and cuttings at an early hour in the morning from London to Bridgewater. The foreman takes a district of nine or ten miles.

By a Juror—It would take him three hours to inspect a district of eight miles. The man for this district is Bottrell, he would not be provided with a signal lamp. It is not the custom to put any watchmen on the line, unless there is a special reason for it. I have 149 policemen under me in my district; a number which is quite sufficient for the protection of the line. The watchmen are not regularly appointed; they are usually labourers. It is not the duty of any policeman to be on the line between Reading and Mustard-lane bridge before 8 o'clock in the morning.

By Mr. Bartlett—If an accident were to occur between 9 o'clock in the evening and 6 o'clock in the morning there would be no person to communicate it to the nearest station except the second guard, who has authority to employ a messenger in such a case, and to take a chaise, or use any other mode of despatch. The passenger-trucks are quite as strong as those which carry the luggage. They were originally made for luggage, but since the Company have taken passengers by the goods trains they have had benches or seats put across them. There are night policemen employed at all crossings, gates, and stations, and on other parts of the line where it is considered necessary.

Mr. T. K. Brunel, jun., sworn—I reside in Duke-street, Westminster. I am principal Engineer to the Great Western Railway Company. It is my duty to appoint the necessary establishment of inspectors and workmen to keep the works in repair, for which purpose I have several assistants, who keep a general control in their respective districts, and have foremen under them, who are constantly upon the works themselves inspecting short distances. I consider it the duty of my assistants to be frequently passing over the whole of their districts, seeing the foremen, and receiving their reports upon the state of each separate district; going himself to inspect any places which appear to require particular attention. This arrangement is adopted as being the most effective to secure immediate attention to anything requiring it. The foreman reports to my assistant, and the assistant to me, and I am thus enabled to give my attention also to those parts most requiring it. With respect to the system of watching adopted at night, I consider that any number of watchmen will be more effectively employed when placed specially to watch any particular place where any change is expected, than by attempting to patrol generally over a district in the night, and for that reason this system is adopted. My assistants have positive directions at all times, and without any limitation, to place watchmen at any point where they consider, from any previous symptoms, or from any peculiar circumstances, there is anything to watch for. At the present moment there must be about 30 or more between London and Bristol each night. These men being workmen, and in communication with the foremen, know better what to watch for, and are more likely to see any change than the ordinary policemen. With respect to the slips which have occurred, and have been referred to, I should wish to observe that the term "slip" is used indiscriminately for the mere washing down of a surface of slopes, and the breaking away of a large mass of a slope, and that some confusion has arisen from this; but they are totally distinct, both in the cause of them and the result. The "surface slips" are very common—probably there may be several hundreds between London and Bristol. They are prevented from extending by draining them, and then it is found better to leave them open. They sometimes gradually increase, but I do not remember any instance of their preceding the breaking away of a large mass of earth. In the Sunning cutting there have been several small superficial slips. But I can safely say that this cutting has given less trouble and caused less anxiety than the majority of cuttings on the line. Near the place where the late accident occurred there was one of these superficial slips. I had seen it about three weeks before the accident. I inquired of Mr. Bertram, and learned that he had given directions to have it drained. I saw afterwards that it had been drained. In passing very frequently I observed no change had taken place. In examining the greater slip a few hours after it occurred I found the drain which had been cut round the old slip, and which marked its situation. I found that a fall of earth had taken place situated about from 40 to 60 feet further east, and higher up the slope. It was a totally distinct matter; the first was a sliding of the surface, the result, I believe, of the quantity of rain which had fallen; the other was a large breaking away of the mass of the slope in a particular stratum near the top of the slope. The ordinary sliding down of the surface below this, which is the result of the slip, and not the slip itself, had spread over, and reached the former slide; but they were totally distinct; and the larger one cannot have been caused by the small one. Experience has shown that slips or slides do not occur one above the other; and I believe it arises from the first slip draining the ground, and removing the original cause of mischief. I am speaking now of slips in slopes of cuttings, not of embankments. I think the bulging of which Mr. Salmon spoke is identical with the slide to which all the witnesses have referred in their evidence. Although it is at so great a distance from the turnpike-road that I was not aware the place could be seen, yet I believe that it is, in fact, the same slide of earth which had been drained and had remained there, and this fall of earth which subsequently took place forty or sixty feet higher up touched in its fall that old slide which Mr. Salmon saw, and swept away part of it. This is one of five or six slips in the Sunning cutting, and not the worst one; and neither of them, I believe, indicated any danger to the slope. With respect to the strength of the luggage-waggons, I beg to state, that the passengers' trucks were originally luggage-waggons. With respect to the occurrence, I arrived at the spot about half-past 11 o'clock. The workpeople had not then entirely removed the earth from off the rails. I examined the site carefully and particularly, because I was surprised at so much mischief having been produced by the comparatively small quantity of ground which had slipped: and I found some large stones, which had slipped down with the clay, being part of a bed of stone which lies a considerable height up the cutting. One of those stones was probably two feet square, and appeared to have been on the rail just at the point where I think the engine first left the line; and I have no doubt that these stones were the principal cause of the accident, as I think the engine would have run through the clay, and the train would have been stopped much more gradually.

By the Jury.—The engine-wheels were not at all broken; but the "guard," as we call it, was. It is a strong iron, running down in front of the wheel.

By the Coroner—Are you of opinion that if greater diligence had been exercised by your assistants and workmen and the police, the accident might have been prevented?—It is impossible to say that anything might not be prevented; but the degree of diligence which I have required was such as I considered sufficient to secure safety in running upon the line. I am satisfied with the reports which my assistants have made to me from time to time.

Coroner—So as to satisfy your mind that there were no previous indications of the fall?—I am from my own experience from the commencement, and throughout the progress of cutting the slopes. I believe, both from reports made to me and from my knowledge of the cutting, and what I have seen in so frequently passing through it, that this fall of earth has taken place without previous symptoms.

By the Foreman—The result of all our experience upon the line has been that these slips have been caused either by continued rains, or the breaking out of some fresh spring; and I do not remember an instance on this line of any large slips of earth from the effects of the breaking up of frost. The surface of slopes and some sorts of stone suffer if the frost does not penetrate deep enough to affect the mass of the slope.

By the Coroner—Does not the superincumbent pressure of the spoil-bank increase the probability of slips?—I do not think, considering the relative height of that spoil-bank to the depth of the cutting, that it can produce any effect upon the springs. If I were going to make this railway afresh I do not think I should place the spoil-bank in a different situation.

By Mr. Bartlett—Are you of opinion that the falling of that slip caused considerable noise?—No.

By a Juryman—From all I could see and was able to learn I believe that at the time the engine ran into the earth the stones and earth were nearly all down, and that part of the slip was still in motion.

By the Foreman—If the trucks in which the passengers were placed had been behind the luggage train would they not have escaped?—In this instance they would certainly; but, generally speaking, passengers would be more exposed to danger than when plrced in front, as in this case. A luggage train is, I think, more exposed to be run into by another train than to meet with such obstructions as caused this late accident. Besides which, amongst a great number of luggage waggons, there are risks of accident from the breaking of axles, or from other damages to the waggons, which may cause the carriages behind to be thrown off the line, or otherwise injured; and again, as the luggage trains are very long, and the waggons very large, it would be difficult to have immediate communication between the guard of the passengers' trucks and the engine. With respect to the relative safety of these passenger trucks, I wish to state that I have frequently travelled by them, and at one period I generally went down the line to Bristol in one, as being the last train out of London at night; and, taking the speed of travelling into consideration, I considered it rather a safe train than otherwise.

By the Coroner—Is not liability of the train running into another more under control than other accidents?—I should say not. There have been many instances of a train running into the luggage train on the Western Railway.

By a Juryman—I saw an axle broken at Bath a short time ago. There is a "tail lamp" behind the luggage train; but from the frequent stoppages of that train, and the shifting of waggons from the train, there is still great risk of its being overtaken unexpectedly.

Would it not add to the safety of the passengers in the truck if two or three empty carriages were placed between that and the engine?—No; because they would be too light, they would be thrown off easier. In some cases that might increase the danger.

By the Foreman—Are not the passengers exposed to more cold and greater annoyance from being placed near the engine?—No.

By a Juryman—At certain stations the train is allowed to get off one line to another for the changing of carriages or the removal of trucks, but not elsewhere; it would be dangerous.

By Mr. Bartlett—Is there not more liability of accident by night than by day?—Unquestionably.

Then is there not a proportionate necessity for a night police?—No; I am of opinion that patrolling by night would not be more effective than the system pursued, because it is impossible in the dark, by the mere light of a lamp, to detect any changes in the level of the rails, or any of the numerous symptoms of danger; at least such watching could not be relied upon. It appears to me that the most certain way of securing safety by night is to use all the means in our power during the daylight for remedying any evil and detecting any fresh symptoms of movement, and then placing special watchmen at those places with a knowledge of what they were to look for, and that is the system which is followed.

Mr. C. Russell, M.P., said, that as some of the jury had expressed a doubt as to the efficiency of the police of the Great Western Railway, he begged the Coroner to ask Mr. Brunel if he did not know that the Great Western Railway Company have a larger police force than any other Railway Company in the Kingdom; and whether the Government Inspector-General had not expressed a wish that other railways would have as large a police force as this Company.

The Coroner desired Mr. Brunel to answer that question.

Mr. Brunel—Yes; and I know the fact, that as compared with other railways generally, the police force of the Great Western line is large, and that some of the other lines have more. I also know that the Inspector-General holds the opinion which has been stated.

Mr. Edwin Gosling repeated his previous evidence, as did also Thomas Goodchild.

This closed the evidence, and soon after seven o'clock—

The Coroner proceeded to sum up the case to the jury. He read at length the voluminous depositions which had been taken, and commented upon them as he proceeded. He did not wish to raise any unfair impression on the minds of the jury, but he must put it strongly to them whether, looking at the nature of the evidence, particularly at the uncertainty which rested on the evidence of Mr. Salmon, Mr. Gosling, and Thomas Goodchild, whose attention was only casually drawn to the slips, and who only saw them at the distance of 270 yards, the jury could safely come to the conclusion that there had been neglect or carelessness on the part of the Company. He must remind the jury also, that it was the interest of the Company to keep up the railway in perfect repair, and that raised a presumption that they would do so, and indeed it was in evidence that every means for that purpose was adopted. After explaining to the jury the laws relating to deodands, the Coroner concluded by remarking that there appeared to be a very strong feeling in the minds of the public with regard to accidents of this nature, and there was undoubtedly a disposition to visit the consequences very severely upon the proprietors of railroads. They had seen several cases in which that had been done, but he (the Coroner) thought it right that the jury should take into consideration that this new system of rapid travelling could not be adopted without a proportionate risk; and, therefore, unless the jury were of opinion that there had been negligence on the part of the Company they ought not to entertain such feelings as those to which he had alluded. It was for them, however, to judge in the matter from the evidence which they had heard. Upon that evidence it was for them to come to a conclusion.

The jury then retired, and after being closeted for upwards of half an hour, returned the following verdict:—"We find that the deceased Richard Yeadon came by his death by a fracture he received on the skull, caused by the engine called the Hind, coming into collision with a mass of earth which had fallen from the slope of a cutting on the Great Western Railway, at Sunning, in this county, and the jury are of opinion that the accident might have been prevented had there been a night police or watch in the cutting. They therefore place a deodand on the engine and train of carriages of the sum of 100*l*., and further they recommend that the passenger trains be in future placed further from the engine."

THE LATE FATAL ACCIDENT ON THE NORTH MIDLAND RAILWAY.

On Monday morning an inquest was held at the Court House, Leeds, before John Blackburn, Esq., on the body of Henry Hoyle, twenty-five years of age, an engineer on the North Midland Railway, who died in the Leeds General Infirmary, on Saturday morning, from injuries occasioned by the overturning of a wheel, on No. 18, locomotive engine, with which he was conveying a fast train from Derby to Leeds, on the Wednesday previous. The inquest was attended by Mr. Patterson, the Company's Secretary, from London, Mr. Eddison, of Leeds, Solicitor to the Company, and Mr. Creeg, the manager of the Leeds station; and it is but justice to say, that every facility was offered by the Company in the course of the inquiry, which lasted several hours. A great mass of evidence was adduced, but the following is all that is necessary to give:—

John Cressey—I was upper guard on the North Midland Railway from Derby to Leeds, on Wednesday last. I have been nearly two years in the situation. I knew Henry Hoyle; he was a driver on the North Midland Railway. We left Derby at one o'clock. There were four first class, one third, and three second class carriages. We were fifteen minutes late at Belper; we did not make up the lost time. Hoyle was perfectly sober during the whole journey. I believe the engines are always examined at Derby before starting. We got to Normanton at thirty-five minutes past three; we ought to have been there at fourteen minutes past three. We travelled from Normanton at the rate of twenty five miles an hour. We could not go fast; Hoyle said he could not get his steam up, as the coke was very bad. I was in the second class carriage, where the break is, next to the tender when the accident happened. I was looking out of the window at the time I saw the engine and tender leave the carriages and run across the line. The accident happened about 50 yards from the bridge which crosses the Wakefield road; the engine stopped on the embankment. The wheels of the carriage I was in were lifted np, and were thrown off the rails; the couplings had been broken that attached the tender to the carriages. Hoyle was laid close by the wheels of the tender. He was insensible, and very much cut about the head; he was removed in about fifteen minutes; the stoker was standing near, not much hurt. I found the engine off the line about 30 yards from the carriages, nearly at the bottom of the embankment. The fore wheel of the engine was broken; the tire had come off it. I cannot say whether this injury arose before the engine got off the line or not. I observed nothing on the line to obstruct the progress of the engine. At the time of the accident, we were going 25 miles an hour. It was quite light. I cannot form an opinion as to the cause of the accident. Hoyle was a sober man.

Mark Wakefield, the foreman of the engines at Derby.—Was at Derby on Wednesday, when No. 18 engine started. I examined her at half-past twelve o'clock, at which time I considered her all right. The tire of the wheels was of wrought iron; the engine has been in use since May last; no fresh wheels have been since that time put on; but the wheel that is broken had been mended a little on the flange in July last; the wheel had failed a little. I have seen the tire of the wheel since the accident, but have not examined it; there is no difference in the construction of the wheels. I considered the wheel to be perfectly safe when it left Derby; I could not tell where it had been repaired after it had been done; I thought it as strong and as good as a new wheel.

John Tuke, fishmonger, of Barnsley—I was standing up when the accident happened; I think it was quick travelling and the unevenness of the line which threw us off the line; I consider the rails there are not evenly laid. The deceased was in liquor; I observed it after the accident had happened; he smelt strong of wine; I held him up when I smelt his breath; I covered his face with my handkerchief, and washed him afterwards; he vomited something of the colour of port wine. A surgeon was sent for, who attended immediately, and paid every attention to the deceased. I have no hesitation in saying we were going at the rate of forty miles an hour. We were before time at Normanton, and were detained there some minutes.

Cressey re-called—I am sure we did not average more than 25 miles an hour at any time of our journey. I did not hear any complaint of quick travelling from any of the passengers. I think there is no unevenness in the line at the place where the accident occurred.

Thomas Dobson, engineer at Derby—I am in the service of the North Midland Railway Company, and superintend the repairs of the locomotive engines. The engine, No. 18 was repaired in July and August last; on that occasion the flange was repaired; it had given way a little longitudinally; there had been an unsoundness in the iron; the tire was all taken off, and a new piece of flange was welted on; I considered it quite sound. It is the duty of Wakefield to examine the engines before they go out; they come into my hands when they want repairing. My opinion of the quality of the iron from which this tire is made, is that, on the whole, it is a tolerably good iron, and sufficient for the purpose for which it is intended; some parts of it are good and others indifferent. It was a very severe frost on Wednesday, and this, in my opinion had acted upon the iron, and had assisted any mischief which might have been going on. I cannot detect any flaw in any part of it. If the line was uneven it might accelerate an accident. I do not think extra speed would occasion it. I cannot tell whether the tire had broken before the engine was off the line or not. If the tire had come off the wheel, it would not have stopped its passage across the other line, though it might have retarded it.

John Fatherley, of Sheffield, machine-maker—I was a passenger by the train when the accident happened. I got in at Barnsley, which place we left at a little after three o'clock; we stopped a short time at Normanton: I can scarcely form an opinion as to the rate of speed from Barnsley to Normanton; I think we were going quicker when the accident happened than at any former time—we were then going very quick. I can form no opinion as to the time it occurred. I should think we were going at the rate of 30 miles an hour; we had not been long at that rate. The accident happened in a moment. I stood up, and saw the engine going down the embankment; we were passing it. I did not notice the wheels of the engine when I saw it passing; I examined the wheel afterwards; I found the tire all detached from the wheel; it was laid on the down line, about thirty yards from the engine. I examined the metal, and having been amongst it all my life, I should say that it is of a very indifferent quality; it appeared to me at the time to be more like cast metal than wrought. I had no idea at the time that it was wrought iron. I did not hear any of the passengers complain of the speed, nor did I hear any alarm expressed.

Wm. Walker, a stoker, and Wm. Burdett, a guard on the line, were examined, and both stated that when the accident happened the train was not travelling more than 25 miles an hour.

Mr. Thomas Dyson, assistant engineer on the railway, had frequently examined the line, and deposed as to its general excellence.

This being the whole of the evidence, the Coroner went minutely through the whole of it, and pointed out to the Jury the law as applicable to the case. After the very luminous summing up, the Jury, after a short consultation, returned a verdict of "Accidental death," expressing an opinion that the iron of the tire is not of the best quality, and recommending the railway company in future to have the iron used for wheels properly tested.—*Leeds Mercury*, Jan. 1.

Government, it is currently reported, has resolved to establish a line of steam communication between the Pacific coast of South America and New Zealand and the Australian colonies. The authorities of Panama, we may add, have invited an English engineer to survey a line of railway across the Isthmus, and are most desirous that the line should be executed by an English Company, to which they are prepared to grant extensive privileges.

COACH ACCIDENT.—On Saturday last the Yarmouth and Birmingham mail was proceeding through or near Lynn, when, in consequence of a donkey being in the road, the horses took fright, which threw Mr. Summers, the coachman, from the box, and we are sorry to say he had his leg broken by the fall.—*Ipswich Express.*

NORTHERN AND EASTERN RAILWAY COMPANY—SPECIAL MEETING.

A SPECIAL Meeting of the proprietors of the Northern and Eastern Railway Company was held on Thursday at the London Tavern, Bishopsgate-street, WILLIAM CRAWSHAY, Esq. in the Chair.

The SECRETARY (William Bourne, Esq.), having read the advertisement calling the proprietors together,

The CHAIRMAN explained that the sole object of the present meeting was to confirm the forfeiture of certain shares which had been declared by the Directors on the 30th of September last. He was happy to state that these shares were only 50 in number—namely, one lot of 40 and another of 10—the arrears upon the remainder of those of which the forfeiture had been declared having been paid up in the course of the morning.

Mr. BULT proposed, and Mr. SMALE seconded, a resolution confirming the forfeiture, which was carried unanimously.

Another resolution was then passed unanimously, authorising the Directors to dispose of these shares agreeably to the provisions of the Company's Acts.

In answer to questions from Mr. Bell,

The CHAIRMAN explained that the Act gave the Directors power to dispose of the forfeited shares in whatever mode they might deem most advisable, whether by public auction or private tender. In the present instance he did not think it would be necessary to dispose of any of these shares; at any rate no more would be sold than would suffice to pay up the arrears.

Mr. HARVEY said, the Manchester and Leeds Directors had set an example at a recent meeting of stating the probable amount of dividend which would be declared at the next half-yearly meeting. Had the Directors of this Company any objection to do the same?

The CHAIRMAN said, he really did not know what the dividend was likely to be, otherwise he should have had no objection whatever to state it. The accounts for the past half-year had not yet been made up, but he would repeat what he had on many previous occasions stated, namely, that any shareholder was at perfect liberty at any time to inspect the books in the Company's office, and to draw his own conclusions. There was nothing in the mode of conducting the affairs of the Northern and Eastern Company that the Directors had the smallest desire to conceal. (Hear, hear, hear.)

Mr. JOHN WILLIAMS said, the time had now expired in which a portion of the shares held by him under peculiar circumstances, could be redeemed, and he had to crave a further indulgence to the 30th of June next, he paying the calls due in the interim, with 5 per cent. interest. At a late meeting, while labouring under some irritation, he had said, he should ask for no further indulgence than was then granted, but circumstances had since occurred to induce him to request a little further grace.

The CHAIRMAN said, the present meeting being special, no valid determination could be come to with respect to Mr. Williams's proposition, but as far as conversation went, there could be no objection to hearing any statement, when he, the Chairman, should be prepared to express publicly the same opinion which he had recently expressed to Mr. Williams in private.

Mr. WILLIAMS would decline, under these circumstances, to enter further into the question.

Mr. SMALE observed, that without any particular reference to the claims of Mr. Williams, it might be desirable to give the original proprietors, who had "borne the burden and heat of the day," every reasonable preference in the issue of shares, whether forfeited or new. He thought the notice which had recently been taken of the Company in the newspapers had done the undertaking a service. (Hear, hear, and a laugh.) The shares had since been rising, and he hoped soon to see them at *par*. (Hear, hear.)

The CHAIRMAN said, he had repeatedly pledged himself that no share should ever be issued with his consent below *par*, nor even then without the full and deliberate sanction of the proprietors themselves. That they would have to issue more shares was certain. How that was to be done must depend upon themselves; but in his opinion, the best plan would be to distribute them *pro rata* among the present holders. (Hear, hear, hear.)

Mr. WILLIAMS entertained no doubt that by the 30th of June next, the shares would have reached such a premium, as to secure to the Company a large bonus, as had been the case with the Liverpool and Manchester Company, whose capital had been nearly doubled, by thus capitalizing their stock.

The CHAIRMAN thought it somewhat singular, that with such views, Mr. Williams should expect to be allowed to hold a large number of shares, under the circumstances to which he had alluded.

Mr. PRANCE deprecated any further discussion at present of Mr. Williams's case, as it appeared that nothing could be formally decided upon in reference to it at this meeting.

Mr. WILLIAMS wished his opinion to be distinctly indicated for the benefit of others, however his own case might be decided. He said now—as he had said six years ago—that there was no railway which was more certain to realise all that the most sanguine had anticipated than the Northern and Eastern, if managed with proper judgment.

Mr. PARKER inquired what proportion of the 240,000*l.* authorized to be raised by mortgage had yet been secured.

The CHAIRMAN said, the amount was about 68,000*l.*, including bonds that had been applied for, but which had not yet been issued.

Mr. PARKER wished to know if any portion of this amount would be applied to the construction of the Hertford and Ware branch.

The CHAIRMAN said, the remainder of the 240,000*l.* would probably be applied to the purposes of the Ware branch, but it must depend entirely upon the proprietors themselves whether the line should be extended beyond Ware. The honourable proprietor was probably aware of the great and onerous difficulties imposed upon the Company by the trustees of the turnpike roads. This matter might be fully discussed at the general meeting in February next.

Mr. KINNARD (a Director) said, if the people of Hertford would consent to a withdrawal of the toll clause, which had been forced upon the Company, the line to Ware might be proceeded with forthwith. It was quite clear that the line, if extended further, must pass through Hertford, but in the meantime the jealousy existing between the two towns had thrown impediments in the way of carrying the railway even as far as Ware. He thought the inhabitants of Hertford were "cutting off their own nose to be revenged on their face." (Hear, hear.)

[Some merriment was here excited by a good-humoured remark of the Chairman:—"Mind your jokes, Mr. Kinnard."]

Mr. KINNARD (in continuation) said, the feeling of the people of Hertfordshire, in regard to the railway, had recently been much altered for the better. It was quite clear that the clause referred to was a great hindrance to the making of the road.

Mr. WILLIAMS inquired whether the line could not even now be carried to Ware.

Mr. KINNARD said, the road could undoubtedly be made, but by the clause which had been forced upon the Company, they were not empowered to levy any toll for the use of the branch line until it was fully completed from Hertford to the junction with the main line. He very much questioned whether the charge which would be made by the Company could be designated a *toll*. A toll seemed to him to be a charge made to other parties than the owners of the line, for license to run their engines upon it, the charge to the public being called a *fare*. He was of opinion the clause referred to might be evaded in that way, although the Directors had no desire to seek for evasions, if unreasonable impediments were not thrown in their path. He certainly thought it would be much more advantageous to the inhabitants of Hertford to have the railway brought within 1½ miles of them, than by persisting in their demands to keep it 5 miles off.

The CHAIRMAN had no doubt that the difficulty could be got over in a similar way to that adopted by the Great Western Company with reference to the non-erection of a station at Slough. Ultimately the inhabitants of Hertford would see that they were injuring themselves.

[A note was here handed to the Chairman, which he explained to be a cheque for the arrears on the forty shares above referred to. The remaining ten he said had been some time since sold, but the transfer had not yet come into the office. He had no doubt the arrears upon these ten would likewise be paid.]

Mr. HARVEY thought the want of power to exact toll on the branch to Ware might easily be obviated, by requiring all passengers from London to Ware to pre-pay in London, and those from Ware to London paying on arriving at their destination.

The CHAIRMAN made no question the difficulty could be got over in many ways. For instance, the Company could employ others to conduct the Ware traffic.

Mr. KINNARD hoped the proprietors would give this matter their best consideration previous to the half-yearly meeting. The trustees of the turnpike-road, by whom the obnoxious clause had been forced upon the Company, were many of them individually favourable to the railway, and used it very frequently.

In answer to a question from Mr. Barclay,

The CHAIRMAN stated, that the line to Bishop Stortford would be ready for traffic by the 1st of April, provided the weather were at all moderate. There were only two miles at present unopened.

At a subsequent stage of the proceedings, Mr. Peto (of the firm of Grissel and Peto, the contractors,) happening to enter the room, confirmed this statement.

Mr. KINNARD explained, that by making 3 miles of new railway, to Ware, the Company would be able to use 5 miles of railway, namely, 2 miles of the main line, which otherwise would be comparatively unproductive.

The CHAIRMAN, in answer to Mr. Barclay, stated that all the coaches which they had a right to look for had not yet come upon the line. He had a few evenings ago conversed with Mr. Horne upon this subject. That gentleman intended to bring three more of his coaches upon the railway, but difficulties had intervened in arranging with other coach-masters.

Mr. BARCLAY enquired, if goods were yet carried on the Northern and Eastern line?

The CHAIRMAN replied in the negative. Not much could be done in that department until the line was opened to Bishop Stortford, besides that no definite arrangement had yet been come to with the Eastern Counties' Company in regard to the amount of toll.

Mr. BARCLAY had understood from the proceedings of the last meeting, that the Eastern Counties' Company had consented to some reduction of toll.

The CHAIRMAN said, the conversation which had taken place at the previous meeting, and been reported, had given offence to the Directors of the Eastern Counties' Company, and, therefore, perhaps it would be as well not to discuss the question at present.

In reply to a suggestion from Mr. Williams with respect to the conveyance of cattle, Mr. Kinnard stated that the Eastern Counties' Company objected (and very naturally) to the bringing of cattle to their passenger station, in addition to which the Northern and Eastern Company were not at present provided with the necessary facilities for this branch of traffic.

Mr. HARVEY referring to railway accidents, wished to know if on the Northern and Eastern

...e that on the joint line has been pro-
duced on the traffic between Glasgow and Greenock, where, notwithstanding a reduction of more than 50 per cent. on steam-boat fares, and the facility in conveyance since the opening of the line, the total numbers travelling both by railway and on the river between the termini are 23 per cent. less than before the line was opened.

The principal deficiency, also, in the traffic between the termini has taken place in the passengers to watering places below Greenock, whence, from the anxiety felt amongst merchants, the visitors returned before their customary time. These results are, in the opinion of the Directors, to be attributed solely to the state of commerce.

The total numbers, however, travelling by railway amount already to 47 per cent. more than were computed in the Parliamentary tables.

The greatest number of passengers carried in one day has been 8,510, and the average during the summer season, carried down to the watering places on Saturday, and brought back on Monday, about 4,000. The total number carried in the half year, 402,241.

Your Directors are using every effort in conjunction with other railways to obtain a modification of the passenger tax, and have reason to expect that this most important measure will be carried through Parliament in the approaching session. Its present effect on this line is to injure the revenue and deprive the working population of the advantage of railway travelling, as your Directors contemplate the establishment of third class carriages immediately on this modification taking place; or it may be found expedient to make the experiment early in the spring, whether by that time the tax be modified or not.

With regard to the goods traffic, the result has hitherto been equally satisfactory, for the only item of those estimated before Parliament, which can be considered as fairly entered upon, is "general merchandise," then rated at about 5,000*l.* per annum, while taking the average of the last two months, the returns under this head will show an annual receipt at the rate of upwards of 6,000*l.* per annum. The joint line goods traffic is, of course, suffering from the present depression in Paisley.

The timber and mineral traffic has yet to be developed; but it has been ascertained from the small quantities already carried in the Company's waggons, that these articles can be conveyed by the railway at rates satisfactory to the public, and remunerative to this Company.

The coal owners have not yet completed their arrangements. They have, however, contracted for locomotive engines, to be supplied early in January, and their waggons are building.

It has been ascertained from the Custom house Returns and other sources, that upwards of 200,000 tons of coal and timber alone passed up and down the Clyde last year, and that about 100 000 tons of coal are consumed annually at Port-Glasgow and Greenock.

The connection by rails with the river is not yet complete, although the Company have been met and assisted by the Harbour Trustees in the fair and liberal spirit which has always characterised the proceedings of the public bodies in Greenock, in reference to the railway. The Harbour Trustees have contracted for the necessary works, and the rails are now being laid along the East Quay by them in connection with the railway. They have also deposited plans, and are about to apply to Parliament for powers to construct additional harbour accommodation, which will place a spacious dock with sufficient depth to float the largest class of vessels at low water, within 150 yards of the Railway Goods' Depot, and already accommodation is provided by a timber platform for the deep sea steamers and other large vessels, to take in lading from the railway waggons at all states of the tide.

With these advantages, which are carrying out to the fullest extent, the contemplated facilities in establishing the railway, your Directors consider that the goods' traffic only needs time to produce a most important accession to your revenue.

Since the establishment of the railway, saw mills have been erected adjoining the line, and the large cotton mill and other works on the Shaws Water have commenced operations; and these works, when fully established, cannot fail also to benefit the railway.

There is another source of revenue—from the Ferry at Dumbarton, to which the attention of your Directors has lately been especially drawn by a project for making a railway from Dumbarton up the Leven valley, for which plans have been lodged, and the requisite Parliamentary notices given. Your Directors recommend this railway to the favourable consideration of the proprietors, as they believe it will be of essential service to your line, particularly in connection with the opening of the Edinburgh and Glasgow Railway, which is immediately expected, and from which an accession of traffic may also be confidently calculated upon.

It appears that the cost of working your railway, exclusive of the passenger tax, is about 40 per cent. upon the receipts, and it is not unusual to make this per centage a measure of the economy enforced in railway expenditure; but it need hardly be observed, that with low fares and frequent trains, it must be a fallacious mode of comparison. Thus, with the exception of the passenger tax, which is a fixed quantity, very little more expense would have been incurred in carrying on a much greater amount of traffic.

In carrying out the details of the connection with the harbour, and the timber ponds, and other works; and also from the necessary increase of stock to meet the traffic, an additional expenditure of capital has been found necessary; and your Directors have not scrupled to enter into this outlay at once, because they have been urgently solicited to afford accommodation for the large amount of goods' and mineral traffic tendered to them by various parties when this accommodation shall be furnished, and the connection with the river complete; and especially as rents affording a full return for part of this outlay are offered by these parties for goods' and mineral yards, and for the use of arches.

In conclusion, they consider, from a careful analysis of the traffic, that the experience of the last half year has established the following important facts:—First, that the steam-boats cannot compete with the railway at remunerating prices, whether in passengers or goods. Secondly, that the numbers travelling are equal to those proved before Parliament.

The following Directors—John Poynter, Esq., William Dixon, Esq.. and Alex. M'Callum, Esq., go out of office by rotation. These gentlemen are all re-eligible.

ROBERT D. KER, Chairman.

The CHAIRMAN observed, that the progressive steps by which the railway had advanced from its commencement, brought them to an important stage of its history in announcing the first dividend to its proprietors. The amount of it would be viewed in various lights according to the expectations of those who had embarked their property in the undertaking. It could be wished it had been greater, but he was persuaded that by those who best knew the circumstances under which their opening traffic had been prosecuted, it would be considered satisfactory; not by any means as a suitable return for the outlay, but as a sure pledge of a triumphant result in time to come. He stated that we had passed through a season of almost unprecedented depression, particularly the latter part of it, and travelling was brought to the lowest ebb. Many railways at their opening found little resistance, if not a clear field, by the voluntary abandonment of other conveyances from the consciousness of inability to compete with the railway. It was widely different here where a system of traffic in full and efficient operation had to be met, which he did not hesitate to call the best appointed of the kind in the United Kingdom. It was not to be expected that the steamers would all at once surrender the position they so long occupied with so much credit to themselves, and such advantage to the public, and they had carried a considerable proportion of the traffic, but at such low rates as to injure the railway without benefitting themselves; but yield they know they must, as they in their day compelled others to yield to them; and although the refusal of the steamers to co-operate with the railway had entailed a considerable expense at the outset, it was an expense which could not have been spared, and which so changed is the relative position in which we now stand to each other, in another season it will be wholly unnecessary to repeat. Coming into collision with so many opposing interests it will not excite surprise that the railway had been assailed in various ways, by no small portion of calumny and misrepresentation. Disguised as the authors of these attacks have been under the cloak of fictitious names, they have in most cases been held unworthy of being answered; but one statement, to the effect that danger was to be apprehended in passing through the Bishopton tunnels, from falling fragments of rock, was so obviously calculated to frighten timid and weak-minded persons, that it had been deemed necessary to notice it in the Report. Any one taking the smallest pains, by visiting the spot, and judging for himself, or inquiring of those who could inform him, would at once be satisfied that the slightest alarm from that cause was utterly groundless. Every member of the Board could testify, from numberless visits paid to the work when in progress, and since, that the security of the tunnels may be relied on with the most perfect confidence. It was surely enough that Mr. Locke and the engineers have pledged their professional reputations that nothing more is needed to render security more sure; and he (the Chairman) could state on the authority of Sir Frederick Smith, that had that gentleman considered the tunnels unsafe, he never would have permitted the use of them without a lining of brick, or by adopting some other precautionary measure, but which, as he did not order, it may be presumed he considered wholly unnecessary. He trusted the Report which had just been read would meet the approbation of the shareholders. The Directors had unceasingly laboured, by every means in their power to promote the success of the undertaking; and he had the satisfaction of assuring the meeting that the railway was daily rising in public estimation. The experience of the past, combined with their future prospects, to warrant

Digitized by Google

them in anticipating for it a continued and an increasingly prosperous career. (Cheers.)

Wm. Martin, Esq. then moved, "that the Report now read be approved of, printed and circulated among the proprietors, and that a dividend of 2 per cent., as therein recommended, be declared and paid to the proprietors on the first day of February next." He would just remark, that considering the magnitude of their undertaking, they had great reason to be satisfied with the Report they had just heard read, and every cause to be grateful to the Board of Directors for their valuable services. In regard to the Leven line which was referred to in the Report, he would remark that whatever was intended to be done in the way of furthering it should be done by them as individuals, and not as a Company.

The Chairman said, there was no intention of interfering as a Company.

George Blair, Esq. seconded the motion, which was carried unanimously.

James Baird, Esq. moved, "that the bye-laws and regulations passed at the general meeting of proprietors held on the 6th day of July, 1840, be repealed, and that the following, in lieu and place thereof, be adopted and acted upon, with any amendments, modifications and additions which may be required by the Lords of the Committee of Her Majesty's Privy Council, appointed for Trade and Foreign Plantations."

James Turner, Esq., law agent of the Company, then read the bye-laws and regulations proposed.

Thomas Hamlin, Esq. seconded the motion, which was unanimously agreed to.

Andrew M. Hunter, Esq., moved, that, "Messrs. John Poynter, William Dixon, Alexander M'Callum, be re-elected Directors, and that the thanks of the proprietors be given to the Chairman and Directors for their conduct during the past year, and for their continued and zealous exertions to promote the interests of the undertaking."

James Watson, Esq., seconded the motion, which was carried.

James Baird, Esq., observed, that in looking over the Report of the Directors of the Glasgow and Ayr Railway Company to the general meeting of proprietors, upon the 30th of August, 1841, he found certain sums are stated to be due by the Greenock Company, and he perceived it stated there in the conversation which took place at that meeting, regarding special trains and the fares upon the joint line, that a motion had been made some time previous to lower the fares, but that it had been resisted by the Greenock Directors. As it would appear from this that a difference of opinion existed, the Chairman would perhaps be kind enough to explain to the meeting any circumstances which might elucidate the matter.

The Chairman replied, that the statements referred to had come under the observation of the Board, but it was considered inexpedient to make partnership concerns a matter for public discussion, but he had the pleasure of reading the following extract of a letter from the Chairman of the Ayrshire Company, in answer to a letter he had considered it his duty to write to that gentleman on that subject. "By the newspapers you were good enough to send me, I perceive a pencil mark under the words 'The plan which had been chiefly promoted by the Greenock Company had not succeeded, and had caused great additional expense without any corresponding benefit.' Now, I am quite satisfied that I did not say the plan was promoted by the Greenock Company, such an expression would have been throwing the blame, if any, on the Greenock Company, and would have been very bad taste from me." The special trains were recommended by one of the joint line officers, and some of them are still running profitably, and with consent of all parties, among whom there is not the slightest difference of opinion on the subject. It is true that the Greenock section of the Board did resist for some time the proposal of the Ayrshire Directors to reduce the fares, because they considered it inexpedient, but they finally were content to go into the measure, and since the rates have been reduced it is fair to give it a trial, even to following the canal, should they go still lower. With regard to the sums said to be due by the Greenock Company, there were claims on both sides, which the Greenock Company had proposed to settle by arbitration.

Thomas Turner, Esq., moved thanks to the Chairman, which were carried by acclamation, and the meeting broke up.

THIRD-CLASS CARRIAGES AND MR. CRAWSHAY.

To the Editor of the Railway Times.

Sir,—So much disapprobation has been expressed in your columns, both on your own part and on that of certain of your correspondents, of the speech of the Chairman of the Northern and Eastern Railway Company, at a late special meeting, that I am induced—thinking as I do that it was nothing more than a bold and forcible mode of placing before his auditors a correct view of the question, and so far rather deserving of commendation than open to censure—to state briefly the reason of my opinion.

Without pretending to know more than other folks of the affairs of the Northern and Eastern Railway, it must be obvious to all persons in any degree conversant with railway matters, that considerable numbers are necessary to render third class traffic productive of profit—that is to say, that to run trains carrying only 10 or 20, or even 30, third class passengers, would be *quoad* expense to the Company carrying second class passengers at third class fares.

It is clear, therefore, that there are many times when it can by no means answer the purpose of the Company to carry third class passengers *only*—the traffic at these times being not more than sufficiently extensive to remunerate them at first and second class fares.

If, therefore, the attaching of a third class carriage to these trains be found to have the effect of drawing out of the first and second classes those persons on whose custom the Company, in the absence of the third class, would justly reckon for their remuneration, this, so far as it goes, tending to bring the train into the unprofitable state of carrying third class *only*, must, after passing a certain limit, compel the Company, by taking off their third class carriage, to deprive of their means of conveyance those few poor people for whose use it had been kept on.

This is the point of view in which I understood the Chairman to put the matter; and although I observe that he good-humouredly explains his proposition concerning the sweeps to have been made in joke, I must say that to me it appears to furnish an admirable mode of suggesting, to those persons who are too dull to collect it for themselves, the reflection that the third class carriage is attached to these trains for the accommodation of those persons only who, if it were not there, would be unable to travel at all.

A word with "P. Z." who it must be admitted, in waggery beats the Chairman hollow. The sweep, though a perfectly fit person to travel in a third class carriage, and at whose presence I cannot myself see that any person need feel himself aggrieved, would very properly be denied admission to a first class, if he paid his fare three times over; both because persons who pay first class fare have a right to reckon upon avoiding contact with soot, and because he would render the carriage unfit for the conveyance of anybody else, until more labour had been spent upon it than his treble fare would pay for.

My object in this letter has been to express my own opinion, and my reason for it, not to defend the Chairman's conduct, simply because it does not need any defence but his own.

It may, however, perhaps, be permitted to others to say that upon which his own letter is silent, that but for the spirit and energy of Mr. Crawshay, the Northern and Eastern Railway would not now have been affording accommodation to passengers of class first, second, or third. H.

January 5th, 1842.

NORTHERN UNION RAILWAY.

To the Editor of the Railway Times.

Sir,—Our recent, and it may be, bootless discussion, has deferred some remarks which I intended as a sequence to my original letter upon the Northern Union Railway project. I now hasten to repair the omission, and the more readily so, as I have had some encouraging letters from my co-dissentients upon the subject.

Your old correspondent, the "Railway Shareholder," has, I find, descended once more into the arena, and throwing his gauntlet, has with his customary hardihood challenged even you to the combat. He is a troublesome and a persevering opponent, and did his tact always equal his shrewdness, sagacity, and vigour, would be a potential one.

To the suggestion, that "if I will calmly review my opinion, I will admit, that in all reason the minority must be bound by the majority," I reply, that I *do* admit the proposition in its utmost latitude, in all matters and things *strictly* pertaining or relating to an undertaking which possesses a deliberative body, and therefore an electoral right. But the instant an attempt is made to introduce, even still less to *adopt*, any measure which goes beyond this, the rule ends, and nothing short of unanimity can render an effort to enforce it, just or legal. For four years has the "Railway Shareholder" been labouring, incessantly and vainly, to introduce what I am sure he conscientiously believes to be *important* reform into Railway Management, and for which he unceremoniously denounces the conduct of the entire constituency throughout the kingdom, as unworthy and disgraceful. How is this? What has caused his failure? Why, clearly his inability either to convince or win the *majority* to support his views. But if a majority, according to his showing, is to bind in my case, ought it not to do so equally in his, without any impeachment of its integrity, whatever may be thought of its judgment? *His* majority has at least the advantage of *legality*, which *mine* wants, and I have therefore double reason to complain of an attempt to carry a measure, defective, as I devoutly think it, in both judgment and integrity. If I mistake not, here is something strongly resembling a pair of horns, upon one of which, unless our friend beats a precipitate retreat, his best coat of mail will not prevent a transfix!

Into the question, whether it is, or is not, my interest to support an east line into Scotland, I do not intend to go. It is sufficient, that as a speculation I will have nothing to do with it directly or indirectly, even if set in operation by the most legitimate means, but with the "Railway Shareholder" I never can agree, when he declares, that we ought to get the Edinburgh traffic into the North Midland, *no matter* how; and that he has supported the present project with all its manifest imperfections, no doubt as others have done, as the "best means of securing a larger sum by risking a smaller"—"a herring to catch a whale." "Very like a whale, my Lord!" Would not the better version be—a whale to catch a herring!!! or, as we are dealing in *fishy* similitudes, may it not eventuate in something akin to a sprat to catch gudgeons?

In addition to objections formerly enumerated, and which I will repeat, may be subjoined:—

1st. That do what we may with respect to the extension line to Newcastle, that adult does not exist that shall live to see the completion of an eastern line into Scotland. The patriotism of the nineteenth century will hardly induce people to advance their money for a contingent benefit, at the end of half a century.

2nd. Although the western line may cost a larger aggregate sum, mile for mile, than the eastern, which, however is doubtful, yet from the requirements of the community, it will and ought to be finished first, and will, by parity of reasoning, assuredly yield a larger return for the outlay.

3rd. The Manchester and Leeds and Hull Railways, instead of being a benefit, are an absolute thorn in the side of the North Midland, by the way in which they co-operate with the steam-boats on

Digitized by Google

the Humber, and lessen its traffic by tens of thousands monthly.

4th. The very same thing will, in the degree, result to a western line into Scotland through the instrumentality of the Glasgow and Edinburgh Railway, which, while people value their money more than their time, will likewise transport multitudes from the west coast to the Firth of Forth, to profit by the facilities of steam navigation. With this presumption staring them in the face, who will dare to encounter the hazards of an eastern line?

5th. Could these objections be overruled, the amount of traffic will never pay 2 per cent. upon the capital necessary to complete an eastern line, without a guarantee by the Government—which the projectors may long whistle for, and no response.

These are amongst my primary objections to the Northern Union scheme, as respects the question of rivalry between the west and east lines into Scotland. Let me now touch upon the prospects and value of that precious project, upon its own intrinsic merits.

1st. Were I disposed to travel beyond the precincts of my own legitimate undertaking, it would be in support of the direct Parliamentary line to Newcastle. If I am to stand sponsor, it shall be for a bantling of comely aspect and fair proportions, and no abortion, with a broken back and cracked crust, conceived in cupidity and begotten in fraud.

2nd. And if it be undertaken, who shall guarantee the supporters that we shall not have another sample of the perfectibility of engineering estimates held up to our admiring eyes?

3rd. And if it be so intrinsically precious, why bolster it up by so suspicious, so objectionable, an expedient, as the payment of interest out of capital? Of all tricks this is the most flimsy. Verily we may boast of living in a liberal and an enlightened age!

4th. The creation of such, or indeed any, continuous line must necessarily add to the profits of those to the north and east of the North Midland, but can bring a small increase indeed either to that line or the Midland Counties'.

5th. Because, even if the Act be obtained, and the undertaking proceed, it will take at least three years to bring it into operation, by which time whatever London traffic is likely to accrue will have nearly attained its full development.

6th. Because, from the earnestness now exhibited by the promoters of a western line, it is not that doubtful or chimerical project which might a short time ago have been imagined; and if carried into execution, what becomes of one of the anticipated sources of revenue to the North Midland and Midland Counties', namely, the western traffic, to be diverted to the east by the Carlisle and Newcastle Rail?

If it be said I am reasoning upon presumptions, I reply—and so are my opponents, be they schemers or dupes, acting upon presumptions. And which is in the safest position of the two? I have not, I cannot have, any hostility to this speculation as relates to others. If they choose to embark their money in a thriftless, insubstantial concern, let them indulge their mammonish dreams. But let no man or body of men take upon themselves to impose upon me the burthen of an obligation to which I am averse, and which, though presented for my acceptance, under the pretence of furthering my interests is, I maintain, not only founded upon fallacious data, but at variance with every principle of law and equity.

It would however appear, that the projectors of this scheme, either doubt its success or are playing a double game, by "laying out another anchor to windward," in the shape of a counter-project. Mr. Harris, the Engineer to the Stockton and Darlington Railway, has thrown out a feeler, expatiating upon the advantage of making a portion of that line, together with the Clarence, to the extent of 10 miles, subservient to the end in view. Now, as this succedaneum will cost but 80,000*l.*, there can be no reason why the North of England proprietary should not patronize it, and thus secure to themselves all the glory which can result from perilling the limbs and lives of her Majesty's lieges, on a line made up of odds and ends, shreds and patches, candle-ends and cheese-parings!

Seriously, however, and finally. Let me once again admonish the "Railway Shareholder," and those whom he represents, if they have not paid their deposit, to pause, and reflect before they unbutton their breeches pocket. It is a good motto to "let well alone." For myself, neither in this or any case is it my duty or my interest to follow the multitude to do evil. Come, therefore, what may, I hereby announce my unalterable determination to oppose, by every legitimate means, this unwarrantable attempt to ride as it were rough-shod over my rights and privileges.

I remain, Sir, yours, very faithfully,

G. E. WATTS.

Langton Grange, Darlington, December 25, 1841.

RAILWAY COMMUNICATION WITH SCOTLAND.

To the Editor of the Railway Times.

SIR,—In reference to the proposed railway communications with Scotland, on the west and east coast, about the respective merits of which we are now doomed to see and hear so much from interested parties, and to very little purpose that can be depended upon, judging from the contradictory statements which daily fill the newspapers, describing bridges of a height that would shame the Monument, and of a length which would, in imagination at least, bestride the Atlantic, would it not be advisable to inform the public more substantially from unquestionable data (now I imagine obtainable, or at least soon will be), by some comparative statement, published in the form of a pamphlet with a lithograph of the section, accurately delineating quantities of excavations, in cubic yards; of tunnelling, in lineal yards, describing the nature of the material to be tunnelled through; of common-road and other bridges, by the number; and large gigantic viaducts, by the lengths and heights of each (both the mean and the greatest height)? From such an historical sketch, faithfully and impartially recorded, many influential parties, I am quite certain, could form their own estimate of cost, more nearly approximating the truth than any statement, vaguely put forth from either side, can indeed be expected to do. Need more be stated on this head than the bare fact of its being asserted that 16,000*l.* per mile is to complete the west coast line throughout—abounding, as it assuredly does, in such a succession of difficulties as the annals of railways have not yet furnished, or ever yet encountered?

If the preponderance of such unheard-of works lie on the west coast, it is not likely that the parties there interested will invite a comparison, or in any way seek to promote its accomplishment. It remains, therefore, for those of the east coast to effect this most desirable object; and for the due fulfilment of such a history, in its most perfect and luminous form, employ a "Whishaw," or some such competent authority no less conversant with railways and their peculiar statistics. The railway public, if I mistake not, would then be able to decide, in point of expense at least, which of the two they would the more readily embark their capital in. If it is gravely asserted by the most conversant and competent Liverpool and Manchester railway gentlemen, that the west coast line will cost, upon due deliberation, at least 50,000*l.* per mile, it is the more necessary that an illustrative comparison, such as I have taken the liberty to suggest, be made; and if it should be proved that such comparison would bring up the cost of the east line to 45,000*l.* per mile, then, I say, of the two let us have the western line, in deference to the Commissioners' Report, upon which so much stress is laid. But, if the comparison should appear to be as 30 to 50, then who will doubt but the preference should be given to the east line, and more especially as having only little more than *half* the number of miles to execute?

If the hints I have thrown out should meet the eye of the active and intelligent Chairman of the York and North Midland Railway, and that I might presume to recommend them to his consideration, I have no doubt his adoption of the plan I recommend would, upon the slightest intimation, be assisted by every species of information useful and necessary to the accomplishment of so desirable an end.

I am, Sir, yours, &c.,

VINCIT VERITAS.

London, January 3, 1842.

RAILWAY COMMUNICATION WITH SCOTLAND.

RAILWAY TO GLASGOW.—A meeting of the Central Committee for promoting this great undertaking, was held in the Town Hall here on Thursday last. The proceedings did not possess much public interest. In the course of the proceedings Lieut. Colonel Graham, said—

"The great project of concentrating, by speedy communication, the talent, enterprise, commerce, and wealth of the western portion of the island, is fast gaining its just meed of support from the cities and districts whose resources it will materially tend to develope. Edinburgh, with her port of Leith, alone now rests supine—lulled, it may be, by the romance of an Eastern tale, she perceives not the possibility of inducing enterprise and commerce to inhabit her suburbs, and a busy population to tread her streets, by the mere emendation of intercourse with the western ports and cities of England; nor are the stockholders of the London and Birmingham Company yet conscious of the *dangerous possibility* of their losing, by an eastern line, a great portion of their traffic along 36 miles of their expensive railway, or of a total deviation from their line by a Cambridge route. With this Committee, at least, the merchants of those towns, and the shareholders of that Company, will lose all credit for discernment unless they speedily arouse and come forward with eager proffers of support. It is cheering to observe that at a recent and fully attended meeting of the Town Council of Glasgow, when a vote of money in aid of this undertaking was called for, the able Chairman of the Glasgow Railway made a long and eloquent speech, which was considered by his hearers to be so highly in its favour that the sum required was granted without a moment's delay. Mr. Errington, in a speech at Greenock, says that railway speculations have for some years past consumed about ten millions annually of the surplus capital of the country, and those works having for the present been generally brought to a close, may account in some measure for the great want of employment throughout the country. The present project would occupy 20,000 men for a considerable length of time, and on this account, besides numerous others, has strong claims upon the legislature."—*Carlisle Journal*, Jan. 1.

RAILWAYS IN RUSSIA.—The favourite project at present in the east of Europe is the construction of a railway between the two Russian capitals. The works will commence in a few months. The road is to pass by Tver, and will have a branch to Ribinsk-Cantonstadt, in the government of Yaroslav, on the Volga, which town is the general entrepot of merchandise coming up that river. It is calculated that the port of St. Petersburg will gain much by the construction of this road, which will ultimately be continued from Moscow to Nishni-Novgorod. A railway of more interest to western Europe, is that from Basle to Milan, meditated by the Swiss cantons. The line projected by M. Wild, passes near Zurich, Coire (in the Grisons), the Splugen, and Lake Como. Part of the journey will be performed in steam boats on the lake of Zurich, the Linth, and the Wallensee, to Wallenstadt; and again on the lakes of Como and the Adda. By this line, the journey from Basle to Milan may be accomplished in twenty-five hours, and that from Strasburg to Venice, in thirty-eight hours. Consequently, by taking advantage of the Belgian railways, we may go from London Bridge to the head of the Adriatic in 86 hours, or allowing ten hours for incidental delays, in four days, passing through the finest scenery in Europe.—*Athenæum.*

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—At the late meeting of the Leeds Company, on the 22nd December, Mr. Entwistle, one of the Directors, stated to the proprietors that after paying interest on loans, a net profit (applicable to a dividend) had been realised of 45,000*l.* during the last six months. In the face of this statement, to which, for my own part, I yield implicit confidence, your correspondent, Mr. "Joseph Walker." of Manchester, asserts that the net profit realised is only 20,025*l.* May I beg of him, through the medium of your columns, to inform the shareholders on what grounds he questions the veracity of Mr. Entwistle's statements, and also what are the *sources* of his information, that he deems them superior to those accessible to the Directors themselves? This in perfect fairness he his bound to do, as his letter, though containing nothing more than mere assertions, is calculated to cause uneasiness in the minds of distant shareholders. At the same time I would ask him, why he takes for granted that the gross receipts amount, as represented, to 116,000*l.*, while he questions the truth of Mr. Entwistle's statement, that a net profit had accrued of 45,000*l.* If the Directors are unworthy of confidence, what assurance can we have that the weekly receipts are correctly published. They may amount to double or to only one half of the sums represented.

Your correspondent is anxious that the true merits of the Manchester and Leeds line should be understood both by *buyers* and *sellers* of railway shares. To assist him in so laudable a design, will you allow me, Mr. Editor, to remind your readers (many of whom doubtless peruse your columns for information as to sound investments in railway stock), that a branch from the Leeds line to Oldham will be opened in two or three months. Oldham contains 60,000 inhabitants, and no fewer than 100 factories; it is distant seven miles from Manchester, which is the mart for its staple manufactures; the traffic is enormous both in goods and passengers; when the railway is completed it will add 500*l.* or 600*l.* to the weekly traffic receipts of the Leeds line, which of itself will enable our Directors to raise the dividend for 1842, *to seven per cent.* The gradual developement of the resources of our line on the opening of the Halifax branch, and on the completion of our arrangements to convey bale goods from Leeds, Halifax, and Rochdale, to and from Liverpool *via* steamers on the river loading and unloading at our quay at the Hunt's Bank terminus, will doubtless afford a dividend in 1843, *of eight per cent.*

Several of your correspondents have questioned the possibility of the Leeds line being worked at the low per centage of 33 per cent. on the amount of the gross receipts; this has been accomplished during the last six months, and it is easily accounted for. Our line obtains coke for the low price of 12s. per ton, while the Liverpool pays (or did a short time ago) 23s.; the Grand Junction line 26s. 6d.; and the Great Western 37s. 6d. per ton. In addition to this, it must be borne in mind that before publishing the weekly traffic the Leeds Company deduct omnibus charges and payments to other Companies; and also that not being carriers, but merely finding trucks, the expenses of working the goods traffic are but trifling. But for this circumstance the amount derived weekly from goods, which now averages 1,800*l.*, would average 2,400*l.* the carrier's expenses at either terminus amounting to one-third of the railway charge; so that if the Leeds Company had been carriers like the Grand Junction, and if they had entered the weekly payments to the North Midland of about 100*l.*, and of the same amount for omnibus and coach expenses as disbursements made half-yearly, as is the practice of the Grand Junction Company, the published weekly traffic returns on the Leeds line would have averaged 800*l.* more than they have done, and the working expenses would have amounted to 45 per cent., thus:—

Gross revenue for six months, as now given		£116,000
Add 600*l.* carrier's charges, 100*l.* for North Midland toll and 100*l.* for omnibus expences—say 26 weeks at 800*l.*		20,800
		£136,800
Expenses for six months, as now given	£40,000	or 45 per cent.
Add above	20,800	
		60,800
		£76,000
Interest on loans		31,000
Net profit as stated by Mr. Entwistle		£45,000

The above statement sufficiently explains the causes of the low rate per centage at which our traffic is worked; in addition to which it is well known that the Leeds line is managed in the most economical manner. Altogether, Mr. Editor, the shareholders may congratulate themselves on the fair prospect they now have of being rewarded for all their anxiety by a steady and gradual prosperity. The Manchester and Leeds line is gradually coming into favour as a safe and judicious investment for capital.

I am, Sir, yours respectfully,
A HEAVY HOLDER IN THE LEEDS LINE SINCE 1838.

January 4, 1842.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

Sir,—We have no right to complain that the Directors of the Liverpool and Manchester Railway choose to do what they will with their own; or that the Bridgewater interest should prevail, when so many shares stand in the name of the representatives of that property. They may sacrifice every other consideration to the great principle that railway and canal interests shall flourish together, and decline completing the chain of communication with the Leeds terminus, for want of which their own traffic in goods has already so seriously suffered. But there is great reason to lament that the Liverpool Company should have *deprived the people of Manchester* of that continuous railway through the town, which is so important to its mercantile prosperity, and to the comfort of passengers from one station to another—and this by an application to Parliament for powers which they may never have intended to exercise; and their prevention of the efforts of other parties who would before this time have proceeded far in the undertaking. But the public have the *strongest* ground of complaint against the Liverpool Company, that they have not *avowed their decision*, although it has been long understood that they have determined to abandon their powers confided to them by the legislature. Many months ago they promised to acquaint the Town Council with their decision, but to the present day they have not given this information. As a Manchester and Leeds shareholder, I would only ask the Liverpool Directors at once to say yes or no. If they too are ready to *fulfil* their engagement with us, we hold out to them the right hand of fellowship, and should delight to proceed together frankly and unreservedly in the line of communication which would be to our mutual advantage, and certainly to that of Manchester. If they decline, having the object just mentioned closely in view, we will go on without them, and doubt not of the public support and ultimate success. We also must test the experiment whether railway and water carriage may not be reconcileable in their interests, and conduce to mutual improvement. By the introduction of steamers of light draught, and accelerated power, we are encouraged to believe that the improvement of the Irwell will amply repay the expenses incidental to a navigation so desirable, when we can transmit by conveyance, of which the speed will only be limited by the restrictions of safety, goods and passengers in one uninterrupted line to Hull and any part of the immense population of Yorkshire. We *only deprecate* suspense and delay grounded upon estimates of traffic so low, as to be scarcely colourable by possibility. We have offered to guarantee the Manchester and Liverpool Company against the contingencies of loss, and now, in behalf of the railway interest, to which honour and promptitude and good faith are so valuable—in behalf of the town of Manchester, and in behalf of *the dissentients of the Liverpool and Manchester shareholders* to the abandonment of the branch line, we call upon the Liverpool Board to convene a meeting of their proprietary and act candidly and openly, whether in union with us, or in opposition.

I am, Sir, your obedient servant,
A HOLDER OF MANY SHARES.

January 5, 1842.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

[From the *Liverpool Standard.*]

The *Railway Times* on Saturday last took the opportunity, presented by a one-sided report of a meeting of the Manchester and Leeds Railway Company, to fasten a charge of bad faith upon the Directors of the Manchester and Liverpool Line, for having declined to enter upon the formation of the proposed junction of the two railways by a line through the town of Manchester. Our contemporary appears quite satisfied that the former Company has acted with the most perfect good faith throughout the agitation of this junction line; that they have not sought to trap the Liverpool Company by the exhibition of fallacious estimates of traffic, into a hasty adoption of a line through Manchester, which would leave two other undertakings equally important as their own, without any junction line with the port of Liverpool, or any chance of ever getting one; and that the conduct of the Liverpool Directors has been, on the contrary, flagitious and dishonourable towards their Manchester and Yorkshire friends, who are so anxious to engross the advantages which a direct connection with their port is likely to afford.

We are ourselves by no means so convinced of any of these positions being correct. Nay, we incline to think that the refusal of the Manchester and Liverpool Directors to proceed with this erroneous and unadvisable scheme is the next best thing to their having never consented to listen to it, which most assuredly ought to have been their course. Although not ourselves in a position to say to what extent the traffic estimates presented by the Leeds Directors to the consideration of the Liverpool and Manchester board were exaggerated and fallacious, we can readily believe that they were so from the unfair spirit, evinced at this meeting, in which the very name of one Company, which possesses important claims to consideration in the settlement of this matter, is not even mentioned as worthy of the notice of the Leeds gentlemen, and the question as to the choice between the two competing junction lines is stated as one between themselves and the Manchester and Birmingham Company only. We have reason to know that it is not viewed in this light by the Directors of the Liverpool line. Their object is to do justice to all, and in doing so, to embrace the only means of doing justice to themselves. They have no unworthy jealousy—like that evinced by the Leeds people—to induce them to forget the very existence of a line so important in its future connexion with the port of Liverpool as that in course of formation between Manchester and Sheffield. And although by the pertinacity with which this selfish scheme was urged upon them by the Leeds Company, in their anxiety to forestal the object of their jealousy, they were induced to enter so far into it as to join in the measures requisite for procuring an Act of Parliament, we can see no moral or just blame which can attach to them for having retraced their steps so soon as they had discovered the deceptive and unfair means by which they had been hurried so far into a wrongful and unprofitable course.

With a full knowledge of the locality, of the conflicting plans themselves, and of the feeling of the people of Manchester respecting their comparative merits and convenience, we can unhesitatingly say that public justice will not be satisfied by the formation of the proposed junction line with the Leeds

Digitized by Google

railway only. That the line to communicate with the Manchester and Birmingham will cost one-half of what it is estimated to cost by the Leeds Directors, we do not believe; nay, we know that it has been estimated, by two competent engineers, to cost not more than a third of the sum put down for it in the one-sided statements of the Leeds and Manchester meeting. The property which it runs through is of the most worthless description, the works required comparatively inexpensive, and the advantages which it affords to the Liverpool Company, when compared with those afforded by the other line, as furnishing a communication with the centre of the town of Manchester, and with three railways instead of one, are such as fully warrant the Liverpool Company in looking forward to that as a line to be formed a year or two hence, rather than to rush into the formation of, confessedly, a very expensive junction with the Leeds alone, with the certainty before them of another line having ultimately to be made.

We believe that these are the considerations by which the Liverpool and Manchester Board are actuated in the course which they are adopting in this much mooted matter. We think that they are proper and just considerations, and we know that they will *not* be driven from them by all the attacks which their detractors may be inclined to make upon them. We submit, too, that they *ought not* to be so driven, and especially at such a time as the present, and by such a Company as the Manchester and Leeds, which, however magnificent in its promise, has not shown such abundant realization in performance, thus far, as to warrant the directors of any public undertaking in seeking an exclusive alliance with it, to the neglect of other less imposing, more humble, but perhaps equally valuable connexions.

EDINBURGH AND GLASGOW RAILWAY TUNNEL.

On Saturday, being New Year's Day, this great undertaking was opened to the inspection of the public, at a moderate charge, for the benefit of the Paisley Relief Fund. Throughout the day great numbers took advantage of the circumstance, at once to gratify their curiosity, by seeing a work of such immense magnitude, and contributing in some degree towards the relief of our depressed neighbours in Paisley.

The tunnel was visited by some thousands of our most respectable citizens, all of whom seemed struck with surprise at the magnitude of the work. It is again to be opened to-day, when, we have no doubt, that the novelty of the exhibition, and the benevolent object for which it has been laid open, will attract a large concourse of visitors.

The tunnel extends to a length of 1250 yards, nearly three-quarters of a mile, and is lighted up by 45 lamps, distant about 80 feet from each other, the lamps being placed alternately on the east and west sides of the tunnel. The lights are afforded by the fan-tail burners originally introduced by Mr. Mellon, of the gas works; and, being inclosed in large semi-hexagonal lanterns, with a slightly curved reflector, throw a brilliant light over the breadth of the line, and display to much advantage the whole interior of the vast and admirably executed undertaking. As the lamps will be kept burning night and day during the running of the various trains, the dull, cheerless, and, to many, alarming feelings which passing through a dark tunnel usually excites, will be entirely removed, the effect being little else than the passage through a somewhat narrow street. The fitting up of the gas lights has been executed by Messrs. Miller and Bankier, Argyle-street, by whom also the lamps have been made, and the whole affair reflects the highest credit on those gentlemen. As the concussion of the air, consequent on the rapid progress of the carriages, would have a tendency to extinguish the lights, an ingenious arrangement has been made in the mode of admitting the air at the bottom of the lantern, by which this effect is entirely obviated. The tunnel is entirely white-washed throughout, and presents a very splendid appearance, while it creates a feeling of the utmost security, although the spectator is conscious of the immense superincumbent masses of rock and other strata which are resting above him. In one or two places only is the dropping of water to be detected, and these portions have been covered over with sheet lead, by which the water is conveyed to each side of the archway, and received in gutters, by which means the roadway is kept dry, and the feeling of comfort unaffected. The immense passenger shed was also lighted up, and had a noble appearance, the ranges of lamps on each side spreading a blaze of light over the whole area, while in approaching the terminus through the tunnel the effect of the shed lights is very striking.

We understand that, in the course of a few days, the rope to be employed on the inclined plane between the terminus and the fixed engine at Cowlairs, will be laid in its proper position for working. It will extend to the length of about two miles and three quarters, and it cost, we believe, about 500*l*. A galvanic telegraph is in the course of erection at the tunnel, for the purpose of conveying signals from the Glasgow station-house to Cowlairs, and directing the operations of the stationary-engines at the latter place as to the moment which they may be required to move the trains upon the inclined plane. The distance from the Glasgow station to Cowlairs is, as near as may be, one mile and a half, and it is expected that this telegraph, which is the first of its kind in Scotland, will transmit intelligence along this distance in the space of three seconds. Since our last notice of this great national undertaking, the works have progressed amazingly, despite the most unfavourable weather. The whole is in such a state of forwardness, that it is expected the entire line will be ready by about the middle of this month, with favourable weather, and certainly not later than the 1st of February, even should the weather prove to be adverse. According to our information, the Company will start with something like the following number of locomotives and carriages, most of which have been received, and others are in their progress towards immediate delivery:—viz., 30 locomotive engines; 42 first-class carriages; 6 coupes, (for the accommodation of separate families); 60 second-class carriages; 60 third-class carriages; 30 trucks, for dry goods; 70 ditto, for common goods, besides the full proportion of cattle trucks, carriage trucks, horse boxes, &c. The two fixed engines at Cowlairs, the head of the Glasgow incline, have been already tried, and are ready for starting. They are 80 horse power each, but will work to a hundred. The workshops at this place are fast coming to completion, and their extent may be learned from the fact that they are 369 feet in length, by 101 in breadth; embracing every kind of machinery for the keeping in repair of all the working means and appliances of a great railway. The water tank for supplying the locomotives is here situated, being constructed above one end of this great building. When charged it will contain 300 tons of water, which is supplied from a neighbouring reservoir, worked by means of a small engine. To economise power, the same engine drives all the lathes and other machinery of the workshops, which, taken as a whole, are not excelled in completeness by any in the kingdom.—*Glasgow Argus*, Jan. 3.

CHESTER AND HOLYHEAD RAILWAY.

On Thursday week a meeting was held at the Penrhyn Arms, Bangor, to take into consideration the propriety of giving parliamentary notices upon Messrs. Stephenson and Giles's projected railway between Chester and Holyhead. The meeting was attended by many of the neighbouring gentry; and J. Wyatt, Esq. was unanimously called to the chair.

Mr. Giles then detailed the plan of the projected railway, and placed before the meeting the apparent merits of the line of railway to Dublin *via* Chester to Holyhead. The line had been surveyed by Mr. Stephenson, and this gentleman was strongly in favour of it. It had been allowed, on all hands, that Holyhead was the most fitting terminus. With respect to Porthdynllaen, he did not feel called upon to make any remark, having pointed out its inferiority in his report of 1838. It was always difficult to estimate the expenses in such large undertakings, but he was prepared to say that the expenses of the proposed line would not exceed three millions, and most probably not more than two millions and a half. One thousand pounds was all that was necessary to place them in a condition to apply to government for a loan. This sum might be raised by subscriptions or otherwise. Mr. Giles then, wishing the meeting to bear in mind that this sum was estimated upon the least and barest expenses of making the necessary surveys, left the matter in the hands of the chairman and meeting.

The Chairman then suggested that circulars should be sent round to the gentry and others to solicit their subscriptions.

Mr. Grenville, banker, Chester, entirely agreed, as the local interests of Chester were so deeply involved.

Mr. Bulkeley Hughes thought that similar meetings ought to be held in Flintshire, Denbighshire, and the other counties, in order to stimulate emulation and prevent jealousy. For his own part, he preferred Porthdynllaen, and, as the representative of the six contributory boroughs of Carnarvonshire, he would suggest that the surveys spoken of by Mr. Giles ought to include one of the line of road between the Menai bridge or Bangor and Porthdynllaen, in order that the public might have fair means of testing the comparative merits of the two lines from Bangor to the railway terminus.

After several other speeches, resolutions were agreed to for furthering the proposed object, and the meeting separated.—*Midland Counties Herald.*

Railways in Austria.—(From a correspondent of the *Times*.)—I hasten to inform you of the rapid progress railways are making throughout the Austrian dominions. The Emperor has issued a decree commanding the completion of three extensive lines of railways; one from Vienna to Trieste; a second from Vienna by Lintz to the frontiers of Bavaria; and a third from Vienna to Dresden, through Prague. These railways are to be laid out so as to correspond with those already completed, or to be executed, and will form one grand line extending over the entire empire of Austria, and communicating with those completed in other parts of Germany. A central committee has been appointed to superintend the execution of this gigantic work, to be constructed solely at the public expense. Another resolution of equal importance has been at the same time adopted by the government relative to a revision of the customs tariff, for the purpose of ascertaining whether it would be modified so as to adapt it to the German Customs' Union (Zollverein)—a measure which clearly proves that the period for a complete union amongst all the German states not having arrived, every impediment and difficulty at least which might obstruct the execution of a future treaty will be removed. Austria feels the necessity of uniting herself as closely as possible with the rest of Germany, particularly at this moment, when Bavaria, the second Catholic power in Germany, is forming a new alliance with Prussia by the projected marriage of the Hereditary Prince of Bavaria with a daughter of Prince William of Prussia, an engagement which is already publicly and officially announced, but which will not be consummated before the latter end of the ensuing year.

Paris and Rouen Railway.—A considerable slip of earth took place, a few days since, at Tourville la Riviere, on the Paris and Rouen Railway. Five men were buried under the fallen materials, but were got out after some time without any serious injury. The directors of the works gave a gratuity on this occasion to the men who helped to rescue their companions; but a very bad use was made of their generosity, for the workmen got intoxicated in the evening, and in a violent quarrel which ensued, several among them wounded each other dangerously with their knives.—*Hampshire Independent*,

2. *Minus* toll to London and Birmingham 144*l.* 18s. 0d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

12. In consequence of an alteration in the period to which the weekly returns are made up, this only includes five days.

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is [illegible]

15. The 36*l.* 14s. 8d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,701*l.* [illegible]

omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 17*l.* 6s. 0d.; horses, 24*l.* 11s. 0d.; dogs, 1*l.* 16s. 0d.; parcels, 309*l.* 18s. 3½d.; cattle, 16*l.* 6s. 6d.; corn, 7*l.* 7s. 4d.; heavy goods, 305*l.* 8s. 8d.; coal, 165*l.* 12s. 8d.—Total, 849*l.* 1s. 5½d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 2,057*l.* 12s. 6½d.; parcels, carriages, horses, and mails, 304*l.* 10s. 0d.; merchandise, 1,000*l.* 1s. 7d.; minerals, 239*l.* 17s. 8d.; cattle, 29*l.* 16s. 8½d.—Total, 3,631*l.* 12s. 5½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 127*l.* 19s. 5d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

32. The returns are exclusive of Man. and Bir. toll.

TO CORRESPONDENTS.

One of your Readers *forgets that the Greenwich line is included in the one case and the Croydon and Greenwich in the other.*

Icarus *has only to apply to the Secretary, and he will, we doubt not, receive full particulars. The arrangement, we believe, takes effect immediately.*

Memo. *There is, we understand, some intention of amalgamating the two concerns, but of course nothing can be determined upon without the sanction of the proprietors of both.*

A Constant Reader from Abroad *essays, we presume, to be witty, but we are too dull to discover the point of his jokes.*

Railway Shareholder.—*We regret that our friend should lose his temper merely because we do not take precisely the same views of certain matters as he himself does, or have not the same felicitous gift of expressing clearly what we mean. We assure him we take his lecture in good part, notwithstanding his readiness to ascribe unworthy motives. We know too well the impossibility of pleasing everybody to attempt it; but we are sorry we have displeased* him. *As to the present being the* "last occasion" *on which he is likely to address us*—that *must depend wholly on himself. We never fail to admire the talent displayed in his letters, although we cannot at all times approve of their spirit or probable effects.* Mr. R. S. *is, we suspect, rather too fond of the "Cantharides" system; a gentler mode of treatment may at times prove more effectual.*

We shall look into the case of "Irving v. *The Maryport and Carlisle Railway Company," of which a printed report has been sent to us, and should occasion require, notice it in our columns.*

A Subscriber for Two Years to the Railway Times, *who complains of the mode in which our papers are folded, is informed that it is the newsmen who are in fault, as single papers are very rarely sent from our office.*

Veritas.—*We should be glad to give the returns referred to by our correspondent, but cannot procure them.*

A Yorkshireman.—*Should it be necessary we will notice the matter. We think, however, it is intelligible enough as it stands.*

In an article which appeared recently in our columns in reference to the increase of traffic on the Canterbury and Whitstable Railway, consequent on the reduction of fare, the number of passengers was erroneously given as the receipts in money. The mistake was not ours; nor is it of any great moment, as in either view of the case the increase is most remarkable.

X. H.—*Fortunately the accident to which our correspondent refers has not proved serious, as was at first supposed, but the hypocrisy of the parties is not the less remarkable. Our correspondent will see that we have elsewhere made some allusion to the subject.*

Four-wheeled and Six-wheeled Engines.—*We very much regret that the extreme length of Mr. Gray's letter compels us to hold it over till next week.*

Proposed Railway in Cornwall.—*The county meeting to which we have so frequently referred took place on Wednesday last. We had hoped to be able to give some notice of the proceedings in our present number, but from some accident the Report has not come to hand. We shall give ample details next week.*

Letters with the following signatures are in type, and shall, if possible, be given next week:—A Shareholder (*Manchester and Leeds*), L. (*Great Western*); A Farmer, Observer, A Constant Spectator, S. E., Arbitrator, &c. &c.

The volume of the *Railway Times* for 1841, may now be had neatly and substantially bound and lettered. Those of our subscribers who are in want of single numbers to complete sets, would do well to apply early, as the stock is very limited.

We should feel obliged if any of our friends could furnish us with the numbers of the *Railway Times* for January, 1838, to enable us to complete a set or two. Double the publishing price will cheerfully be paid for them.

THE RAILWAY TIMES.

SATURDAY, JANUARY 8, 1842.

THE fatal issue of the injuries inflicted upon one of the persons who were not killed instantaneously by the late accident on the Great Western Railway, has led to a second investigation, before another jury, of the circumstances connected with that melancholy occurrence. The evidence, except where it was a mere repetition of that adduced on the previous inquiry, will be found in another page. The verdict of the second jury was, it will be seen, pretty much the same as that of the first. It was as follows:—

"We find that Richard Woolley came by his death from a fracture he received on the skull, caused by the engine called the *Hecla* coming into collision with a mass of earth having fallen from the slope of a cutting on the Great Western Railway, at Sunning, in this county; and the jury are of opinion that the accident might have been avoided, had there been a night police or watch in the cutting. They, therefore, place a deodand on the engine and trains of carriages of the sum of 100*l.*, and further they recommend that the passenger trucks be in future placed further from the engine."

Mr. BRUNEL, the Engineer-in-Chief of the line, gave, as on the former occasion, evidence at some length, and from that gentleman's connection with the Great Western Railway, and his position in the profession, his opinions and statements have very naturally excited considerable attention. We are sorry to find that, as usual, his random style of giving testimony has laid himself, and the establishment in which he holds so prominent a place, open to much censure.

Mr. BRUNEL persists in stating that the front part of a luggage train is the safest position for passenger trucks, because, among other things, such trains are liable to be run into by succeeding trains. Being asked by a juryman whether the liability of one train to run into another is not more under control than other accidents, he replies, as reported, "I should say not. There have been *many* instances of a train running into the luggage train on the Western Railway." We were not before aware that the Great Western line had been the scene of so many accidents as the evidence of the Engineer-in-Chief would imply; but certain we are that the experience of that Company, if thus rightly described by a party who ought to be well acquainted with it, is no fair sample of the experience of other Companies, much less a specimen of what *ought to be* the experience of all of them. If we take the London and Birmingham line, where the goods' traffic is larger than on the Great Western, and where there are so many tributary lines, and where moreover such traffic is less under the control of the Company, who merely supply locomotive power, we venture to affirm that not only have there not "been *many* instances of a train running into a luggage train," but that not one such accident, or other accident of a serious kind, has on an average occurin a year, in this which Mr. BRUNEL appears to deem the most hazardous department of railway traffic. As to the assertion that it is as difficult to guard against running into a preceding train as against "other accidents," we can scarcely believe that Mr. BRUNEL's testimony can have been accurately recorded. "Other accidents" may be of a kind which it is impossible to foresee or prevent, but with common care on the part of the servants of a Railway Company, the over-running of one train by another would be unknown. Mr. BRUNEL speaks of the breaking of an axle as likely to throw a train off the line, and in that case it is plain that the engine driver, and other servants of the Company, might be wholly blameless; but will it be affirmed that such an accident as running into a preceding train could possibly occur, if proper signal-lights were affixed to each train, and if the trains were proceeding at their appointed speed, and the drivers keeping a proper look-out? And yet Mr. BRUNEL says, or is made to say, that the one species of accident is not more under control than the other! Mr. BRUNEL appears to think that the slip which caused the fatal occurrence of Friday fortnight, was in progress at the very moment when the train was passing. If it were so, what degree of vigilance on the part of engine-drivers, guards, policemen or watchmen could have averted the catastrophe? All would be wholly free from the shadow of blame (unless it could be shown that timely measures of caution might have prevented or delayed the slip); but had the driver of the luggage train run into one that was before him, or the driver of the first passenger train run into the luggage train in the Sunning cutting, the signal lights being shown on each, would Mr. BRUNEL have looked upon the occurrence as just as little under control as the sudden and unexpected failure of the slope? We are satisfied he would not. He would have said, and said justly, that it was the duty of the driver to keep a proper look-out, and that having failed to do so, he must take the consequences. In fact, if there be one species of "railway accident" which more than another ought to be, and might be, prevented, it is that of running into preceding trains. In *no* case can such an accident occur without gross neglect on the part of somebody—neglect in not having the appointed signal affixed to the tail of the first train, or neglect on the part of the driver and stoker of the second in not keeping the requisite look-out. Mr. BRUNEL intimates that the frequent stoppages of the luggage train and the shifting of waggons may render the "tail lamp" useless, but as he subsequently states that it is only at stations that such changes take place there need be no difficulty in guarding against any temporary or permanent obscuration of the signal light. We know that on some railways it is an invariable order to the police to notice the tail lights at each point on the line, and that in the event of their non-appearance the party in authority at the last station is held responsible.

Another assertion of Mr. BRUNEL which it is clear must have been uttered without due reflection, has reference likewise to the position of the passenger trucks. He is asked by the foreman of the jury whether passengers are not exposed to more cold and greater annoyance from being placed near the engine, and he boldly and laconically answers "No." Mr. BRUNEL boasts of having travelled frequently by the third class train, and considers it "rather a *safe* train than otherwise." It may be so—we hope it is, although the present proceedings would point the other way—but not even Mr. BRUNEL shall persuade us that a position in immediate contact with the engine is nearly so *comfortable* as one at a greater distance. We say nothing of the noise, but any one who has travelled even in a second class

Digitized by Google

carriage will feelingly recollect the *comfort* arising from having his eyes half filled with the dust and smoke of the fuel, and perhaps his flesh or his clothes injured by the fiery particles from the chimney. We ourselves know of at least one case of serious and permanent injury from a spark falling on the face of a second class passenger. If the place next the engine be quite as safe and to the full as comfortable as one further removed we should be glad to know how it happens that all Railway Companies put the inferior vehicles in front.

Mr. BRUNEL admits that there is greater liability to accident by night than by day, but strangely enough does not acknowledge the necessity for greater precaution on that account. "I am of opinion [he says] that patrolling by night would not be more effective than the system pursued, because it is impossible in the dark, by the mere light of a lamp, to detect any changes in the level of the rails, or any of the *numerous* symptoms of danger; at least such watching could not be relied upon. It appears to me [he adds] that the most certain way of securing safety by night is to use all the means in our power during the daylight for remedying any evil and detecting any fresh symptoms of movement, and then placing special watchmen at those places with a knowledge of what they are to look for, and that is the system which is followed." Did it not occur to Mr. BRUNEL that a night watch might very easily be combined with those detective and remedial measures by day which he so properly recommends? Allowing that everything was done by day which could have been done in the Sunning cutting, we have proof too manifest that all was ineffectual. A night police might or it might not have prevented the calamity, but at least there would have been an additional chance, and at any rate the Great Western Management would not have been subjected to the odium which two Coroner's juries have cast upon them, of not having provided an adequate night watch. It may be impossible, as Mr. BRUNEL affirms, to detect by the mere light of a lamp "any changes in the level of the rails, or any of the *numerous* [?] symptoms of danger," but passing over the propriety of of finding better lights, even the light of a lamp, in such an instance as this, would in all probability have been sufficient to discover the immediate cause of the accident. Mr. BRUNEL gives it as his opinion, that a large stone which had slipped down with the clay, and which was, subsequently to the accident, found between the rails, was the principal cause of throwing the engine off. Now with a good lamp, and a proper inspection of the line previous to the arrival of the train, it would have been next to impossible not to have observed this impediment—that is, supposing the slip to have taken place before the train came up. As we have already said, no immediate vigilance could have prevented (though foresight might) the occurrence, if Mr. BRUNEL's conjecture be correct that the slip was in motion during the passing of the train; but such a case, even if it occurred on this occasion, must necessarily be rare, and ought to have no weight in determining the precautions ordinarily to be adopted. Mr. BRUNEL apparently does not think much of patrolling by night "by the mere light of a lamp;" but if there be so little use in this mode of inspection, what, pray, shall be said of the practice deposed to by HIGGS on the first inquest, of going out to inspect the line on a dark December morning *without a lamp?* The inspection of the man HIGGS must be looked upon as a mere form, for if he *without* a lamp, and by once walking over the line, were likely to detect an obstruction, the chances are more than twenty to one that a policeman *with* a light, perambulating the railway twenty times during the 14 or 15 hours of darkness, would have observed it, and have had time to ensure its removal. This system of a regularly established night police need in no way interfere with Mr. BRUNEL's plan for the appointment of "special watchmen," at spots where particular danger is dreaded. It is better to err on the side of over-precaution (if such be possible) than to throw away a chance of increased safety. Mr. BRUNEL states that "at the present moment there must be *thirty* or more, [of these special watchmen] between London and Bristol every night." When it is considered that at the Sunning cutting, where previous slips had occurred, it was not deemed necessary to place this special watch, we fear that Mr. BRUNEL's statement will not tend to give the public a very favourable opinion of the present condition of the Great Western Railway.

Upon the evidence of the other witnesses it is not necessary to comment at any length. The manner in which BOTTRELL, the inspector of the Reading district, gave his evidence, does not say much for the general intelligence of that party. There is one point in the evidence of COLLARD, the superintendent of police, which strikes us as being somewhat singular. It seems that a policeman enters upon duty at Twyford, at six o'clock in the morning, his "beat" extending to a spot called Mustard-lane bridge, and that another policeman takes charge of the line from Mustard-lane to Reading, *but this latter person does not leave Reading till eight o'clock.* How is this? Is there more necessity for an inspection of the one portion of the line than of the other that it should be commenced two hours earlier? The evidence of REYNOLDS, the engine-driver, shows that there was a policeman between Twyford and the Sunning cutting as the luggage train passed. Why was there not a similar watch between Sunning and Reading? The Twyford policeman gave the signal of "safety," and the train proceeded without apprehension to the scene of the sad tragedy. It appears further, from the evidence of Superintendant COLLARD, that if an accident were to occur between nine o'clock in the evening and six o'clock in the morning, there would be no person to communicate it to the nearest station except the second guard, "who [he says] has authority to employ a messenger in such a case, and *to take a chaise*, or use any other mode of despatch." The idea of "taking a chaise" at unfrequented spots of a railway, or even at the most populous points whence the new mode of locomotion has almost banished such conveyances, is ludicrous enough—to say nothing of the chance that five miles of railway would prove at least ten miles in distance by a common road, if there were a common road at all. To find a "messenger" would probably be an easier task; but how much better and how much safer would it be, to have the means of passing a signal of stoppage or danger, from one policeman to another, up to the nearest station?

We do not think that the conduct of the Reading Coroner (Mr. BLANDY) throughout this investigation, will conduce either to his own honour or to the credit of the office which he fills. The spirit of partisanship displayed by that functionary was most offensive, and his attempt to stifle inquiry anything but what the public had a right to expect. Probably he thought that, in throwing impediments in the way of a full and fair investigation, he was doing an acceptable service to the Managers of the line; but if such were his impression, we are convinced he was greatly mistaken. Nothing can be more honourable to the Directors and officers of the Company than the open, straight-forward course they have pursued throughout this unfortunate business. It is a very common charge against Railway Directors—and in general it may be well deserved—that they seek to stop investigation into the circumstances of mishaps like this; but whatever may be insinuated to the contrary, we have it from undeniable sources that the Great Western Management have nothing of *that* sort to answer for.

ALMOST simultaneously with the accident on the Great Western Railway, an occurrence took place on the works of the Bristol and Gloucester line, which resulted in the death of several individuals, and the serious injury of many others. We gave in our last number some particulars of the case, and should probably not have reverted to it but for the wording of the verdict returned by the Coroner's jury who investigated the circumstances, and the use made of it by a portion of the press.

It appeared clearly in evidence, that the men employed in the construction of a tunnel on the railway referred to, had been in the habit of placing barrels of gunpowder in a temporary forge, or smith's shop, situated on the works, and that on the morning of the explosion there were two such barrels in the shop—one of them containing 1 cwt. of gunpowder, and the other, *the head of which was out*, about 8 lbs., which had been damaged and of which they took no account. These barrels were about *eight feet* from the fire, and some planks *partly* covered them. The blacksmith was at work, and several of the labourers were smoking their pipes, when suddenly the gunpowder exploded, killing three persons on the spot.

Was there ever a case in which men have more recklessly brought destruction upon themselves—for it appears that they were all cognizant of the fact, that barrels, both full and empty, were constantly deposited in the forge, and that their fellow-workmen had indiscriminate access to the combustible? And yet, the jury, on the recommendation of the Coroner, returned a verdict of "Accidental Death," with the following rider:—"And the jury unanimously express their great regret that in this case they have it not in their power *to mark their sense of the grossly improper management of this line of railway*, by levying a deodand, which they would have levied to the utmost extent had anything been left to levy it upon!" We do not know whether it was the *intention* of the jury to censure the Directors and officers of the Bristol and Gloucester Company for the gross carelessness that led to the accident, but their verdict has been so construed by that portion of the press which is inimical to the railway system, and during the last fortnight this has been paraded as "*Another* Frightful Railway Accident," a "*Further* Railway Murder," as if railways, or Railway Managements were in the smallest degree chargeable with such accidents as are constantly occurring in the formation of all great works, and which in nineteen cases out of twenty originate, as in this instance, from the uncontrollable fool-hardiness of the sufferers themselves. As fairly might the deaths which

Digitized by Google

occurred in excavating the foundations of the new Royal Exchange be imputed to the Managing Committee of that establishment, or the injuries received in erecting a church be laid at the door of the Ecclesiastical Commissioners. Railway Directors are not only marked out for censure when they are blameless, but when in common with others they are really in fault they alone are selected for rebuke. It is not long since a vessel was wrecked in the north, and several persons perished. A few days ago, one of the bodies was washed ashore, and on the Coroner's inquest it was clearly proved that the vessel was in a state wholly unseaworthy. The jury did their duty in strongly reprobating the conduct of the owners, but while the land rings with denunciations of the manifold enormities of Railway Directors—while they are charged with exhibiting the most reckless disregard of human life—not a single pen is raised in condemnation of the owners of the brig *Susannah*, who must have known that they were wilfully, and from the basest motives, emperilling the lives of their fellow creatures!

Some excellent practical suggestions with respect to the approaching half-yearly meetings, will be found in a letter which we publish in another column. Our correspondent recommends that, instead of the present plan of holding the meetings upon such uncertain days as the convenience or caprice of Railway Boards may determine, with but a slight notice to the proprietors, two days in the year—say the first, second, or third Monday, Tuesday, or other day, of the months of February and August—should be positively fixed, so that shareholders at a distance, some of whom do not always see the newspapers, might know exactly the periodical occasions of meeting. We know of no valid objection to this proposition. The accounts of the Companies are not required to be made up (pursuant to their several Acts) to within 20 days at least of the months appointed for the meetings, and there could therefore be no excuse for not having the requisite documents ready, even were the biennial day fixed as early as the several Acts of Incorporation will allow. We fear that the imperfect notice of the time and place of meeting to which our correspondent alludes, is not unfrequently a part of the policy pursued by some Boards of Management, of keeping their constituents as much in the dark as possible. They do not desire the presence of a large body of proprietors, and therefore they do not take means to secure it. We could name Companies the Managers of which studiously confine their announcements within the limits set forth in their several Acts, instead of giving them as extended a publicity as possible. Some of these parties pretend that their object is to avoid the expense of advertising, but we have seldom failed to observe that these same Boards, who are so fond of the "penny wise" practice, are liable to the charge of being "pound foolish" in much weightier matters.

Our correspondent further recommends that the Lancashire and Yorkshire Companies should hold their meetings in the same week, "commencing with the Liverpool and Manchester on, say, the first Monday in February, and followed by the Grand Junction, North Union, Leeds and Manchester, and North Midland Companies," so as to give an opportunity to London proprietors of attending all these meetings, with the least possible hindrance to other pursuits. A similar suggestion is offered with respect to the meetings of the metropolitan Companies. To ourselves, as conductors of a railway journal, in which the proceedings of the several Companies are carefully and fully recorded, such an arrangement would be attended with no inconsiderable inconvenience, but at the same time we can see how advantageous it would be to railway proprietors, like our correspondent (and we know that he is what he represents himself to be), who are shareholders in several undertakings connected locally, but having, perhaps, very different seasons of periodical revision. We have known instances of great inconvenience to shareholders resulting from the holding of *two* London meetings in one day—as for example, the Great Western and Eastern Counties—and we trust that in future such collision will be avoided.

We dissent altogether from our correspondent's views with respect to the prior publication of Reports and accounts. So far from detracting from the *interest* of a meeting, we are convinced that nothing could tend more to increase it than the adoption of such a practice. Were example required, we need only appeal to the late meeting of the South-Eastern Company, where, although a draft Report had been previously circulated, the attendance was as numerous and influential as we have ever witnessed in this or any other Company, and where, it will be seen by reference to our notice of the proceedings, the business of the day was conducted with as little leaning to particular interests as is usually exhibited. It might certainly occur, as our intelligent correspondent seems to dread, that parties would attend solely for the purpose of promoting *a particular interest;* but this evil could easily be remedied by providing that no matter should be formally brought before the proprietors unless notice of an intention to do so had been given at the previous meeting. For many reasons apart from the prior publication of the Directors' Report, such a regulation would, in our opinion, be highly serviceable.

While on the subject of these meetings we may mention that another valued correspondent urges strongly the propriety of declaring dividends quarterly. As railways become more and more the objects of permanent investment, such a regulation must be highly desirable. There need be little additional trouble imposed on the Managements. There is no occasion for quarterly meetings—although probably good might arise from such an arrangement—for supposing the half year likely to return 3 per cent. the Directors might of themselves declare a dividend of 1½ per cent. for the first quarter (as it were "on account") leaving 1½ per cent. to be declared by the proprietors for the next. This is a matter of no slight importance to many persons whose whole substance is embarked in railway speculations, and to whom of course the speedy realization of the current income is everything. We would add that for this reason it is the duty of the different Boards of Management to hold their meetings at as early a period as their several Acts will admit, and immediately afterwards to pay their respective dividends, instead of allowing the proceeds of the preceding half year to "fructify" in some bank at little or no interest.

As our sole object in adverting so frequently to the differences existing between the Liverpool and Manchester and Manchester and Leeds Railway Boards on the subject of the proposed junction line has been to elicit the real facts of the case, and to forward whatever scheme may appear likely to be most conducive to the mutual interests of the Companies and the accommodation of the public, we have never hesitated to give a full hearing to both sides, notwithstanding we feel daily more and more convinced that the conduct of the Liverpool Board has been influenced by considerations of individual advantage distinct from, nay opposed to, the advantage of the proprietors at large. With this feeling we insert to-day a second article from the *Liverpool Standard* of Tuesday last, containing some comments on our notice of the previous Saturday. We regret that our contemporary contents himself with a mere reference to the articles which he criticises. It would be no more than justice to us, and might contribute to a clearer understanding of the points at issue, were he to transfer to his columns our remarks, more especially as they would occupy but a small portion of his valuable space.

There appears little reason to doubt that the article referred to emanates from some other quarter than the Editorial *bureau*. It displays throughout, brief though it be, a spiteful spirit such as an indifferent spectator of the controversy would scarcely exhibit, and deals so much in assertions and dwells so little on facts or in arguments, that none but a partisan of the Liverpool Company can have penned it. Thus the junction scheme is denounced as "erroneous and unadvisable," and subsequently as "selfish," without a single reason being given for the application of these epithets—the Leeds Directors are charged with showing an "unfair spirit" and an "unworthy jealousy," and with having had recourse to "deceptive and unfair means" to *trap* the Liverpool Company by "the exhibition of fallacious estimates of traffic" into "a wrongful and unprofitable course," and finally, all (ourselves, we suppose, among the number) who venture to think that the Liverpool Directors ought to adhere, and *ought to be compelled to adhere to*, the covenant with the Leeds Company, with Parliament, and with the public, into which they themselves voluntarily entered, are stigmatised by insinuation as "detractors."

These are hard words, but how are they justified? The writer in the *Standard* will not take upon himself to say to what extent the estimates of traffic presented by the Leeds Directors "were exaggerated and fallacious," because he well knows that the Leeds Directors are ready to submit these estimates to any fair test that the Liverpool Directors may propose, and even to guarantee their accuracy by the payment of a fixed interest on the capital expended; but he "can readily believe" in their fallacy, "from the *unfair spirit*" evinced at the late special meeting! And in what do our readers suppose, did this "unfair spirit" exhibit itself? Why, in not once mentioning the name of the Sheffield and Manchester Company in alluding to the said-to-be-contemplated junction between the whole of the Manchester Railways! We really are ashamed to waste a word upon so childish a pretence. Every body knows, and therefore the *Standard* writer, who boasts of "a full knowledge of the locality," cannot be ignorant, that the Sheffield and Manchester Railway has no terminus in Manchester apart from that of the Birmingham line, and therefore if the latter be included in the junction scheme, it follows, as a matter of course, that the former must participate in the benefits derivable therefrom. Supposing it were in contemplation to extend the Green-

Digitized by Google

wich Railway from London Bridge to Blackfriars, would it be necessary to inform any one having "a full knowledge of the locality," that the Croydon, the Brighton, and the South-Eastern Companies, would share in the benefits that might be contemplated from such extension?

The writer asserts, but does not attempt to prove, that the *other* junction line would be more advantageous and less expensive than that to Hunt's Bank. We should be glad if this could be satisfactorily made out, for in that case we should urge the Liverpool Directors and all concerned to give it the preference. But this has not, and we believe it cannot, be shown—and, indeed, the real object of this much-paraded scheme oozes out in the assertion of the writer in the *Standard*, that its advantages "are such as fully warrant the Liverpool Company in looking forward to it as a line to be formed A YEAR OR TWO HENCE." Why thus put off a project which is described as so very superior? Why, but that there exists no intention on the part of the Liverpool Directors to execute *any* junction line, so long as they can help it. Their present object is delay, and doubtless a hope that the chapter of accidents may get them out of *this* compact also, should circumstances ultimately force them into it, as was the case with the Manchester and Leeds alliance. The writer in the *Standard* says, he "*knows*" [a pretty clear proof that the article has a Board-room origin] that the Liverpool Directors will not be driven from their position by the attacks of the detractors to whom we have already alluded. More is the pity, say we. If the proprietors of the Liverpool and Manchester Company were fully alive to their own true interests, they would at once take this matter up, and perhaps *they* might succeed in driving their representatives into a different course—into a course of which the issue would be, not the advantage of canal-owners, but of the railway proprietors themselves—they would compel the Board to set about, *in good faith*, the formation of a connecting line, we do not say with the Manchester and Leeds Company alone, but such a line as would best contribute to the advantage of all parties concerned.

If the Liverpool Directors have nothing better to put forth in their defence than articles such as that upon which we have been commenting, we would recommend to them the policy of being altogether silent Nothing is more difficult than to give seemingly satisfactory reasons for a doubtful course of procedure.

An admirable letter on this subject will be found in another page.

THE first dividend from the working of the Glasgow and Greenock Railway was declared at the meeting held on Wednesday last. It is at the rate of 4 per cent. per annum on the amount paid up—a much smaller return than was originally looked for, but sufficient to show that the undertaking may be regarded as intrinsically sound. Circumstances adverted to in the Report, and in the remarks of the Chairman, explain much of the present depression under which the Greenock line labours.

THE attention of our readers was some time since repeatedly directed to the mechanical disadvantages of the present railway system, under which Engineers have hitherto been reduced to the dilemma of either sacrificing much of the actual power of the locomotive in consequence of the imperfect character of its adhesion to the rails, or incurring much additional resistance in the friction of great lengths of rope, and of the heavy machinery necessary to move it, in cases where they have required a direct pull on the train. We agreed to the immense sums expended throughout the country in order to obtain such gradients as alone were adapted to locomotive power, as long as it was a condition of that power that the adhesion to the rails was the dynamic limits of the force of the engine.

We are now enabled to lay before our readers some account of the new mode of applying motive power to propulsion, to which we then referred, as patented by Mr. W. H. TAYLOR, in conjunction with Mr. CONDER, C.E.

The principle of the machine may be thus simply illustrated:—If a cylinder, take for instance a common round ruler, be laid on a flat surface, with a piece of string or rope underneath it, on lifting one end of the string the ruler will roll forward, not only on the level, but up a very considerable incline, without any slip. The same will also be the case if the propelling band thus used be endless, the slack that is hauled in from under the cylinder being laid on the plane surface in advance. Whatever be the size and weight, or even the number of cylinders, if the rope be only proportionate the same effects will result.

It is thus easy to understand how, by a simple arrangement, a carriage may be constructed in which the motive power, whether steam, manual labour, or power of any other species, may be applied to the turning of a drum or disc, whose revolution shall constantly haul in the endless rope from under a roller running on the ground at the back of the carriage, and allow it to be deposited in advance of a similar roller in the front, the carriage itself necessarily advancing a foot for every foot of rope wound round the cylinder.

The weight of the carriage or its load makes no difference in the mode of application, the motive power and the propelling band being of course duly proportioned to the work they have to do. If the engine be required, as on railways, to *draw* and not to carry, the patent includes a very simple mode of increasing the tenacity of the rope to any amount.

As we have not ourselves seen the experiment of either Mr. TAYLOR or Mr. CONDER, which have we believe been principally conducted in France, we cannot be expected as yet to give a decided opinion on the merits of a system the success of which would be attended by so marked an influence on the state and progress of present and future lines of railway. It is not, however, going too far to say, that it appears based on sound mechanical principles, and that if the accounts we have received of the experiments be at all correct, the adoption of this plan would secure, first, very great economy in the construction of railways; secondly, reduction of the annual expenses of locomotive power, wear of permanent way, and maintenance of way and works; and thirdly, the means of carrying railways over districts hitherto impracticable.

We have no doubt that the supporters of the Cornish, and the Scottish projected lines of railway, will lose no time in investigating for themselves a system which, if successful, would enable their dividends to compete with the best now declared. The Blackwall line again, the machinery of which is ever at its task of winding and unwinding eighteen miles of rope, would present a new appearance to its shareholders, if it were enabled to lay aside this cumbrous and costly mode of propulsion, and to convey each carriage from station to station by the muscular power of the two guards who, as it is, constantly accompany them.

We look with much interest to the development of a plan which must either prove a signal failure, or an improvement on the railway system unrivalled since the first flight of the *Rocket* on the Liverpool and Manchester line. The French Ministry have appointed a Commission to investigate the propriety of applying the *Messenger Propelling Engine* to the new lines about to be constructed in France—an example not unworthy of imitation in our own country.

WE need scarcely call attention to the particulars, which appear in another column, of the very handsome and substantial mark of esteem evinced by the principal proprietors in the London and Birmingham Railway Company towards their excellent Chairman, Mr. GLYN. Seldom has testimonial been better merited by public services or private worth. The promptitude with which the matter was taken up, and the quiet, unostentatious manner in which it has been carried out, are hardly less creditable to the donors than the result must be gratifying to the feelings of the recipient. Long may Mr. GLYN live to enjoy the continued confidence and affection of his friends and constituents, and still further to benefit by his talents and zeal one of the most magnificent undertakings the world has ever beheld!

WE understand that the whole amount required for the survey between Lancaster and Glasgow and Edinburgh, of the proposed western line to Scotland, has been raised, and that the survey is now in progress. A demonstration in favour of the project is to take place in Edinburgh on or about the 14th instant.

THE efforts of the Agnewites to obtain proxies for the approaching meeting of the Edinburgh and Glasgow Railway Company, have led some of the English shareholders on the other side to the adoption of a similar course. A circular has, we understand, accordingly been sent to every one of the English and Irish proprietors enclosing the following form:—

"———— One of the proprietors of 'The Edinburgh and Glasgow Railway Company,' hereby appoints Theodore Woolman Rathbone, Esq., of Allerton Priory, near Liverpool (or in his absence, John George Hamilton, Esq., of Glasgow), to be the proxy of the said ———— to vote, or give his assent to, or dissent from, any business, matter, or thing relative to the said undertaking, which shall be proposed at the general meeting of the said Company, or at any adjourned or subsequent general meeting, to be held at Glasgow in February next, in such manner as he the said Theodore Woolman Rathbone, or John George Hamilton (as the case may be), shall think proper. In witness whereof the said ———— hath hereunto set hand, the ———— day of January, One thousand eight hundred and forty-two.

"Signature."

We trust this appeal will be generally responded to. It appears that the Puritans are having recourse to the splitting of votes. We are very much opposed under ordinary circumstances to such a course, but these people must be fought with their own weapons, and we trust the matter will be looked to in time. We would again earnestly recommend that a meeting of the Lancashire shareholders should at once be held in Liverpool or Manchester so as fully and unequivocally to have the feelings of the English proprietors expressed.

We are told that neither Sir ANDEW AGNEW,

Digitized by Google

nor Lord Provost FORBES, nor (with few exception) any of the prime movers in this Sabbatical agitation, are in the smallest degree connected with the railway as proprietors! Was ever impudence equal to this? They must not merely be defeated, but defeated ignominiously.

WE regret to say that another slip took place yesterday on the London and Croydon Railway, again blocking up both lines. We understand that it is of a rather serious character, and will entail considerable expense in the removal.

—o—

A REMARKABLE instance of the extraordinary contradictions which not unfrequently occur in evidence given before a Coroner's jury, will be found in another column, in a notice of an inquest held upon a servant of the North Midland Railway Company. Three of the Company's servants swore that at the time of the occurrence the speed of the train did not exceed 25 miles an hour, whereas one witness unconnected with the Company estimated it at 30, and another without hesitation at 40 miles an hour! Surely the one party or the other must have been greatly mistaken. We admit that the Company's servants are more likely to be able to judge than strangers of the rate of progress; but then the latter have no motive to exaggerate or extenuate, which railway servants usually have. At any rate the extreme difference in this case is somewhat extraordinary.

—o—

MESSIEURS DUFOUR and HARKORT, of Leipsic, whose mission to St. Petersburg on the subject of the railway from thence to Moscow was lately noticed in the *Railway Times*, have received an intimation to return to St. Petersburg with the least possible delay, in order to settle preliminaries for prosecuting the above important project, and they accordingly left Leipsic on the 25th December.

—o—

THE number of passengers on the Sheffield and Manchester Railway on New Year's day alone was 3,500.

—o—

GREAT NORTH OF ENGLAND RAILWAY.—A special general meeting of the Great North of England Railway Company was held at their office in Darlington, on the 28th December, for confirming the forfeiture of the unpaid shares, both scrip and registered, already declared by the Directors. The shares having been read over, the resolution confirming the forfeiture was unanimously carried.

RAILWAY OFFENCES AND OFFENDERS.

LAST week William Davidson, one of the guards on the Liverpool and Manchester Railway, was brought before Mr. Rushton, a magistrate of Manchester, on a charge of neglect of duty. Mr. Clay, the solicitor, stated that he had been instructed by the Directors of that line of railway to prefer a charge against the prisoner, who was one of their guards, for not having kept his proper seat, and applied the break to the carriages when coming down the tunnel into the station in Lime-street, on the morning of Christmas-day, by which neglect great damage had been done to two of the Company's carriages, and the mail guard and one of the passengers had received some slight injuries. The Act of Parliament under which the prisoner was brought before the magistrate, was one for the general regulation of railways, 3 and 4 Victoria, c. 97, by the 13 sec. of which it was enacted, that any engine-driver, guard, &c., upon any railway, who shall wilfully, maliciously, or negligently do, or omit to do, any act, whereby the life or limb of any person passing along the railway may be endangered or impaired, the person so offending may be taken before a justice of the peace for the place where the offence is committed, and may be committed to prison, to hard labour, for any term not exceeding two calendar months, or may be fined any sum not exceeding 10*l.*, and in default of payment committed for the like period. From the evidence produced it appeared that the York mail train, which arriving at five in the morning, and of which the prisoner was the railway guard, came down the tunnel with great velocity, the prisoner not being in his proper situation, and not applying the break to the wheels; the consequence was that a violent concussion took place against two carriages in the station yard, and considerable damage was done to them, as well as injury received by the mail guard and one of the passengers. It fortunately happened that the train was a very small one, there being only two carriages and three passengers, otherwise the consequences might have been of a more serious nature. *Mr. Rushton, in pronouncing judgment, said the case was one of so much importance to the public, that, however he regretted the situation of the prisoner (who had an excellent character), he considered he should not be doing his duty if he did not inflict the severest penalty which the law allowed, as a warning to all persons in similar situations to the prisoner, to be careful in the performance of their several duties. He then ordered the prisoner to be imprisoned and kept to hard labour in the House of Correction at Kirkdale*, FOR THE SPACE OF TWO CALENDAR MONTHS. The punishment, we trust and believe, will have a good effect.

A most diabolical attempt was made on Wednesday night week to cause a further accident on the Great Western line. The mail train was on its way from London, and when within about three miles of Bath the signal was given to the engine-driver of something wrong, and the train was stopped with all possible dispatch. On investigation it appeared that some villain had placed two large stones (one on each rail) with the view of sending the engine off the line, but which did not take place. One of the stones was crushed to pieces and flew over the driver and stoker without doing them any serious injury; the other stone was forced on one side by the sword, or guard, which is placed before the wheels, but both the guards were put out of their place, and much bent and twisted.

On the 16th ult. (says the *Dundee Warder*), Alexander Duncan, was convicted, under Lord Seymour's Act, before Provost Mann, Arbroath, one of her Majesty's Justices of the Peace, of having trespassed upon the Dundee and Arbroath Railway, at or near Broughty Ferry, of refusing to quit the same when requested to do so, and of using violent language to the Company's officers. After a severe admonition from Provost Mann, in which he pointed out the great danger of walking along railways, as well as of the necessity of Railway Companies enforcing their regulations, Duncan was fined in the mitigated penalty of two pounds, failing payment, to be imprisoned for one month. The fine was immediately paid; and we hope it will prove a warning to others, as we understand the Directors are determined to enforce the full penalty against all offenders.

LONDON AND BIRMINGHAM RAILWAY —TESTIMONIAL TO GEORGE CARR GLYN, ESQ.

WE have for some time past been aware that a testimonial to Mr. Glyn, the Chairman of the London and Birmingham Company, was in contemplation, and more recently that it had been completed and presented; but understanding that an official account of the proceedings would be published, we have hitherto refrained from alluding to the subject. That account is now supplied, and is as follows:—

Office, Euston Station, 31st December, 1841.

The Committee acting on behalf of the proprietors of this Company, who subscribed for a testimonial to mark their esteem for their excellent Chairman, Mr. Glyn, have the pleasure to report the satisfactory termination of their duties.

In pursuance of the declared wish of the subscribers, that practical utility should be consulted in any application of the fund, the Committee ordered a table service of silver plate, from Messrs. Rundell, Bridge, and Co., of the full value of the sum subscribed 1,634*l.* 19s., and directed that the following inscription should be engraved on the central piece or candelabrum:—

TO GEORGE CARR GLYN, ESQ.,

This Service of Plate is Presented as a Testimonial of the High estimation in which he is held by the Subscribers

Who as Directors and Proprietors of

THE LONDON AND BIRMINGHAM RAILWAY COMPANY,

Have witnessed and experienced

THE BENEFIT OF THE SIGNAL SERVICES WHICH HE HAS RENDERED

TO THAT GREAT AND SUCCESSFUL UNDERTAKING

In the important Station of

CHAIRMAN OF THE COMPANY,

1841.

The order was executed with the accustomed good taste of Messrs. Rundell and Co., and the service was presented to the Chairman, with the following letter:—

Office, Euston Station, 9th Dec., 1841.

My Dear Sir,—I have, on the part of those of the Directors and proprietors of this Company who have subscribed for the accompanying service of plate, to request your acceptance of it, in testimony of the high sense they entertain of the admirable qualities by which, while rendering important service to the Company in the situation of its Chairman, you have secured their personal esteem and confidence and attachment. In the expression of these sentiments I beg to be allowed to participate, and to assure you that I am ever,

Your faithful and obliged,

R. CREED, Hon. Sec.

G. Carr Glyn, Esq.

Of this letter and offering, the following acknowledgment was received from Mr. Glyn:—

London, 11th December, 1841.

My Dear Sir,—The expressed approbation of so numerous and influential a portion of the proprietors would of itself have been sufficient to have excited in my mind feelings of gratitude and pleasure, but when accompanied by such tokens of approval, I feel utterly at a loss how to return an adequate acknowledgment to those who have put so favourable a construction upon the discharge of my duties; this generous testimonial will remain in my family a splendid evidence of the feelings of friends towards one who can only claim for himself honesty of intention.

Digitized by Google

My connexion with the London and Birmingham Railway has been, from the commencement, of the most gratifying character; and though since 1837, when I was selected to fill the honourable position which has led to this mark of their approbation, there have been several occasions when the responsibility of my office has pressed heavily upon me, yet the kind assistance of my colleagues and your experience, joined with that mutual co-operation among the Directors, which it has been my constant endeavour to promote, enable me to revert with pleasure to the events which have occurred in the interval.

It would have been impossible to have carried on such a work without some difficulties, especially when we recollect that the capital for this great undertaking was principally supplied by the commercial and manufacturing classes, but we are now arrived at a period of our labours, when we can look back with satisfaction to those measures which were adopted to render the pressure upon the proprietors as light as possible, and may regard with confirmed assurances the successful results which await those, whose unshaken confidence has so mainly contributed to the fulfilment of our duties. It has been our object to combine the interest of our proprietors and the welfare of our officers and servants, with the comfort and safety of the public, not forgetting that while the enterprising subscribers to this national work have a right to expect an ample return upon their investments, the legislature has confided to them a trust to be used for the general benefit.

Satisfied with the recollection of having assisted in carrying out some of those great public works which have particularly characterised recent years, and by which the commercial and general interests of the country have been promoted, I have left to others the labours and advantages of political and public life; to the London and Birmingham Railway Company in particular, my earnest attention has been given for some time past, and though I wanted no additional inducement to stimulate me on its behalf, this kindness, and the manner in which it has been demonstrated towards me will, as long as memory last, be deeply engraven on my heart.

Accept my best thanks for the very kind expressions of your letter, and with the request that you will do me the favour to communicate my most grateful thanks to those numerous friends who have thus signally honoured me,

Believe me, my dear Sir,
Yours very faithfully,
GEORGE CARR GLYN.

Richard Creed, Esq., &c. &c.

It now only remains for the Committee to lay their accounts before the subscribers, with a cordial assurance that the transaction thus happily closed, has been to the Committee, individually and collectively, a "labour of love."

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Fully concurring in the justice of your forcible strictures, in your last number on the conduct of the Great Western Railway Company in regard to the recent calamity at Sunning, I beg to offer a few observations on the same subject.

By the subjoined calculation it appears that the fares for the third class passengers by this railway are sufficiently remunerative to afford their being conveyed by trains entirely separate from the goods trains. How then can the Company justify uniting the two at the great risk to human life which attends the practice according to the evidence of their own witnesses?

It is a great reproach to this Company that of the numerous suggestions which have been continually offered for diminishing the hazards of this mode of travelling they appear to have adopted few if any. These suggestions consist of buffer spring carriages, improved plans of lights and signals, improved breaks, additional guards or conductors, the electric telegraph, &c. &c. The recent accident suggests the necessity of no longer leaving such matters to the decision of Directors, but of some legislative enactments for giving to Government officers the power of enforcing them, which however objected to on the score of expense, would be probably in a great degree, if not wholly or more than, compensated by the augmentation of traffic consequent on the greater confidence of the public and real safety which would result from their adoption.

The calculation referred to is as follows. It is a known fact that on the London and Birmingham Railway the cost of each train at their average speed is a fraction under 1s. 6d. per mile.

118¼ miles at 1s. 6d.	£8	17 9
The third class fares being.....	12s. 6d.	
Including duty	1s. 3d.	
	11s. 3d.	
Would yield on 16 passengers	9	0 0

There cannot be a doubt of there being a much greater average than 16 passengers by each train, particularly with increased safety.

Yours respectfully,
F.

Bath, January 5, 1842.

SUNDAY TRAVELLING ON THE EDINBURGH AND GLASGOW RAILWAY.

To the Editor of the Railway Times.

SIR,—Sir Andrew Agnew, the great agitator, being unsuccessful in the south, is now troubling the waters in the north. I deny that there is any such feeling as the *Reverend* Baronet describes, in favour of shutting up the Edinburgh and Glasgow Railway on Sunday; the general feeling is, that the communication betwixt Edinburgh and Glasgow, on Sunday, *cannot, and ought not to be, stopped.* There are mail coaches twice a day, and why not mail trains? The morning mail coach leaves the respective cities of Edinburgh and Glasgow at 12 o'clock noon, of each and every Sunday (in the *middle of Divine service*), and at nine o'clock in the evening; why does Sir Andrew, therefore, keep silence on this most "illegal" affair; for if the railway mail train is to be tried on its legality—as is obscurely hinted at in the paper which I enclose—why not assail the mail now running on the same ground? The agitation on foot, in fact, emanates from a mere knot of over-zealous but well-meaning persons; and the feeling, substantially, in the minds of the community, is, that *there ought to be* a morning and evening MAIL train, well regulated, and at such hours as to avoid those of Divine service. I repeat, that I am certain of such a course meeting the feelings of Scotland.

But, Sir, the worthy Baronet and his friends are at other and more dirty work; *they are splitting votes for the nonce.* They are dividing large lots of shares into small ones, so as to rule the railway as they choose at a meeting of the proprietors. So much for an Edinburgh lawyer's trick, which I do hope and trust the English shareholders will manfully put down. No concern is safe under such tyranny and oppression as this might bring upon it. It is, along with the threats issued a week ago by the same clique, a downright conspiracy against the undertaking. I wonder if this be the "legal" course Sir Andrew points at?

If the Directors do their duty to the shareholders, they should instantly appeal to them against the tyranny and chicanery of these agitators; they should open the railway as soon as possible (perhaps they are right in not pressing the opening during this muggy weather); they should establish a well-regulated SUNDAY MAIL TRAIN—one morning, another evening—and do, with a good grace to the proprietors, what they all along intended to do, and wholly irrespective of this unheard-of oppression of a few individuals towards the property of others. Such a proceeding would, I am convinced, meet the approbation of all enlightened men, and the hearty applause of the shareholders in general. I know several who have been so disgusted with these Agnewite proceedings, as to become ardent opposers of them, where before they were passive.

But the Agnewites are themselves in a "legal" scrape. The circular sent round to all the houses in Edinburgh a week ago, is thought to be ACTIONABLE, and damages to a large amount might be obtained for a conspiracy; and most certainly, if they do not take care what they are after, they will be brought into the position so richly merited by their virulence. If the Railway Company were to take up this view and prosecute it to conviction, the agitators would to a man be ruined. The Scottish Jury Court is no joke.

I am, Sir, yours, &c.,
A SHAREHOLDER.

January 1, 1842.

THE APPROACHING HALF-YEARLY MEETINGS.

To the Editor of the Railway Times.

SIR,—I am not one of those who advocate the publication of railway accounts *some days* prior to the general meeting, though I greatly approve of their being delivered to those proprietors *who attend the meetings*, as early in the day as possible. Were the former plan adopted, the consequence I fear would be that in many cases, where the proprietors are much dispersed, a sufficient number would scarcely be assembled to constitute, according to the Acts (which generally require 40 to be present) a legal meeting, and those would chiefly consist of such as came to *serve some particular interest*, whilst nearly all such as were satisfied with the accounts and general management would stay away, and thus expose the concern to sudden and injurious change.

A full attendance of proprietors is at all times highly desirable, and in my opinion of greater importance than the convenience of the few, and I think this object and the convenience of all would be greatly promoted if each of the Companies were to fix a biennial day for their general meetings, in place of, as at present, giving only a few days notice of them through newspapers, which many proprietors never see. Moreover, if the Lancashire and Yorkshire Companies (whose stocks are now very extensively held in London) were to hold their meetings in the same week, it would add to the convenience of the arrangement—commencing with the Liverpool and Manchester on, say, the first Monday in February, and followed by the Grand Junction Company, North Union, Leeds and Manchester, North Midland, &c., in rotation,—a similar arrangement being also made by the Companies who hold their meetings in London.

I (as a proprietor in several of those Companies) have been prevented attending their meetings, which I have been most anxious to do, from the want of such an arrangement, or of due notice, and I doubt not many others have suffered the same inconvenience.

I am, yours, &c.,
X.

GREAT WESTERN, NORTH MIDLAND, AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—I watch railway interests closely. I am too deeply interested not to do so, and I am bound in honest candour to admit that I have seen nothing in your paper for the last twelve months for which the public ought to feel themselves so much indebted as the letter of "Vincit Veritas," in your number of the 11th of last month. What is there prédicted has too truly since come to pass, and I fear, if the advice there recommended be not adopted, many more victims will be sacrificed.

A fundamental element in the prosperity of railways I should conceive would be a due regard to their safety and efficiency in every material particular, so as to render the possibility of an accident from a dereliction of duty a matter, if not almost of impossibility, at least of very remote probability; and who will have the hardihood to contend that the late fatal accident on the Great Western Railway, where eight persons were hurried into eternity in an instant, is not one of those which ought to bring down upon the heads of the Directors a degree of punishment more severe than I fear any of our laws will admit of? They have been forewarned of this calamity in your number of the 11th December, already referred to. Have they taken the warning? It would seem not. The same excellent letter drew attention to the dangerous condition of other lines from similar causes, and also to the alarming state of a very large bridge on the Bristol and Exeter line, entering the station at the former place. Have these been looked to? I hope and trust a philanthropic desire for the public safety will induce the writer of the letter I allude to once more to look to those lines he has so ably and energetically called into notice, and favour us with his opinion more unreservedly, now that his predictions have unhappily for the public weal come to be verified. I hope he will fearlessly expose wherever he sees danger exist; and where the case is so palpable as in that of the Great Western, is it not in the power of this vaunted Government Commissioner to stop the traffic until safety is insured? What can more seriously affect the interests of railways than occurrences of this kind, which I imagine would sadly discourage the pedantic effusions of your arithmetical and rule-of-three correspondents?

Many are the causes which operate either directly or indirectly to the ill working of railways, and consequent liability to accidents, which necessarily affect in a greater or less degree their legitimate revenues; and amongst these may be named discontent amongst servants, consequent upon the parsimonious views entertained by Directors as regards their wages and pay, in which all great lines can afford to be liberal, without being prodigal. I exceedingly regret to perceive that an experiment of this kind is being tried on that hitherto considered excellent line, the North Midland; and what will be the saving? Some 2,000*l.* a year, in a revenue approaching to 250,000*l.* at least! Do these Directors do their duty to their constituents by so acting? I say, no. I observed this point ably commented upon in your paper some time since. The North Midland Railway is not in such a condition as to call for this reduction, and the proprietary and public should not tolerate so despicable an experiment, let the motive be what it may. The minds who planned this scheme, have I believe in this particular instance driven every other of a more comprehensive and commanding turn from their Board, in the room of whom they have substituted nonentities of their own. I deplore the experiment; it breeds discontent, which will bring in its train all its concomitant circumstances.

Another no less certain cause of depreciating the revenues of railways, is practised upon a neighbouring line to the above, viz., the Manchester and Leeds, where the experiment so jocularly referred to by Mr. Crawshay, Chairman of the Northern and Eastern line, in your paper of the 18th December, is seriously put in practice, and in a truly disgusting and highly reprehensible form. Sheep, and sometimes pigs, are made the substitutes for sweeps, and for the avowed purpose of driving the better sort of passenger into a better sort of carriage; but instead of having this effect, I have myself frequently observed many passengers enter the tubs, as they are called, for the purpose of thwarting the Company, who would otherwise have been second-class passengers. These tubs are also placed next to the tender to render them still more offensive, and what is worse, *more dangerous*. On this account alone, the voice of humanity should enforce a more commendable observance of its claims. The appointments upon this line generally are of a piece with the above—in every department the most hoggish and slovenly. But what could be expected of the Management that would tolerate such rules and regulations? Call such acts as these by what name you may, they are essential causes affecting the revenues of railways, as well as the comforts and just demands of the public, and ought not to be permitted under any pretext whatever.

You have it much in your power to perform a useful part in rooting out and exposing such evils as these, so baneful to the true interests of railways, and highly detrimental to the comforts of the public.

I am, Sir, yours obediently,

JACOBUS.

London, January 5, 1842.

THE LATE ACCIDENT ON THE CROYDON RAILWAY—THE ELECTRIC TELEGRAPH.

To the Editor of the Railway Times.

SIR,—As one of the sufferers by the collision at the Sydenham station on the Croydon Railway, on the evening of the 17th ult., I have a natural dread of again trusting myself upon a railway, especially during fogs or after dark. I am not alone in this feeling; others besides myself, frequenters of this line, have taken to the coaches since the accident—much to our personal inconvenience.

Without having any specific complaint against the general management of this Company, several circumstances unite in rendering this line peculiarly subject to collisions. Not to dwell upon the waggon trains, which have so long been at work in removing the fallen soil, as they are only a temporary evil—though I believe they will be engaged on that duty for many a winter—the connection of the Croydon line with the Brighton and South-Eastern, will always expose the often-stopping Croydon trains to the danger of being overtaken by the faster long trains, especially in the deep cuttings, whilst night and London smoke and fogs materially increase the risk.

Still trembling from my recent narrow escape, with these permanent sources of danger before my eyes, I feel myself excluded, at least for a time, from venturing on the rail. I often beguile the weary time, whilst plodding in a one-pair coach to and from town, in forming various schemes for avoiding collisions. Your last number, however, threw all my plans into the shade. The description you gave of the method by which the electric telegraph may be made to effect this important object deeply interested me, and I referred to the work itself for further information. Without pretending to any knowledge of the scientific details, I at once comprehended the system, from the extremely clear style in which it was explained, whilst my mind was equally convinced by the conclusiveness of the arguments; but I was disappointed in not finding any estimate of the cost of the new plan. Supposing it however to amount to the cost per mile of the experiment on the Great Western Railway, as given in Mr. Saunders's evidence in the appendix, viz., 250*l.*, the cost of laying down the telegraph would be about 1-10th of the yearly receipts of the line. Suppose this to be thrown over two years, and the fares to be increased only 1-20th part, or 5 per cent., the expense of establishing a telegraph would be paid by this slight additional toll on the passengers in two years—or, if you please, double the period, and diminish the rate in proportion.

I do not pretend to any great accuracy in this calculation, but surely the additional safety would be cheaply purchased by passengers at the increased rate of a halfpenny, or a farthing in every shilling.

If there is anything tangible in this hint, pray, Mr. Editor, lend us your assistance in recommending the adoption of this or some other feasible plan for getting rid of these collisions, which belong to that class of accidents that need not necessarily be incurred. It may be impossible to prevent an axle breaking, an engine occasionally getting off the line, or the slipping of earth, but no one can read Mr. Cooke's work without becoming convinced that a cheap and certain cure for collisions has already been devised.

I remain your obedient servant,

CROYDONENSIS.

Croydon, January 5, 1842.

THE LATE ACCIDENT ON THE CROYDON RAILWAY.

To the Editor of the Railway Times.

SIR,—After your report of what took place at the second examination of witnesses on the charge against the driver of the engine which ran into the train at Sydenham, the letter of "A Daily Traveller on the Croydon Railway," in your paper of last Saturday, certainly "*appears remarkable.*"

If your correspondent had availed himself of the information contained in your report, he would have discovered that so far from the driver of the engine having been drunk, the contrary was proved to the satisfaction of the magistrate, and "A Daily Traveller on the Croydon Railway," must have made *very* bad use of his time, if he have not learned that the same fact has since been clearly shown to the Brighton Directors who have re-instated the driver, and to the Croydon Directors who have removed the signal-man from the Sydenham station.

What if the Superintendent of the Brighton line *were satisfied at the time* of the accident that the driver was drunk? Was not it possible for the Superintendent to be mistaken? The result has proved that he *was*, and when I refer to your report of the evidence of the stoker before Mr. Grove I cannot help thinking that *your correspondent is also mistaken* when he asserts that the stoker admitted to a Croydon Director that Goldsmith (the driver) was drunk.

Your correspondent has evidently written in ignorance of his subject, and he will be pleased to learn that so far from it appearing that "no one was to blame," it would seem that the policeman at the Sydenham station was in some degree culpable—at any rate the circumstance of his removal immediately after the investigation, affords reasonable ground for assuming as much.

But I agree with your correspondent that the matter should *not* rest here. I have taken some pains to get at the facts of the case, but have not yet been completely successful.

If I find (as I suspect I shall) that the fault was not altogether with the signal-man, I will send you a full detail of the facts, and probably at the same time suggest means for preventing the occurrence of similar accidents.

Meanwhile I will remain,

Your most obedient servant,

AN OCCASIONAL TRAVELLER ON THE CROYDON RAILWAY.

Sydenham, January 5, 1842.

RAILWAY FROM DARLINGTON TO NEWCASTLE.

To the Editor of the Railway Times.

SIR,—Seeing in your paper of Saturday last, a long letter from Mr. Harris, for the purpose of showing that it was the interest of the promoters of the line from Darlington to Newcastle to adopt portions of the Stockton and Darlington and Clarence Railways, and being one of those who think the extension of a railway to Newcastle from Darlington will materially benefit the public, as well as all the southern lines of railway; I have been induced to make some inquiries on the subject, and if you think them of sufficient importance to deserve

Digitized by Google

a place in your valuable journal, I give you the result.

Mr. Harris says, 5½ miles of the Stockton and Darlington, and about 3¼ miles of the Clarence Railways, might be adopted; the former not being an *average* divergence of one mile, and the latter less, and he gives the gradients by which he could get *down* from the Darlington Railway into the original line. I am not much of an adept in measuring distances upon maps, but I presume, like other triangles, starting from a point at one end, and averaging a mile apart is something like going two miles round at some point or other; and I fancy it is somewhat alike on the Clarence, but not to so great an extent. But this is not all. I understand that the point where these divergences join the main line—the *north* extremity of the first, and the *south* extremity of the other—at or near Thrislington Gap, or at A, is the *natural summit level* between the Rivers Tees and Wear, and that the *natural line of railway* from this point *south* to Darlington and Yorkshire is a straight descending one, and *north* to the Wear and Tyne also a straight descending line.

Now what says Mr. Harris:—You must not take the *straight descending line* from A to Darlington, but you must diverge two miles to *go up a hill, or ascending gradient of more than* 20 *feet per mile* in going *south* to get upon the Stockton and Darlington Railway; and that this may appear strictly impartial on my part, I propose that you must not take the *straight descending line* from A into the Wear, but you must diverge again to *go up another hill*, or *ascending gradient* in going *north* to get upon the Clarence Railway, my rival.

Now, Sir, what does this all really mean? Why, I will tell you. Darlington, Thirsk, Northallerton, York, &c. &c., are supplied with coals which come *down*—mark *down* the Stockton and Darlington Railway. A. is the centre of a valuable coal field, the coals from which *might go down* the straight descending line to Darlington and Yorkshire; but says Mr. Harris, if I can induce these poor simple creatures to go round about, or diverge two miles, and place a Highgate Hill before them, I then block out A., and secure the traffic in coals to my employers; and no doubt he would, for it is no *light* matter, with such a *heavy* article as coal, to place an *ascending gradient* of upwards of 20 feet per mile against a *descending gradient* of probably the same amount.

But as this only scotches the snake, and does not kill him. I propose, lest the coals from A. might find their way upon the new line and go *down* the *straight descending line* to the Wear, I will try to induce the poor simple creatures again to go round, or diverge to *go up another hill* in going north from A., that the coals may go *down* the Clarence Railway to the Tees; or to place the *rising* gradient in their line against the *descending* gradient on the Clarence Railway.

Now, Mr. Editor, we have sometimes heard of calculations being made when a hill interposed, how far it would be advisable to diverge to avoid it; but I am sure you never heard of Engineers—though they are rather strange beings—advising a divergence from a straight level line to go up or over a hill. This is indeed a new principle—the *Harris principle*—of laying down railways.

I am, Mr. Editor, your most obedient servant,

B.

York, 5th January, 1842.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

To the Editor of the Railway Times.

Sir,—Your correspondent of last Saturday is indeed a beautiful exemplification of the accuracy of Doctor Johnson's definition of a "Spectator," whom he describes as "a looker-on;" for had "Spectator" been "a thinker-on" the correspondence your have published on this subject, he would immediately have perceived the hollowness of the offer of the Greenwich Company to bring "these" (the New Cross low-fared passengers) "on to London, on being charged the same toll per mile for the use of the Croydon Railway that they are receiving for their own," unless accompanied by a limit in the charge which the Greenwich Company might make to the public, and without which the object of the Croydon Company, namely, to establish a *low charge* for fares between London and Croydon, would obviously have been defeated; and because the Croydon Company refused an offer, which would have left them in precisely the same difficulty, that is, either of keeping up the rate of fare, or of giving the Greenwich Company more than that which they believed to be the fair proportion of the money received for the entire journey, from London to Croydon, "Spectator" ventures to assert that the Croydon Company will neither convey the passengers themselves, nor allow others to do it for any reasonable toll, although he knows that the *Croydon Company had distinctly offered to convey these passengers themselves at a very low fare, or to allow the Greenwich Company to do it at a toll far less than that which they proposed to pay.*

But "Spectator" has not even *looked* at the correspondence with any attention, for I deny that the principle of the Croydon Company as therein laid down, is, "that all the parts of a continuous line of railway are of equal value," although they insist "that the toll charged for the use of any one mile should be exactly the same as for any other." This is not, as "Spectator" has hastily concluded, the same proposition "in other words," any more than it would be a *sequitur*, that because two tradesmen dealt in the same articles and sold at the same prices, therefore their goodwills were of equal value; one might have a much more extensive, and therefore a much more valuable trade, and so also one part of a continuous line of railway may have much more traffic over it than another. For instance, let A, B, C, represent a continuous line of railway, and *d, e, f, g, h*, the intermediate stations, A being the large town to and from which the traffic principally passes:—

A B *d e f g h* C

and then let it be assumed that the portion between A and B has cost considerably more than any other part of equal length, and that the toll charged throughout, mile per mile, is "exactly the same." Now, then, let a train start from A with 70 passengers, 10 for each intermediate station, and 20 to proceed the whole distance to C, it is clear that the portion between A and *d* will receive a toll upon 70 passengers, whilst the part between *h* and C will only receive a toll upon 20 or five-sevenths less, and that therefore although the toll charged for the use of both portions would be exactly the same, the value of the two parts would be essentially different.

The "objections" of the Croydon Company to the "unfair proportion" which the Greenwich Company would get so far from being "an admission that the portion nearest London will bear a higher fare (and of course a higher toll) than the rest," is a direct assertion to the contrary, whilst on the other hand the Greenwich Company has indeed made a "distinct admission" that a line of railway constructed at an enormous cost, and in the heart of a metropolitan district will *not bear so high a fare* (*and of course so high a toll*) as a less expensive "country" line, for it has lately seen fit to lower its fares to an average of 2d. per mile, whilst it is notorious that on cheaper "country" lines a higher rate is still maintained.

It may be "an undoubted fact, that if the receipts on any line of railway are apportioned mile for mile, there are many portions on which the receipts will never pay the interest of the money expended;" but then it is equally true, that there are many portions (probably the most costly) on which the traffic is, from their peculiar position (as in the instance I have above suggested), more than commensurate for the extra outlay, in which case, of course, the "fair" or "equitable" payment should be *less* "on such portions;" but endless will be the trouble, endless the discussion, endless the illwill which will exist between Railway Companies, unless some such rule as that suggested by the Croydon Company be adopted, which will be found simple in its application, and equitable in its general bearings.

I am, Sir, your constant reader,

MENTOR.

HORSE RAILWAYS.

To the Editor of the Railway Times.

Sir,—Can you inform me what is the comparative expense, between working a railway as they are generally done at present, by locomotive engines, and what it would cost, to do the same work by horse power, though of course in a more inefficient manner.

It appears to me, that on those railways which have proved failures, there might still be so much saved in the managing and working upon this principle, as to be well worthy of the consideration of those more acquainted with the subject than I can pretend to be.

In Scotland, for instance, I am told that on the Edinburgh and Dalkeith Railway, nothing beyond horse power has ever been used, and on the Dundee and Arbroath, where the intercourse has not proved to be so great as expected, it may be found necessary to have recourse to the same mode of conveying goods and passengers.

I am, Sir, yours, &c.

A RAILROAD SHAREHOLDER.

Leamington, Dec. 30, 1841.

WEARDALE EXTENSION RAILWAY.

An important and very numerously-attended meeting was held at Wolsingham, on Monday, the 20th instant, of the owners and occupiers of lands and mines in Weardale, for the purpose of promoting an extension of the existing railways into that rich mineral district. G. H. Wilkinson, Esq., of Harperley Park, was in the chair. Messrs. H. Pease and J. C. Hopkins attended on behalf of the Stockton and Darlington Railway Company. Messrs. Story and Lax, civil engineers, were present. It was resolved:—"1. That it is expedient to construct a line of railway (to be called the Weardale Extension Railway) from the terminus of the Bishop Auckland and Weardale Railway, at Crook, to the great limestone formation, at or near Frosterley. And that the line now submitted to this meeting—passing over Woodifield Hill, by means of an inclined plane to be worked by a fixed engine, and following the south bank of the river Wear to Broadwood Kilns, with a branch to Bishopley Crags, is, in the judgment of this meeting, the most eligible course for such railway. 2. That this scheme would involve the formation of about nine miles of way; and that it appears from the Report (now read) of Mr. Story, the engineer, that the cost of a single line of railway over this course, with siding at every quarter of a mile, including the fixed engine and the Wear bridge formed for a double way, but exclusive of the land required for the line, would not exceed 60,000*l*. 3. That it is expedient, under existing circumstances, to carry out this project by means of a Company, to be incorporated by Act of Parliament, without compulsory powers, but authorized to treat with the landowners, either for the absolute purchase of the requisite land, or for wayleaves for a term of 99 years. The land to be taken being sufficient for a double line, if hereafter needed. 4. That it is desirable to effect a junction with the West Durham Railway, also, (if that Company shall think fit,) by means of a branch or link, to be made at their expense, from Dowfold Hill to the said terminus of the Bishop Auckland and Weardale Railway, at Crook; and that every facility should be afforded by the promoters of this scheme to that Company, to effect such junction. 5. That the capital necessary to be raised in order to carry this work into effect, would be 60,000*l*., which it is proposed to raise in 1,200 shares of 50*l*. each." From the character of the proceedings there seems every prospect of the design being carried out.—*Northern Times*, Dec. 31.

ALL-TRIUMPHANT STEAM.—The *Great Western* fired her signal of arrival in Kingroad (ten miles from Bristol, at the mouth of the river, at half-past ten on Monday night, in thirteen days only from New York. The reporter of the *Times* went on board, and left her again with the despatches, in an open boat, and in a gale of wind, before eleven. He reached London by the mail train at half-past five. The intelligence was printed, and despatched again to Bristol by one of the regular trains, and a copy of the *Times* was in the cabin of the *Great Western*, in the roadstead, by one o'clock, P.M. These are the wonders of steam navigation, steam travelling, and steam printing.—*Mechanics' Magazine.*

WE the undersigned being five or more Proprietors holding collectively more than Ten Shares in the Thames and Medway Canal, do hereby give notice, that a Special Assembly of the Company of Proprietors will be holden at the George and Vulture Tavern, St. Michael's-alley, Cornhill, in the City of London, on Tuesday, the 18th day of January next ensuing, at Twelve o'Clock in the forenoon, for the purpose of considering the expediency of converting the said Canal into a Railway, and for carrying the determination of such Special Assembly into effect.

JOHN MOXON.	S. C. HOPE.
JAMES SUTTON.	RT. SUTTON, JUN.
GEORGE PALMER.	JOHN PITTMAN.
SAMUEL MILLS.	JAMES NEALE.

The Chair will be taken at one o'Clock precisely.

London, 22nd day of December, 1841.

TO RAILWAY CONTRACTORS, &c. — WANTED to purchase from 150 to 200 Tons of Iron Rails, suitable for a Contractor. Any person having either of the above quantities to dispose of, naming the weight, shape, and price, may hear of a purchaser, by addressing a note to B, care of Messrs. Holt and White, Drysalters, Manchester.

VALUABLE COAL MINES AND IRONSTONE, AT MAREHAY, NEAR RIPLEY, IN DERBYSHIRE.—To be Sold by Auction, by Messrs. BREAREY & EYRE, at the Royal Hotel, in Derby, on Thursday the 27th day of January instant, at Four o'clock in the afternoon, the Coal, Ironstone, and other Minerals under 130 Acres of Land, at Marehay, near Ripley, and the fixed and tonnage rents payable by the lessee. The mines consist of the most valuable seams of Coal in the neighbourhood, being the Main Soft Coal, the Bottom Hard or Denby Coal, the Ell Coal and the Furnace Coal, as also valuable mines of Ironstone and Pot Clay. The three first-mentioned Beds of Coal are leased for a long term at a fixed annual rent of £500, and a tonnage rent upon the quantity gotten beyond what the fixed annual rent will cover. The superior quality of the Coal has been proved by six years working, and the position of this Colliery (the other hard Coal in the neighbourhood being nearly exhausted) ensures the command of the Market, and an extensive sale at good prices.

The Colliery is 7 miles from Derby, and has a Wharf adjoining the Derby and Alfreton turnpike road, near Ripley, and a Railway to the Derby canal.

For further particulars, applications may be made to Mr. Barber, Solicitor, Derby; or to Mr. Woodhouse, Civil Engineer, Overseal, Ashby-de la-Zouch.

Derby, January 1st, 1842.

TO CARRIERS, COAL PROPRIETORS, AND OTHERS.—To be Sold by Private Contract, a number of very superior FLY BOATS with Iron Knees, in thorough repair, complete with Cloths, Planks, &c., the whole built by Messrs. Kenworthy & Co., of the best materials, expressly for their own use in the London and Manchester Carrying Trade.

Application to be made to Messrs. Kenworthy & Co., Castle Fields, Manchester, where the Boats may be viewed.

PATENT ROLLING AND COMPRESSING IRON COMPANY, UPPER ORDNANCE WHARF, ROTHERHITHE. — MR. JOSEPH CARTWRIGHT BRETTELL having succeeded Mr. JOHN ATLEE in the Secretaryship of this Company, all letters and orders for bolts, rivets, Railway pins, &c. &c., are in future to be addressed to the said Mr. Brettell at the above Works, or at Mr. W. A. Urquhart's Office, No. 27, Mark-lane.

December 23, 1841.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LOCOMOTIVE ENGINE.—TUBES WITHOUT SEAM.—GREEN'S PATENT.—These Tubes possessing great advantages over the ordinary brass tubes used in locomotive and other boilers, may now be obtained in any quantity and of any dimensions.

Testimonials from eminent Engineers and samples may be seen by application to W. C. Alston, Birmingham, or Braithwaite, Milner, and Co., New Road, London.

LONDON AND BRIGHTON RAILWAY COMPANY.—NOTICE is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company, will be held, pursuant to the Act of Incorporation, on Thursday, January 20, 1842, at the London Tavern, Bishopsgate-street, in the City of London, at One o'Clock precisely, when the five following members of the present Direction will go out of office, and, being duly qualified, will offer themselves for re-election, viz.—Francis Parker, John Gould, Michael Gibson, Newman Smith, and John Entwisle, Esqrs. And at which Meeting certain Shares upon which the Eighth and Ninth Calls have not been paid, and which have been in consequence thereof declared forfeited under Minutes of the Board of Directors of 19th November, 1840, and 6th May, 1841, will be submitted for confirmation of such forfeiture.

The Transfer Books of this Company will be closed on the 6th of January, and remain shut until after the Meeting.

The above Meeting is also made Special, for the purpose of taking into consideration the financial state of the Company, and the best mode of raising the requisite funds for the purposes of the Railway, and the Station at London Bridge.

By Order,
JOHN HARMAN, Chairman.

10, Angel-court, Throgmorton-street,
7th January, 1842.

ADVERTISEMENT RESPECTING TENDERS FOR RAILS WANTED FOR A PART OF THE BAVARIAN RAILWAYS.—With reference to the Advertisement dated 27th October last, respecting tenders for rails, as well as to the printed conditions distributed, we make known in addition,

1. In consequence of a decision of the Ministerium of the Interior, of the 25th instant, the tenders with regard to the examination and approval of the rails, may be given in with the alternative conditions,

a, in case that the examination takes place at Bamberg, as per § 12 of the printed conditions,

b, in case the examination takes place on a different spot, to be named by the person making the tender.

However, as the examination in this latter case, is merely to ascertain the quality of the rails, in accordance with the conditions of the contract in both alternatives, the former condition remains in force, according to which the delivery at Bamberg, or Rotterdam, or Cologne, has to be fulfilled at the expence and risk of the contractor, accordingly as in conformity with § 9 and 12 of the conditions, he selected one of these places for the delivery of the rails, and should one of the two latter towns be fixed upon, the § 13 of the conditions remains applicable.

2. To § 18 of the conditions the term for giving in the franked submission is prolonged to the 31st March, 1842.

3. To § 8 of the same, the periods for delivery are altered, in so far that 3.5ths of the quantity contracted for must have arrived at Bamberg by the end of November, 1842, and the remaining 2.5ths by the end of May, 1843.

4. To § 7 of the conditions, it is moreover to be observed that the Bavarian Ministerium of the Interior reserves to itself the decision respecting the acceptance of the several tenders, either for the whole or in part only.

Nurnberg, the 28th December, 1841.

Royal Bavarian Commission for the Construction of Railways.

DENIS, PAULI, DURIG.

SMOKE NUISANCE.—Engineers, Architects, Chemists, Patentees of Inventions for Consuming or Preventing Smoke, and other persons wishing to exhibit Models, Plans, &c. at the Meeting to be held at the Music Hall, Albion Street, Leeds, on Wednesday, the 12th day of January next, at Twelve o'clock, at noon, for the purpose of showing that Smoke can be prevented with a saving of Fuel, are requested to have them at the Music Hall not later than Ten o'clock in the morning, on Monday, the 10th January, in order that they may be inspected on that and the following day, prior to the Meeting on the 12th, which is for explanation and discussion.

Tickets for Admission to see the Models and Plans, and to attend the Meeting, may be had GRATIS on application at the Music Hall, on the 10th and 11th of January, between the hours of Ten and Twelve in the mornings.

It is very desirable that all Patentees should attend in person, but if, from distance or other cause, they cannot come, their communications will be read to the meeting.

EDWIN EDDISON,

58, Albion Street, Leeds, 16th December, 1841.

TO SHIPBUILDERS AND ENGINEERS.—Mr. FOERT'S Patent Syphon Screw and Paddle Wheels, with double indented Floats (to be used in a vertical or horizontal position), are particularly adapted for canal, shallow river Boats, and large Steam Vessels which are used for long sea trips.

Apply to the Inventor, A. W. Beyre, Architect, 3, Upper Eaton Street, Pimlico, by pre-paid letters; all necessary drawings and models may be seen there.

OFFICE OF THE GOVERNOR AND COMPANY OF COPPER MINERS IN ENGLAND.—The Court of Assistants of the Governor and Company of Copper Miners in England, hereby give Notice, That the Half-year's Interest due on the 15th instant, on the Debentures of the Company, will be paid at this Office.

The Coupons, with an accompanying list, must be left for examination one clear day.

Old Broad Street, London, 3rd January, 1842.

PARIS AND ROUEN RAILWAY COMPANY.—By the Seventh Article of the Statutes of this Company, the seventh payment of one-tenth of the capital becomes due and payable on the 12th of January, 1842.

The Shareholders are therefore requested to pay the said call of £2 per share, on or before that day, to either of the undermentioned bankers:—

London—Messrs. Stone, Martins and Stones.
Liverpool—Messrs. Moss and Co.
Paris—Messrs. Jacques, Laffitte and Co.
Paris—Messrs. C. Laffitte, Blount and Co.

By order of the Board of Directors,
ADOLPHE THIBAUDEAU, Secretary.

N.B.—Interest at the rate of 5 per cent. per annum will be charged on all payments not made on or before the 12th instant.

Paris, 1st January, 1842.

UNITED KINGDOM LIFE ASSURANCE COMPANY.—8, WATERLOO PLACE, PALL MALL, LONDON.—This Joint Stock Company, established by Act of Parliment, without limited responsibility, affords the most perfect security in an ample paid-up Capital, and in the great success which has attended it, since its commencement in 1834, and the large accumulation of premiums which has taken place.

On the 1st of July, 1841, the Company, at their General Meeting, declared an addition of one half to the sums paid by the Stockholders, and appropriated to those holding Assurances at the participating rate, £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1,000, in force for the previous five years, has been £100, making it in all £1,100. The premiums are nevertheless very moderate, and only one half of them, when the insurance is for life, need be paid for the first five years after the date of the policy.

Insurances may be effected on lives however far advanced; and the credit for five years is found particularly convenient on such insurances, and for the the security of temporary loans.

Annuities are granted on very liberal terms.

The facilities afforded by this Company to the Public in these and other respects are so great, that it is obviously a moral duty in every parent, not possessed of a fortune, but in the enjoyment of an income however moderate, to insure his life for a sum which may yield a provision to his family.

RATES OF PREMIUMS.

Age.	Without Profits.	With Profits.
25	£1 18s. 5d.	£2 2s. 11d. per Cent.

Every information will be afforded on application to the Resident Directors. Edward Boyd, Esq., and E. Lennox Boyd, Esq., of No. 8, Waterloo-place, Pall Mall, London.

Surgeon—Frederick Hale Thomson, Esq., 48, Berners-street.

Just published, 7th edition, price 3s., and sent free on receipt of a Posteffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.:

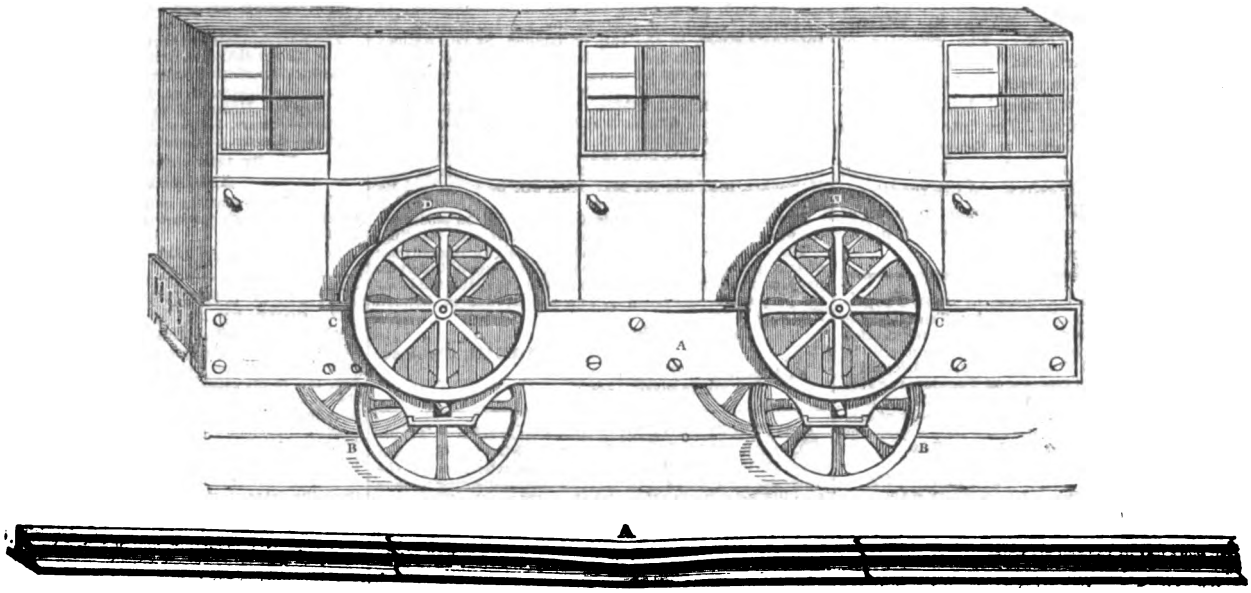
By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Bailliere, Medical Bookseller to the Royal College of Surgeons, 219, Itegent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*



We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

THE PITH OF COLES ON RAILROADS AND LOCOMOTIVE TRAVELLING.—A Description of COLES'S PATENT ANTI-FRICTION RAILWAY CARRIAGES, and Two distinct Plans of Rails, either of which will qualify the off-wheel to keep pace with the inner one. WM. STRANGE, Paternoster-row, and all Booksellers. Price Twopence.

Side view of the inner rail, the step is lowered at A, when the inner wheel is made to run on its periphery or lesser part, whilst the outer wheel runs entirely on its flange when working a cant. (Verse 7 and 21; also Fig. 2, end view of Carriage.)

ANTI-FRICTION *versus* FRICTION.

Some fifty years since, Sam. Coleridge left Ottery—
Where a waggon was burnt to the ground;
A hap'orth of oil, applied where it ought to be,
Wou'd save its owner three hundred pounds.

An action was brought, for the loss of some wine;
Why he defended it, he dian't know:
It cost him that money, minus his time,—
So very uncertain is Law.

What constitutes friction we very well know,
On Railways 'tis as hot as a piper;
Anti-friction Carriages plainly show,
That Friction's reduced to a cipher.

Their axles run level with the horizon,
They point to the centre of a curve,
They do what nothing else ever has done,
Their working wheels scarcely will move.

The off-rail of a curve is always the longest,
But why higher or *not laid level*,
Unless the off-wheel is *larger* or strongest,
Is productive of very great evil.

Let a socket be turned in the hind axle arm,
Let it pass to the opposite frame,
Let both of their wheels be key'd very firm,
The two halves one axle will form. (Fig. 1.)

Supposing both rails had a step on the edge,
The wheels would then run on their flanges;
Lower the step *here* and *there* on *the* ledge,
Fore wheels, vice versa, run changes.

Instead of raising the off-rail above level,
By this plan the rail's a step lower,
The off-wheel *runs faster*, though not bevel,
The inner one's made to *run slower*.

Not so with hind-wheels, because they would lock,
If they also ran on their flanges;
A two-wheel carriage will run true as a clock—
And be far less subject to changes.

The higher the load the more it will slant,
When the axle is rais'd at one end;
Prevent them from rocking, or reeling, they can't,
Till they find their own level again.

Some would inquire how they are united,
That depends on a rais'd or sunk rail;
It matters but little as rails are now fitted,
If they tried it I'm sure it would fail.

Elliptic spring buffers will yield when you pull,
They'll resist when they come to a stand,
They are protected from breaking as well;—
You must admit this is well plann'd.

A four-wheeled carriage or an engine
Would run free upon the off-rail;
The one would run on the *step* with its rim,
Th' other *not*, though a much quicker wheel.

Let one ounce stand for a one-horse engine,—
Let the carriage be twelve pounds weight;
It requires forty ounces with the old plan
To draw a hundred and forty pounds net.

If thus we remove rubbing surfaces,
And introduce rollers in their stead,
Four ounces will draw it, *just ten times less*,
Which demonstrates the plan to be good.

To say nothing of the strain in their axles
When wheels run unlevel or oblique,
Their bodies are lower, which *greatly excels*
All others when running so quick.

Had we fifty carriages, all in a train,
Forty-nine should have but two wheels
I'm aware their axles would be lib'rating,—
The wheels won't run 'gainst the rails.

You'd think they ran on periphery and flange,
If you look 'twixt the wheel and the rail;
Scarcely would they experience a change,
Become centrifugal, or reel.

Besides the Friction, *in those axles of mine*,
We get rid of centrifugal force;
We'll do the work with a fifteen-horse engine,
Whilst they require one seventy-horse!

Our points of contact are not more than *two*;
How should this affect the off-wheel?
Engineers have express'd *their fears* it *won't do*,—
They are far more afraid that *it will*.

You may think there is danger in working a cant,
When 'tis work'd with periphery and rim, (A)
Should they run more correct, won't you grant
'Tis not merely indulging a whim.

There's a curve at the Great Western station;
How grievous they must be annoy'd!
Ten men are doing what two might have done,
If my carriage had been employed.*

A rais'd or sunk rail is invincible,
Nothing's more clearly understood;
'Tis a self-acting unerring principle,
Pray adopt it, if only a rood.

I now am addressing my master, John Bull;
'Tis said he's a very rich man,
Though he is sometimes a very great fool!
Not so when improving his land.

Does Baddeley† know how the wheels would run,
If he saw them stand on their flanges?
If the inner wheel ran on a ledge of its own,
Would their axle be subject to changes?

Look first at this Number,† then look at that, ‡
Pure science can't flow in such channels;
They're too often straining at a gnat,
As often they swallow a camel.

Trams may be made for the common roads too,§
You will think I have just found it out;
Engineers will probably say it won't do;
Try it—you no longer will doubt.

Don't take up this paper, and then run away
And say you are none the wiser:
Study the subject at least a whole day,
You then will not want an adviser!

Sharpe, Roberts,‖ and Co., make two engines a week,
An Anti-Friction carriage they plann'd;
Its rollers ran round, in a collar or break,
When working curves, it came to a stand.

Had they put *brakes* on the common wheels too,
Anti-Friction wheels would run faster;
In that case common wheels never would go,
Which then would have proved a disaster.

We are not to suppose the invention their own,
Mr. Garnett invented it for them;
He'd remove those impediments, *every one*,
Had he known, *like me*, where to find 'em.

Those axles a very great weight will sustain,
Garnet's were exceedingly small;
Their rollers would turn two hundred times, when
Those rollers would scarce turn at all.

They ran in Manchester, Liverpool, Birmingham,
They've gone thousands of miles *on the Sea*;
They're known in America, Germany, Belgium,
They were sent there by the *Patentee*.

These models have work'd in the Adelaide,
Others in *The Polytechnic*;
One on a large scale I also have made,
Which may run in The Pantechnic.

If Railway Directors were public protectors,
With engineers they must have a quarrel;
For nought will satisfy them but the oysters,
Whilst they are content with the shell.

Whoever attempts to teach them a lesson,
Will find it is labour in vain;
'Tis impossible to make an impression,—
The *cause* I beg here to explain.

The greatest improvement lies *in the rail*,
Whether Engineers adopt it or not;
'Tis prejudice prevents it—not their skill!
For by Friction their living is got!

It grieves me to think you won't alter your rail,
When 'tis done at a trifling expense;
Put a step here and there with a dowel,—
You get your pounds, and they get their pence.

What is gain'd in speed is lost in power;
Craft lays *that* down as *an axiom*;
What fees are to Judges or Lawyers,
In that light Engineers regard *Friction*.

Railway Societies, to serve their own cause,
Keep improvements in the background;
Directors wink at this, every one knows;
Does this show their judgment is sound?

If engine concoctors, or Railway Directors,
Were compelled to drive their own engine,
Old Harry may drive us, and be our protectors,
A new era they sure would begin!

Not so with the driver, who ventures his neck,
Whatever he fears he dare not complain:
What if a thousand pounds were on him set?
Such sacrifice go to the Queen!

Eighty thousand men, at three-pence per head,
Would only deodand one thousand pound;
If Juries give that sum for one lying dead,
Is their judgement in both cases sound?

What must we call it, LUCK, or good management,
That they havn't yet killed eighty-four?
'Twill be time to adopt my improvement,
When they pick up dead men by the score.

You all have discover'd your system is bad,
That the people have got very shy,
Why barter life, when 'tis all that they had?
When they are not ready to die.

You see that your shares are in jeopardy,
That their prices are still going down,
How are you to retrieve your lost property,
But by making my system your own.

If you will subscribe to the Company,
How many shares will you take?
Move your stumbling-blocks out of the way,
A fortune you'll certainly make.

W.C.

ILLUSTRATIONS TO COLES'S ADVERTISEMENT.

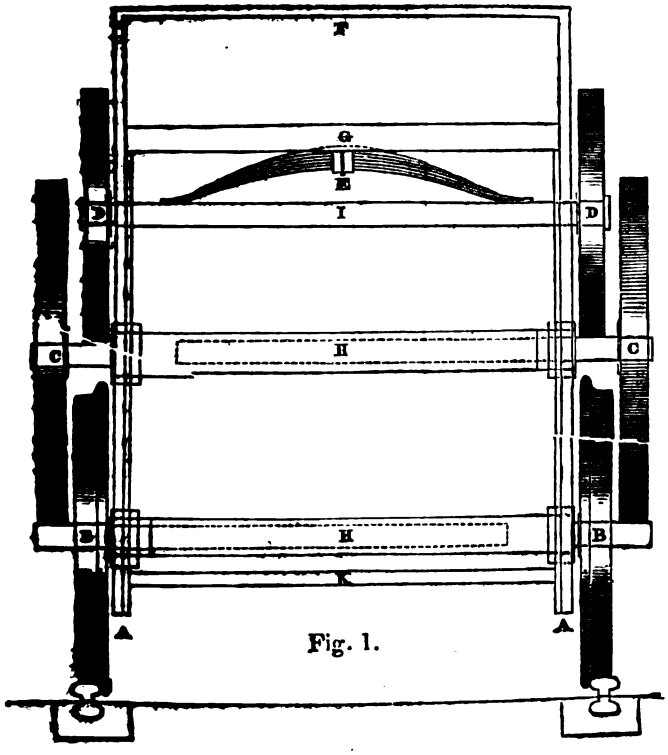

Fig. 1.

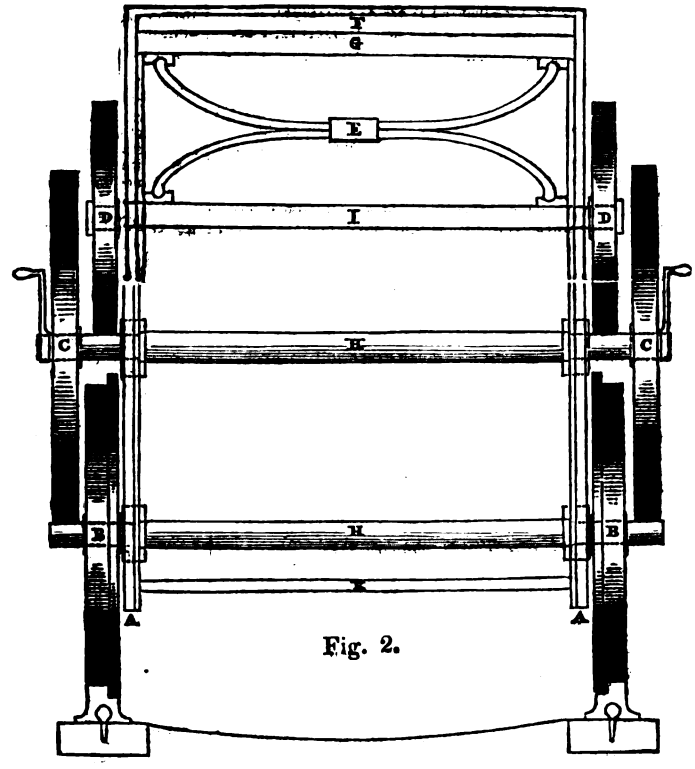

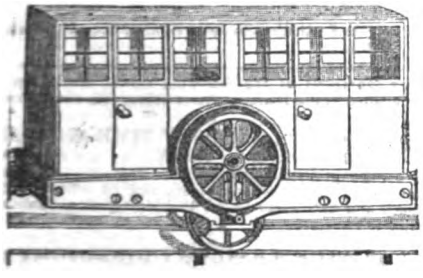

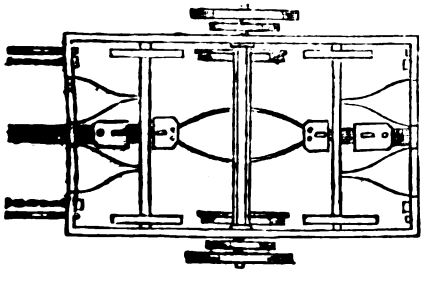

Fig. 2.

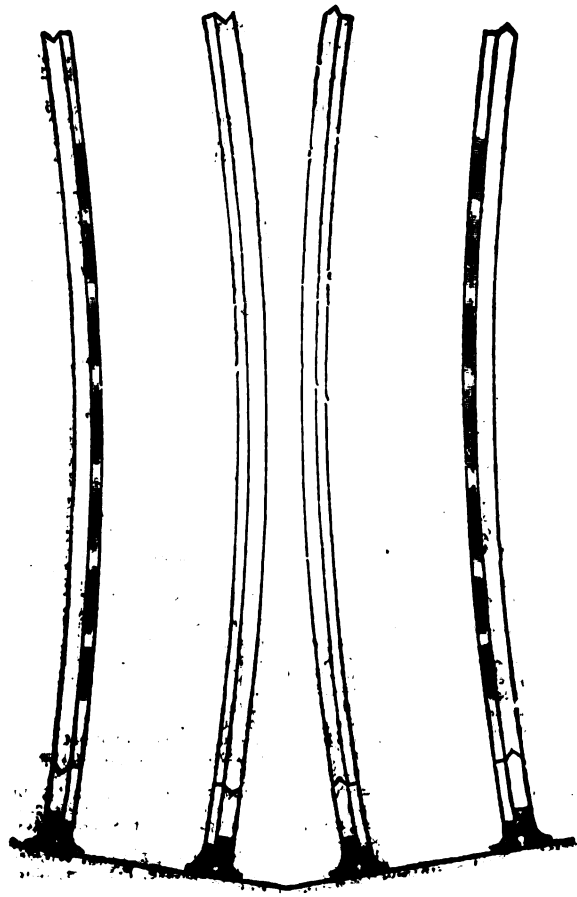
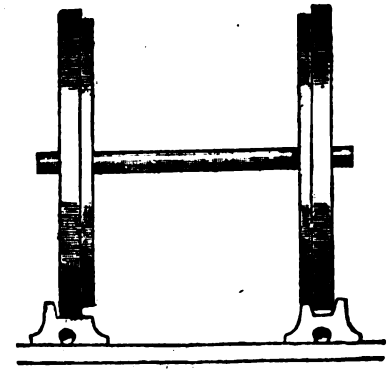
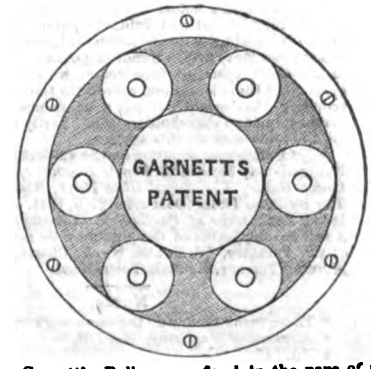


Many two-wheeled carriage would have their wheels inside the frame, not outside. It was my intention to fit up my large carriage with socket axles for common roads, when I found improvements were not wanted on railroads. (See end view, Fig. 1.)



(Vide 12th verse.)



Mr. Scales, late partner with Alderman Thompson and Co., Iron Masters, examined the models of Mr. Coles' carriages and rail; he said they employed 90 horses in their mines, and it was his firm conviction that the same work might be done with nine. He further declared that the principle was applicable to all kinds of machinery.

Undulated Step-rail, by which the outer wheel is made to run on its rim, or flange, whilst the inner one will run alternately on its flange and periphery, when working curves to the right or left. (Vide 18th verse.)
(See end view of carriage, Fig. 2.)

Self-acting Rail, to qualify the off-wheels, when working a curve, to run on their largest diameters.
(Vide 25th verse.)

Garnett's Rollers are fixed in the nave of a wheel, which revolves round a fixed axle. A nephew of Sir Walter Scott declared the above to be the best principle of Anti-friction Rollers in this country; but he hesitated not to say, that Coles's Patent was worth a million of them.
(Vide 29th verse.);

(Coles's Advertisement in continuation.)

Letter from Geo. Stephenson, Esq. to Mr. Coles, in reference to his Anti-friction Wheeled Carriages.

Tipton House, October 22, 1839.

My Dear Sir,—On my arrival at home I found your letter of the 12th of October. When I saw you last I did expect that I should have been again in London ere this. As soon as I do come I will take care to call and look at your carriage; and if I can be the means of helping you on, I shall be glad to do so; but I should not be justified in leading you or any other person on to spend money without any chance to get it back again. In making your experiments, you ought to have your axletrees brought down to that thickness that would safely carry the weight. If I mistake not, your common axletree bearings were much too thick for the weight they had to carry; oil ought also to be applied to them. You must be aware that the bearings of an axletree revolving in oil are revolving on friction rollers. For the particles of oil being globular and intervening between two metallic bodies, the weight is carried upon those rollers. Now, your contrivance is to have metallic rollers, but much larger, with a great deal more machinery in the arrangement, and when brought into rough usage will be likely to get out of order. If a railway could be kept in perfect order, I think some benefit may be obtained from your carriage, although complicated: but such perfection of a railway cannot be expected to be obtained. As you seem so anxious to have a trial made, I should have no objection to be one to subscribe to have a carriage made and tried on a railway, on a large scale. As soon as I arrive in London I shall call and discuss the point further with you.

I am, Sir, yours truly,
GEORGE STEPHENSON.

Mr. Coles's reply, January, 1842.

Dear Sir, 'Tis for the engine to complain of my axles, and not you,
For he, poor lame old gentleman, has all the work to do;
To find him guts and food to feed his over-cramm'd stomach,
Leaves shareholders without a dividend, even a "schronic."
My Western's and Birmingham's fetched three thousand pounds—What of that?
They never brought me a dividend that would purchase a sprat!

Our names are almost immortal they say,
At least, if the world speak true;
'Twas William Cobbett immortalised me,—
Mr. Pease immortalized you.

Very few can boast as you and I've done,
Since our earnings were eightpence a day;
Whatever I get, your's is fifty to one,—
So enormous do railways pay!

Your son Robert appeared rather haughty,
He look'd on me with disdain:
His father could see with half of an eye,
Far more than I could explain.

He would'nt allow me to leave him my models,
Or a drawing, nor yet read my rhyme;
For many came to him with crack'd noddles,
Which occupied half of his time.

If Engineers' lathes, tools, and chissels,
Were imperfect like carriages and rail,
All the workmen would become blue devils,
Or their workshops very like hell.

I know I share the fate of all others,
Who do not belong to your clique;
Account for the apathy of shareholders
I cannot—and therefore I speak.

Mr. Coles has completed a full-sized carriage, capable of sustaining three tons burthen. Steam power can be applied to the axles by means of a belt, which would not be at all likely to be deranged; one-eighth or a tenth part of the power would propel the same burthen. The above plan is secured by patents in the United Kingdom, and in France. The inventor, during twenty years, has never drawn a shilling from any man's pocket to aid him in bringing any of his discoveries before the public, though he is proprietor of many useful and valuable patents. His hobby is railroads; and he is firmly persuaded, notwithstanding he has thrown away fifteen hundred pounds on one railroad,¶ in the short space of three years, which is not worth a groat, that there is not one railroad in ten, if managed with economy, that would not pay a handsome revenue to her Majesty, and to shareholders too. Verily the Government are too lukewarm on this subject.

☞ Further information on the subject of the Improved Railroad may be seen in *Pope's Journal of Trade, Boyle's Court Guide, The Royal Blue Book, Robson's Directory, The Railway Times* (December 25th, 1841, and January 8th, 1842), *The Mirror of Parliament* (February, 1842), &c. &c. A full development of the plan may be seen at the Office of the Patentee, W. COLES, No. 3, Charing Cross; or 13, Moreton Terrace, Kentish Town Road.

NOTES.

* Three men can now do the same work on a straight line.
† *Mechanics' Magazine*, No. 776.
‡ No. 747.
‡ The Northern Directors doubtless paid very dear for their whistle. If such boxes of rollers were now fitted into two separate frames, and two grindstones, or two fly wheels of steam-engines, were made to run with their axles in these boxes of rollers, one with its collars or brakes, the other not, it would operate upon them like a box of Grimstone's eye snuff, it would open their eyes. Mr. Moseley, of New-street, Covent-garden, has a grindstone fixed on this principle, which will (when set in motion) run almost as long as Mr. Roberts's peg top; a bit of lacquer was removed from it, because it acted as a brake on the top.—See *Mechanics' Magazine*, No. 747 and 776, and they will sufficiently demonstrate that peg tops cannot run too light, nor railway carriages too heavy.
§ A portion of the raised rail, when fastened to sleepers bedded in the common road, would be far preferable to any trams that have hitherto been employed.
‖ Such was the desire of the Directors of Railways to get rid of friction, that Mr. R. said there was not a principle of anti-friction wheels known, which had not been tried on railways in that quarter.
¶ South Durham, alias New South Durham, alias Weardale Junction Railway.

RUPTURE.—COLES'S PATENT TRUSSES are universally admitted to be the most complete and effective instruments now in use for the relief and cure of HERNIA. The following opinions are selected, from a list too numerous for insertion, in a single advertisement:—

"This is the only real improvement in the construction of a truss that ever came under my inspection."—George Birkbeck, M.D.

The late George Telford, Esq., of Widmore, who lived to a very advanced age, told Mr. Coles that he owed more gratitude to him and Dr. Birkbeck, than to any two men on the face of the earth.

"The pressure upon the ring is not merely equalised, but adjusts itself, without inconvenience to the wearer, to the different attitudes in which the body may be placed."—William Thomas Brande, Royal Institution.

"They make a more uniform pressure on the ring than the ball and socket pad can effect."—Sir A. Cooper, Bart., F.R.S., in his Treatise on Hernia.

"The varied positions of the body in stooping and coughing do not alter the position of the pads, nor displace them."—Thomas Callaway, Guy's.

"It is my firm conviction that his trusses will be found more efficacious than any at present employed."—Henry Earle, F.R.S.

"I may add, that this truly scientific discovery justly entitles the inventor of such an instrument to universal confidence."—John Borthwick Gilchrist.

"They are the best trusses that have ever yet been got up."—Aston Key, Guy's.

"I consider these trusses calculated, beyond every other truss I have seen, to cure this disease in its earliest and simplest form."—Gideon Mantell, F.R.S., Crescent, Clapham.

There are two Generals who have asserted that they have sent Mr. Coles upwards of three hundred patients, who now wear trusses. Why was not the late Governor General of India and William the Fourth of that number? Ask Mr. Robert Keate.

Manufactured only by Mr. COLES, Patentee of the Medicated Bands, for the Cure of Rheumatism, 3, CHARING-CROSS.

See "Boyle's Court Guide," "Royal Blue Book," "Robson's Directory," "Pope's Yearly Journal of Trade," and the "Railway Times," 25th December and 1st January, for a poetical description of Coles's Railway Carriages.

Parcels forwarded by every train; and if for 8¼ p.m. Mail Train, are received at the above Offices until ¼ past 7 for the above places, and to all parts on the several lines of Railway, viz.:—

Bristol, Bath, Swindon, Farringdon, Reading, Windsor, Southampton, Winchester, Basingstoke, Farnham, Chertsey, Kingston, Brighton, Reigate, &c.

HORNE & CHAPLIN, Proprietors and Agents.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to most parts of the south and western railways.

EASTERN COUNTIES RAILWAY WORKS.—NOTICE is hereby given, That the Partnership heretofore subsisting between us, the undersigned John Beaty and Thomas Pearson, as Railway Contractors, at Hatfield Peveril, in the county of Essex, was this day dissolved by mutual consent. And that all debts due by the aforesaid John Beaty and Thomas Pearson are to be paid by the said Thomas Pearson, and all debts due to the said John Beaty and Thomas Pearson are to be paid to the said Thomas Pearson, who is duly authorised to receive the same. As witness our hands this sixth day of January, one thousand eight hundred and forty-two.

JOHN BEATY,
THOMAS PEARSON.

Witness, EDWARD BELLIS,
Agent to the said John Beaty and Thomas Pearson.

COVENTRY, LEAMINGTON, AND WARWICK RAILWAY.—At a Meeting of the Owners of Land and Hereditaments on the Line of the proposed Coventry, Leamington, and Warwick Railway, held at the Warwick Arms Hotel, in Warwick, on Tuesday, the 4th of January, 1842,

LORD LEIGH, in the Chair,

It was Resolved—

1. That nothing having occurred to change the sentiments of the Proprietors on the proposed Line of Railway, they adhere to their Resolution of Dissent of December, 1840.

2. That the same Committee be appointed to watch over the interests of the Dissentients, and to adopt such steps as they may deem expedient to oppose the measure.

LEIGH.

Lord Leigh having left the Chair,

It was Resolved—

That the thanks of this Meeting be given to Lord Leigh, for his kindness in taking the Chair, and the able manner in which he has conducted the business of the day.

AYLESFORD.

By order of the Committee,
THOMAS HEATH.

Warwick, 4th January, 1842.

TO ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, AND OTHERS.—To be Disposed of, an Old Established Engineers, Millwrights, and Founders Concern, (the present Proprietor retiring from the Manufacturing Department,) situated in London. The Premises and Plant are arranged for a most extensive business, and have been erected during the last 25 years, at a considerable cost, but from the above cause will be Disposed of upon extremely favourable terms; the Premises will be let on lease, and the Machinery and Tools disposed of at a valuation.

Apply for Particulars to JOHN EVANS, Esq., 51, Lincoln's Inn Fields.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 211. Vol. V.—No. 3.] SATURDAY, JANUARY 15, 1842. [Price 6d.

PROPOSED PLAN for the establishment of a GENERAL OFFICE for the use of TRAVELLERS BY RAILWAY and STEAM NAVIGATION, where the public could readily obtain every species of information that might be useful to or required by Travellers, either on business or pleasure, by any of the various Railway and Steam Navigation Conveyances throughout the United Kingdom, more especially as relates to the hours of departure and arrival, the scale of fares, and the different regulations of each, for conveying Passengers and Goods; to be formed under the sanction and patronage of the several Boards of Direction and Management of the Companies now in existence.

It is proposed that a complete Register be kept of all the Railway Conveyances, systematically arranged for the convenience of immediate reference, setting forth every station at which the trains stop on the respective lines, and the several stations and booking offices from whence passengers and goods may be conveyed.

That the proposed Office be furnished with the printed placards and hand-bills from all the different Companies, for reference and distribution to the public, who should receive gratuitously every information required.

That a like Register be kept of all the Steam Navigation Conveyances, and a similar distribution be made of the hand bills of the different Companies, and every information respecting them be given in the same manner.

That a communication be opened for correspondence with the respective Secretaries to enable the Manager of the Office to give answer to such inquiries as might arise, and which their printed hand-bills do not furnish, and that the Secretaries would from time to time give the Manager immediate notice of every alteration affecting the conveyance of passengers and goods.

The Manager of the Office would undertake to transmit by post any hand-bill or specific information, which might be required by persons residing in the country, and who could not conveniently attend personally to obtain it.

That such Office be fixed at some central point (being a public thoroughfare) at the West End of the Town, holding connection with a similar establishment in the City, and to be open to the public every day, Sundays excepted, and that the Office shall be furnished with geographical maps and plans of the Railways.

It is proposed that arrangements should also be made which would embrace an extension of the plan, by collecting information of the various establishments on the Continent of Europe and elsewhere, for conveyance by Railway and Steam Navigation, as it is considered that by centralizing these various objects at one place, a complete Emporium will be formed for obtaining that general information which Travellers so much require, and this concern founded upon such an enlarged and comprehensive scale as would ensure the contemplated benefit and advantage to the several Companies interested, as well as for its becoming a medium of the greatest public utility.

NATHANIEL W. SYMONDS.

Lombard Street Chambers, Clement's Lane,
27th October, 1841.

*** Any suggestion to improve or add to the usefulness of the above plan will be thankfully received.

TO ENGINEERS AND CONTRACTORS.—The advertiser is desirous of engaging himself with an Engineer, or Contractor for public works, railways, &c., as agent or superintendent, having been engaged as such for several years, and perfectly understands the duties of the situation. He can give the most unexceptionable reference to character and ability, and would have no objection to go abroad, address X.Y., *Railway Times* Office, Fleet-street.

TO CONTRACTORS.—A Gentleman who has had several years experience in railway work, wishes to engage with any respectable Contractor, as Engineer or Inspector. He understands earthwork, bridge building, measuring, levelling, drawing, getting up estimates, &c., &c., will be responsible for the proper gradients, widths, proper level and construction of masonry, and would make himself in any other way useful to his employer, and can give the best testimonials as to character and ability, address G.G.B., *Railway Times* Office, Fleet-street.

THE ELECTRIC TELEGRAPH ON RAILWAYS.
Just published in Royal Octavo, 3s. 6d. cloth, lettered, with four engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,

J. S. YEATS, Secretary.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Ralliffax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—Call of £10 per Share, being the Eleventh Instalment, and making with former Calls, the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give Notice, that the Proprietors of Shares are required to pay on or before the thirty-first day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz.:—

London—Messrs. Glyn, Halifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.; the Devon and Cornwall Banking Company; Messrs. Alliford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent. per annum on all arrears.

FREDERICK RICKETTS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, Jan. 7th, 1842.

Interest at the rate of 5 per cent. will be allowed on payments in anticipation of Calls.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 200, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

This day is published,

TEMPLETON'S RAILWAY STATISTICS containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 192, Fleet-street.

THE PROPOSED RAILWAY IN CORNWALL.

(From the *West Briton*, Jan. 7.)

On Wednesday last, a county meeting, pursuant to notice, was held in the Shire Hall, Bodmin, for the purpose of receiving the Report of the Committee appointed two years ago to inquire into the practicability of obtaining a railway through the county of Cornwall. The meeting was convened by the High Sheriff, J. H. Gill, Esq., of Bickham, who, with the Under Sheriff, was present. Most of the Magistrates who attended the sessions were present; but owing to the recent and sudden decease of the Earl of Falmouth, the Chairman of the Committee, a gloom was thrown over the proceedings.

The High Sheriff, on taking the chair, said he need not observe that he had very great pleasure in complying on all occasions with the request of the county. On the present, however, that pleasure was attended with no inconsiderable degree of sorrow, on account of the very great calamity that had fallen on the noble Lord (the present Earl of Falmouth), who did him the honour of transmitting the requisition, and he trusted he should be excused for expressing very briefly the sympathy he felt for this painful bereavement, and for the loss the county had sustained by the decease of a nobleman, whose services, on so many occasions, materially benefited this county. (Cheers.) The Sheriff then called upon the Under Sheriff to read the requisition.

P. M. Little, Esq., read the notice accordingly.

The Right Hon. Lord Vivian then rose, and after referring to the late and present Earls of Falmouth, said, he knew that there were those who thought it would have been desirable, before this meeting was called, that the Report should have been published, in order that it might be taken into discussion on this occasion. He was unfortunately prevented from attending the last meeting of the Committee, but he confessed that that Committee having been appointed by a county meeting, it was more respectful in the first instance that a Report should be submitted to a county meeting, and if any further measure should take place, there would be no difficulty in calling a meeting at some other time when they might get a larger attendance than at this season of the year. With respect to the Report itself, it is founded on the report of a very able engineer, and also upon the report of a gentleman appointed to inquire into the traffic likely to accrue if a railway should be established. He thought that they had every reason to believe that a Report so founded was based upon a good and solid foundation. Bot at all events, it was perfectly clear that there would be no difficulty in carrying a railway into this county, and he hoped and believed it was equally clear that those who would invest their money in it would receive good interest for it. His own opinion was well known. He thought the best interests of the county were mixed up with the success of the undertaking. If they did not succeed in bringing a railway into this county, they would be placed in a disadvantageous position as compared with other parts of the British empire. (Cheers.) He knew that it was the fashion to say that Cornwall was no thoroughfare,—that it was the *Ultima Thule*—that it was the way to nowhere; but he asserted that if they had a railway it was the way to three quarters of the globe. (Cheers.) When he looked around him, and saw the effects of steam navigation,—when he saw steamers starting from this country to all quarters of the globe every month or fortnight,—when he recollected the situation of the port of Falmouth, he could not but feel that if they had a railway to that port, it would be the port of embarkation not only for passengers, but for a very large proportion of the merchandize of this country; for he could not fancy any one would wish to pass down a dangerous channel at the rate of ten miles an hour, when they could travel on the land at a rate of 20 miles an hour. Therefore it was that he had been always most anxious that a railway should be established. He believed the benefits of a railway would exceed their most sanguine expectations. With respect to the means and prospects of its being established, he would venture to say a few words. The Report of the Committee entered into the matter at very considerable length. One way by which it could be established was by the support and assistance of the county. They knew that the sum required would be probably larger than could be raised in the county; but if the gentlemen were prepared to come forward and give every possible encouragement to those who were ready to adventure their money, he thought that there could be no question but that the object might be effected with very great ease. He did not mean at this moment, when there was very great commercial distress throughout the country; but he felt persuaded that if monied men who could adventure their money in railways, found that they could come into this county, supported by the gentlemen and inhabitants belonging to it—he did feel it was very probable and very possible, that if they put their shoulders well to the wheel, they should be able to form a Company that would bring a railway into this county. That was one way, and the most proper way. (Cheers.) There was another way, supposing that they could not establish a railway Company;—it was through the assistance of the proprietors of the Great Western. When the Great Western Company carried their railway to Exeter, he thought they would find it very desirable to carry it on to Falmouth. At least they would find it very desirable to give them great encouragement to enable them to do so. There was another means by which he looked forward to its being brought into this county;—for as to its being brought he was quite sure that the day must come when there would be a railway to Falmouth, although he might not live to see it. He thought it very possible it might be done with the assistance of the Government. He had always had a very strong opinion with respect to railways. He regretted that the Government did not in the first instance, when it was seen clearly that railways would be formed throughout the country—that they did not take them upon themselves. He remembered, in that hall, Baron Rolfe stating that he regretted that the railways were not what the highways were called, the Queen's highways, and he (Lord Vivian) did think it would have been of great importance to the nation to prevent communication becoming the property of proprietors, who, by establishing a monopoly, would have all the traffic of the country in their own hands, and that railways should belong to the government of the country. (Hear, hear). He had had an opportunity some time ago of conversing with parties having a knowledge of railways in the Netherlands. What they said was this: "We, the Government, have established railways. You, in England, think it of great advantage to have cheap postage—we think it of great advantage to have cheap locomotion. Our people can travel from one end of the country to the other at a cheaper rate than they can walk, considering their time and the cost of shoe leather." (Hear, hear.) Therefore it was that he should be very glad indeed to have seen the railways the property of the government. But the fact was, that they were so circumstanced that they could not afford to make a railway themselves. It should be recollected that it was of great national importance to have an easy conveyance to the most western port. The immense advantage of the port of Falmouth was found during the last war. If they had another war, which God forbid! it was impossible to say what would be the importance of the port of Falmouth to a fleet of steamers, and it would be impossible to say what would be the advantage of a speedy conveyance to the metropolis and the western port under such circumstances. These were his views with respect to the probability of a railway being carried to Falmouth. That there it must come he was as much satisfied as that he was addressing that assembly, and he felt that the strongest possible measures should be adopted to carry out this great advantage to the county. Before he concluded, he would observe that at all times and upon all occasions, if his humble assistance was of any advantage to the county, they might rest assured that it would never be refused. (Loud cheers). The Noble Lord concluded by proposing the first resolution.

E. W. W. Pendarves, Esq., M. P., rose with great satisfaction to second the resolution of his Noble Friend. His Noble Friend had left him very little to say on the subject of the railway. The Report which would be read was lengthy. It would go more into the particulars and into the labours of the Committee which was formed upon a former occasion. It would state to the meeting what had been done, and he was only sorry that there was not an immediate prospect of bringing a railway into the county. He was of opinion, with his Noble Friend, that they should at a future time have a railway; that he was convinced of, whether it would be commenced this year, or next year, or the year following, he would not say. But he would give the best assistance in his power to carry it into effect, whenever a motion of that kind should be brought forward. (Loud cheers). He begged to second the motion that the Secretary should read the Report.

Mr. Bond then read the Committee's Report, of which the following is an abstract:—

The Committee commence their Report by stating the resolutions passed at the County Meeting, held in October, 1840, when they were empowered to obtain a survey of the most advantageous line of railway. Upon receiving those instructions, they proceeded forthwith to obtain subscriptions to meet the expenses, and very quickly collected 1,500*l.*, which they deemed sufficient to justify them in entering into communication with Captain W. S. Moorsom, who commenced the survey the last week in November. The Committee speak very highly of the abilities and liberality of Captain Moorsom, and of the services he has rendered. The survey was continued through the inclemency of the last season, but its severity compelled Captain Moorsom to employ an additional number of hands to accomplish the work within the stipulated time. This contingency occasioned an extra expense of 250*l.* The survey, by this aid, was accomplished within the specified time, and on the 27th of February, Captain Moorsom laid before the Committee the plans and sections of the proposed line. The several notices required by the Standing Orders of Parliament, preliminary to obtaining a Bill, were complied with. By the deposit of the general plans and sections with the Clerks of the Peace for the two counties and in each parish through which the proposed line would pass of a plan showing in what manner the property of individuals would be affected, an opportunity was afforded to the landowners and others interested, to examine the line and ascertain its general character. From this examination it was hoped that the Engineer and Committee might derive much valuable information respecting such deviations from the original plan as might be required to meet local views and obviate objections. The Committee felt the advantages likely to result from the measure so strongly, that although it entailed an additional expense of 200*l.*, they determined on adopting it.

On the 14th of April the Committee met to receive the result of Captain Moorsom's survey, when he presented the very able and elaborate report appended to the Committee's Report, to which as well as to the further report also appended, the Committee beg to refer for all engineering details. In these able documents a full explanation is given of the manner in which the work is proposed to be executed. The expense of constructing a railway from Exeter to Falmouth adapted to our requirements, and of providing the requisite stock for working it, is estimated at 1,397,290*l.* These estimates have been submitted to the examination of practical men in this county, competent to form an opinion, and have by them been pronounced "ample" for the purpose.

In the Report presented to the county in 1840, the annual income estimated to arise from the traffic likely to pass over the line through Devon and Cornwall amounted to 214 037*l.* This calculation was based on the observations made by Mr. Francis Fox during the previous winter and spring, of course during the least favourable portion of the year, and corrected by a few observations made at two or three places during the summer. Subsequently to the opening of the South-Western Railway to Southampton, and of the Great Western to Bridgewater, these calculations have undergone a scrupulous revision, the result of which, if correct, shows that a revenue of 226,669*l.* per annum may be expected upon the establishment of a railway, including the traffic to and from Plymouth over that part of the line which would form a common trunk.

The details from which this result are obtained are given in the appendix, but the Committee observe that the average rate which each passenger is estimated to pay is only 1½*d.* per mile, whereas the more usual average is 2*d.* per mile; and further, that on comparing this statement with the actual receipts of the 32 different railways which are reported weekly, experience seems to show that no exagreration has been involved. It further appears that of these 32 railways, there are only 14 which have a smaller traffic than the present estimate assigns to that portion of the road over which both the Plymouth and Cornish traffic are combined, and only eight which have a smaller traffic per mile than that calculated on for the Cornish tradic alone. By comparison also with the receipts upon the railway between Bristol and Bridgewater, which, from being only partially opened, has not its traffic nearly developed, it appears that they have already realised a larger revenue per mile than that estimated to pass over our line. In fact, the increased traffic in consequence of increased facility of communication has, in almost every instance, far exceeded the most sanguine expectations. An evidence of this, immediately applicable, is to be found in the largely increased receipts of the Truro turnpike since the new lines of road constructed in 1831 have been opened, as compared with those previously obtained.

It must be further observed, that the amount of traffic included as that belonging to Plymouth, is not so large by nearly 25 per cent. as has been shown in a publication authorised by the Plymouth Railway Committee. From other statements and other evidence which might be adduced, beyond the intrinsic evidence of the tables themselves, as given in the appendix, the Committee trust it will be found that the amount contemplated as likely to be annually realised is by no means overstated.

The Committee proceed to say, if we assume Captain Moorsom's estimates to present only an approximation towards accuracy, and even if we suppose that instead of less than one million and a half, two millions may be required to

Digitized by Google

complete our case, the amount of traffic which has already been stated as reasonably to be anticipated will, after an ample deduction for the expense of working, leave a surplus of upwards of 6 per cent. for those who may embark their capital in the undertaking.

Having thus shown the practicability of a railway from Exeter to Falmouth, the Committee proceeded briefly to urge its vital importance. It was no longer a question whether railways ought to be adopted. Other portions of the kingdom possess the advantages they afford. Other ports seek to deprive this county of the advantages it has hitherto derived from its westerly position, in consequence of the facilities resulting from railway communication with the metropolis. The Committee know that since the opening of the railway to Southampton, and the transfer of the Falmouth packets to Liverpool, a much larger proportion of passengers has embarked and landed at these places than formerly, and Falmouth has suffered to no inconsiderable degree. It must not be concealed, that the most strenuous efforts are being made, and may be successful, to deprive it of the advantages resulting from its being the port at which the mails are taken on board and landed.

After some further arguments of the same nature, the Committee remark that the improvement in the value of agricultural produce, if a reasonable time be allowed for its development, may be inferred by comparison with the profits in the aggregate which have been produced during the last eleven years in those districts (chiefly in Lancashire and the northern counties) where time has afforded the best experience.

To the mercantile and trading interests of this county no arguments can be required to prove the advantages of a safe and speedy means of intercourse with the markets from whence they derive their supplies, or to which they forward their products. The very large proportion of goods now brought by steam vessels for the retail traders of the various towns, proves the importance to them of rapid and easy communication.

It only remained for the Committee to point out those means by which the accomplishment of an object so important to this county may be promoted by the landowners, merchants, and others interested in its prosperity. The great obstacle has been by the formation of a Company. In the present state of the monetary concerns of this country, the Committee could not feel justified in obtruding any recommendation of their own upon the county, but if such a Company should, at any future time, be formed, much important assistance might be rendered by the organisation of a Committee, who should apply to the landowners, merchants, and others, particularly those along the line, for their support, which might be rendered in one of the following ways:—

1. By agreeing to take shares in the proposed undertaking, whenever a Company should be properly organised.
2. By an agreement to exchange the land which might be required at a fair agricultural value for shares in the proposed railway.
3. By agreeing to part with the land on such fair and reasonable terms as might evince a desire to support the undertaking.

Promptitude, energy, and perseverance, ought to be the watchwords of the county, in the endeavours to secure and improve the immense nautical advantages resulting from its south-westerly position.

The question is not a local one, but one in which every individual residing westward of Exeter is more or less interested, and, therefore, one to which our united energies should be applied; and, if so applied, there can be no doubt of final success.

Mr. BOND, at the conclusion, observed that there were the Reports of the Engineer, and of the person who was appointed to take the traffic of the county—but they were very lengthy and will be printed.

The SHERIFF then put the first resolution, and it was carried nem. con.

The following are abstracts of the documents alluded to by Mr. Bond:—

ENGINEER'S REPORT.

The Report of Captain W. S. Moorsom to the General Committee, commences by alluding to the detailed Report which he presented, dated the 10th of April, 1841, containing all the particulars relating to the survey, which was directed in consequence of the Committee's resolution of the 23rd November, 1840. It was now his duty to explain the general position of the railway prospects in reference to that survey, and also to further examinations and revisions of the case generally, which had subsequently been made.

By reference to the April Report, it will be perceived that the country between Exeter, Plymouth, and Falmouth, had been thoroughly examined, as well by his own as by other persons' surveys. Examinations and surveys had been further continued during last summer by the Plymouth Committee, and under such information as he had been favoured with in respect of the latter, his view was the same as that which he had before expressed—in effect that, after duly considering the importance of Plymouth and comparing the facilities which the county of Devon presents for approaching that town without losing sight of the further connexion with Falmouth, or a more westerly port; the plan which is the most comprehensive—which embraces most fully the points of natural advantage as well as the features of commercial interest, both with reference to the capital to be raised for making the line, and to the facility and certainty of working it with locomotive engines, such as we may expect to use for the next twenty years to come—is to proceed upon a trunk line which shall be common both to Plymouth and Falmouth, for about 31 miles out of Exeter, by way of Okehampton, under the northern base of Dartmoor, to Lidford, in the neighbourhood of Tavistock, and from Lidford to make a southern fork for 21 miles through Tavistock to Plymouth, and a western fork for 75 miles through Launceston, near Bodmin, and by St. Austell and Truro to Falmouth.

The lengths of the respective lines that have been proposed from Plymouth eastward, are by the Tavistock and Okehampton line to Cowley Bridge on the London side of Exeter, 52 miles; by the south coast, as surveyed in 1836, to the same point at Cowley, 52 miles; by a recent amendment of the south line, keeping to the north of Totness and Newton, 49 miles; and by the line over Dartmoor, from Stonehouse to Cowley, 45 or 46 miles—and with the branch to Tavistock five miles more.

To explain the several features of these various lines to Plymouth and onwards to Falmouth, would occupy far more space than can be admitted for this Report, but it may be stated generally, that a southerly course from Exeter to Plymouth, and onwards to Falmouth, cuts across all the main streams and minor ridges of the two counties, in such manner as to involve very expensive and difficult works, including a very doubtful passage across Hamoaze, or the lower part of the river Tamar. Objections also exist to some extent, both (as stated authoritatively) in Devon and also in Cornwall, along any southern line, in respect of valuable and ornamental property which could hardly be avoided, without running into still greater difficulties.

In point of distance there appears to be no difference worth naming, except in the line over the mountain ranges of Dartmoor, but the difficulty of constructing and of working this line, together with the impediments which its adoption would throw in the way of any further extension into Cornwall, preclude it from holding the place which its length might seem abstractedly to claim in any comprehensive plan for uniting these counties with the metropolis.

The Report then goes on to show that it is for the interest of both counties that a sound and comprehensive railway scheme should be adopted in which both counties can cordially unite. Captain Moorsom then proceeds to state the estimates of the Plymouth Committee as to the expense of constructing their line. He then states, that by adopting, in conjunction with Cornwall, the trunk line above adverted to, the inhabitants of Plymouth might secure a railway to the latter place complete, for about 450,000*l.*, whereas by carrying a line exclusively to Plymouth, unsuited for Cornwall, the statements published by authority show that more than 800,000*l.* would be required for that purpose. To connect the principal districts of Devon and Cornwall as far west as Falmouth, in a manner the most comprehensive, and at the same time to combine certainty in the character, with economy in the extent, of the works involved, would require a total length of about 127 miles of railway, to be made by the united efforts of the two counties. If the railway from Par to Newquay should be made in continuation of that which Mr. Treffy is now making, a new and important feature will then be involved in the consideration. To the westward of Truro the line has been carried in such direction as to offer an easy extension to Penzance, by making use of the Hayle Railway, and at Falmouth a branch from the passenger terminus leads down to the water's edge in a position which, by a moderate expenditure, might be made available for the largest steamers to take in all their supplies alongside of a wharf, and from thence to go clear off to sea after receiving their mails from the same wharf, in 12 hours from London. It was still his opinion that the line laid down combined the greatest amount of accommodation, both local and general, with the least drawback in respect of the works involved, and the expense to be incurred, both in making and in working the railway.

Captain Moorsom states, that in his April Report he recommended that the time to be occupied in travelling by railway between Exeter and Falmouth should be 5½ hours by the fastest trains, and 7 hours by the slow trains, while the mail trail trains on express occasions might go still faster. This speed might be regularly maintained with engines of ordinary construction, without any assistant power beyond one engine per train. The maximum inclination is 88 feet per mile, or 1 in 60, and the smallest curve is formed with a radius of a quarter of a mile. Present experience shows, that a line thus graduated may be worked under ordinarily good management with certainty and safety, and with economy equal to that which most other lines at the present day exhibit.

The estimates appended to the April Report comprised all the works of the railway, together with 15 per cent. for contingencies and management, and also stations, land, and compensation, working stock, and Parliamentary and other preliminary expenses. In addition to these, Captain Moorsom can see no other items except those incident upon Direction, office charges, and conveyances. These estimates have been revised since April, with the kind aid of the agent of Mr. Treffry, (whose extensive works are well known in Cornwall), who states his "confidence that the prices now put for the items will be found ample." In this revision additional prices have been put for contingencies on the works in the districts where granite and other hard material will probably be pierced, and the total amount consequently calculated, in order to open the railway from Exeter to Falmouth, is 1,397,290*l.*, and to carry the southern fork to Plymouth would probably require about 250,000*l.* more.

The Hayle and Redruth Railway, upon which heavy works were involved, was set to work for little more than half the amount per mile which these estimates contemplate. Captain Moorsom mentions also, 16 railways, whose whole length is 264 miles; and have cost 3,091,999*l.*, or at the average rate of 11,700*l.* per mile, whereas the above estimates contain a cost of 13,180*l.* per mile. Captain Moorsom attributes the excess over the estimates in the making of railways to arise generally from a departure from the original plans. He proposes, if the railway should be attempted, to contract with respectable parties, under bond, to execute the works for sums not exceeding those estimated, excepting only the few instances where some uncertainty exists for want of the necessary borings.

The traffic case, based upon the observations made in 1839 and 1840, by Mr. F. Fox, has been lately revised, and shows that an income of about 226,000*l.* per annum may be fairly calculated on as the receipts of the railway. From this the current expenses of working the line must be deducted. These expenses usually vary with the length of line and the mode of management, and the extremes may probably be stated at from 38 to 60 per cent. upon the gross revenue. In the case of the Cornish Railway he believes 45 per cent. or 102,000*l.* will be more than sufficient to deduct from the gross revenue. This leaves 124,000*l.* as a net return upon the above contemplated expenditure of (not quite) 1,400,000*l.*, which is at the rate of nearly 9 per cent. Captain Moorsom thinks this statement not so highly coloured or so unlikely, as must appear to those who have not fully studied the sources of revenue which would be drawn upon in this case. It must be remembered that this railway will connect locally a very moveable population of about 60,000 in the contiguous districts of Redruth, Falmouth, and Truro, with nearly 130,000 in the neighbourhood of Exeter and Plymouth, besides the intervening population of other towns and mining districts; and that the metropolis and the manufacturing places of the north will thus be brought into immediate connection with the most favourable point of arrival from and departure to the south and west of the British empire. If the same receipts were applied to the relative length of the Cornwall line that were applied by Mr. Divett to the Exeter Railway, at present only partially opened to Bridgewater, the receipts on the Cornish line would be 10,000*l.* per annum more than had been calculated.

There were no physical features but what could be surmounted. The only real difficulty in this case is the means of raising the requisite capital. The estimated expenditure (exclusive of the Plymouth line) being 1,400,000*l.*, the practice of the legislature requires that three-fourths of this amount, or 1,050,000*l.* shall be subscribed before the Bill can be brought forward in Parliament. As soon as one half of the total capital has been paid up, the practice of the legislature also admits of sums being borrowed to the extent of one-third of the capital, namely, 466,666*l.*

The result of these operations would stand thus:—

To pay the interest at 5 per cent. on 466,666*l.* would require out of the net revenue annually..	£23,333
And this sum if deducted from the total net revenue of 124,000*l.* leaves the balance of.....	120,666

Or at the rate of 11½ per cent. to pay dividends upon the subscribed capital, excluding the interest of money for five years during the construction of the railway,—or at the rate of 10 per cent. upon the subscribed capital if interest during five years be allowed upon the calls at 5 per cent.

To raise, therefore, to the amount of rather more than one million, Captain Moorsom suggests, first, that the landowners on the line may guarantee the requisite land in some cases as a gift, and in other cases in exchange for shares at a fair equivalent value, such as 30 years' purchase upon the rental. Local parties who would be immediately benefitted may probably contribute a fair proportion of the subscription, and if both of these points are fairly met within the counties, the Committee may then with good reason appeal to the public to support their case.

Inasmuch as four, if not five existing Railway Companies to the north and east of Exeter would receive from the execution of this railway, an increase of traffic which they could not expect to receive without it, it is possible that those Companies might unite to guarantee a yearly income which should amount to 6 per cent. upon the estimated expenditure. This course has been adopted by parties desirous of making a north eastern Railway into Scotland.

Thirdly, a measure was brought before the legislature in June last, to enable certain counties of Ireland to obtain capital for making projected railways which parties were then (and are still understood to be) willing to advance upon a guarantee that in the event of the net dividend of the railway falling short of 4 per cent. upon the capital advanced, the difference between the actual dividend realized and 4 per cent. shall be made good to the hoders of the stock out of an assessment to be made by Commissioners upon the counties, cities, and places, benefited by the railway; such deficiency, if any, being made by grand jury presentment; and on the other hand, any surplus over a dividend of 4 per cent. is to be equally shared on similar assessment between the stockholders and the counties, and places otherwise liable for deficiency.

In this case, it will be seen that to produce the net dividend of 4 per cent. before the stated expenditure, would require a gross traffic of only 20*l.* per week on the Cornish line, or less than half the traffic realized on the Bridgewater line last summer; and if we return to the reports of the traffic on 32 railways, published weekly, we shall find only three which possess traffic so small as 20*l.* per mile per week, and these three are all short lines, and all recently and one also very partially, opened. This course of procedure might possibly be the most secure and the one best calculated to confine the expenditure within the estimated amount.

Captain Moorsom in conclusion observes, if some should imagine I have exceeded the strict limits of the Engineer's position in bringing these points to notice, I must remind you that justice could not have been done to your undertaking had your case been less fairly handled; and as I have stated my readiness to embark my quota of capital if proper management were exhibited, I may reasonably claim to express the grounds under which my own conclusions have been formed, and upon which, by a proper combination of enterprise with energy and perseverance, I have no doubt of your eventual success.

Post-office, 56 weekly journies, or 3,448 miles weekly, at 2s. 10d. nearly per mile, exclusive of branch journies						500
Parcels as per Mr. Francis Fox's return						112
Horses, averaged at one up and one down, or two per day, at 40s.....						24
				Total supplementary		£930

Horses for fairs, and passengers by trading vessels, not included.

D.—Merchandise.

WEEKLY.

General merchandise now carried four miles per hour, as per Mr. F. Fox's observations							100
Ditto ditto two ditto, ditto including bullion now sent by waggon.....							73
Fish, as per Mr. A. Fox's estimates							119
Vegetables, at present carried, as per Mr. Paynter's return (doubled).....							200
Cattle, of all kinds, computed as equal to 20,000 head per annum, passing through the counties, or 400 head weekly, as per Mr. Treffry's estimate. Of these only 60 taken at 10s. per head							30
Sand—The Wadebridge Railway carries per annum 27,000 tons. This quantity will be at least doubled on the main railway through the counties, giving an average of six miles, at 2d. per ton per mile, or 54,000 tons, at 1s., gives 2,700*l.* per annum, or per week							51
Coal from Truro upwards.....	5,000 tons,	5 miles	Total 545,000 tons for one mile at 2d., gives 4541.66*l.* per week.				87
St. Austell ditto	5,000 „	3 „					
Roche junction ditto	20,000 „	10 „					
Tavistock ditto	15,000 „	15 „					
Exeter downwards.....	10,000 „	8 „					
Corn—One-third of the above weight, or 18,000 tons per annum per 10 miles, or 180,000 tons per one mile at 3d. gives per annum 2,250*l.*, or per week.....							43
				Total merchandise			£704

E.—Plymouth traffic weekly.

Direct and contingent passing over 31 miles of the line from Exeter to Lidford junction. £1,271

Slate, lime, china clay, timber, and other supplies for mines and the interior; ores, manure other than sand; not included.

In the above calculations we have omitted the decimals, which will account for some slight difference in the figures.

J. H. TREMAYNE, Esq. said, the Noble Lord and his worthy friend (Mr. Pendarves) had performed the pleasing task of recommending this Report to the meeting, and he had the very unpleasing task of calling their attention to pounds, shillings, and pence, on which he was very unable to address them. People had said, he was hostile to the introduction of a railway into this county. It was no such thing. (Cheers.) If a railway with reasonable gradients, and at a reasonable expense, could be brought into this county, no man would be more anxious than himself to promote it. But the only question on which he differed with the majority of the Committee was this—that he thought it necessary to take more time to have a more extended survey—to make a more minute examination into details before they lodged their plans last session. It was a question—a very minor consideration with regard to expense. That was the only question on which he differed with the Committee. That he boldly stated in the Committee, and he boldly stated it now. (Cheers). But the majority of the Committee, which was composed of more able men than himself, were of a different opinion. Their opinions were given in the Report, and probably the meeting would be of their opinion. He only stated this in his own justification. (Cheers). Now, the resolution he had to move was this—That the Committee be re-appointed and requested to devise some means for raising the necessary amount for liquidating the out-standing claims, and that the assistance of the county generally be invited to co-operate with the Committee. Now, he believed the resolution of the former county meeting was to this effect—that a survey should be immediately made, and that 2,000*l.* be raised to meet the expenses of it. The expenses of the actual survey, without any remuneration to Capt. Moorsom, amounted to 1.788*l.* The remuneration agreed to be paid to Capt. Moorsom, together with such expenses as should be allowed, amounted to 359*l.* 1s. 11., making the whole expense 2,147*l.* 1s. 11d., exceeding by 147*l.* the 2,000*l.* which had been ordered to be raised to set this survey on foot. Then there was another item of incidental expenses attendant on journies, postages, meetings, and some expenses of Mr. Francis Fox, amounting to about 85*l.* Then came the question of lodging the plans, amounting to 112*l.* 15s. 8d. That was 2,344*l.* 17s. 7d. Now, he was sorry to say that of that 2,000*l.* ordered to be raised in the county, which they thought there would be no difficulty in raising, the sum total raised was 1,809*l.*, leaving a deficit of about 535*l.* That sum was to be raised. This resolution, therefore, went to request the re-appointment of the Committee, and that that Committee be requested to adopt some means to liquidate the outstanding claims. He saw no way in the world to meet those claims except by asking the assistance of the county; and in a question like this, taken up by a county meeting, he was sorry to say that many names did not appear in the subscription list which it might have been supposed would have been found there. He could not doubt that the county would raise willingly the sum necessary, and if the county thought that the Committee had been lavish, he would have them know that their neighbours in Plymouth, who were not more forward than themselves, had expended about 7,000*l.* Under these circumstances, he could not but believe that this meeting would willingly sanction the re-appointment of this Committee. They all knew that the first step in any undertaking was half the battle. The first step had been gained by them, and he could not but think that gentlemen would now willingly give that support which they had hitherto withheld. (Cheers.)

JOHN PAYNTER, Esq., seconded the motion in one of his usually excellent speeches. The evidence in support of the entire practicability of the Devon and Cornwall Railway had been fully laid before them, from time to time, and it now only remained to call upon them to act. With the greatest deference he differed from the preceding speaker. He submitted that no adjournment ought to be allowed—that they ought to take some steps this day—that they ought to make progress, and by no means to let the interest die away. If once allowed to die away, they would hardly ever be able to revive it. The two years occupied in the inquiry had been by no means time lost, since the amount of traffic and expense of construction had been so well tested, that they could now proceed upon the surest and safest ground. Probably no proposal ever came before the public with higher claims to confidence, and if any apathy existed on the subject, he implored them to exchange it for the most energetic resolves. (Cheers). This day the future condition of this county would be decided. A better line might or might not be found—the line might or might not admit of improvement. That was a secondary matter. That they determined on having a line was the paramount con-

RAILWAY ADJUDICATIONS.

WILLIS *v.* THE DIRECTORS OF THE LONDON AND GREENWICH RAILWAY COMPANY.

Court of Queen's Bench, January 11.—Mr. ... moved for a rule to show cause why a ... should not issue to the defendants, com... them to issue their precept to summon a ... to assess the amount of compensation payable ... Mount, Sloss and Co., under the follow... circumstances:—The applicants were possessed of certain premises, which were situated in the immediate neighbourhood of this line of railway and were included in the schedule affixed to the first Act passed for the construction of the railway. By the 46th section of that Act, the defendants were bound to purchase the whole of the premises of every proprietor on the line if such premises were named in the schedule, and if they should be duly required so to do by the owners of such property, or by the lessees thereof. The defendants proceeded to make the railway, but deviated in some degree from the original line, in consequence of which the applicants' premises ceased to fall within the distance to the works of the line necessary to bring them within the schedule. The defendants afterwards went to Parliament for another Act, and a report was then made by the Government Surveyor, declaring the necessity of widening the line. The 3 and 4 Vic., c. 127, was passed, and among other things embodied the representations of this report. The line of railway was therefore widened, and the applicants' premises were consequently brought within the distance. The applicants on this gave notice to the defendants to purchase the premises under the first Act, but as that was refused, the defendant being only willing to purchase part of the premises, the present application was made.

The Court granted the rule.

THE QUEEN *v.* THE SHEFFIELD, ASHTON-UNDER-LYNE, AND MANCHESTER RAILWAY COMPANY.

Bail Court, yesterday.—Mr. COMPTON applied for a mandamus, calling upon this Company to summon a jury to assess the damages sustained by a Mr. Shawcroft, by reason of their works. The person on whose behalf this affidavit was made is an extensive dyer and bleacher, whose grounds adjoin the line of the railway. In the business of a bleacher it is of the first consequence to secure an ample supply of pure water, and this Railway Company had by their works cut off the water heretofore used by Mr. Shawcroft for the purposes of his business, and by interrupting one stream and rendering others muddy, they had seriously inconvenienced and damaged his trade. Application had been made to the Company to redress the grievance or afford compensation to Mr. Shawcroft for the damage done him, but no satisfactory replies had been given to any such demand, and under these circumstances the applicant was necessitated to apply to the Court for this mandamus.

Mr. Justice WILLIAMS granted the rule.

IN RE THE EASTERN COUNTIES' RAILWAY.

Before Vice-Chancellor Bruce, Jan. 12.—The petitioners in this case were the above Company and John Gardiner. The application was, to have a sum of 100*l.*, now standing to the general account of the Company in Court, paid to the Secretary of that body. It appeared that the Company required, for the purposes of their Act, a certain piece of land of which the other petitioner, Gardiner, was the tenant, for a period of ten years, commencing from October, 1835. It was agreed between him and the Company, that for his interest in the land they should pay him 100*l.* That sum was paid into Court by the Company, and the prayer of the petition was, to have it repaid to them.

His HONOUR—If you verify the facts which you state by affidavit, you can take the order.

NORTH UNION RAILWAY COMPANY *v.* THE BOLTON RAILWAY COMPANY.

Before Vice-Chancellor Wigram, Jan. 12.—This case, which was a motion for an injunction to restrain the defendants from erecting certain works on the plaintiffs' line of railway, was concluded this morning.

His HONOUR said, there was no proof that any injury would be sustained, and the motion, therefore must stand over generally, with liberty to apply.

IN RE BIRMINGHAM AND GLOUCESTER RAILWAY.

On Saturday last a Court of Compensation was held at the Bell Inn, Northfield, to award compensation to Benjamin Guest, Esq., for injury to his his land, caused by the Birmingham and Gloucester Railway. Mr. Serjeant Talfourd received a special retainer from the plaintiff of eighty guineas, and Mr. Whateley appeared for the Company. No less than 36 jurors attended, and after viewing the land in question, accompanied by a host of professional men and witnesses, &c., (for the case created great interest,) twelve of their number were sworn, Mr. John Collis, of Stourbridge, being the foreman. W. Taunton, Esq., Under Sheriff, presided, and U. Corbet, Esq., acted as Assessor. The question was what amount of injury Mr. Guest had sustained by the interference of the railway with the overflowing of a brook upon his land. The learned Serjeant addressed the Court for upwards of two hours, and then commenced the examination of his witnesses, which occupied the Court till past nine o'clock. Mr. Whateley then spoke till about half-past ten, when, finding that there would not be time to examine his witnesses (of whom there were many in attendance) he left his case in the hands of the jury. The learned Assessor having summed up, the Jury retired to consider their verdict, and a few minutes before twelve returned into Court, and gave the plaintiff 100*l.* damages, greatly to the disappointment of his friends, some of whom had valued the damage sustained at 650*l.* and the Company had offered 115*l.* There was, however, great difference of opinion among the plaintiff's witnesses, as to the amount of damage done, and the defendants' witnesses were prepared to show that Mr. Guest was not entitled to any portion of the regular stream, but only such water as overflowed the banks of the brook in a flood, and which overflow would not be interfered with by the railway, if the water was properly applied, but the "carrier" and "gutters" had been out of repair for the last three years. It is said that this proceeding will cost Mr. Guest 250*l.*—*Worcestershire Chronicle.*

RAILWAYS IN 1841.

AN article on the Railways in Great Britain, in the "Companion to the British Almanack for 1842," states, that excepting the main line of the London and Brighton Railway, no complete line has been entirely opened to the public since November, 1840; but several, which were then partially opened, have since been rendered available for their whole length, and considerable progress has been made towards the completion of some others. Altogether there have been about 247 miles of railway brought into use for the conveyance of passengers within the year, and perhaps before this volume is in the hands of the reader, some other lines now on the eve of completion, may be in operation. Pursuing the same plan as last year, the railway openings now to be noticed may be classed as follows:—

Lines completed since the appearance of the "Companion" for 1841; most of which were partially opened in 1840—

	Total length. Miles.	Opened since Nov. 1840. Miles.
Manchester and Leeds (main line)	50¼	10
Taff Vale (main line)	24½	8
Glasgow, Paisley, and Greenock	22½	15½
Great Western	117½	42½
London and Blackwall	3½	0½
Birmingham and Gloucester	56	16
London and Brighton (main line)	41½	41½
		134

Lines partially opened before, and further so during 1841—

	Total length. Miles.	Open. Miles.	Opened 1841. Miles.
Maryport and Carlisle	20	8½	1
Northern and Eastern	30	23	7
			8

Lines first partially opened in 1841:—

	Total length. Miles.	Opened 1841. Miles.
Great North of England Railway (with branches)	78	44½
Bolton and Preston	14½	9½
Cheltenham and Great Western Union (with branch)	48	18
Bristol and Exeter (main line)	75½	32½
		104½

RETTIE'S DAY TELEGRAPH FOR RAILWAYS.

THIS machine consists of plain tripod stand made of wood or iron, in the centre of which is placed an iron rod 12 or 15 feet long. Near the top is a square plate of iron painted green on one side and red on the other, (the general colour used on railways); near the stand are two handles painted green and red also, which turn the rod and plate in the direction required. When not required the plate is "invisible," but on turning the handle to the "rest," the colours required may be seen miles off so that railway police, or those stationed at the various points of the line, can convey the intelligence as easily as holding out their hand, intimating that all is right. The cost of the working would be very inconsiderable, as these men are actually now paid that could work the telegraph, and give intimation in case of *slips*, engines wanted, or accidents of any kind that might occur.

ACCIDENT ON A RAILWAY.—On Thursday morning, at seven o'clock, as a train of laden coal waggons was coming down the branch of the St. Helens and Runcorn Gap Railway, close to the Union Plate Glass works, at Pocket Nook, the swing bridge, by which it should have crossed the Sankey Canal, was withdrawn to allow a flat to pass; and, as it is stated, without giving the usual signal. As soon as the circumstance was seen by those having the care of the train, the steam was thrown off from the engine, and the break applied; but, finding that an accident was inevitable, the engineer and stoker jumped off, safely; and the engine, which had lately been repaired at a cost of 500*l*., with the tender and two of the coal waggons, were precipitated into the canal. The engine was under the waggons lying on its side, and the damage it has sustained is not yet known; but the tender and waggons were much broken. The water was immediately let off from the canal, and preparations made for getting the wreck out; but it is probable that the engine must be taken to pieces, as there was no tackle on the spot that would lift one-fourth of its weight. At the time of the untoward accident, the flat had not approached near enough to be injured.—*Liverpool Standard.* [Nothing but the grossest negligence could have caused this accident.—ED. R.T.]

ACCIDENT ON THE BIRMINGHAM AND GLOUCESTER RAILWAY.—Tuesday morning, the nine o'clock railway train from Birmingham met with an obstruction about four miles from Spetchley, by one of the wheels of the engine breaking. The passengers alighted while another engine was sent for, and amused themselves by walking about three miles into Spetchley. In consequence of this delay, the train arrived at Cheltenham about an hour behind its usual time, much to the annoyance of many gentlemen who had business at the Sessions, and to whom an hour was of great consequence.—*Cheltenham Examiner.*

FATAL ACCIDENT ON THE GREAT WESTERN RAILWAY.—A fatal accident on this line occured in the Sunning Cutting (near the spot of the last catastrophe) on Wednesday evening, whereby a policeman of the name of Dixon lost his life. It appears that the unfortunate man was on the south or down rail, signalling the up train, when the six o'clock down train approached, unperceived by the policeman, and killed him upon the spot. The poor men has left a widow and five children.—*Daily Paper.*

FATAL ACCIDENT ON THE WISHAW AND COLTNESS RAILWAY.—We regret to learn that an accident occurred on Saturday last, on the Wishaw and Coltness Railway, by which two lives have been lost. The particulars of the catastrophe, so far as we have learned, are as follows:—The railway runs on an inclined plane as far as the village of Motherwell; and the waggoners, before starting from the top of the line at New Mains, are in the habit of placing the horse in a carriage or basket, when the train moves down the rails by its own momentum. On this occasion the waggoner followed the usual custom, and at the same time gave a man and a woman a drive in one of the waggons under his charge. The train had proceeded to about half a mile from Wishaw, when the first waggon entered a lye—the tongue having been left open—and being thus diverted from the straight course at the moment that the mass was moving with great velocity, the waggon was overturned, and killed the two passengers above referred to on the spot. Their bodies were frightfully mutilated. We have heard that the driver is not by any means blameless in this matter. Each waggoner, it appears, has a large block between the wheels of the waggons that can be immediately put into operation, and restrain the speed, by simply moving a handle at the side of the vehicle. Moreover, it is the driver's duty to go slowly or cautiously when approaching lyes on the line, but it is alleged that none of these precautions were observed, and the deplorable accident above noted is the result.—*Glasgow Herald.*

ACCIDENT ON THE MANCHESTER AND LEEDS RAILWAY.—On Monday morning last, about six o'clock, a terrible accident occurred upon this line of railway near the station at Sowerby Bridge, but which providentially was not attended with loss of life. One of the luggage trains was proceeding towards Manchester, when the engineer found he had not sufficient water in his boiler to keep up the steam; detaching the engine, he proceeded towards Sowerby Bridge for water, leaving the trucks in the deep cutting near that place. Another luggage train hove in sight almost immediately, and though the usual red lights were suspended upon the last carriage of the standing train, and the guard ran down the line waving the usual light as a signal, the curve is so extremely sharp that the engineer of the coming train did not perceive the danger he was in till within a short distance. Every precaution was adopted, but a dreadful collision took place. The engine literally jumped upon the standing train, and spouting forth its fire, ignited several of the trucks. One man had his thigh broken, and the engineer received a contusion of the head. The engine was all but demolished, and injury done to the carriages to the extent of several hundred pounds.—*Bradford Herald*, Jan. 13.

AN accident happened to the Yeovil mail on its down journey on Tuesday, by which it was upset and detained two hours. All the passengers were thrown off and injured, as was the coachman, and one unfortunate individual had his thigh broken. The coach had, we understand, just left the station, and was coming down a steep declivity without the shoe being applied to the wheel; the consequence was, the horses ran away and the coach came over.—*Sherborne Journal.*

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—In the letter of Mr. Hood, at page 1303 of the *Railway Times*, in continuation of the discussion on four and six-wheeled engines, I perceive your correspondent has in general evaded the principal points of the six-wheeled advocates, and substituted something in their place, which is certainly a very easy way, for the time, of representing them as being completely answered. In the seventh part of your correspondent's letter, at page 1206, he boldly stated, in answer to mine at 1195, that I was "well aware that the cause of the early locomotives of the Liverpool and Manchester line rocking was not the inside bearings, but it was the alterations which were found necessary to be made in the boilers and fire-boxes, which [he says] threw the engines out of their balance, and caused the additional pair of wheels to be then first used." At page 1254 I told Mr. H. that "he could not have made a greater mistake;" and at 1304, although he admits "it is perfectly true those engines were not altered in their fire-boxes," as he had previously stated, yet, in almost the same breath he has the modesty again to assert that my descriptions of the various engines on that line "are very erroneous."

Now, the determination of the Liverpool and Manchester Directors to have no engine above six tons, and none with fewer than six wheels if above four and a half tons, was so very widely published when they offered a premium of 500*l.* for the best locomotive engine about the year 1829, that one could hardly have expected any person would have attempted to deny the fact either that the first engine upon that line had six wheels, or that six wheels had been looked upon as a necessary protection to the road, even in engines from four and a half to six tons weight.

Moreover, Mr. Hood's historical account is equally inaccurate. The first case of a crank axle being used in locomotives I believe was in the year 1814, for the purpose of coupling the wheels, and is described in the specification of Messrs. Stephenson and Dodds, and those axles I distinctly recollect seeing. Again, two or three of the steam coach locomotive engineers used inside horizontal cylinders and cranked axles. One of the Stockton and Darlington engines in the year 1827 had inside horizontal cylinders in the boiler end, and applied their power to the outside of the wheels. The inside vertical cylinders of the *Novelty* applied their power to a cranked axle, and the whole of these took place prior to the existence of the *Liverpool*, the cylinders of which were not horizontal, but inclining upwards. When she first made her appearance, she had a large tube through her boiler, having pipes and the fire inside of it, but could not get steam; and Mr. Stephenson's *Planet* was the first railway engine having a crank axle, which he had used before, and inside horizontal cylinders which Mr. S. had also used before. That engine had Mr. Booth's tubular boiler, which had been used in about a dozen of the previous engines. The *Liverpool*, failing to get steam, was eventually withdrawn; and the *Planet*, having a rectangular fire-box, a round one was applied to the *Liverpool* in the adoption of Mr. Booth's boiler, and (as your correspondent very correctly states) this "fire-box being found larger," was also found to have "increased the weight so much behind the driving wheels" of the engine thus altered, "as to render additional wheels necessary," or the destruction of the rails inevitable, so that after all the noise we have heard about derangement of balance, Mr. Hood now claims credit for the *Liverpool* as the first example of a large fire-box. And the reason for it was a very natural one certainly, for being so hard up for steam in the first instance, it would have been rather unusual, after remodelling the boiler, that they should a second time be deficient in the supply of that necessary commodity, when so many examples were in daily work, pointing out a size of fire-box that would answer in practice. Moreover, independent of several engines of that construction, with inside bearings, constantly working upon the Liverpool line, there have been probably not fewer than 50 engines of the present construction, with four wheels, which have been tried upon that line prior to being sent to their final destination. Hence, ample opportunities presented themselves for comparative observations, both on their motions and consumption of fuel, so that your correspondent's reasoning about the experience of that line being confined to the *Liverpool* is absolutely fallacious, and that engine was not so ineffective as to be of any weight to an argument based on that ground. Moreover, Mr. H. makes this engine out, either as a superior example, or not so effective, just as suits his argument, and in that respect she is certainly a very accommodating engine.

"At high speeds the action of the spring is frequently at fault," and therefore the rocking motion caused by the difference of the levels of the inside springs of the present four-wheeled engines is greater than with outside bearing engines, in proportion as the same difference of levels in the springs have the superiority of about five to three in rocking the four-wheeled engines off the rails. From the shortness of the distance between the axles and springs in four-wheeled engines, their pitching and serpentine motions are, at page 1123, admitted to be greater from "inequalities in the rails than in six-wheeled engines." If so, then the cross distance of the springs being shorter with inside than with outside bearings, the cross pitching or rocking must for similar reasons be greater upon inside than upon outside springs; and it was therefore no wonder that Mr. Hood should admit the same class of causes to produce similar effects.

As to the sinking of the rails, Mr. Hood contends they ought never to occur (except in his argument against six-wheeled engines) and when they do take place, it has been most unequivocally admitted that such inequalities must and do produce more pitching in four-wheeled than they do in six-wheeled engines. Again, I contend that the gauge or cross distance of the springs, which are an elastic foundation and admitted to be "frequently at fault," are hence entitled to at least as much consideration as "the sinking of any small portions of the road," which "ought never to occur." With respect to the gauge of the rails (though there are different opinions entertained on the subject, nevertheless), nearly all agree that fifty-six and a half inches is too narrow, and more especially for inside springs, which are in fact a negative upon the gauge of the road, from the greater latitude which they allow for rocking upon the elastic foundation of the springs, and consequently a greater rolling upon the road, and tendency to disturb the vertical centre of gravity of the boiler, and thereby the proper level of the rails, sleepers, &c. with increased chances of lifting the flanges of the wheels upon the rails.

Your correspondent has attempted to deny his admission of the greater steadiness of motion given by outside bearings; but on looking at what he says I stated, it will be impossible that any one can avoid discovering his misrepresentation of it. What I stated was as follows: "even Mr. H. himself admits the fact he here attempts to controvert in the first division of his reply to Mr. Seaward at p. 1137, WHERE THAT GENTLEMAN ONLY ATTEMPTS TO FRIGHTEN US WITH BROKEN AXLES AS A GREATER DRAWBACK THAN THE ADVANTAGES GAINED BY OUTSIDE BEARINGS." Now, the whole of the above Mr. H. separated from its connection with his own words. "The outside bearings of six-wheeled engines would undoubtedly, *when considered simply of themselves, and without reference to other causes*, give greater steadiness;" the words in italics I omitted, considering Mr. Hood's meaning more explicitly expressed by the words (above) in capitals which preceded the quotation, and Mr. Hood did not (in his last) deny that such was his meaning, but scrupulously suppressing those remarks which accompanied the quotation, he completely alters the sense of what I said, and then asserts "that no one can avoid discovering the difference." Now, I contend that your correspondent is bound to lay aside his "loose general assertions" about "other causes," and gives us intelligible "and substantial facts," as to what he did mean, unless he wishes to be considered as making "groundless statements."

Mr. Hood also observes, that I am "perhaps not aware of the change which has taken place in the opinion of Mr. Stephenson, in" respect to outside framing, "otherwise as pupil of Mr. Stephenson, would perhaps scarcely hold so tenaciously to" what Mr. Hood considers as an exploded opinion, though scarcely anything else is to be seen in the general practice of the inside advocates of the present day, nor do we hear anything about a general resort to inside bearings.

Mr. Stephenson first adopted the outside system in the year 1827, to suit the construction of a wider tender, and also some wider coaches which were then made; shortly afterwards I contended for a more general adoption of them, for different reasons, and Mr. S. eventually took the same view of the subject. Up to the present time experience has only confirmed the reasons which led to their general use—consequently I am unchanged in that respect, notwithstanding the engine alluded to, and which I have seen. I am told by different parties that the working of that engine is tolerably steady at 20 miles per hour, but that rocking, pitching, and serpentine motions, are very evident at thirty miles per hour; and, to adopt the language of those who from comparative trials as far as they have gone, (and they have had good opportunities for comparative observation), "the engines previously received from Newcastle are Mr. Stephenson's patent ones." But I contend, Mr. Hood's allusion to that engine is a mere evasion of the question I put to him on the consistency of inside advocates, and on the operation of his own admitted fact of "the springs being frequently at fault in high speeds," and the consequent necessity for an extensive base for their action.

At the foot of the centre column in page 1123, the vertical deflection of the rails under the wheels is intimated to be so great as to lift the flanges of six-wheeled engines upon the rails, and that "the whole of the six-wheels are scarcely ever in contact with the rails." That assertion, however, is quickly followed by another statement, as contrary to the above as light is to darkness. In order to get rid of part of the "additional pitching motion of four-wheeled engines by the sinking of the rails, or unevenness at the joints," it is contended by Mr. H. that those inequalities "ought never to occur in a well-constructed and duly maintained railway;" did it never occur to your correspondent, that the inequalities alluded to ought never to take place with six-wheeled, as well as "never occur" with four-wheeled engines, and that engines entirely upon inside springs, with their axles six feet asunder, have not only a "greater" liability than six-wheeled engines to pitch, from their front and hind wheels, &c., being nearer together, but also to rock, as well as pitch, from the faulty springs being nearer together?

"It must be obvious to every one, that any body of the parallelogram form moving in curved lines, must be more easily moved in proportion to its shortness, as it adapts itself more readily to the curvature;" and this property is so strong in four-wheeled engines, that the cases 41 and 51 at page 1257, rocked and pitched themselves off the rails, *on the inside of the curves*, the latter producing one of "the worst species of accidents that can happen on a railway, by runing down an embankment, and drawing the train after it." I account for them going off the inside of the curve from an excessive rocking and serpentine motion, possibly aided at the moment by the pitching motion. A spring not being "instantaneous in its action," and the present four-wheeled engines in particular frequently being in the act of running against one side of the road *below*, whilst the rocking motion is busy with the boiler in the *opposite direction above*, consequently as the centrifugal force of the boiler will be heaviest when rolling to the *outside* of the curve, the natural effect is a greater tendency to lift the *inside wheels*, and whenever the serpentine motion is running the *inner*

Digitized by Google

wheel against the rail, at the same moment there will be a combined effort to send the engine off *on the inside*, especially if the pitching motions *are easing* the weight in front at the time.

"Now, in the case of locomotive engines, the extreme points of support in four-wheeled engines are about six feet apart," and consequently are more readily disposed to twist about suddenly, as in some 24 of the cases with four-wheeled engines in my last, out of which about 17 were of the class described by your correspondent, as the "present excellent four-wheeled engines," the other seven being of various constructions of four-wheeled engines. Moreover "in six-wheeled engines they are nearly eleven feet" between the axles, and "it must be obvious to every one that" they "must be more easily" prevented from turning so suddenly "in proportion to" their length, "as it then adapts itself more readily to the curvature" of modern railways, instead of twisting about so suddenly as to go off at the inside of curves, and upset in the manner so frequently experienced with four-wheeled engines where the axles are only about six feet apart. Whether the distance of eleven feet will bear increasing with advantage, future experience will best determine; at present the cases of Nos. 32, 36, 42 and 44, all six-wheeled engines, ran through the switches at a quick speed, and those being the very worst part of railway curves, amply prove that they are not too long at their present distance between the axles.

In my previous letters on this subject at page 1195 and 1254 and 5, I distinctly stated in the seventh and eighth division of my remarks that a greater steadiness of motion had been obtained by the adoption of outside bearings, and that in consequence the rocking motions were much reduced—that the pitching and serpentine motions were much diminished by adding a third pair of wheels to some of the four-wheeled engines, and that by removing the coach axles further asunder, a similar steady motion was obtained in them also. Hence considering what I think must be obvious, that steadiness of motion is the greatest desideratum, and the indispensible element of safety, I therefore stated that "upon a road of sufficient strength, I do not contend for six wheels over four, as possessing any additional safety, except in the present form of locomotive engines, where it is better for various reasons," thus evidently preferring six wheels in those engines upon any road whatever.

I then went on to state, "I believe that if the weight of materials in three pairs of wheels and axles, be put into two pairs of wheels and axles, the latter will be the safer engine of the two, provided the extreme distance of the axles and springs be the same in both cases. But however strong and durable, or whatever may be the number of the wheels and axles, the advantages admitted by Mr. Hood in employing a greater width for the springs and a greater length for the better working of both wheels and springs, which the present six-wheeled engines possess, that (I think) is the principal point of the present discussion." Now from the "scrupulous" professions of your correspondent, and his assuming so conspicuously "the high bearing of a gentleman," we are naturally led to expect some grand display of the principle. "In every work regard the writers end," and your correspondent has given the following truly exquisite specimen of his "high bearing" and "scrupulous" mode of misrepresenting his opponents as to "the peculiar excellence of" six-wheeled engines, in order that they may appear to have been "completely answered." He states, "Mr. Gray commenced by advocating six-wheeled engines, but concludes by determining four-wheeled engines to be safer, provided they contain as much weight of materials as six wheels; though he strongly insists on the advantages of outside frames, after every body else, even Mr. R. Stephenson has abandoned them as far as possible."

Now, it must "be quite obvious to every one" that the alterations of Mr. Hood "so completely alter the sense, that no one can avoid discovering the difference."

I also proved that the maintenance of way for the "present excellent four-wheeled engines" was about 77 per cent. more than for the six-wheeled engines of the Liverpool and Manchester line; this, however, your correspondent has not attempted to controvert. As to Mr. Hood's assertion of the cost of locomotive power, it will of course pass for its worth, and has already been shown to be "very erroneous," from details which have appeared in another quarter since the publication of your correspondent's assertions.

In the tenth division of my remarks at page 1255, I questioned your correspondent, whether the bending and breakage of axles in the early inside bearings, together with those admitted by himself, to have failed more recently "be as great an argument against the advantages of inside bearings, as any similar cases are against the advantages of outside bearings?" Mr. Hood has not attempted to answer that question, and I give him credit for cautiousness in not doing so, if he can handle it no better than by evading it as he did another class of my remarks, at the top of the right column in page 1256, which he attempts to get rid of in the following manner:—"What will" I "say, if" he "argue in the same way, and assert that if" I "could bring 99 cases of four-wheeled engines running off the rails, it would prove nothing but some imperfection in those particular engines." I say this to it, that Mr. Hood having stated at page 1206, that four-wheeled engines "are almost wholly exempt" from broken axles, he evidently means to say (if he has any meaning at all), that there is not much "imperfection" in that quarter; and if any exist in other parts, we should expect him, as the advocate of four-wheeled engines, to give an intelligible description of their "imperfections," by which it would be seen whether they admit of a remedy, or are unavoidable in four-wheeled engines: for to employ such vague expressions, as "some imperfection in those particular engines," according to his own phraseology, is merely a "loose general assertion," and very possibly an "unfounded statement," and is neither arguing in the same way, nor is it arguing at all.

At page 1123, it is stated, "that in addition to the numerous accidents from six-wheeled engines running off the rails, there have been on one railway alone, in the course of twelve months, nineteen broken crank axles on six-wheeled engines." Now, as these remarks were made after alluding to the Brighton accident, I was naturally led to suppose that that writer meant to convey the idea to the public, that in addition to a great number of broken axles, there had been "numerous accidents from six-wheeled engines running off the rails," similar to the Brighton and other accidents of that class; arising from little or no other cause than the want of breadth for the action of the springs, and the want of length between the axles; both of which are the more indispensible to safety and stability, from "the action of the springs being frequently at fault" in high speeds.

Moreover, Mr. Hood, declared near the conclusion of his second letter, at page 1137, that he had "stated facts which clearly show that four-wheeled engines are less liable to accidents than six-wheeled engines upon railways of the usual construction."

Now, having resided about railways and railway machinery since about the year 1811, which is nearly the whole period of my life, without being aware of the numerous accidents alluded to by your correspondent, I therefore doubted the accuracy of his statements, but as it was very possible that some solitary case or two might have taken place without my becoming acquainted with them; after stating my third question at page 1195, I requested that Mr. Hood would "be kind enough to inform us about what periods and whereabout such casualties had taken place, and what were the consequences" of six-wheeled engines with outside bearings running off the rails, without any apparent cause? In reply to that question your correspondent endeavours to produce three cases at page 1206. The first of the three, however, which is No. 18, in my last letter, did not, upon his own showing, come under that class of cases, nor was the train drawn down the embankment, as stated by that gentleman, and so far from going off without any apparent cause, your correspondent himself stated, "the *Patentee* broke her fore axle."

Moreover, she had no flanches upon her driving wheels, and according to Mr. Hood's opinion, was a four-wheeled case, for he states at page 1123, it is quite of as much importance, as the simple, though obvious fact, of the engine possessing four or six-wheels; and but one of those cases had the slightest appearance of being a parallel to the Brighton accident, namely, the Southampton one. Now, as the axles were in that case found bent after the accident, whether they were straight before it took place may with tolerable certainty be judged from the fact that the Liverpool and Manchester Company at that time were using axles under their common waggons (not precisely of the same dimensions, but) as powerful as those under the front of the six-wheeled engine in question. Hence his *Patentee* turns out (upon his own showing) to be but a parallel case of weak axles to the Southampton one, and was not in any respect similar to the Brighton accident either in its cause or consequences, for the latter was very fatal, but there was no personal injury with that of the *Patentee*.

Having thus disposed of two out of the three "numerous cases" produced by your correspondent in answer to my third question with reference to his insinuation of six-wheeled engines running off the rails without any apparent cause, I shall, in his own words, here again dispose of the remaining negative evidence against six-wheeled engines.

"No. 19. This four-wheeled engine (says Mr. H.) had vertical cylinders between the wheels, and never could run at high speeds. This case does not appear to be peculiarly illustrative of the present form of engines." Now, if this four-wheeled case is not illustrative of the present four-wheeled engine, why did your correspondent bring that very case forward, not only as a parallel to the present form of engines, but to represent this four-wheeled case as a specimen of six-wheeled engines, and support his argument by remarking that they now stand recorded "as evidence against the perfect safety of six-wheeled engines, which the indiscretion of such unscrupulous advocates as Mr. Gray has alone called forth."

There is an old proverb, that one should praise the bridge which has borne them safely over, and by that test will the comparative security of four and six-wheeled engines be eventually settled by the public. Now, Mr. Hood asserted he had stated facts, and if so, surely he must have known his cases; but on being called upon in the fifth class of my remarks, at page 1195, to specify his facts on railway accidents in general, your correspondent, in the fifth part of his reply, at page 1206, declined giving us anything more than his previous "loose general assertions," which were unsupported by the "direct reference to statistical returns of accidents," which, if necessary from six-wheeled advocates was still more necessary from Mr. H. himself, who proposed that test, and more especially from what he stated as facts, being couched in mere assertions, which upon his own showing not only betrays a lamentable "poverty of argument," but places him under the suspicion of being considered as making groundless statements. The various Companies using six-wheeled engines "will perhaps not much thank" Mr. Hood "for publishing" such unsupported assertions—not in attempting to support them—by substituting four wheeled cases for six-wheeled engines.

Not one of the fifty-five cases in my last is denied to have occurred, and all that your correspondent has been able to make of them, is to correct a few of their details, which do not materially affect the position they were chiefly brought forward to prove, namely, "that the engine-driver or stoker almost invariably suffer" in accidents with four-wheeled engines, "whilst they as generally escape under similar circumstances with outside six-wheeled engines."

I have been referred (by a friend) to examine the

Digitized by Google

Railway Times for 22nd May, 1841, at page 559, for an account of the case of No. 9; I shall only give a few extracts, and refer your readers to that number for further particulars. The switches were not right, "the consequence of which was, that on the arrival of the up train, the engine was thrown off the line, and the engineer nearly killed." Had "the speed of the train not been reduced to a very slow rate, the consequence might have been vastly more disastrous." The man-trap or foot-plate "on which Cox was standing between the engine and the tender, owing to the violent jerk it received, rose out of its usual place," (or doubled up as usual,) "and the poor fellow's right foot and leg were jambed with great violence; poor Cox was carried to the Leeds Hospital, where his leg was found to have been so dreadfully injured, that it is feared amputation will be necessary. Two or three pieces of bone were extracted from his leg at once. Is not the bleeding party," in reference to the switches not being right, "a protegé of one of the Directors? Has he not been indebted to the friendship of that Director for his repeated restoration to office and salary? Is he not the son of the housekeeper or laundry-maid of the said Director? And is not that Director Mr. C. H.?" Now, your correspondent stated, "this case certainly deserves the attention of the Linnæan Society," and there is too much truth in that remark, for Mr. H. assures us that notwithstanding the loss of his bones, "the man is now walking about with two full-grown legs, precisely similar to those of any other person." However, whether Cox belongs to the "species of zoophites," or to "those of the crustaceous tribes," he is evidently an honourable and a grateful man, and upon the whole, I do not much regret a trifling error which has brought into public notice circumstances which will have their influence both with railway Companies and their servants, under similar circumstances, and will also be a lesson to cost hunting attornies. My own recollection of the case was this:—Not long ago, one of the E. C. R. engines went off the rails at the switches, and Cox, the engineman, was severely injured, as usual, by the doubling up of the man-trap. On my mentioning the case to the friend above alluded to, he replied, "he lost either one or both of his legs;" but I am sure that that individual had not the slightest wish to overrate, but the contrary; and I had not the slightest idea at the time that your correspondent had been the subject of Editorial remarks upon that occasion.

In the four-wheeled case, No. 1, in my last, your correspondent asserts, that the accident "was caused by a switch which was too narrow to allow the wheels to pass." It was generally considered the road was not perfect, but it was contended that it was not so much out of order as to account for the accident, and the other engines of that Company passing the same switches without difficulty, was full more proof of that opinion. I stated that the "*Liverpool* went off the rails through a small defect in the road," and I might have added, combined with those of the engine.

No. 2, six-wheeled. Mr. H. states, this engine ran "into the bog at Chat Moss, and therefore could not upset;" however, that statement is "very erroneous;" the case occurred upon an embankment, and some of the four-wheeled engines not only upset, but twisted about end for end, and turned bottom up, near the middle of Chat Moss, where the road is about level with the "bog."

No. 3, four-wheeled. The objection that this engine had outside framing goes for nothing, and the case shows the greater liability to sudden twisting in four-wheeled engines, in common with "the present excellent" specimen.

No. 7, four-wheeled. It is objected this engine had outside cylinders; but why did not your correspondent object to her "excellent" inside bearings?

No. 11 and 25, four-wheeled. It is not denied by Mr. H. that both those engines went off the rails, and turned, nor that the former went upon her broadside "against a rock," and the other part of his details are not of so much importance.

No. 19, four-wheeled. After an unsuccessful (though probably an inadvertent) attempt by your correspondent to place this case on the six-wheeled side, he modestly informs us that it is not "peculiarly illustrative of the safety of the present form of engine," and should think that a short coupled four-wheeled case is not at any rate "peculiarly illustrative" of six-wheeled engines.

Nos. 21 and 23 four-wheeled, with outside bearings as stated by Mr. H., which could not of course prevent their twisting, as those results can only be obtained from a greater distance between the axles.

No. 29 four-wheeled. This is similar to No. 48 six-wheeled, but the former twisted and tumbled, whilst the latter did not go off the rails.

No. 41 four-wheeled. Mr. Bury and not Mr. Hargreaves was the maker of this engine, and it was not until after this accident that Mr. Hargreaves her proprietor, added a third pair of wheels.

No. 53, four-wheeled. It is objected "this engine had outside bearings;" hence the stronger proof that four-wheeled engines generally have their wheels too near together, and the following cases are an additional proof:—

No. 59, four-wheeled, Bolton and Leigh, *Liverpool*, ran over a horse-shoe, which had been jammed on the rails, and thus pulled from off the horse's foot; she went off the rails, and ran over an embankment.

No. 60, six-wheeled, the L. and S., *Hawke*, ran over a pinch bar, and broke it in two, near Garforth, and kept on the rails. F. Haigh, engine-man.

No. 61, four-wheeled, the L. and S., *St. Vincent*, came into collision with some waggons by the slide bars being wrong; the engine twisted about end for end; both engineman and fireman escaped by previously jumping off.

No. 62, six-wheeled, L. and M., *Comet*, Hesketh, engineman, ran over the switches which had been left wrong, and kept on the rails, although the switches presented a greater obstacle than the horse-shoe in No. 59.

No. 63, four-wheeled, the N. U. engine, No. 4, went off the rails and tumbled over, by running over a stone.

No. 64, six-wheeled, the L. and S., *Lord Hood*, ran over a piece of wood about 5 inches square, and kept on the rails. F. Haigh, engineman.

No. 65, four-wheeled, the B. and L., *Liverpool*, and another four-wheeled engine of that line, came into collision near Kenyon junction, and gave a striking illustration of the familiar simile alluded to by Mr. Roberts, for, like "a plank upon a fulcrum," they each reared up, and stood to each other, as though they had been "bull terriers" in a ferocious conflict.

No. 66, two of the same Company's six-wheeled engines came into a collision upon one of the inclines, when the short four-wheeled tenders (one of which was between the two engines,) reared up, but the engines from the greater length between the axles, were prevented doing so.

No. 67, four-wheeled, the L. and S. engine, *Lord Hood*, prior to having a third pair of wheels attached, ran over a piece of wood, and pitched so frightfully that the fireman left through fear. Haigh, engineman.

No. 68, six-wheeled, one of the H. and S. engines ran over a horse, without getting off the rails or experiencing any frightful pitching, and being dark, Wilson, the engineman, thought at first he had run over a man.

No. 69, one of the N. M. engines, which having no flanges upon the driving-wheels, is, in your correspondent's opinion, "quite of as much importance as the simple, though obvious fact, of the engine possessing four and six wheels," lost a tyre off one of her front wheels, and went off the rails, and although her length prevented her twisting so suddenly as shorter four-wheeled engines usually do, the speed eventually tumbled her over, and sent her down an embankment; the engineman died from the bruises which he received. Passengers escaped unhurt.

No. 70, one of the L. and S. six-wheeled engines lost a tyre off one of the front wheels, about three miles from Selby, and although the speed was so great as to run the train more than a quarter of a mile after it came off, she was stopped without getting off the rails, having flanges upon the driving wheels. Peacock, engineman.

In conclusion, I beg to state, that I should only equal the general "poverty of argument" exhibited by your correspondent, had I followed his example in stripping from the six-wheeled side in my last, just so many cases as are not a fair specimen of the "present excellent" six-wheeled engine, in the same manner that Mr. Hood has attempted to strip out of the four-wheeled list, not only the four-wheeled engines which in some respects differed in construction from (but also several of) "the present" class. After "deducting those cases which" he stated "to be incorrectly described," began to put his foot into his own professed principles in "controverting facts by arguments," stating that "no doubt several others are equally inaccurate, though" he "did not happen to be acquainted with the particulars." Now was ever an argument more evidently unfounded than this? I might (in the same way) have argued, and also supported it by proof, that some of his three "numerous accidents" with six-wheeled engines, having turned out to be four-wheeled cases, no doubt his statements in general "are equally inaccurate," but I consider that such arguments are as "loose" and "ungentlemanly" as they are prejudicial and injurious to any cause incumbered with them.

Independent of greater safety, it is an additional recommendation of six-wheeled engines that they are also about fivepence per train per mile less than four-wheeled engines in the amount of expenses for locomotive power and maintenance of way, upon two of the lines alluded to in my last.

I am, Sir, your obedient servant,

JOHN GRAY.

English-street, Hull, December 30, 1841.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—I beg to offer some further remarks on locomotive engines, in reply to the observations of your correspondents.

The letter of Mr. Adams is evidently written with the intention of most fairly discussing the respective advantages and disadvantages of the two classes of engines; and therefore if I differ with him in some of his opinions, I do it under the conviction that he is equally desirous with myself to elicit the truth by these discussions. Passing over, then, his remarks about the difference in length between the wheels of the two kinds of engines, and the effects of that length in passing curves, I would first remark upon that part of his letter where he alludes to the axle of the driving wheels of a six-wheeled engine, always being parallel to the radius of the curve, while in the four-wheeled engine it is not so. This argument I have also heard stated by an advocate of six-wheeled engines, as a very strong point in their favour. It is argued that the centre of gravity of the entire engine being much nearer to the driving axle than the fore axle in both classes of engines, the centrifugal force will cause a large portion of the resistance to be thrown on the flange of the driving wheel of the four-wheeled engine, while in the six-wheeled this will be counteracted by the flange of the trailing wheel. This is the same argument as Mr. Adams's, only rather differently stated. It appears to me, however, that this view of the subject arises entirely from considering the action of the engine by itself, without viewing it, as it must always be viewed, in connection with the train which it draws. The effect stated, would undoubtedly occur at high velocities, were it not counteracted by the weight of the train, which, possessing no motion of its own, acts as a balance to the centrifugal force, and prevents the hind part of the engine from having the tendency to press the flanges of the last pair of wheels—whether driving

Digitized by Google

or trailing against the outer rail. I consider, therefore, that when a train is attached, the flanges of the trailing wheels of six-wheeled engines are not in contact with the outer rail, (except the curve be of such small radius that the engines will not otherwise pass) and that the same cause prevents the flanges of the driving wheels of the four-wheeled engines from being unduly pressed against the rail. Of course, it must be understood that I am only speaking of those cases where the engines exert a tractive power on the trains; because, in the case of descending gradients of considerable magnitude, the case would be very different. In one of the letters of Mr. Cruickshank, it was stated that the flanges of the trailing as well as of the fore wheels of a six-wheeled engine, were in contact with the outer rail in passing curves, and for the purpose of simplifying the argument arising out of it, this position was assumed to be true—the argument itself not being altered by the admission. But for the reasons here stated, I feel convinced the position cannot be true, except in particular cases, as it militates against the known laws of dynamics. We arrive then at this result:—that if the distance between the axles, and also the play of the wheels, be double in the six-wheeled, to what it is in the four-wheeled engines, the line of direction of the axles of the driving wheels will be exactly the same in both classes of engines. And though it has been objected that this difference in the play of the wheels is not always the case in the two classes of engines, geometry teaches us that it ought to be so in all cases, and experience shews that it is so in the generality of instances.

Mr. Adams is perfectly correct in what he has stated about my remarks on Mr. Roberts's theory of the vertical vibrations of four-wheeled engines. The great number of points which I had to discuss in that letter, obliged me to confine my remarks to proving the inaccuracy of the various positions which I undertook to answer, without attempting to shew the modifications to which some of them might be subject. Mr. Roberts's illustration of the vertical sway of the engines, was clearly erroneous, for if it were not, the vertical motion once induced would go on increasing as long as the engine was in motion. Mr. Adams's is a totally different view of the matter, and is certainly correct in theory, though he greatly overrates it in extent. The question resolves itself into a problem of the *composition or the resolution of forces*; and it appears to be a problem of a very complicated nature. Supposing the pitching motion to be produced by some inequality in a joint of the rails, the three principal forces which will have to be resolved, will be: 1st, The existing momentum of the engine, (reckoned from its centre of gravity,) will be deflected from a horizontal into a vertical direction, the angle of reflection being equal to the angle of incidence: 2d, The force of gravity acting in opposition to this new direction of the force: and 3dly, The fresh power produced by the action of the pistons, which will either aid or retard the effects of gravitation, exactly in proportion as the strokes of the pistons happen to coincide with the upward deflection of the mass, or its downward movement by the force of gravity. The great elasticity of the mass, and the extreme mobility of a portion of the weight—namely, the water—will still further complicate these results. The angle of deflection must, however, be extremely small under all ordinary circumstances, and can only become of consequence when several causes combine to produce their effects, in one direction, at the same moment.

With regard to the letter signed "A Friend to Railways" I should much regret if any observations of mine were the cause which had aroused the splenetic anger of any of my opponents, in the manner which this letter shews. For myself, I never suffer a moment's vexation in consequence of any remarks that may be made upon any of my writings; because I never advance anything I am not fully prepared to justify. *Vereate dii, quid ferre recusent, quid valeant humeri.* But seeing the internal vexation which the writer of this letter suffers, I would not willingly add to such a corroding passion by any further remarks, were it not necessary to justify myself from the supposition of wilfully misunderstanding an opponent's arguments, and then arguing upon this supposition as though it were true. Had "The Friend of Railways" quoted the whole passage of Mr. Roberts's letter to which he alludes, he would find it impossible that any other meaning could be attached to it than that which I adopted, if words be allowed to have any positive and definite meaning. The passage is as follows:—"Unless the road is in bad order, each pair of wheels in a six-wheeled engine presses upon the rails with nearly an uniform weight throughout the journey, whilst in a four-wheeled engine, as at present constructed, when at rest, the weight is necessarily great on the driving wheels compared with that on the leading wheels, and this weight is increased by the draught on the engine." Here the equal weight on each pair of wheels of one kind of engine, is constrasted with the unequal weight on the wheels of the other: and I had no more right to doubt that this was the real meaning of the author, simply because it was not true, than I had to doubt his meaning when he stated that *double* the angle of incidence of a blow would give *seven* times the force of the stroke—an assertion which is equally erroneous. Any person must be a mere novice in polemics, who could hope to gain any advantage by misrepresentation in such a discussion as the present, which excites the attention and effects the interests of a very large number of most intelligent and well informed men: and such a course would be the surest way a writer could adopt to lose his standing in the field of argument. It has however been pronounced, evidently *ex cathedrâ*, that a different meaning was intended to the passage, than what the words import; and the best argument to prove that I had no motive for misconstruing the meaning will be, to shew that the new reading is equally erroneous as a matter of fact, as the old and repudiated statement has already been proved to be.

The argument now is, that the respective weights proper to each pair of wheels of a six-wheeled engine, are maintained with nearly an uniform pressure on the rails throughout the journey, when the road and rails are in good order. Now, if a line of rails are mathematically true, of course this would be the case with both descriptions of engines. But inequalities must necessarily occur even on roads in the very best order. Whatever, then, causes an obstruction to the wheels—whether an unequal joint of the rails, the striking of the flanges of the wheels against the rails at curves, or any other cause—gives a blow to the wheels by reaction from the body which the wheels strike against. This blow the wheel communicates through the springs to the engine itself; and therefore, the moment the wheel communicates this blow to the engine, the engine reacts upon the wheel in the opposite direction, forcing it downwards, while that part of the engine which is acted upon rises upwards in proportion to the magnitude of the blow. Here then the wheel remains for a moment without the weight of the engine resting upon it. But what becomes of the weight thus taken off from the wheel? Gravity is a power we cannot elude by the most subtile refinements; and therefore this weight is either distributed among the other wheels, or else the weight suspended for a moment, acts the next moment with double force. This is a law which never varies—not even to meet the wishes of the advocates of six-wheeled engines. And therefore we see, that as this effect occurs continually to each of the wheels of six-wheeled engines, the same as it does to those of four-wheeled, the assertion that six-wheeled engines possess any advantage in this respect, is wholly without foundation. *Felix qui potuit rerum cognoscere causas*—"Happy is the man who traces effects up to their causes," is a truth which, were it more acted upon, would prevent a vast deal of idle assertion, and perhaps prevent a great deal of acrimonious feeling, when the loose assertions of an unsound philosophy are shown to be erroneous. The want of this inductive system is to produce the *eruditio ad libitum*—a science which can be twisted this way or that, according as it happens to suit the present purpose.

I am, Sir, your obedient servant,

CHARLES HOOD.

Earl-street, 11th Jan., 1842.

CARRIAGE OF GOODS AND AGRICULTURAL PRODUCE BY RAILWAYS—LONDON AND BIRMINGHAM RAILWAY.

To the Editor of the Railway Times.

SIR,—Commercial men and proprietors of railway property are much indebted to your correspondent, "A Shareholder," for his letter inserted in the *Railway Times*, of January 1st, in which the subject of the carriage of goods on railways is very ably brought before the public. Notwithstanding the importance of the question, I do not recollect that it has ever before been discussed in the columns of your valuable paper, but I trust it will now attract your attention, Mr. Editor, as well as that of your numerous correspondents, as it is one of the greatest consequence to the commerce of the country, as well as to the success of railway undertakings.

As a considerable proprietor in the Birmingham and Gloucester Railway, I, equally with your correspondent, cannot but express my astonishment at the inconsiderable amount of goods conveyed by that line. At the last meeting we were told that this arose from the circumstance of the railway not being open into the town of Birmingham. Several months have now elapsed since this opening has been effected, and still no increase in the carriage of goods takes place. I fear this does not say much in favour of the new management, which was to have produced such wonders.

To shew how completely the expectations held out by Railway Companies in regard to the conveyance of agricultural produce have failed, I will cite one instance, but that a most important one—the London and Birmingham Railway Company. In a prospectus of that Association now laying before me, dated January 31, 1832, I find the following advantages held out to the public as an inducement to form the railway, viz.:—

First. The opening new and distant sources of supply of provisions to the metropolis.

Second. Easy, cheap, and expeditious travelling.

Third. The rapid and economical interchange of the great articles of consumption and of commerce, both internal and external, and

Lastly. "The connection by railways between London and Liverpool, will unite London by railways with *the rich pastures of the centre of England*, and the greatest manufacturing districts, and through the Port of Liverpool, afford a most expeditious communication with Ireland."

In proceeding before Parliament* for their Bill, I find the following statement given in of their anticipated traffic for goods and cattle, viz.:—

Goods	£103,901	16	6
Cattle	102,286	13	6
Total of estimated receipts from goods and cattle	£206,188	0	0

Now, it appears that the *actual* receipts for goods and cattle for the years 1839 and 1840 and 1841, were as follows, viz.:—

In 1839—Goods	£64,691	7	0			
Cattle	607	0	0			
				£65,298	7	0
In 1840—Goods	104,195	13	3			
Cattle	6,824	1	6			
				111,019	14	9
Six months of 1841—Goods	67,617	3	7			
Cattle	3,105	15	0			
				£70,722	18	7

It will be observed from the above, that while the traffic in goods has equalled the estimates—though it cannot be doubted that with moderate tolls it might probably be doubled or trebled—the

* Vide Minutes of Evidence taken before the Lords' Committee to whom was referred the Bill, entitled an Act for making a Railway from London to Birmingham, ordered to be printed 1832.

Digitized by Google

mmence of cattle instead of producing, as estimated, pwards of 100,000*l.*, has in reality reached only out 1-15th part of the amount. Now considering the Company obtained a very important concession from Parliament, on condition of "*opening new sources of supply of provisions for the metropolis*," and "*from the rich pastures of the centre of England*," and "*from Ireland*." I do assert that they are bound both by interest and policy, to fulfil these promises to the letter; on the faith of them, be it remembered, was the Act granted by Parliament. The traffic in cattle, apparently so totally beneath their notice, they estimated at upwards of 100,000*l.* per year, and I confidently assert that it would produce that amount, or more, if conducted on reasonable terms, favourable to both parties, instead of driving the farmer away by high tolls. It would, however, seem that Railway Companies look to first class passengers alone for revenue, as it is exclusively to them that deference, homage, and attention are paid, and comfort provided.

It has been asserted, that little or no profit is derived from the conveyance of cattle, agricultural produce, and merchandise; but I am at a loss to imagine how this position can be maintained, considering that some of our best paying railways, viz. the Stockton and Darlington, the Leicester and Swannington, and others in the north, derive their profits principally from coal, although it is an article of so trifling value, as compared with its weight.

I am, Sir, your obedient servant,
A FARMER AND SECOND CLASS PASSENGER.

CARRIAGE OF GOODS ON RAILWAYS—BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—The following table is compiled from the weekly reports given in your paper, in order to show the proportion of passenger and merchandize traffic on the several railways, commencing on the 12th November.

Name of Railway.	Passengers.	Merchandize.	Pro. of pas. to merc.
Birmingham & Derby	£4,420 6 3	£2,064 18 7	2.14
Birmingham & Glou.	7,060 9 2	1,295 14 8	5.45
Bromsgrove Junction..	694 1 6	867 5 3	0.80
Chester & Birkenhead	1,652 14 9½	161 15 10	10.26
Dundee & Arbroath	761 9 0	310 0 9½	2.47
Glasgow & Ayr.....	3,647 5 11	1,758 13 1	2.07
Glasgow, Paisley, & Greenock	3,030 9 6	801 16 5	3.78
Grand Junction and Chester and Crewe	32,368 7 9	10,385 19 9	3.11
Great North of England	4,013 19 1	3,016 2 11	1.33
Great Western.....	49,056 10 4	12,919 3 2	3.79
Hull and Selby.....	2,419 1 8	2,154 14 9	1.12
Lancaster & Preston.	2,253 10 5	226 11 10	9.96
Liverpool and Manchester	12,954 10 5	11,821 11 6	1.09
London and Birmingham	63,706 7 9	16,968 9 6	3.75
London & Blackwall	388 11 10	353 2 4	1.09
London and South Western	19,678 19 8½	5,229 17 2	3.76
Manchester, Bolton, and Bury	2,192 1 1	1,199 19 4½	1.82
Manchester & Leeds	11,466 1 8	10,021 13 6	1.14
Midland Counties'..	8,865 5 9½	5,185 15 9½	1.70
Newcastle & Carlisle	2,136 15 5	3,820 11 6	0.55
North Midland	13,379 17 6½	8,262 11 7½	1.61
Scottish Union	3,570 4 8	1,115 5 2	3.20
Preston and Wyre ..	627 2 5	442 10 9	1.40

In the above table, "merchandize" is in each case taken as *unity*, and the third column shows the ratio of the passenger traffic upon the unit of merchandize. It appears from this table that there are only two short railways out of the twenty-three which take a smaller proportion of merchandize than the Birmingham and Gloucester; and also that whereas on the general average, the other railways take one-third part of the whole of their receipts from merchandize, the Birmingham and Gloucester has been able to gather little more than one-sixth part of its receipts from the same source. Will any of your correspondents or readers, whether directors, superintendents, carriers, or shareholders, explain this singularly unfavourable position of a railway traversing a country where the merchandize traffic between Manchester, Liverpool, and Bristol, Staffordshire and Gloucestershire, the Dean Forest and Cheltenham, and Birmingham and Bristol, is known to pass in immense quantities, and where it might reasonably be supposed that a large portion of this would come upon the railway?

I am, Sir, your obedient servant,
OBSERVER.

Birmingham, 30th twelfth month, 1841.

THE SOOT-BAG SYSTEM.

To the Editor of the Railway Times.

SIR,—I have observed that the favour and sympathy of the public are not unfrequently in an inverse ratio to the triviality of the offence committed.

I attribute the defence of Mr. Crawshay by your correspondent "H." to some such morbid feeling as this. Mr. Crawshay's merits remained unacknowledged, and uncommented upon, although so well known to "H." up to the moment of his "soot-bag" proposition, at a meeting of the Northern and Eastern Railway proprietary. Now, far be it from me to deny or detract from the great merit that is undoubtedly due to Mr. Crawshay, for his conduct and management *generally* of the Northern and Eastern Counties' Railway. I believe that your correspondent "H." does not state more than the truth, when he says, "that but for the spirit and energy of Mr. Crawshay, the Northern and Eastern Railway would not now have been affording accommodation to passengers of class first, second, or third;" but still, admitting all this, if we are to "give honour where honour is due," it is equally incumbent upon us to be alike impartial in the administration of censure and rebuke, when such are also due. A man receives the former upon the tacit condition of submitting to the latter when his conduct shall merit such.

But, I think that Mr. Crawshay will have a just ground of complaint against such injudicious friends as I must class your correspondent "H." amongst. They have concealed from the light his good deeds, but the moment he has committed an act, which he himself almost acknowledges to have been a foolish one, a friend in the person of your correspondent "H." starts up, and declares, that this speech of his, acknowledged by him to have been made in joke, is one of the best (not jokes, but serious) things he has ever uttered; and as Mr. Crawshay repudiates it, he "H." will adopt it, as "it appears to him to furnish an admirable mode of suggesting, to those persons who are too dull to collect it for themselves, the reflection that the third class carriage is attached to these trains for the accommodation of those only who, if it were not for these, would be unable to travel at all."

It is a pity that your correspondent "H." did not wait a week, in order that he might have read the letter signed "Jacobus" before answering mine, it which it is stated, that "sheep, and sometimes pigs, are made the substitutes for sweeps, and for the avowed purpose of driving the better sort of passengers into a better sort of carriage," on the Manchester and Leeds Railway, as I have but little doubt that this would have appeared to him a still more admirable mode of "furnishing the reflection" which he thinks so desirable.

And as your correspondent "H.'s" ecstacies seem to rise in proportion to the disgracefulness of the mode of "furnishing this reflection," I have no doubt the plan suggested, but I believe not yet acted upon, on another railway of having five or six inches of water in the third-class carriage, would have been regarded by him "as a bold and forcible mode of placing before the minds of the travellers by the third class, the propriety and expediency of travelling by a second-class carriage." I dare say, that if these "bold and forcible" means of driving people from the third-class carriage had been known to your correspondent "H.," the "soot-bag system" would have appeared so dull and spiritless in his eyes as not to have met with a word of approbation.

I doubt whether any of your readers will agree with "H." in the excellency of any of these plans to correct the admitted abuse of persons who are well able to afford to travel by the first and second class carriages travelling by the third.

What your correspondent says about the profitableness, or rather unprofitableness, of carrying third class passengers, when the number is small, may be very correct, but does not, as I see, affect the question at all. If the Company cannot afford to run a third class, let them give it up; but if they do run a third-class train, let all people who travel by such be treated respectfully and properly. I never heard in the good old times, when we travelled by coach, of a coachman holding out any such threats against those travelling outside, and yet the expense of carrying the outside passengers was equal to that of conveying the inside passengers; and yet this is the plea or apology that "H." puts forward, that the expense of carrying 20 or 30 third-class passengers is equal to that of conveying as many in a first-class carriage.

But one word with regard to the manner in which "H." replies to my query, in answer to Mr. Crawshay's defence of the soot-bag system. He says, "the sweep, though a perfectly fit person to travel in a third class carriage, and at whose presence I cannot myself see that any person need feel himself aggrieved, would be properly denied admission to a first class, if he paid his fare three times over; both because persons who pay first class fare have a right to reckon upon avoiding contact with soot, and because he would render the carriage unfit for the conveyance of any body else, until more labour had been spent upon it than his treble fare would pay."

I deny that a sweep is a more fit person to travel in a third than a first class carriage; for every person travelling by rail has a right to expect that he shall go unharmed both in life and clothing: the poor man travelling by a third class, has an equal right to these with the rich man travelling in a first class carriage; and I should think that this will show "H." a good reason why a person, though poor, should feel himself aggrieved upon having a sweep thrust into the same carriage and brought in contact with him. "H." can see a good reason for refusing a sweep admission into a first class carriage, since it renders the carriage unfit for others to travel in it, "until more labour had been spent on it than his treble fare could pay;" he can see the injustice of putting the Company to expense, but can see none in a sweep's injuring the dress and clothing of a poor man, in which perhaps is his whole estate.

I confess that I can scarcely understand the moral obliquity of vision which can so nicely discriminate between the injustice of injuring the cushion of a railway carriage, and the perfect justice, nay, desirableness, of damaging to the greatest possible extent the clothing of a poor man. I again, Sir, fully and freely admit the abuse of persons who can well afford to pay more, travelling by a third class carriage; but I cannot see the justice of annoying poor people and injuring their dress—and people, let it be recollected, who have a right to demand immunity from any such damage or annoyance—for the sake of suggesting the reflection, to those who can afford to pay first and second class fares, that the third class carriage was not provided for their use.

I am, Sir, yours obediently,
P. Z.

Monday, January 10, 1842.

CURIOUS CIRCUMSTANCE.—Mr. Bay, mate of the Ruby, just returned from Australia, had determined to pass his Christmas holidays in London, with his wife; hearing, however, of the railroad accident, he resolved to go by coach, and singular to relate, his wife is, we understand, now detained on the road from injuries caused by the upsetting of the coach.—*Bristol Mirror.*

2. *Mines* toll to London and Birmingham 600*l.* 60s. 0d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 456,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅔ (83⅔+21+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 38. The divisor employed to ascertain the daily receipts per mile is

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 17*l.* 12s. 6d.; horses, 27*l.* 18s. 0d.; dogs, 1*l.* 7s. 6d.; parcels, 245*l.* 8s. 7d.; cattle, 18*l.* 3s. 0d.; corn, 8*l.* 14s. 7d.; heavy goods, 361*l.* 14s. 0d.; coal, 202*l.* 18s. 7d.—Total, 883*l.* 8s. 9d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,784*l.* 0s. 6½d.; parcels, carriages, horses, and mails, 206*l.* 16s. 9½d.; merchandise, 813*l.* 14s. 2d.; minerals, 277*l.* 13s. 4d.; cattle, 32*l.* 18s. 4½d.—Total, 3,115*l.* 3s. 4½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 121*l.* 17s. 6½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

32. The returns are exclusive of Man. and Bir. toll.

TO CORRESPONDENTS.

The Prospectus of the Patent Mortimer Wood Pavement *does not come within the scope of our journal.*

A Shareholder in the Great North of England.—*We should think the guarantee would have the effect referred to by our correspondent, but he must use his own judgment.*

Bristol and Exeter Railway Debentures.—*The correspondent who wrote to us last week on this subject is informed (and for this information we are indebted to J. B. Badham, Esq., the active and intelligent Secretary of the Company,) that the debentures of the Bristol and Exeter Railway Company are not mere assignments, but* bona fide *mortgages of the freehold of the line, with all its* rents, *rates, and tolls, and are expressly so constituted by the Company's Act of Incorporation, sect. 246, which may at any time be referred to at either the London or Bristol office of the Company. The late decision of the Court of Queen's Bench, in the case of the St. Helen's Railway, is likely to mislead the holders of debentures issued by Companies whose Parliamentary powers are more extensive. The St. Helen's Act must differ very materially from those of most others. It is difficult to conceive a more perfect security than a mortgage of such a freehold property as the Bristol and Exeter Railway, leased to a highly responsible tenant, at a rental so far exceeding the interest of all the debentures that have been issued, or that there will be occasion to issue.*

A Shareholder (*Tunbridge*).—*On no account can the letter be inserted, unless we have the name and address of the writer.*

Four-wheeled and Six-wheeled Engines.—*We have devoted a large portion of our space to-day to the letters of Mr. Gray and Mr. Hood on this question. We are unwilling in any way to check the discussion of so important a matter, but we beg to remind our correspondents generally, that as the half yearly meetings are approaching, it is desirable that brevity be studied as far as possible.*

W. S.—*From a case heard in the Court of Exchequer on the 3rd November last, it appears that the eminent firm of Sharp and Co., of Manchester, agreed to make for the Great Western Railway Company ten engines and tenders of the best materials and workmanship, the price being 1,850l. for each engine, and 450l. for the tender.*

Cocker.—*A few weeks will settle the matter. It would be a waste of space to enter upon it now.*

C. *is referred to a notice in last week's number. The fault rests with the news-agents, as the papers are handed to them unfolded. We may take this opportunity of re-stating that single numbers are not usually sent from our publishing office. We are constantly receiving complaints of irregular delivery, whereas in fact we have no control over the matter. Either the newsmen or the Post office people are in fault. The parties should write direct to the agents who supply the papers.*

The valuable Table, and (a portion of the) Circular, issued by Messrs. R. B. Watson and Co., *are in type, but are unavoidably postponed. We heartily congratulate Messrs. W. and Co. on re-commencing business.*

Glasgow and Greenock Railway.—*The accounts must still stand over.*

In type—Scoto-Londinensis, Observator, Scrutator, &c.

The volume of the *Railway Times* for 1841, may now be had neatly and substantially bound and lettered. Those of our subscribers who are in want of single numbers to complete sets, would do well to apply early, as the stock is very limited.

We should feel obliged if any of our friends could furnish us with the numbers of the *Railway Times* for January, 1838, to enable us to complete a set or two. Double the publishing price will cheerfully be paid for them.

THE RAILWAY TIMES.

SATURDAY, JANUARY 15, 1842.

ELSEWHERE in our columns to-day will be found a very detailed notice of the proceedings at the late county meeting in Cornwall, on the subject of constructing a railway through that district. Some weeks ago we had the pleasure of publishing exclusively an abstract of the Committee's Report, and from the more extended particulars now given it will be seen that our sketch was in every respect correct. Lord VIVIAN, in opening the business of the day, referred to the non-publication of the Report in question prior to the proceedings of Wednesday week, and justified it on the ground that, as the Committee had been appointed by a county meeting, it was more respectful that the result of their labours should in the first instance be laid before the county assembled in a similar way. We are sorry to see so sensible a nobleman as Lord VIVIAN descending to such reasoning as this, as if it mattered to the county whether the Report were read to them by the Committee's Secretary, or whether they read it for themselves in the columns of the local journals, or—if Lord VIVIAN should think it *infra dig.* to recognise such *media* of communication—in special circulars, issued direct from the Committee-room. Will etiquette and punctilio, and being "respectful" to the county, construct a Cornish railway? Will standing upon forms as regards "the *county*" induce *individuals* to subscribe their capital? Is the mere reading of a document in the Shire Hall to have equal influence upon the landowners and capitalists of Cornwall as a careful investigation of its contents at their own leisure? It is true, Lord VIVIAN says a future meeting may without difficulty be called; but, why render a future meeting necessary? They have had meetings enough in all conscience—they have had a Committee in existence for two years, and except a well-arranged and well-executed survey (for which they are mainly indebted to a more vigorous mind than their own), how much nearer are the leading men of Cornwall to a realization of their object than they were at the outset? Are they even so near as they were two years ago? We doubt it. They would have the county—they would have capitalists—believe that there is in prospect an adequate return from the capital to be embarked, and yet they themselves do nothing but hold meeting after meeting, as if words alone were all that was necessary from *them*. This is by no means the course which we had anticipated—the course which alone can conduce to the attainment of a Cornish Railway.

The result of the late meeting has, we regret to say, sadly disappointed us. Called by the High Sheriff, pursuant to requisition—its intended proceedings kept from the profane gaze, as if some startling effect were proposed to be produced—attended (as our contemporary, to whom we are indebted for the report, says,) by "most of the magistrates"—addressed by right honourables and members of Parliament—in what has it resulted? The least that one could reasonably have looked for was the formation of a Company on the spot, with a brilliant array of names as subscribers for shares, by way of example to the county for which they appear to entertain so deep a respect, and as the means of direct and indirect benefit to themselves. But no; instead of this, we have nothing but the passing of a resolution requesting the Committee "to devise some means for raising the necessary amount for liquidating the outstanding claims, and that the assistance of the county generally be invited to co-operate with the Committee." In this elegantly turned sentence is comprised the result of the "great county meeting" in Cornwall! We are ashamed to think that so important an undertaking as a railway to Falmouth should be thus trifled with. The "outstanding claims," so prominently put forward, amount it seems to about 535*l.*, the balance of an account for surveying the district—a survey which we venture to assert has been more economically conducted than that of any existing railway. The total extent of these preliminary steps, including the lodging of Parliamentary plans, was, it appears, only 2,344*l.*, and yet this comparatively paltry sum cannot, we find, be raised by the great county of Cornwall without the holding of county meetings and special votes requesting co-operation. It would have been no great sacrifice, we think, had the Committee raised, among themselves the odd 500*l.* Ample would be their return, if their own calculations and predictions are correct. Then might their appeal to the county to subscribe for shares, and to landowners to exchange their property for a proportionate interest in the undertaking, have been brought forward with a good grace. We are told that the people of Plymouth have expended 7,000*l.* on *their* survey, and as we know nothing to the contrary, we are to presume that such expenditure has been duly defrayed, and yet the county of Cornwall cannot without reiterated applications and "requests," raise one-third of the sum! Does this say much for the public spirit—does it say much for the prudent foresight—of Cornishmen? It is admitted on all hands—they themselves admit—that without a railway the county of Cornwall, and more especially the port of Falmouth and the adjoining district, must not only lose all hope of advancing in the march of improvement and prosperity, but must seriously and sensibly retrograde, and yet so little do the natives seem alive to their own true and permanent—nay, their immediate—interests, that the Railway Committee must go a begging for 500*l.* Alas, we say again, for the hope of a Falmouth Railway!

It seems, indeed, as if the position of the county, far removed from the busier scenes of commercial enterprise, had infected all belonging to it with an apathy and indecision which are the grave of all national or social improvements. Thus we find Lord VIVIAN discouraging of assistance from the Great Western Company, and of aid from Government. "Help yourself, and Heaven will help you," is a maxim which others besides the Cornwall Committee would do well to keep constantly before them. It might be—we are sure it *would* be—to the interest of the Great Western Company, and of the Government, to promote by every reasonable means the construction of a railway from Falmouth to Exeter, but is it to be supposed that either body will stir in the matter until they see a decided determination, on the part of those more immediately interested, to "help themselves?" It would no doubt be very agreeable to the people of Falmouth, could they persuade the Great Western Company to bring a railway to their doors, but it was not thus that that Company completed their own great work. They encountered the risk—we trust they will speedily

Digitized by Google

reap the benefit—of their enterprise; and it is thus, and thus only, that the inhabitants of Falmouth, and of Cornwall generally, can hope to participate in similar advantages.

Instead of speaking for some hours in the Shire Hall at Bodmin, it would have been infinitely more to the purpose if Lord VIVIAN and his co-Committee-men had each put down his name for 50 or 100 shares. This would indeed have been showing the county how all-important and all-powerful was "co-operation." Nor can we conjecture any sufficient reason why the Committee should not thus have acted supposing them to be sincere in their professions. Captain MOORSOM, in whom they repose (and very properly repose) every confidence, states that upon the outlay which he deems sufficient, the estimates of probable traffic show a return of 9 per cent. per annum. Is not *that* remuneration enough to rouse the speculating spirit of these *Ultima Thule*-ists? Allowing every latitude to engineering estimates, and just doubling Captain MOORSOM'S calculations—a pretty large margin in these days—is not the direct return of 4½ per cent., with the numerous indirect benefits which it is said, and said justly, a railway would inevitably confer, sufficient to induce the *landowners on the Committee* to barter their land for shares? The inference is unavoidable. Either the Committee have themselves no faith in the estimates which are put forth under their sanction, or they are shamefully remiss in forwarding a great public work in connection with their own private advantage. Talk, indeed, of requiring the "assistance of the county generally," to "co-operate with the Committee," in raising 535*l.*! Why there need be no difficulty, supposing the representations of the Committee to be correct, and the Committee themselves to do their duty by setting an example to others, who must to a great extent be influenced by their conduct—there would be no difficulty, we say, in at once raising, instead of 500*l.*, the 500,000*l.* which one of the speakers at the meeting (and be the most practical and straightforward of them all,) stated would be sufficient to induce distant capitalists to join in the enterprise.

For the present we have done. What we have said, we have said "more in sorrow than in anger." We fear that the project of a Cornish railway is being mismanaged, and that unless a far greater amount of energy be infused into the working Committee, the scheme will not be carried out in our time, (as Lord VIVIAN predicts in that sort of prophecy which frequently carries its own accomplishment,) instead of being as it might be, fully completed in the space of a very few years.

WE are told that a comprehensive system of railways for Ireland is likely, after all, to be taken up by Government, upon the plan said to have been devised by Mr. VIGNOLES and embodied in a Bill which was introduced into the House of Commons, but not pressed forward, in the last session but one. It is rumoured, however, that there is to be a material difference in regard to the guarantee of 4 per cent. interest to the capitalists who profess their readiness to carry the project into effect. It will be recollected that a main feature of the scheme was a guarantee to the effect stated, upon the security of the counties through which the proposed lines would pass. It is now said that finding this contemplated charge upon the county rates unpalatable, if not impracticable, Government has in view the imposition of an additional halfpenny on Irish letters, for the purposes of a guarantee fund.

It seems to us that the plan now proposed is neither so likely to be successful as that originally laid down, nor so equitable in principle. In the first place, we do not believe that the additional impost upon Irish letters would form anything like a sufficient fund for the purpose contemplated. It is true that Irish railways will in all probability produce revenue enough to pay 4 per cent. interest, without the necessity of having recourse to external aid, and so far a very moderate guarantee fund, or no fund at all, would meet the practical requirements of the case; but such would not appear to be the opinion of the capitalists above referred to, nor the opinion of the Government or the landed proprietors of Ireland—for in that case the capitalists would not seek security, nor if they did, would the landowners hesitate to grant it on the terms of mortgaging the county rates. If then there is to be any security at all, let it be a valid and sufficient security, depending upon no fluctuations such as those to which a postage rate is necessarily subject.

Nor is the new scheme so fair and equitable as the old. From the vagueness of the rumours alluded to, we are unable to say whether the additional postage is proposed to be fixed upon the internal correspondence only of Ireland, or whether it is meant to apply likewise to letters passing from England (for example) to the Sister Isle. If the latter be the extent of the scheme, we should be glad to know why this country should be taxed for the benefit of Irish landowners. None are more ready than ourselves to acknowledge how much benefit would accrue to England, as part of the United Kingdom, from a well-devised scheme of Irish Railways, and in one sense, an additional tax to effect that object would be no more unjust or unreasonable than is a rate imposed upon a whole borough or parish for the carrying out of a local improvement, from which probably nine-tenths of the inhabitants may not directly derive any advantage or accommodation. But the gain to the Irish landowner from a comprehensive, or even partial, system of railways will be immediate and tangible, and he it is, therefore, who ought to encounter the risk of failure, if risk there be. Even to the limited extent of a further tax upon internal correspondence only, the same objections would apply, for all districts would have to contribute alike to the promotion of a local improvement; and unless a much more general scheme of railway communication than is at present in contemplation were to be carried out, some districts would thus be incurring a responsibility not only without the hope or chance of a proportionate benefit, but in reality in furtherance of an object which would be injurious to them, since it is clear that those districts favoured with railways must of necessity draw off from others, not similarly affected, a portion of their present prosperity.

There are other objections to the scheme of increased postage, upon which we need not at present enter, as in truth, there may be no real foundation for the rumoured change. We should be glad to see the railway system introduced into Ireland upon almost any terms, but we have seen no scheme yet which, all things considered, is so generally desirable as that which was so ably expounded by the Irish Railway Commissioners.

As reference has been made to the proposal of certain capitalists, it may not be out of place to give a brief summary of the original Bill under which their powers and privileges were proposed to be conferred. The subject was fully explained in this journal some months ago, but the following recapitulation, for which we are mainly indebted to our able contemporary the *Dublin Monitor*, places the principal points of the measure briefly and clearly before the public:—

The objects of the Bill are to provide for the construction, by Government Commissioners, of railways in Ireland, upon the security of the county rates; and the first railway to be thus made is one by way of Holycross, in the county of Tipperary, to the city of Limerick. After this line has been completed, power is given to make other lines—southwards, northwards, westwards, and, in point of fact, wherever the authorities created by the Bill shall think proper — whenever they can find money for the purpose, by the help of the means just described. No line of railway is formally laid down or minutely described. The outline, however, and main features of the Government plan of 1837, are preserved; the authors of the Bill being content to indicate the general direction and leading points which the route they prefer should pursue, and to give the Commissioners an unrestricted power of deviation to any extent they may choose to go. Thus the Bill not only empowers the parties to make a line round by Holycross to Limerick, and that made, one from Holycross to Cork, and that again made, one by Naven to Belfast; but it admits, should they by-and-bye change their minds and desire to modify their present intentions—of their running the Limerick line round by Carlow, and even by Clonmel to Cork, so that they may exclude from the advantages of the improved communication any place or county now embraced by it.

Such are the comprehensive objects of the Bill; the means by which they are to be carried into effect are debentures paying 4 per cent. interest upon the security of the counties through which the different lines are to pass. In other words, the land in each direction is to be mortgaged for the railway. As this is the vital principle of the whole scheme, it is most desirable that its aim and effects should be clearly understood. There are several clauses referring to this portion of the plan, and they are dispersed over different parts of the Bill; but their substance is to the full what we have stated. In the first instance, Sir ISAAC LYON GOLDSMID, Mr. JOHN SMITH, the Banker, and Mr. Alderman THOMPSON, profess to be willing to raise one million two hundred thousand pounds for the railway by Holycross to Limerick, provided the counties traversed by it are made liable to pay the accruing interest, and the principal itself in case the undertaking should prove a failure. Upon the same condition it is provided that other lines shall be subsequently proceeded with, provided money can be raised for the purpose upon the terms just set forth. If this or any other line pays its expenses, the counties will not be called upon to contribute in any way—if it pays more than its expenses, the counties are to have one-half of any profit it may yield; but if it should be commenced, and not be completed — or if, when completed, it should not yield an adequate return to meet the costs of construction and maintenance—the whole of the deficiency, the full outlay, and all losses incurred, are, in that event, to fall upon the counties.

Equally stringent and important with the means, is the agency by which the Bill is to be carried into effect. The several lines are to be made under the immediate orders and superintendence of three Commissioners—Sir J. BUR-

Digitized by Google

COINE, Major HARRY JONES, and Mr. GRIFFITH. These are to be paid functionaries, and upon them the duty of making, maintaining, and regulating the railways is to devolve. There is also to be a Board of Directors, upon which Sir I. L. GOLDSMID, Mr. Alderman THOMPSON, and Mr. SMITH, are placed by the Bill. These Directors are to have salaries also, and their successors in office are not to be contractors; but there is nothing in the Bill to prevent them from participating in any beneficial interest of the kind they may aspire to. Lastly, there is to be a Board of Control, intended, we apprehend, to protect the landlords, and for that purpose invested with a power of negativing any motions and proceedings originated by the two preceding bodies which they may regard as objectionable. If to this account we add that these Boards are to have Secretaries and the usual complement of Engineers, Surveyors, and Clerks, and that they are to be authorised to take the land required for the respective undertakings at such prices as to them, upon examination, shall appear fair and reasonable, we shall have furnished an account of the Bill sufficiently distinct, we trust, to enable our readers to form a correct opinion of its character and tendency.

The Directors of the Great Western Railway Company intend, it is said, to appeal against the verdicts of the two Berkshire juries upon whom it devolved to investigate the circumstances connected with the late accident at Sunning Hill. The well-known leaning of the superior courts may excite the Railway Management to this determination, but in our opinion they will do well to pay the deodands without litigation, and allow the matter to rest as quietly as it may. The more the occurrence is discussed the less likely will the undertaking be to regain its former position in the confidence of the public. That such confidence has been exceedingly shaken will be evident to any one who examines the weekly returns of traffic before and after the accident. Ten times the amount of the deodands imposed will not meet the loss which has fallen upon the Company through this occurrence; and the longer the recollection of its details is kept alive by arguments and statements in courts of law, the farther will such loss extend. We never heard of a railway accident concerning which public opinion was less divided than in this instance. Generally and unequivocally the arrangements of the Company with respect to the conduct of, at least, their third-class trains, have been condemned, and, as we think, condemned not without cause.

These inquests and their results have given rise to a discussion among certain of our contemporaries respecting the law of deodand. By some the abolition of such an impost is contended for, as absurd and useless. Absurd enough it may be in some respects, and useless it is too frequently rendered by technical objections, but as the only means of punishment in certain cases, which no other court can reach, we should be sorry to see the power of levying deodands taken from Coroners' juries, unless some other mode were first provided of meeting the class of offences to which we have referred—a mode more stringent in its operation and less easy to be evaded.

Objection may be made to committing to Coroners' juries the power of imposing extensive (and in some cases almost unlimited) fines; but if such power is to be continued, its exercise might at least be more beneficially exerted. If, for example, instead of the payment of a deodand to the lord of the manor or to the Crown, the fine were to be apportioned among the sufferers or their friends, the double purpose would be served of punishing neglect, and in some measure of recompensing those who had been its innocent victims.

In connection with this subject, it might not be amiss were there to be introduced into this country the Scotch law which enables the near relatives of a party who has met his death from the culpable neglect of another, to recover compensation for the loss of their natural protector. It is, as the *Globe* remarks, "at least anomalous, that the law should provide to an individual the means of obtaining compensation for the loss of property, or for any considerable injury occasioned to his person, through the neglect or wrongful act of another; and yet that his wife and children, deprived of their protector and the source of their comfort and support by the sacrifice of his life through the negligence or misconduct of an individual, or public Company, however wealthy, should be absolutely left without redress. The owner of a dog, or a horse, is allowed to bring his action for its loss, if the animal were killed through accident, originating in wilful negligence, or by a premeditated act; and yet a widow, deprived of her husband, and children deprived of their parent, by the negligence or other misconduct on the part of individuals, or public Companies, or those in their employ, under circumstances which would render them responsible in a civil court for the life of an animal so destroyed, are left by the law, as it now exists, without any claim for compensation."

We have frequently had occasion to notice the serious accidents resulting from the crossing of highways by railways on a level. Within the last six months several lives have thus been sacrificed. It is with much pleasure, therefore, that we find the Directors of the Stockton and Darlington Railway taking measures, as far as possible, to guard against these casualties by the erection of proper gates at the points of intersection. These crossings are very common in the north of England; but so inconvenient and dangerous have they been found, that Parliament, we doubt not, would hesitate before again giving its assent to a similar practice. Under the head of "Railway Offences," a case of this kind will be found noticed.

A MEETING of the county of Renfrew in Scotland was held yesterday week, for the purpose of promoting the success of the west coast railway to that country. The greatest harmony and zeal characterised the proceedings.

ON Tuesday last a meeting of the inhabitants of Warwick was held to consider the expediency of promoting the proposed branch line in connection with the London and Birmingham Railway. The Earl of WARWICK moved a resolution in favour of the line, which has been frequently referred to in our columns as the "Warwick and Leamington Union Railway." After some opposition, and the moving of an amendment, the resolution was carried almost unanimously. We are glad to find that this scheme is not to be allowed to slumber.

WE should be glad to know out of what fund the expenditure incurred by the Sabbatarian agitators in Scotland is defrayed. Splitting the shares, as we hear from all quarters is now being done by those pious personages, must cost something, and so must the mass of canting circulars which they are scattering over the length and breadth of the land. The other day, the Presbytery of Glasgow thought fit to busy themselves in this matter, and after a vast deal of speechifying, authorised a Committee of their number to print a memorial to the proprietors of the Edinburgh and Glasgow Railway, "to address a copy of it to each shareholder, and *to consider the propriety of publishing it in the Liverpool and Manchester papers.*" Out of whose pockets, we again ask, comes the money thus spent in an attempt to depreciate the property of others? We suppose we shall soon have the usual accompaniment of these pseudo-righteous demonstrations in the sending round of the "begging box." The Presbytery Committee may save the expense of advertising in the Lancashire journals, for we assure them that their eloquence is entirely in vain.

One of the organs of the Puritans—the *Witness* by name—in a very characteristic article on this question, says:—

"No one acquainted, for instance, with what is meant by the once common phrase 'A Scottish Sabbath,' will doubt that the portion comprised in the Fourth Commandment is one of these. And thus, just from this circumstance, in at least nine cases out of ten, the Scotch Sabbath-breaker, especially if he belong to the humbler classes, will be found to be a much worse man than the Sabbath-breaker of the sister kingdom. By much the greater number of the railway engines of England are guided by Sabbath breakers—men bound by their own act to a life of heart-hardening, soul-debasing bondage—men in whose every week there are seven days of labour; and we doubt not that, in the numerous railway accidents of that kingdom—accidents, many of which the Sabbath-breakers might prevent, but which laws cannot—we have melancholy evidence of the fact. Bad as the class must be, however, and there can be no religious men of the number, for no religious man would dare sell himself to a course of slavery, in which the soul would be well nigh as certainly bargained away as the Sabbath itself—it must be of necessity a better class than the railway Sabbath-breakers of Scotland. The lives of railway travellers on this side the Tweed must be entrusted to a worse and inferior set of Sabbath-breakers than those on the other."

The *Morning Chronicle* in alluding to this extract says with equal justice and point:—"Among a set of Pagans like the English, the railroad people, bad as they are, may not be much worse than other people; but among a holy people like the Scotch, a man who breaks the Sabbath will be ready for the commission of any deed, however atrocious, and therefore the least which any person travelling on a Sabbath can expect from being driven by a Scotch engineman is to have his neck broken. We are quite sure, [adds our contemporary,] that the circulation of these Sabbatical Scotch newspapers in England would make more infidels than all that Voltaire, Hume, Volney, or Paine ever wrote."

The *Glasgow Argus* of Monday week has a sensible article on this subject, from which we make a short extract, principally as exposing the hypocritical pretensions of *another* agitator:—

"Without entering [says our contemporary] into the theological part of the question, for which the columns of a newspaper are not altogether suited, we maintain, on the broad ground of civil and religious liberty, the inalienable right of every man to decide for himself as to the peculiar degree of strictness with which the day ought to be kept. As a merely civil institution, and apart altogether from religious considerations, the propriety of laying aside one

Digitized by Google

day in seven as a day of rest from labour, can scarcely we think be questioned. In this country, more especially, where the toil of the labouring man is during six days of the week so peculiarly hard and unremitting, it is even more necessary than amongst other nations, where holydays are of frequest occurrence, and where the labour is not of the same harrassing description. To the care-worn son of toil the approach of the first day of the week must prove one of sweet relief, and far be from us the desire to abridge his already too brief period of enjoyment.

"We know, however, that a total cessation from labour, on the part of the entire body of the peopled on the first day of the week is impracticable, and all, therefore, that we can do is to endeavour so to regulate it, that it shall become in as small a degree burthensome as possible. Amidst the peaceful triumphs of the age, railways stand in the foremost rank, and not the least important of their advantages, is, that, aided by the wondrous invention of the illustrious Watt, they enable immense multitudes of human beings to be carried to distant places with a limited expenditure of human exertion unknown in any other mode of transit. As, therefore, communications between place and place cannot be restrained on the first day of the week, it is clearly the duty of those who desire that it shall be made as much as possible a day of rest, to take advantage of that mode of communication which offers the largest amount of benefit with the smallest expenditure of the labour of man.

"Not so, however, reason the tyrannical Sabbatarians, who, after failing in remonstrances addressed to the Directors of the Edinburgh and Glasgow Railway, are now endeavouring, by blustering threats of intimidation, to coerce the shareholders into an acquiescence in their views. We have already noticed the resolutions sent forth in this city under the auspices of Mr. William Campbell, a partner in a concern which make no scruples of conscience about employing steam boats on Sunday, which happen to answer their purpose, although they are dreadfully shocked at the idea of carriages running along a railway, which they would seldom or never require to use. In the city of Edinburgh a set of similar resolutions have been agreed to at a meeting presided over by Bailie Johnston; but, like the Glasgow meeting, with the exception of the foresaid Bailie, and of an individual who styles himself 'Hon. Secretary,' we are not favoured with the names of any of the 'merchants, bankers, and other inhabitants,' who, it is alleged, were present at the gathering.

"We dare say some of our readers may have before heard of this Bailie Johnston, who comes forward as the opponent of railway travelling. * * The Bailie is by trade an engraver, and it is alleged that he is not overly scrupulous in refusing a well paid job, even although the necessity should be incurred of having his workmen engaged on the sacred first day of the week. Such is the man whom the saints of Edinburgh have placed in the foreground as the opponent of Sunday travelling on the railway. It is impossible sufficiently to admire the consistency of the persons who thrust themselves forward to fight the battle of hypocrisy, and this Bailie Johnston is truly as beautiful a specimen of the class as it has been our fate to encounter."

The *Scotch Reformers Gazette* of a later date has some pertinent remarks to the same purpose:—

"It is amusing, [says our excellent contemporary,] to notice sometimes how the professions of men, and especially their *sanctimonious* professions, really square with their own actions. We have made inquiry, and learn that some of the greatest sticklers for shutting up the railway on Sunday—some of the good pious worthies who roar out against it as an act of Sabbath desecration—are themselves partners or shareholders in an undertaking which is actively at work in this city during the whole of Sunday, from morning till noon, and from noon till night!

"Our readers may startle at this statement, but it is the fact, and we undertake to prove it in a moment. There is the great *Gas* Manufactory, or Joint Stock Company, in this city, which has been paying famously to all its shareholders. It is perfectly notorious to every body in this city, that this Gas Manufactory is wrought, and in full operation on the Sunday. But every body did not know that some of these Edinburgh and Glasgow Railway anti-Sabbath Desecrators, as they call themselves, are also shareholders in this *Sunday* Gas Manufactory. Such, however, is the fact. We can name them if desired. Will Mr. John Bain, in particular—the now *notorious* John Bain, deny that he is a shareholder in this Sunday Gas Manufactory? Will Mr. Wm. Connal, another Edinburgh and Glasgow Railway Director, on Bain's side, deny that he is a shareholder also? We could go over a long list—including even *Ministers and Elders*—but the above may be taken as a fair sample. And pray did we ever hear of this Gas Manufactory, on *Sunday*, being deemed by those more immediately connected with it, or by any others, as a thing of Sabbath desecration? Did these pious Directors refuse at any time to pocket the profits and dividends derivable from "the traffic" on Sunday? Did they hold up their pious hands with horror, and refuse to touch the Gas blunt counted down to them at the usual annual periods? Have they refused to allow this Gas, so manufactured on the *Sunday*, to be introduced into their own houses? Nay, are not our own *churches* brilliantly lighted up by it on the Lord's evening, and did any of our Doctors in Divinity, or Probationers of the Church, whether Established or Dissenters, turn round the gas cock with indignation, or puff out the lights thereby afforded them by this manufactory *on Sunday?*—Never.

"What then is the difference, in a moral point of view, between a manufactory of gas and a manufactory of steam,—between the burning of the gas-coke on the Sunday, in the large establishment at the head of the town, supplying nearly 300,000 individuals, or the whizzing of the locomotive on the railway, carrying not more than a fractional part of that number? Is the smoke of the *gas* holier on the Sabbath-day, than the smoke of the railway carriage? We leave the saints to answer us these questions if they please.

"But we have them on another very palpable tact. Will our Bains, or our Leadbetters refuse to take the *interest* on their bonds or bills including the Sabbath-day? Do they make any deduction on that account? Will the good Mr. John Bain, in particular, who has trafficked in horses, and carriages, and mail-bags on the Sunday, be pleased to inform us whether he ever gave any deduction to the widow for her rent on the *Sunday*, or whether he ever hesitated to pocket the premiums accruing on his stock of various kinds on the Sunday?

"When these questions are answered, if they be answered, we will follow them up with others, though, after all, we suspect it will be found that *the holier-than-thou* are no better than their neighbours of much lesser pretensions, but of greater modesty."

RAILWAYS are likely to effect a revolution in certain customs appertaining to law, as they have already done in more momentous matters. In the Court of Exchequer on Wednesday last, Mr. Richards moved for a rule, calling upon the plaintiff in a case where one shilling damages had been awarded, to show cause why the Master should not be directed to review his taxation. The trial had lasted two days, and a great number of witnesses were examined, and upon taxing the costs, the Master allowed at the rate of 1s. per mile for the travelling expenses of the witnesses, many of whom had come by railway. It was admitted that 1d. mileage was the ordinary allowance for witnesses, but the rapidity and cheapness of travelling by the railway made it desirable that some change should be made in the practice. Many of the witnesses in the present case came from Birmingham to London, and the price in the first class carriages from that town to London was 30s., and in the second class only 20s. There were no expenses on the road, and, therefore, allowing a mileage of one shilling, was much more than the travelling expenses of the witnesses actually cost. In the present case it was estimated that, allowing for all the witnesses as first class passengers to and fro, the sum allowed by the master was 250*l.* more than had actually been paid, and if the taxation should stand, that sum would be a profit in the pocket of the plaintiff or his attorney, which could never have been intended.

Mr. BARON ALDERSON said certainly the plaintiff should not have any profit; but it sometimes happened that the travelling expenses of a witness were much more than a shilling a mile to and fro, and in that case the successful party was only allowed a shilling. If he gained by one witness he lost therefore by another, and a shilling was fixed upon as the fair average calculation. Did the affidavit state that the whole sum allowed for the travelling expenses of the witnesses exceeded the amount actually disbursed?

Mr. RICHARDS admitted that his affidavit did not state that fact. It would be impossible it could do so, as the defendant did not know by what conveyance the plaintiff's witnesses travelled. The affidavit only stated that the railway was the usual mode of travelling now, and that the allowance greatly exceeded the expense by the railway. When witnesses had to stay and eat on the roads, and to pay coachmen and guards, if they came by coach one shilling per mile might not be too much, but it was now exorbitant.

Lord ABINGER did not omit the opportunity of having a fling at railway travelling. His Lordship said it would be a great tyranny if the Court were to lay it down that a witness should only travel by railway. If he were a witness, in the present state of railways, he should refuse to come by such a conveyance. (A laugh.)

BARON ALDERSON—The true principle appears to me to be that no more should be allowed to the successful party than all his witnesses' costs; but you should not select particular witnesses and say they cost less than had been allowed.

Lord ABINGER—Take your rule to show cause.

We shall look with some curiosity for the result.

—o—

WE understand that Henry Patteson, Esq., the late valuable Secretary of the North Midland Railway Company, has accepted the office of Secretary to the Committee for carrying out Mr. Robert Stephenson's line from Norwich to Yarmouth, advertised in our columns of to-day. Mr. Patteson is, we believe, a native of Norwich.

—o—

IT is understood that some farther experiments are about to be tried with the "Atmospheric Railway" laid down on the (unfinished) West London line, at Wormwood Scrubbs.

RAILWAY OFFENCES AND OFFENDERS.

The *Dundee Courier* contains a long report of the trial (which took place in the "High Court of Justiciary" yesterday week) of James Boyd, an engine driver on the Dundee and Arbroath Railway, for the "culpable homicide" of Margaret Steven. It appears that the railway in question passes through several villages, one of which is named Westhaven, and is situated a short distance from the Carmoustie station. The line cuts the village in two, the houses of the majority of the inhabitants being on one side, and certain provision shops on the other. There is a foot path across the railway and persons—men, women, and children—could pass over it at all hours, without impediment, there being up to the time of the accident no policeman stationed at the spot. On the 11th of October last, the woman Steven was crossing the line as a mail train, going at the rate of upwards of 30 miles an hour, came up. There is a curve close to the village which prevents an extended view of the line, and it was not till within 200 or 300 yards of the deceased that the driver, Boyd, noticed her. The whistle was instantly sounded, and the drags put on, but before the train could be stopped, the woman was knocked down and killed on the spot. She was infirm and very deaf, otherwise she might have escaped, as it was clearly proved that had she remained where she was when the whistle first sounded (namely, between the tracks) the train could not have touched her. The driver received an excellent character. He had been in the service of the Company since the opening of the line about three years ago. The jury returned a verdict of "Not guilty," in spite of a strong speech against the prisoner by the Public Prosecutor, and the very unfavourable summing up of the presiding judge.

We think the verdict of the jury was a most proper one. The driver was personally free from blame, and to have punished him for the omissions of his masters—the Directors of the Company—would have been hard indeed. That they, the Directors, are not blameless, the mere fact we have above noticed, of leaving so dangerous a portion of the line unguarded, fully proves. The least they should have done was to have a watchman constantly at the spot. It appears from the evidence that they have on the whole, in proportion to the length of the railway, a sufficient number of these watchmen or "waymen;" and yet that this point, so peculiarly circumstanced, should have been left unattended, seems most unaccountable. It came out in the course of the inquiry, that this is the first accident that has taken place on the railway. We are glad to hear it, but no thanks are due to the foresight of the Directors. One of the witnesses stated that she "has a family of six children, the eldest of whom is ten years of age. Has a garden on the north side. Witness and her children have occasion to cross the railway during the day to the garden, through a wicket, *which was never locked, neither was there any servant of the Company stationed there to warn the people from crossing before the accident occurred.*" Is it not surprising that fatal occurrences should, under such circumstances, have been so rare?

Great stress was laid by the prosecutor on the speed at which the mails travel—namely, upwards of 30 miles an hour—through such a locality, and it was contended that the pace being dangerous, the prisoner was culpable in being in any way a party to it. In reply, it was urged that the Company are compelled to carry the mails at the speed fixed by the Postmaster-General, and that if the rate of travelling be dangerous, that functionary ought to be the party indicted. This is certainly the common-sense view of the matter, but while enginemen and servants can be laid hold of, and their conduct tortured into a semblance of offence, we may look in vain for a prosecution of the Post-Office authorities or even of Railway Directors.

Now that an accident *has* happened, the Directors of the Company are as usual bestirring themselves. The wicket is at last guarded, and a bridge is to be erected at considerable expence, so as to obviate the necessity of crossing on a level. The melancholy fate of the woman Steven—who, by the way, had been repeatedly cautioned as to crossing the line, and who, had she made a right use of her eyes, might on this occasion have escaped—will thus probably be the means of preventing further loss of life to a much greater extent.

The Coroner's inquest is unknown in Scotland, else it is probable that the absence of proper precautions in regard to the crossings might have entailed a heavy deodand, instead of subjecting an innocent man to the annoyance and anxiety of a criminal indictment. Were our northern neighbours to borrow from us the Coroner's Court, and we from them the office of Public Prosecutor, the safety of the public might not be trifled with so frequently as unfortunately it now is.

A quarrel took place a few days ago between two of the engine-drivers employed on the London and Croydon Railway, which ended in the infliction of serious injuries by one of them, whose name is Robert Jobson, upon Thomas Archer, the other, whose skull was fractured by blows inflicted by Jobson with a heavy hammer. Archer lies in a precarious state, and Jobson has been held to bail by the Croydon magistrates to meet the charge. We understand that both men have been dismissed the Company's service, the one for using insulting language, and the other for resenting it in so savage a manner. Both of them bore the character of steady trustworthy servants, although unfortunately cursed with a violence of temper which has placed the life of the one and the liberty of the other in very serious peril.

LONDON AND BLACKWALL RAILWAY.

Comparative statement of the traffic of the London and Blackwall Railway during the months of October, November, and December, 1840, and 1841:—

1840.	Passengers.	Amount.
October	140,693	£2,620 6 5
November	104,751	1,970 9 9
December	95,697	1,823 17 5
	341,141	£6,414 13 7

1841.	Passengers.	Amount.
October	172,914	£3,263 13 5
November	132,747	2,524 6 6
December	134,617	2,553 15 9
	440,278	£8,341 15 8

Increase in 1841, for the three months as above specified, of passengers 99,137, and receipts 1,927*l.* 2s. 1d.

THE SLIP ON THE CROYDON RAILWAY.

The slip which occurred on the morning of yesterday week was a continuation of the large one, which was the cause of the late stoppage of the line. The length of the slip was about the same, but the character of it does not appear to be so bad, from its having occurred in more favourable weather. The earth, as before, came down from the slope in one mass, moving over a solid floor, and creeping down over the rails so gradually that although the first movement commenced shortly after seven o'clock, the road was not covered until nearly eleven. Shortly after this time, we were informed that the length of the covered portion of the rails on the east line was about 50 yards, and on the west line 120 yards, and the depth of about 7 feet. Operations were immediately commenced to remove the slip by waggoning away from the gullet, and by erecting a stage to carry away the top of the slip to an adjoining spoil bank. From the advance made in the work during the past week, it appears that the greater part of the gullet is cleared on the east line; but the complete clearing depends altogether on the state of the weather. General Pasley, the newly appointed Inspector of Railways, visited the spot on Wednesday last, and remained there for upwards of an hour.

THE TOLL QUESTION—CROYDON AND GREENWICH RAILWAYS.

The toll paid to the Greenwich Railway Company from passengers by the Croydon Railway Company, is as follows:—

First Year.		Second Year.	Third Year.
1st 6 Months.	Fares reduced 9th Sept.	Fares raised 5th July.	Slip 3rd Nov. Railway obstructed.*
June to Dec...	£3,149 11 3	£3,060 13 3	£2,398 19 1
2nd 6 Months.			
Dec. to June..	2,508 4 9	2,026 19 10	

The amount of toll payable to the Greenwich Company for passengers by the Brighton trains, from the 12th July to 3rd January, six months (minus nine days), is £1,006 17s. 6d.

The gross amount received by the Brighton Company for passengers on their line, from 12th July to 3rd January, is £41,637 7s.

The amount of toll payable by the Brighton Company to the Croydon Company for the same period is £4,027 10s.; or 9¾ per cent. on that amount.

The gross amount received by the Croydon Company for passengers on their line, from June to December last (six months), is £15,044 19s. 11d.

The amount of toll payable by the Croydon Company to the Greenwich Company for the same period, is £2,398 19s. 1d.; or 16 per cent. on that amount.

The relative length of the Croydon line to that portion of the Greenwich line over which its traffic runs, is as 5 to 1.

That of the Brighton to the portion of the Croydon over which its traffic runs, is as 4·7 to 1, or nearly the same.

The toll in both cases is fixed at about 1½d. per mile per passenger.

Detention of the Mails.—Yesterday morning the mail trains on the London and Birmingham Railway, and also those of the Great Western, which should have arrived at six o'clock, did not, on account of the heavy fall of snow, arrive until half-past seven. The Worcester and Portsmouth mails did not arrive until eleven, and at twelve o'clock there were upwards of a dozen mails of the eastern and northern counties which had not arrived at the General Post-office in St. Martin's-le-Grand. Some of the guards of the mails which have arrived, state that the roads in many places were from five to six feet deep in snow, and in others drifted to a great depth.

* Notwithstanding the obstruction here alluded to, the amount of toll in November was only 109*l.* less than the corresponding month last year.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—At the meeting of the Manchester and Leeds Railway Company, in December, it was announced that a dividend of 3 per cent. upon the half year would result from this undertaking—the returns of the month of December being estimated at £4,000, which it has however *considerably exceeded*. Letters have appeared from Mr. White, Mr. Walker, and an anonymous writer in the *Manchester Guardian*, to the effect that there would not be 1½ dividend payable upon the half year, and otherwise disparaging the prospects of this undertaking.

It does the greatest credit to the Directors of this railway, that by their Secretary, in the same paper, they contradicted the statements of "Verax," and informed the public that his figures were grossly incorrect, and they did this to prevent the sacrifice which might be made of shares, through the misrepresentations of unprincipled stockbrokers.

Now, Sir, without giving you my opinion of the man who endeavours to depreciate my property below the value which it bears as a source of daily revenue, so that I may be influenced to sell it at a sacrifice, and this under the plea of protection to the purchaser, I beg to say that I read such letters with pleasure; they always instruct me that the writer who has "no shares connected with the Manchester," is extremely desirous to possess some, and they have been invariably followed by a considerable rise in the stock which they would depreciate.

I am, Sir, yours,
CAVE NE VENDAS.

Jan. 5, 1842.

MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—Will you spare me a corner in your next paper, to direct the attention of the Manchester and Leeds Directors to the excellent suggestion in your leading article of December 18, in reference to the construction of branch railways to be worked by horse power. It is understood that the character of the country presents so many difficulties, that the Halifax branch to the Manchester and Leeds will cost a sum altogether out of proportion to the receipts, if the motive power be the same as that adopted on the main line. A branch worked by horses would cost very much less, and would be worked for very much less; whilst, by enabling passengers to take the railway at any point between Halifax and the station on the main line, it might be made even more convenient to the inhabitants of that town and its vicinity than a steam-worked branch. Such a branch as that to which I have alluded might possibly present the further advantage of offering facilities for its continuance to Bradford; and if found successful in the one instance, then all the great towns which cluster so thickly along the line of the Manchester and Leeds, even including Burnley and Blackburn, might be connected with it by similar means.

I submit this hint to the better judgment of our Directors, whose untiring zeal for the interests of the railway will induce them duly to weigh every suggestion, however inexperienced the quarter from which it may come.

I am, &c.
A SHAREHOLDER.

P.S. Can any of your correspondents favour me with any account of the progress of the Oldham branch, and of its cost, as compared with the estimate of last September. Have the Directors, in their negociations with the Northern Union Company, taken care to stipulate that Manchester passengers shall be carried to Carlisle by the various railways at such fares as shall, in the event of competition on the western side, place the Manchester and Leeds Railway in a fair position. The difficulties thrown in our way by the Midland Counties Company, in reference to the London traffic ought, and I have no doubt will, induce our Directors to take such steps as will prevent any similar course from being adopted by the Northern Union and its associated Railway Companies.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—The Leeds Company having determined at the late meeting to proceed immediately in executing their half of the junction line through the town of Manchester *via* Hunt's Bank, the question of a southern junction line may now be considered *as for ever set at rest*. The Liverpool Company have now the option of a northern junction line, or of none at all; for the expense of the southern line is too great to be incurred by any one Company, and the Manchester and Birmingham and Sheffield lines are not prepared to join in the proposed junction by either route.

I have read with attention the article on this subject which appeared in the *Liverpool Standard* (quoted in your last number), and I must say the writer of the said article displays gross ignorance of his subject. He asserts that the southern line would run through property of the most worthless description. Now, Sir, any lad of twelve years of age who knows the locality, knows that this is far wide of the truth. I myself know every inch of the ground, and I can safely affirm that from the valuable nature of the land and buildings which must be taken, the southern junction line would prove most ruinously expensive. It would also, I am convinced, meet with the most determined and unrelenting opposition in Parliament from the owners of property, and probably also from the authorities of Manchester, as it would be a most intolerable nuisance, and greatly disfigure many of the best streets in the town. It crosses six of the widest and noblest streets in Manchester *on arches!* Your readers may imagine the effect of all this, by reflecting how great a nuisance would be in London, a railway crossing the Strand, Holborn, Tottenham Court Road, Portland Place, Regent Street, &c.

It is very apparent that the Liverpool and Manchester Board has no intention of making any junction line whatever. Their morbid anxiety that the Birmingham and Sheffield lines should participate in the advantages of a junction line is very praiseworthy were it but genuine. They know perfectly well that the construction of the northern junction by no means precludes a junction of all the railways in Manchester, but quite the reverse. When the Sheffield and Birmingham lines are ready to join in this project there would remain only about half a mile between the Store-street and Oldham-road stations to effect a junction of all the railways entering Manchester.

One word to the proprietary in the Liverpool line. Let them not blindly confide in Directors whose personal interests may often clash with their official duties. Let them remember also, that their goods traffic will greatly suffer from the steamers plying from the Leeds Company's Hunt's Bank terminus to Liverpool. And let them beware *of an opposition line!* The Leeds Directors are not men to be driven from their purpose, and they have no terms to keep with the Liverpool Board, which has treated them rather carelessly. They will never rest till they have secured a continuous railway communication from the docks in Liverpool to those at Hull; and this object may easily be attained by joining the Bolton and Bury Railway in forming a very short junction line through Salford, of some 700 or 800 yards in length. The route to Liverpool would then be by the Bolton and Bury, the Bolton and Leigh, and Liverpool lines, travelling only about half the distance on the Liverpool.

Let then the proprietors in the Liverpool beware of an opposition line—they have more reason to dread this than is generally supposed. A project has been mooted to form a line from the Bolton and Leigh to the north end of Liverpool. Such a line could be formed at a trifling cost. It would pass for some miles through estates belonging to the Derby family, and would be greatly assisted in passing through Parliament by that noble family powerful interest—as it is understood that they have never ceased to regret opposing the Liverpool and Manchester line going through their estates, as was originally intended; having found out their mistake when too late.

I am, Sir, your obedient servant,
HAUD IGNARUS LOCI.

January 10, 1842.

SPEED ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—Having recently travelled upwards of 700 miles upon different railways, I have like many other people made my remarks upon the arrangements generally, and as your columns are open to the public, I venture to forward my opinions, feeling that even though anything I may suggest will perhaps be considered of less importance than I myself may imagine, still there is no harm in laying before your readers those things which have occurred to my mind, in the hope that they may lead to improvements. Much has been said of late respecting the danger of rapid travelling, and of this there cannot be a doubt; but as all the old conveyances that used to run within a moderate distance of the railways now in operation are given up, the public are obliged to go out of their course to get on the railway, and it frequently happens that persons have transacted all their business, and are obliged to wait a considerable length of time, before another train starts in the direction they wish to go. This is much felt as regards short distances. I myself waited three hours when wanting to go ten miles, and after starting was detained more than an hour on the road, the line of railway being fourteen miles. This delay took place at Normanton, near Leeds, on what account I could not learn; therefore I was, in fact, more than four hours getting over a space of ten miles.

In the first place I would suggest, that if the trains were more numerous, viz., every hour and a half, and on some lines every hour, they would accommodate the public more than at present, and might travel at a less rate. It is no use whirling away at a dangerous speed, when the same time may be kept, by enabling people to start at their convenience, or nearly so. There would be another advantage in this arrangement, viz., the trains would be lighter; and the speed being decreased, would do away with the necessity of building the carriages and engines so strong; in fact, they would not need to be much heavier than the old fashioned coaches, which, during opposition, used to rattle over the stones at a rate fully as destructive to wheels and axles, as 25 miles an hour on a smooth railway. I have ridden upon a coach with a heavy load at the rate of 16 miles an hour, and no accident happened. There is a feeling rather too general, that as steam is all powerful, every thing should be constructed in a most massive manner, to bear the shake to which it is subject at *high speed, and this speed is required, as before stated, to compensate for the loss of time between the starting of different trains;* this ought not to be, and under the arrangement proposed, might be materially diminished. I would not allow more than 20 miles an hour exclusive of stoppages, and to ensure this not being exceeded, there should be a method adopted, by which the engine would give notice of the same to every passenger, that they might report upon it. I am prepared to produce a plan by which this can be effected. The whistle might be blown (*i. e.* after a slight sound) at every *quarter or half mile*, being worked by the driving-wheel, and this arrangement would be attended with another advantage, viz., in a fog; it might then sound to its full power, giving not only notice of its approach, but some idea of the speed; and if generally understood that the whistle of the down train sounded six seconds, whilst that of the up train uttered its note only three, there would be no mistake as to which train was approaching. I am aware the expense of having more trains will be objected to, but feel satisfied a *regulated* moderate speed would supersede the necessity of such extreme strength, thereby lessening

Digitized by Google

the cost of engines and carriages, and the consumption of coke. When a heavy train proceeds at great speed, an accident must be more serious in its consequences than to a light one, although proceeding at the same rate, the momentum being so much greater. The proposed alteration would be satisfactory in this respect also; and I feel sure it is possible to reduce the effect of collision very materially, by the introduction of a series of expanding springs behind the tender. I have been turning my attention to this point, and hope shortly to send you a plan that will meet with approval. Those who have travelled much upon railways must have observed that the speed is very uncertain, being more regulated by the caprice of the driver than by any inclination of the rails. A short time since a guard remarked to me, as we were proceeding at a good pace, "now the driver means going it; and he was right, we soon attained the rate of more than 60 miles an hour. With very long trains there must be considerable time lost whilst the necessary arrangements are making at the different stations; this evil would be diminished by dividing them as proposed.

I am, Sir, yours, &c.

S. E.

January 4, 1842.

THE NORTHERN UNION RAILWAY AND CAPTAIN WATTS.

To the Editor of the Railway Times.

Sir,—I at one time intended to make some remarks on the irascibility of temper in which the letter of the above-named gentleman of the 21st of November, addressed to the dissentient shareholders of the North Midland and Midland Counties' Railways, and published in your journal of the 4th instant, is written; but after perusing your own observations in your number of the 18th, I feel this to be quite unnecessary, and shall therefore at once proceed to the object I have in view.

Whether the resolutions of the majorities of the Companies guaranteeing 6 per cent. on the capital for ten years, to the shareholders of the proposed Northern Union Railway, be "untenable in a legal point of view, without the sanction of every proprietor" of these lines, or otherwise, I do not pretend to know. But whatever may be the law in the case, I am desirous, with all deference and respect, of suggesting a method of settling the question between the "tyrant majorities" of the two Companies above mentioned and the dissentients, with the Captain at their head, and thus averting all hostile measures of any description which they may now have in contemplation. The Captain says—what the numbers of his party, the dissentients, may be, he cannot tell. I should suppose that they are few, very few indeed. I know not whether the sentiments of each shareholder, either personally present or voting by proxy, were recorded at the meetings when the resolutions were passed. If such was the case, the dissentients, with the number of shares at that time registered in their names, will be easily known. If the votes were not specially recorded, trusting that none will now come forward as dissentients who then approved, I would submit that the dissentients should send their names to the Directors, with the number of the shares for which they were registered at the time of the meetings, provided they still continue to hold them all, or such part of those shares as they still continue to hold—*not of shares purchased since the meetings*, as they can in honour and in justice have no claim for indemnity in respect of such purchased shares; it being quite understood, that purchase under existing circumstances implies, in reference to those shares, assent to all former measures and resolutions. Let the Directors propose to the "tyrant majorities" at the next half-yearly general meetings, to relieve Captain Watts and the rest of the dissentients from their proportion of the amount of the guarantee, in respect of the shares registered in their names at the times of the meetings which passed the resolutions—or rather, I should say, such number of those shares as they continue to hold. For example, if the proportion of the profits of the Northern Union Railway, for the first year, should amount only to 4,000*l.* for the North Midland Railway Company, as they would have to supply the deficiency of 2,000*l.*, let it be ascertained how much of this loss would fall on each holder of one share, and then let Captain Watts and the other dissentients be paid their dividends, with the addition of the amount which would have been deducted had they concurred with the majority—who I am sure, would promptly and cheerfully agree to this mode of indemnification. On the other hand, if in the next year the proportion of this Company's profits of the Northern Union should amount to 8,000*l.*, of course Captain Watts and the other dissentients could have no claim for any portion of the excess. How easily, you will perceive, could the Captain be thus relieved from his apprehensions of any portion of his property being "appropriated to purposes foreign to the undertakings in which he is engaged!"

As a great increase of traffic on all the lines between Darlington and Rugby will be the result of the formation of the Northern Union Railway, I wish that the amount of such increase of traffic could be ascertained, in order if possible that the proportion thereof falling to each share might be deducted from the dividends of Captain Watts and the other dissentients. But this I apprehend cannot be done. I anticipate that the North Midland Railway Company will receive on their own line an accession of traffic to the amount of 1,000*l.* per week, and the Midland Counties' perhaps 800*l.* I fear that the dissentients could not be deprived of their proportion of this, though they would most amply deserve it. Doubtless Captain Watts would say that such increase was the consequence of the natural development of the traffic, quite independent of the Northern Union, and would have taken place had the Northern Union never been established. But it will be difficult to convince the clear-headed and unprejudiced shareholders of this; and I found this remark on the fact of the great increase of traffic on both these lines which soon followed the opening of the Great North of England Railway. I trust that at least an equal boon is in store for them, to follow the opening of the Northern Union Railway.

Some individuals are very desirous of exaggerating the probable cost of this important junction line of railway. One of your correspondents has supposed that it may even amount to 1,500,000*l.*—treble the estimate of Mr. Robert Stephenson. Captain Watts says, "that his faith shall be pinned to what Mr. Stephenson shall prove, not to what he shall say." From his accompanying allusion to the erroneous estimate of George, *the father*, at a time when the experience of the present day was wanting, of the cost of the North Midland Railway, he has assumed an error, namely, that the same is he who has estimated the cost of the Northern Union. But the engineer who has recorded his opinion of this is Robert, *the son*, and who has founded that opinion on his own experience; as the cost of the railways already constructed which this line will join, and the nature of the country through which it will pass, are already well known. I think I cannot conclude better than by quoting the following passage from this eminent Engineer's Report to the Directors of the Great North of England Railway Company, which Report was by them laid before the half-yearly meeting of the shareholders on the 7th September last:—"I have no difficulty in stating most confidently, upon the calculations and examinations I have already made, that it cannot exceed 20,000*l.* per mile, nor require more than two years to complete, and would beg to add that the traffic case, chiefly of a local character, which I have taken some pains to investigate, will be found fully sufficient to meet a fair interest on the money expended, exclusive of the immense reproval benefit which will immediately accrue to all the railways thus brought into union with each other."

My object in this letter being to propose a method of settling the dispute between the majorities of the two Companies named, and the dissentients, of whom Captain Watts is the leader, trusting that it will be adopted and prove successful, I subscribe myself,

Sir, yours respectfully,

ARBITRATOR.

December, 1841.

P. S.—Since inditing the above, I have perceived that at the recent special general meeting of the Manchester and Leeds Railway Company, there were only two dissentients, from a similar resolution in regard to their amount of guarantee. I would suggest that these two gentlemen should have a similar indemnity, subject to similar conditions.

5th January, 1842.

"CAPTAIN WATTS AND PRINCIPLE."

To the Editor of the Railway Times.

Sir,—Had I thought it necessary to reply to the case stated for my consideration in your paper of the 1st instant, my answer would have been, that he who by fraud or circumvention obtains, or attempts to obtain, possession of another's property, is not an honest man; and that I had no knowledge of the case alluded to.

The nearest to it is the following:—

A and B are Directors of a Company, the shares of which from known losses had dropped from 30*l.* to 12*l.* B a man of rank, and very timid—in fear of arrest or other imaginary degredation, asks his colleagues to take his shares; they decline; when he offers them to A, who not being competent to hold them, procures his friend C to do so, with the consent of the Board, provided B will wait over the next meeting, which is expected to be a stormy one, and may lead to a dissolution, the loss of one-fourth the capital authorising this. A dividend being declared, all passes quietly, when the Directors with unparalleled perfidy, attempt to appropriate the shares for the benefit of the Company. Indignant at such conduct, A threatens exposure, and denounces the attempt as disgraceful. Frightened on the one hand, C obtains the shares; but, stung by reproaches on the other, a determination, as the event proved, was taken to deprive both A and C of any eventual advantage. As the shares are forfeitable at the end of six months if the property of A, he makes them over to C, in full proprietorship, who *retains them to this day*. At the end of six months nearly, C, as the reward of long and faithful service under the Government, being promised the first superior appointment at home or abroad, is anxious to settle his affairs and dispose of his shares, and pressed for time, applies to A for assistance, who being as a Director precluded from appearing as a buyer or seller of shares, at first hesitates, but finally agrees to offer them in the market, with the concurrence of C, under an assumed name, but *upon condition that the proceeds shall be set apart to reimburse the purchaser in case of further losses*, to which C agrees, his object being, not to fill his pocket, but to ease his mind. The Directors refuse the transfer, and will assign no reason. A enters his protest, which is disregarded, and states that as no just cause can be assigned, save the actual losses, no further transfers ought to be allowed, and demands that a meeting should be called, in conformity with the deed of settlement, to make known the state of the Company, which being resisted, he resigns; and when subsequently he is invited to return, upon an intimation that all *might go well* if he would sanction the transfer of a number of shares, he resolutely refuses, knowing that *no such reservation could be made as in his case*. C receives his promised appointment within a week after, and that being a home instead of a foreign one, *there* the affair might have ended. But the buyer threatens his action against C for not performing his contract. To which the Directors, upon representation, turn a deaf ear. The action ends in a nonsuit, but the parties who had brought it, having vainly endeavoured to terrify A into a compromise while it was pending, through the fear of exposure, which was the very thing he courted, became irritated, and leagued with other calumniators, who being chiefly composed of the knaves who figured some time ago

Digitized by Google

so conspicuously in the Durham County and Northern Coal Mining Companies, and whose precious doings he had endeavoured to counteract, it requires no further explanation why and wherefore A was vilified.

Hence, Sir, it will be seen, that the only weak point in the case of A was the fictitious name superinduced by the practice of the Board, and which his enemies adroitly availed themselves of, to give edge to their slander. So inartificial was the mode of doing it, that the letters to the broker were in his own hand-writing, and dated from his own residence; and he subsequently, when bringing the matter before the meeting, made no secret of it. It may have been wrong. It certainly was foolish; because a friend might have done it equally well, but what is sanctioned by custom, where guile is not intended, can hardly merit severity of censure. It need hardly be said that my name may supply the place of A, and that as formerly I gave a solemn denial to the imputation of fraud, so I equally renew it now, accompanied by the assurance that I can, by the evidence of others, substantiate my statement; and then, Sir, where is discernable that departure from principle, an adherence to which I hope it is no vain boast to say, I have made the rule of my life? When I attacked Mr. Hudson, I knew it was like boarding the lion in his den, for York is the stronghold of my adversaries—but strong in my integrity and my proofs, I challenge publicity and defy detraction. Why you have lent yourself to propagate the calumny, you best know; but I desire to inform you, not from myself only, but from the testimony of dozens, to whom I have shown the article in your journal, that whether the imputation be true or not, you were not justified in lending yourself to such an act. Against private slander and secret detraction one has no safeguard—but now that they have found their way into a public journal, the matter cannot be allowed to rest. My friends have already obtained my sanction to address you on the subject, and if you either cannot or will not do that which true nobleness of mind cannot fail to dictate, I trust ample reparation, on being sought, may readily be obtained elsewhere.

I remain, Sir, your obedient servant,

G. E. WATTS.

Langton Grange, Darlington, 10th January, 1842.

"CAPTAIN WATTS AND PRINCIPLE."

To the Editor of the Railway Times.

Sir,—Unused as I am to the art of composition, yet a sense of both duty and justice urges me to take up my pen in reply to an article in your journal of the 1st instant, headed "Captain Watts and Principle."

If I am right in my conjecture as to the meaning and motives of the writer, I trust, for the sake of his character as a Christian, that he believes he is right; but I assure him he is wrong. The entire facts upon which the charge is grounded, could be known but to a few individuals, of whom I am one. *One* fact alone enabled those who had been offended by the plain dealing of Captain Watts (as others have been in a recent instance), to put an illiberal construction upon his motives. The explanation is both easy and simple; and I undertake, if required, to give it, supported by undeniable evidence; and this done, I anticipate the verdict, that in no case could any one have acted with more disinterested integrity.

This attempt, therefore, to cast a stain upon the character of as honourable an individual as ever won his way to credit and respectability, is deserving of the highest censure. Had Captain Watts, Sir, been one capable of doing what is imputed to him, the calumny never would have been uttered. He treated his maligners and their conduct with the contempt due to the unworthy, and disdained, *beyond a solemn denial*, to account for his motives in a *private transaction* to a self-constituted tribunal. Like other by-gone matters, it might now have been supposed extinct; but malevolence never slumbers—envy never dies.

Since you have thus unaccountably lent your journal to give currency to the slander, I rely upon your sense of justice to give equal publicity to this refutation; and to add (whatever confidence "Spectator" may have in the authenticity of his case), that I challenge him to produce his proofs, and confront them with mine; and in order the more effectually to do so, I enclose you my name and address, and claim the equal privilege of being made acquainted with his, and remain, Sir,

Your obedient servant,

W. C. W.

January 7, 1842.

"CAPTAIN WATTS AND PRINCIPLE."

To the Editor of the Railway Times.

Sir,—I only to-day observed an article in your journal of the 1st instant, headed "Captain Watts and Principle," in which a case is stated for that gentleman's consideration, evidently for the sinister purpose of criminating him, if possible. The struggle he has been recently making in defence of what he deems to be right, and the hostility his straightforwardness may have excited in the mind of an offending party, will sufficiently account for the animus of the writer.

The transaction upon which his incorrect statement is founded, gave rise to an action at law, in which the parties were nonsuited, and from its peculiarity excited considerable local notice some years ago. Now, as the circumstances were entirely of a *private nature*, with the details of which I, as the person chiefly interested, must be best acquainted, so no one is more competent than I am to give a *true* version of the affair, which I am at any time ready to do.

These details, however, cannot interest the public, and I shall therefore only do now, what *I once did before*, come openly and honestly forward to relieve Captain W. from that responsibility entered into by him for my accommodation, and the time and mode of doing which were dictated by present necessity, and with *my full concurrence*.

While I regret that your excellent journal should have been made the medium of invidious insinuations upon the conduct and motives of an honourable man, I at the same time rejoice in the opportunity it affords me of refuting one of the most unjust aspersions that ever emanated from the tongue of calumny, and of moreover testifying, upon the strength of an intimate acquaintance of between 30 and 40 years, that no one more deservedly possesses a higher character for honour and integrity, and that were I to select a case in which he showed himself *pre-eminent* in both, it would be this very one, where, while striving, with considerable kindness, to serve a friend, he at the same time *provided, by a generous reservation, that others should be guarded from eventual loss.*

I enclose you my name and address, and

I am, Sir, yours, faithfully,

VERITAS.

January 8, 1842.

[We cannot allow this matter to be pursued further; at least, we can admit no letter without the name and address of the writer affixed.—Ed. R. T.]

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—My attention having been called to a letter signed "K. H.," addressed to yourself, as Editor of the *Railway Times*, in your last publication, reflecting on the conduct of the jury which sat on the Coroner's inquest on the bodies of the sufferers by the late railway accident at Sunning, I take the liberty in justice to myself and fellow-jurymen, to say one word in reply, and to request your insertion of this letter. As to your correspondent's remark on the degree of blame that ought to attach to the Company or their servants in this unfortunate case, I recommend your own leading article to "K. H.'s" perusal, as an answer, and as a justification of the view we took of the subject. With respect to his base insinuation that we, the jury, were induced to award the deodand we thought fit, under the "supposition that they would either divide the spoil, or that the Lord of the Manor would enjoy it," I treat the insinuation itself, as well as its author, with the contempt that it deserves; and as to the statement that your correspondent presumes to make, "that the verdict was prepared before the adjourned meeting took place," I take the liberty in the name of the jury, to say, that such an assertion, come from whom it may, is a gross and deliberate falsehood.

I am, Sir, your obedient servant,

JAMES MILLARD,

[Foreman of the Jury.]

Sunning, Jan. 7, 1842.

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

Sir,—Just and forcible as were your strictures on the evidence given at the recent inquest at Sunning, equally appropriate are those in your last number on the proceedings at the inquest at Reading on the 31st ult.

The public will learn with astonishment that "there have been many instances of a train running into the luggage train on the Western Railway." Let a list be produced of them and their several consequences; also another list of similar occurrences on the London and Birmingham, and their consequences. It may be anticipated that such lists would go far to refute the arguments that such instances are numerous, or that they are unavoidable. The fact of their existence, their ill consequences, or their being unavoidable, may well be questioned, or if they have occurred, where has been the vigilance of the public press, particularly of that part devoted to railway subjects?

The truth is, that this alleged danger is one which it is neither impossible nor even very difficult to guard against. Attention to one point alone (mentioned by you,) would suffice effectually to prevent it, viz.—a proper arrangement easily to be formed for the slow trains to halt on sidings, and "remain a certain time at certain places, to allow the faster trains to pass on."

Supposing eight hours to be allowed for going over the ground between London and Bristol (fifteen miles per hour), let another four hours be added for halting at the appointed places. For all practical purposes, twelve hours for slow trains would be as good as eight hours, and this would assist the object of rendering the slow trains less eligible to passengers, and tend to deter those who can afford the higher fares of the superior carriages from resorting to those of an inferior class. The work of attaching and detaching vehicles at various stations would also be better performed.

It is high time for Government to interfere actively in these matters, though they have not at present power to enforce what they may recommend, and if not properly attended to, the case for Parliamentary interference to extend their powers would become thereby much strengthened.

Yours respectfully,

T.

Bath, January 12, 1842.

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY—SLIPS ON RAILWAYS.

To the Editor of the Railway Times.

Sir,—Much ill-placed indignation has been manifested against the Directors of the Great Western Railway, for an imputed remissness in watching their embankments and cuttings. The evidence of Mr. Brunel and Mr. Saunders, sets this matter entirely straight in my own mind, and will do the same I think in the minds of most candid persons. I wish I could attach equal importance to the reasons assigned for placing the passenger truck next to the tender, because I must consider all such reasons insufficient, while any means exist for obviating the ill consequences of a collision of trains. But as to the slip, can it be a matter of wonder that such accidents occur—and they are

Digitized by Google

not confined to the Great Western Railway—under an atmosphere which, with a precarious interval, has reduced our climate during the last four years to the state almost of a perpetual rainy season? While inhabitants of Holland are driven from their fields and their homes by the breach of sea banks, caused by ceaseless rains and consequent irruptions of the waters, shall it be imputed as a crime to the Directors of railways, when slips happen unawares to their officers, by night, and in spite of ceaseless vigilance by day, that they keep not up a night-watch, to see nothing in our long starless, as well as sunless, regions? The wonder really is, that so few accidents of this sort have occurred on such vast lengths of newly raised and new cut road; and still more may we wonder, be thankful, and adore, when we reflect, that although *the windows of heaven have been opened on us during many a forty days and forty nights* of the four last years, still have seed-time, and harvest been continued to us by Him, who "is not a man, that he should lie, nor a son of man, that he should repent" of his promise given to our race. Had *thousands* perished during this mournful period, by land-slips such as that in Dorsetshire, by overflows and famine, it could have created no surprise under so dread phenomena of nature; and shall feeble mortals be arraigned for lack of attention under circumstances wherein even a lining of the road with watchmen, that would devour the whole profit of a concern, might as likely as not be utterly inadequate to give warning of a mischief thus heaven-entailed?

But suffer me, Sir, now to recommend a lining to cuttings and embankments, which nature herself can make effectual, as a preventive of slipping soil; and which nature and art together may render effective of profit to Railway Companies, that shall ultimately vie with the profit on the travel itself, and even continue a profit should travelling by railway cease. Every portion of these ways I would clothe, or border, wherever susceptible of the thing without injury to the road itself, or to the neighbouring land, with shrubs or valuable timber trees, preferring oak and walnut in all fit spots. Shrubs probably would best line the cuttings, to produce in every decade of years a vast growth of faggot-wood. The watch that protects our roads would guard our woods; and I need not say, that roots serve to sustain land. I have seen the mischief of *removing* trees from slopes on a great scale. The river Ohio, named by its first European discoverers, the French, La Belle Riviere, I beheld, years ago, in the course of losing under the axe of crazed new settlers, that feature which chiefly entitled it to its French distinction, and which almost solely sustained the deeply alluvial soil of its banks, then, and now, crumbling into the stream, to be washed into the fens of Louisiana, or lost in the Gulf of Mexico.

With a view to profit and public advantage, I ventured to introduce this subject during the year 1840, to the notice of the eminent Chief Engineer of our western railways, who expressed his approval of the suggestion. Could the Directors of the Bristol and Exeter Railway turn their attention to the subject, might not their own interval of inaction on the finished parts of their road, be turned to good account? Respectfully yours,

J. P. BARTRUM.

Bath, January 12, 1842.

N. B.—Speaking on the subject, since writing my letter, with our eminent practical gardener and nurseryman, Mr. Jonathan Salter, the elder; he declared, that he had not a doubt of the efficiency of shrub-planting for the protection of the cuttings; and that he had repeatedly thus sustained slopes, by planting the common elder, and any willow; both of which strike their roots straight down, and will yield faggot-wood in four or five years.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—I have been an anxious wellwisher of the North Midland Railway ever since its commencement, and was very sanguine at one time of its eventually being one of the best speculations of its kind; but having narrowly watched its working ever since it came into operation, I feel bound to confess that my impression is materially altered, if the capricious mode of conducting it for the past be any criterion for the future. "Capricious," I call it, and so it is, as connected with their putting on and taking off trains; changing the number and times of stopping at local stations; and their very disproportionate rate of fares at some of those stations. These things I call capricious, inasmuch as the local Directors seem to be governed by too much individual prejudice, and, in many cases, unfounded statements.

In many cases the Managers, I fear, have been too much influenced by the too often vague reports of the police, porters, clerks, &c., touching the requirements of the neighbouring country through which the line passes, and its resources (matters on which most of them are wholly unable to give a proper opinion), without adhering to the sound admonitions of bygone experience, or calling in as they might have done, the opinion of respectable and impartial individuals of the immediate neighbourhood, and comparing their statements with the present and past, and their own ideas of the future. These things, added to the want of courtesy (I would not now say uncivility, but leave the sequel to speak for itself), are causes obviously producing a falling off of revenue.

When I compare the want of accommodation on this line, with the great accommodation on some others, to my thinking less likely to pay and yet yielding good interest, I feel free to confess, when they tell us through the medium of their porters, &c., that they care nothing about short passengers, in consequence of the heavy duties per mileage, that they stand in their own light. And not only so, but they err greatly in keeping, as is too often the case, illiterate men at the stations, who no sooner put on a suit of corderoy than they think they have a licence for insulting passengers, instead of drawing them to the line as they might do by courtesy. At one particular place, viz., Beighton, a small village on the confines of Derbyshire, a box and platform were put down which realised as much as from 400*l.* to 500*l.* a year. Now it is mutilated, and three others are established between Eckington and Masbro', and altogether do not realise much more than that one did alone, and principally from the causes above named. On the 15th of November, several most respectable persons were walking on the platform at Beighton; the train was due, and there was no official person there either to give them tickets or admission from the inclemency of the weather; but when the man came, who resides near two miles off, on being remonstrated with, he impertinently said, it was not a proper place for a station, and that he was not bound to let passengers into the box, as it contained the Company's stores. Again, on the 26th of December, 1841, there were at the said Beighton fourteen or fifteen passengers who could neither gain admission into the boxes, and train due, nor tickets, notwithstanding the vigilance of the Inspector alluded to in your paper a few weeks ago. These are evils that cry aloud for immediate attention.

I am, Sir, your obedient servant,

A CONSTANT SPECTATOR.

January 3rd, 1842.

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

Sir,—In a letter signed "Jacobus," inserted in your last week's publication, I observe some remarks in reference to the North Midland Railway, on the late reduction of some of the salaries of the Clerks. It should be borne in mind that such reduction does not affect any Clerk having a salary of not more than 100*l.* per annum, and I would ask "Jacobus" how many Clerks—aye, and efficient ones too—might be found in Manchester and elsewhere, whose pittances are from 60*l.* to 90*l.*, and who would be exceedingly glad to obtain a situation of 100*l.* a year, if they knew where to find it.

It is also stated in the letter above referred to, that the revenue of the North Midland approaches near 250,000*l.* I only wish this may turn out correct; but according to the weekly returns published in your valuable paper, the half year just ended amounts to somewhere about 114,000*l.*, and this includes a large amount of traffic which, when the Manchester and Birmingham line is opened (in March next) will immediately leave the North Midland, and be conveyed *via* Crewe; and this traffic is very considerable, as one firm alone (Pickford and Co.) I am informed, convey from 300 to 400 tons weekly to and from Manchester and the south of England, and which at present passes along the North Midland.

The North Midland Railway may "ultimately" pay its enterprising proprietors something like a fair remuneration for the capital they have embarked in it; but at present I think their prospects are any thing but cheering, and it therefore behoves the Directors to use every economy consistent with the efficient working of the line.

I am, Sir, your obedient servant,

A RAILWAY SHAREHOLDER.

Manchester, January 12, 1842.

CARRIAGE OF PARCELS BY RAILWAY.

To the Editor of the Railway Times.

Sir,—Allow me, through the medium of your publication, to call the attention of the public, and particularly the trading part of the community, to a grievance of which myself and others have cause to complain.

Complaints are frequently made at the stations of railways (and justly) of the charges exacted for the conveyance of parcels and merchandise; and, however well founded, they are not within the controul of the Directors or the individuals conducting the carrying department.

The remedy is simple and efficacious, and in the power of all persons who have occasion to forward goods by railway; viz.—Let every parcel or package be directed "per railway;" in such case the Directors will be amenable for any overcharge; but when goods are entrusted to other parties, these send them by railway, pay the regular charge on arrival at the station, and add any amount they might think proper, and these combined, form the sum demanded of the parties to whom the articles are consigned.

Instances have occurred in which individuals have been charged 100 per cent. and upwards, in addition to the railway charge.

In all cases where goods are directed, per railway, a printed document is issued at the office, stating the amount charged, and to which the *only* addition that can be demanded is the expense of carrying the articles from the station to the place of destination, and this of course only where parties do *not* convey by their own means.

A SUFFERER.

Bristol, 12th January, 1842.

The Iron Trade.—The state of the iron trade, as was expected, came under the consideration of the ironmasters' meeting, at Dudley, on Thursday last, when, we are happy to state, it was determined to continue paying the men at their present rate of wages. No reduction, consequently, will, in the present state of affairs, take place. Thus, as the hands have not hitherto been discharged, nor are any that we know of under warning, and the rate of wages remains the same, the discontinuance of the working of some of the furnaces (for there will not be a fourth of those recently at work blown out) will not prove so calamitous as apprehended. The surplus stock of iron is understood to be chiefly pig iron; and it would appear, from the circumstances above stated, that employment has been found for the furnace men and others immediately connected with that manufacture, in other departments of the business.—*Wolverhampton Chronicle.*

PRESENT PRICES OF GREAT WESTERN AND OTHER RAILWAY STOCK.

To the Editor of the Railway Times.

I have frequently observed that much valuable information has been elicited through replies given in your columns to inquiries made by some of your correspondents; as for instance the memorable one in 1838 or 1839, of "Will Railways Pay?"

May I beg of you, Sir, to permit me to inquire whether any of your correspondents can favour me with replies to the following queries:—

1st, How is it that the Great Western shares are at 22 premium old, and 10 premium new, equal to 32 premium on each 100*l.* paid, while the Manchester and Leeds shares are only at par? The Leeds line is paying 6 per cent; it is not expected that the Great Western will pay more, and the chances of an increased dividend in 1843 are as much in favour of the Leeds line as of the other.

2nd, How is it that the Sheffield and Manchester shares, 82*l.* paid, are selling at 31*l.*, if that line is likely to be constructed at the trifling cost of 1,134,000*l.*, as affirmed by the Engineer? Is it that the public consider the three mile tunnel impracticable—that the total cost of the line is likely to turn out some three millions, and that Engineers are the worst possible authority as to cost?

3rd, How is it that the North Midland is not worked as as low a per centage on the gross receipts as its neighbours, the York and North Midland and Manchester and Leeds?

4th, For how many years was it that the Liverpool line agreed to allow the Grand Junction the use of their line for 20,000*l.* per annum? If the agreement expires shortly, the Liverpool Company will find that the opening of the Manchester and Birmingham will curtail their profits probably to as great an extent as the canal penchant of their largest shareholder.

I am, Sir, yours, respectfully,
A CANNIE SCOT.

London, January 10, 1842.

THE MANCHESTER AND BIRMINGHAM EXTENSION SCHEME.

To the Editor of the Railway Times.

Sir,—The breach of faith on the part of the Directors of the late Stafford and Rugby Railway scheme with their subscribers, ought I conceive to be made public.

When the said Directors distributed a portion of the remaining funds of the Company to their subscribers, they, the Directors, told the subscribers, that there would be about 5*s.* more per share for them, and that too immediately.

Now, Sir, from that day to this not a word have they dropped on the subject. The matter cannot of course be permitted to end thus. But as many if not most of the subscribers gave up their certificates to the Directors at the time of receiving back the portion of the unexpended funds referred to, they have no longer that demonstrative evidence of being subscribers.

But I am informed this difficulty can be got over. And my motive in requesting an insertion of my note, is that a case of discreditable, and as I conceive dishonest, conduct, may be exhibited on the *black board* of the railway community.

Yours, &c.,
ONE OF THE WRONGED.

London, January 11th, 1842.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

[From the *Liverpool Standard* of Tuesday.]

Our contemporary, the *Railway Times*, in replying to a few remarks which we offered, on Tuesday last, upon the subject of the proposed junction line between the above railways, infers what we really cannot allow him to do, that the article in our columns must have emanated from "a partizan" deep in the secrets of the Liverpool and Manchester board. We can assure the *Railway Times*, that in any opinion which we have at any time offered upon the comparative merits of railway undertakings, our motives have been equally pure as his own, and our mind perfectly unbiassed; and if, on this question, we could see, in the conduct of the Liverpool board, any leaning to individual interests, as opposed to the interests of the shareholders at large, or the convenience of the public, we should be as ready to denounce such a leaning as our contemporary himself.

We cannot, however, we must confess, discover any such unworthy spirit in the conduct of the Directors of the Liverpool line, in resisting the attempt of the Leeds and Manchester Directors to hurry them into the formation of the proposed junction between the two railways. On the contrary, we are, on a more mature consideration of all the circumstances of the case, even strengthened in our conviction that the Liverpool and Manchester board have a perfect right to pause before adopting the views of the Leeds Company, and with *three railways, each seeking a communication with them* through the town of Manchester—and that communication necessarily a somewhat expensive one—to give their sanction to such a scheme as would satisfy at once all interests, rather than to enter upon the formation of a separate junction with the Leeds line, leaving two other important lines entirely unprovided for. We can see nothing either very reprehensible, on the part of the Liverpool board, in wishing to postpone any present steps in the matter, even supposing—(and it *is* a mere supposition—) that they are convinced of the superiority of any particular scheme. It is quite possible, as we have remarked in a previous article upon this subject, that circumstances may develope themselves during the present session of Parliament, which will force upon the mind of every prudent man the conviction that the formation of a junction line through Manchester, so expensive as either of the competing schemes, is very inexpedient; and independent of this consideration, the present position of commercial and monetary interests, and of railway interests as well, is quite sufficient ground for unwillingness to embark in new undertakings not urgently required.

We did not, whilst alluding to the "unfair spirit" manifested by the Leeds Company at their recent meeting, or when expressing our confident expectation that the Liverpool board would not be turned from their course by the paper pellets directed against them by their "detractors," include our contemporary amongst the number. And yet on the principle that a journalist is in some measure responsible for the statements of his correspondents, any one, not so well acquainted as we are with our contemporary's general fairness in "hearing both sides," might almost have done so. For weeks past his columns have teemed with the contributions of the Manchester and Leeds gentlemen, impugning the motives of the Liverpool board in no very measured terms, and decrying the merits of other undertakings, in particular of that much vilified one, which is the especial object of their jealousy, (the line between Manchester and Sheffield,) and which for the last five years their scribblers have been sedulously endeavouring to write down; and coupling with these attacks the total omission, (for which our contemporary offers a very lame excuse,) of the claim of that undertaking to be considered in the settlement of this question of a junction line, we are convinced that we were fully justified in charging them with both "selfishness" and "unfairness."

But pass we to the main point in dispute; the question as to the relative advantages of the two competing schemes, for after all, that question is the most important one to be settled. The *Standard*, our contemporary, says, "Asserts, but does not prove that the *other* junction line" (the line to connect the Liverpool with the Birmingham and the Sheffield line) "would be more advantageous and less expensive than that to Hunt's Bank. We should be glad if this could be satisfactorily made out, for in that case we should urge the Liverpool Directors and all concerned to give it the preference." Our reply to this passage shall be very brief. In the first instance, we did not say that the line to join the Liverpool with the Manchester and Birmingham and Manchester and Sheffield could be made for less than that to Hunt's Bank. We said that it had been estimated at and could be made for one-third the cost (650,000*l.*) put down for it by the speakers at the Manchester and Leeds meeting; and if it be the case that the estimated cost of the line to Hunt's Bank is 450,000*l.*, then, of course, we may *in substance* have made the assertion which is here attributed to us. We have no great confidence, however, in *ex parte* estimates, or indeed in estimates of any kind. It is not, however, a dozen years ago since we saw a plan and estimate of a line of railway *over this very part of Manchester*, commencing from the Liverpool line at Oldfield-lane, and terminating at Sheffield—a route of 44 or 46 miles, and comprising *eight miles* of tunnelling—the cost of which was stated at, if we remember right, the very same sum of 650,000*l.*, by no less celebrated an engineer than Mr. George Stevenson, the projector of the Leeds line; and we cannot think that such great improvement has been made in the art of spending money upon railway works, that two miles of railway now will cost as much as 46 miles, *including the same two miles*, would have cost ten or twelve years ago! This estimate, it is true, may be *too absurd* to be noticed; and so may be, and so is, the estimate which the Leeds gentlemen would palm upon us. The same line has, however, been surveyed at a more recent date by more than one eminent engineer; and we are much mistaken (and we can be corrected if we are,) if the estimate of any of them exceeded 250,000*l.*? Our contemporary can readily satisfy himself, if he possesses the inclination, by an application to the parties in Manchester, one of them a Company proposing to make the line in question, for whom these surveys were made. If we mistake not, some information upon the subject will be found by a reference to the early numbers of his own publication.

With respect to the comparative advantages to the Liverpool Company of the two connecting lines, we presume that Company is very competent to judge for itself. We have no wish to undervalue the importance of a connection with the Leeds line, and do not think that that line ought to be without a junction with Liverpool; at the same time we are as little disposed to overlook the advantage of a connection with the important towns upon the other two lines, some of which—and we allude to Sheffield in particular—do not possess already the advantage of water communication with Liverpool. On these grounds we do not wish to see a decision upon the line to be adopted hurriedly arrived at; and would suggest, that it would be infinitely better that *all* the Companies should consent to abate a portion of their present demands, and seek a line of which *all might partake the advantage*.

In conclusion, we should be very happy if we could on all occasions copy entire any remarks of our contemporary addressed to us. We believe, however, that he will not suffer greatly by the omission, his journal being generally read by those of our townsmen who are interested in any subject likely to be discussed between us.

Edinburgh and Glasgow Railway.—A special general meeting of the Railway Company was held on Tuesday [week], in the Railway Office, Queen-street, Glasgow, to enact bye-laws for the government of the Company. After the special business was concluded, a question was put to the Chairman as to the fares, when Mr. Leadbetter stated that the first class was to be nine shillings—the second, six shillings and sixpence—and the third, four shillings. The Chairman likewise mentioned that the hours at which trains would start from both ends would be 7, 9, 11, 3, 5, and 7—with two luggage trains at six morning, and one afternoon. We learn that the railway will be opened very probably on the 1st of February.—*Glasgow Constitutional.*

LONDON AND SOUTH-WESTERN RAILWAY.—We understand that the Directors of this railway company have adopted the plan of having side lamps fixed to the carriages as near as possible to the centre of the whole train. These new lamps give a red light, and are, in addition to the two white and red lamps heretofore and still used, the one in front of the engine and the other at the back of the last carriage. The advantage of this plan is said to consist in the readiness with which a train following another may, when the preceding one is on a curve, distinguish the line of rails which it is traversing, and thus the possibility of a collision under such circumstances is rendered more remote. The new lamps give out a most intense red light, and are upon an improved construction.—*Daily papers.*

MANCHESTER AND LEEDS RAILWAY.—TENDERS FOR LOANS.—Notice is hereby given, that the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £1,000 each, secured by the bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly.

By order of the Board,
JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester,
January 10th, 1842.

MANCHESTER AND LEEDS RAILWAY.—TENDERS for BUILDINGS at OLDHAM STATION.—The Directors will meet at their offices, Clowes' Buildings, Hunt's Bank, Manchester, on Monday, the 24th of January, 1842, for the purpose of receiving TENDERS for the erection of Offices, Goods Shed, and other Buildings, at the Oldham Station, including a Shed, with Iron Roof, over the platforms.

The Plans and Specifications will be ready for inspection at the Engineer's Office, Palatine Buildings, Manchester, on and after Monday, the 10th January.

Printed forms of Tender may be obtained at the Engineer's Office, and none others will be attended to.

The Tenders must be delivered at the Offices in Clowes' Buildings, on Monday, the 24th January, 1842, not later than Ten o'clock, in the forenoon, and parties tendering will be required to be in attendance at Three o'clock in the afternoon of the same day.

Engineer's Office, Palatine Buildings, Manchester.
December 30, 1841.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton-street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs. Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the consequent cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London. Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

METROPOLITAN PATENT WOOD PAVING COMPANY.—Notice is hereby given, that interest at the rate of 5 per cent. per annum on the paid up capital for the six months ending 31st December, 1841, will be payable to Shareholders at the offices of the Company, 4, Millbank-row, Westminster, on the 1st and 2nd of February, between the hours of 11 and 2 o'clock.

By order of the Board,
WM. PROSSER, Jun., Secretary.

4, Millbank-row, Westminster, 11th January, 1842.

TO RAILWAY SHAREHOLDERS, ENGINEERS, CONTRACTORS, AND OTHERS.—IMPORTANT RAILWAY CASE.—Just published, price 2s. 6d., a Report of the Case, "Irving, a Contractor, v. the Maryport and Carlisle Railway Company;" referred from the Carlisle Assizes to R. B. Armstrong, Esq., Q. C., and heard at Carlisle on the 7th of September, 1841, and the four following Days, in which Mr. Thorpe, of Thorne, Yorkshire, appeared as Attorney for the Plaintiff; and Mr. Tyson, of Maryport, Cumberland, and Mr. Mounsey, of Carlisle, for the Defendants.

London: Whittaker and Co., Ave-Maria-lane; and may be had of all Booksellers.

TO RAILWAY CONTRACTORS.—For Sale 3,443 fine well seasoned Scotch Fir Sleepers, 9 feet 10 inches by 5 inches broad. 1,469 ex. True Blue are lying in the Grand Surrey Canal Dock, and 1,974 ex. Evander, at Mr. Manuelle's Lavender Granite Wharf, Horseferry. Rotherhithe, at either of which places they may be seen. For terms, apply to Mr. James F. Morice, Crosby Hall Chambers, Bishopsgate-street, London.

TO RAILWAY CONTRACTORS, EXCAVATORS, QUARRYMEN, JOINERS, BUILDERS, IRON FOUNDERS, BLACKSMITHS, TIMBER MERCHANTS, FARMERS, AND OTHERS.—IMPORTANT SALE OF STOCK.—To be Sold by AUCTION, by Mr. OUSEY, on Thursday, 20th January, 1842, on the Banks of the Canal, near Guide Bridge, and the Railway Station near Ashton-under-Lyne, in the County of Lancaster, in Lots to suit Purchasers, Part of the Stock of Messrs. Denton and Co., Railway Contractors, who have FINISHED THEIR CONTRACT on the Sheffield and Manchester Railway, consisting of Nine valuable, short-legged, powerful, DRAUGHT HORSES in capital Working Condition; 30 sets of Shafts and Chain Gears; 10 good box Carts, on 6 inch and 4½ inch wheels, and iron arms; 2 capital timber Carriages on four wheels; 2 Stone Trucks, or Carriages, equal to 5 Tons, in good repair; 120 Railway Waggons, carrying 2½ cube yards each, 2 feet 6 inch wheels, 3½ inch axle, all in good working condition; 100 Wheelbarrows; several thousand feet of excellent Battens and Planks, also Timber of all scantlings; 3,000 to 4,000 good Larch Sleepers; Pile Engine; a quantity of new 3 inch Plank; Sets of Centres, for 12, 20, 25, 30, and 60 feet span arches, all complete; 220 Tons of Rails, from 28, 32, and 45 lbs. per yard; 140 Tons of Chairs; 40 Tons of New and Old Scrap Iron; a large quantity of Cast Iron; 24 good 3 wheeled Carts; Blacksmith's Shop, Anvils, Vices, and Tools; several sets of 2 and 3 Sheave Iron Purchase Blocks, capable of lifting heavy weights; Chains, Nippers, Leavers, Shear Legs, Mason setting Legs, and 2 excellent Block Cranes; numerous Pumps; 3 Black Larrys with 2 feet wheels and 3 inch axles; and numerous other valuable articles of Stock used by Railway Contractors.

Sale to commence at Eleven o'Clock in the Forenoon precisely.

Punctual attendance will be esteemed a favour. For Catalogues, apply near the Ashton Station, Guide Bridge; or to the Auctioneer, Old Cross, Ashton-under-Lyne.

AIRE AND CALDER NAVIGATION.—TO EXCAVATORS, MASONS, AND GENERAL CONTRACTORS.—TO BE LET, the WIDENING AND ENLARGING of the LEEDS CUT, the Building and Completing of an Entrance from the said Cut to certain intended Docks on the South Side thereof, a Bridge over such Entrance, and the Floodgates, Culverts, Retaining Walls, and other Works connected therewith.

Plans and Specifications may be seen, and further Information may be had at the Office of Messrs. George Leather and Son, Civil Engineers, at Leeds, from Wednesday, the 19th instant, to Wednesday, the Second Day of February, on which latter Day, the Work will be Let at the Royal Hotel, in Leeds, at Twelve o'Clock at Noon.

Leeds, January 13, 1842.

RAILWAY ENGINE.—FOR SALE, A LOCOMOTIVE ENGINE, just completed upon the most approved principles; Cylinders 11 inches in diameter, 2 feet stroke; patent valve and valve gear, 7 feet connecting rods, and 6 feet driving wheels; with boiler, tubes, and copper fire box, of the most approved kind and workmanship.

The framework is of great strength, and capable of sustaining almost any degree of wear and tear without injury. The engine carries its coke and water, and affords every requisite convenience for the Engineer and Stoker, without adding unduly to the weight, which is about *nine tons*. As no Tender is required, the Engine may be worked either way with equal facility.

For inspection, and further particulars, inquire of Mr. Inshaw, Engineer, Sherborn street, Birmingham.

DERBYSHIRE.—VALUABLE FREEHOLD ESTATES AND COAL MINES AT DENBY AND MAREHAY, within Eight Miles of the town of Derby.—To be sold by Auction, by Breary and Eyre, at the Royal Hotel in Derby, on Thursday the 27th day of January inst., at four o'clock in the afternoon.

LOT 1. An excellent House, at Denby, with extensive and well arranged farming buildings, several cottages for labourers, and a compact and useful farm in a high state of cultivation, occupied by Mr. Samuel Woolley, and containing 155 acres.

LOT 2. Another Farm in Denby, adjoining to Lot 1, occupied by Mr. Samuel White, and containing 55 acres.

LOT 3. The Coal, Ironstone, and other Minerals under 130 acres of land at Marehay, near Ripley, and the fixed and tonnage rents payable by the Lessee.

LOT 4. An excellent Farm at Marehay (part of the 130 acres mentioned in Lot 3) in the occupation of Mr. John Woolley, lying in a ring fence, and containing 105 acres.

Lot 5. Three Closes of rich and very useful Land, at Ripley, with a cottage and garden, also occupied by Mr. John Woolley, and containing 10a. 0r. 29p.

LOT 6. A small Piece of Land, at Heanor, fronting the turnpike road from Heanor to Loscoe, containing 1r. 9p. now occupied by James Nelson.

The tenants will shew the lands in their occupation, and further particulars may be obtained on application to Mr. Barber, Solicitor, Derby, to Mr. John Bromley, Land Agent, Derby, or to the Auctioneers.

Derby, January 1st, 1842.

WANTED.—A Small Locomotive Engine, without a Tender, either new or secondhand in good working condition, suitable for drawing coal waggons, upon a colliery railway. Apply to Messrs. John Bagnall and Son, Golds Hill Iron Works, West Bromwich near Birmingham.

TO ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, and others.—To be disposed of, an Old-Established Engineer's, Millwright's, and Founder's Concern—(the present proprietor retiring from the manufacturing department)—situated in London. The premises and plant are arranged for a most extensive business, and have been erected during the last 25 years at a considerable cost, but from the above cause will be disposed of upon extremely favourable terms. The premises will be let on lease, and the Machinery and Tools disposed of at a valuation.

Apply for particulars to John Evans, Esq., 51, Lincoln's Inn Fields.

DUKE OF CORNWALL HARBOUR, AND LAUNCESTON AND VICTORIA RAILWAY COMPANY.—NOTICE is hereby given, That pursuant to Act of Parliament, the next Half-yearly General Meeting of the Proprietors of this Company will be held at the London Tavern, Bishopsgate-street, on Thursday, the 27th day of January instant, at One o'Clock precisely.

GEO. DYSON, Secretary.

3, Copthall Buildings, London, Jan. 6, 1842.

GEOLOGY.—A Series of Papers having for their object that of determining the quantities and qualities of Matter developed in the Fossil and Mineral Kingdoms as produced by operations of life, and the union of principles and proximate principles developed by and in life in the Fossil and Mineral Kingdoms; consequently that all previous opinions in these matters are erroneous, and as such at variance with nature,—will appear regularly in the columns of the *Mining Journal*, commencing on Saturday next, 15th January, 1842.

The *Mining Journal* of Saturday next will also contain (besides the usual variety of information on all matters interesting to the Capitalist or Speculator) Papers—

On the Manufacture of Iron, by S. B. Rogers, Esq., of Nant-y-glo, Monmouthshire.

On the Evaporation and Incrustation of Boilers.

On the Combustion of Coal, by C. W. Williams, Esq., of Liverpool.

On the Chemical Constitution of Coal, by C. Hood, Esq., F. R. A. S.

Improvements in Generating Steam.

Proceedings of Public Companies; Transactions of Scientific Bodies; Specifications of Recent Patents; Correspondence from the English and Foreign Mining Districts; Remarks on the Operations in the Money Market during the Week; Particulars of Sales and Purchases of Copper Ores and Block Tin; Prices of Mining Shares; Railway Shares and Traffic Returns for the Week; Coal Market, &c. &c.

The *Mining Journal* is published at the office, 37, New Broad street, City, every Saturday afternoon, Price Sixpence, and can be had of all Newsvenders and Booksellers

LONDON AND BRIGHTON RAILWAY COMPANY.—Notice is hereby given, That the next Half-Yearly Meeting of the Proprietors of this Company, will be held, pursuant to the Act of Incorporation, on Thursday, January 20, 1842, at the London Tavern, Bishopsgate-street, in the City of London, at One o'Clock precisely, when the five following members of the present Direction will go out of office, and, being duly qualified, will offer themselves for re-election, viz.—Francis Parker, John Gould, Michael Gibson, Newman Smith, and John Entwisle, Esqrs. And at which Meeting certain Shares upon which the Eighth and Ninth Calls have not been paid, and which have been in consequence thereof declared forfeited under Minutes of the Board of Directors of 19th November, 1840, and 6th May, 1841, will be submitted for confirmation of such forfeiture.

The Transfer Books of this Company will be closed on the 6th of January, and remain shut until after the Meeting.

By Order,
JOHN HARMAN, Chairman.

10, Angel-court, Throgmorton-street,
December 24, 1841.

The above Meeting is also made Special, for the purpose of taking into consideration the financial state of the Company, and the best mode of raising the requisite funds for the purposes of the Railway, and the Station at London Bridge.

By Order,
JOHN HARMAN, Chairman.

10, Angel-court, Throgmorton-street,
7th January, 1842.

ADVERTISEMENT RESPECTING TENDERS FOR RAILS WANTED FOR A PART OF THE BAVARIAN RAILWAYS.—With reference to the Advertisement dated 27th October last, respecting tenders for rails, as well as to the printed conditions distributed, we make known in addition,

1. In consequence of a decision of the Ministerium of the Interior, of the 25th instant, the tenders with regard to the examination and approval of the rails, may be given in with the alternative conditions,

a, in case that the examination takes place at Bamberg, as per § 12 of the printed conditions,

b, in case the examination takes place on a different spot, to be named by the person making the tender.

However, as the examination in this latter case, is merely to ascertain the quality of the rails, in accordance with the conditions of the contract in both alternatives, the former condition remains in force, according to which the delivery at Bamberg, or Rotterdam, or Cologne, has to be fulfilled at the expence and risk of the contractor, accordingly as in conformity with § 9 and 12 of the conditions, he selected one of these places for the delivery of the rails, and should one of the two latter towns be fixed upon, the § 13 of the conditions remains applicable.

2. To § 18 of the conditions the term for giving in the franked submission is prolonged to the 31st March, 1842.

3. To § 5 of the same, the periods for delivery are altered, in so far that 3-5ths of the quantity contracted for must have arrived at Bamberg by the end of November, 1842, and the remaining 2-5ths by the end of May, 1843.

4. To § 7 of the conditions, it is moreover to be observed that the Bavarian Ministerium of the Interior reserves to itself the decision respecting the acceptance of the several tenders, either for the whole or in part only.

Nurnberg, the 28th December, 1841.

Royal Bavarian Commission for the Construction of Railways.

DENIS, PAULI, DURIG.

VALUABLE COAL MINES AND IRONSTONE, AT MAREHAY, NEAR RIPLEY, IN DERBYSHIRE.—To be Sold by Auction, by Messrs. BREAREY & EYRE, at the Royal Hotel, in Derby, on Thursday the 27th day of January instant, at Four o'clock in the afternoon, the Coal, Ironstone, and other Minerals under 130 Acres of Land, at Marehay, near Ripley, and the fixed and tonnage rents payable by the lessee. The mines consist of the most valuable seams of Coal in the neighbourhood, being the Main Soft Coal, the Bottom Hard or Denby Coal, the Kil Coal and the Furnace Coal, as also valuable mines of Ironstone and Pot Clay. The three first-mentioned Beds of Coal are leased for a long term at a fixed annual rent of £500, and a tonnage rent upon the quantity gotten beyond what the fixed annual rent will cover. The superior quality of the Coal has been proved by six years working, and the position of this Colliery (the other hard Coal in the neighbourhood being nearly exhausted) ensures the command of the Market, and an extensive sale at good prices.

The Colliery is 7 miles from Derby, and has a Wharf adjoining the Derby and Alfreton turnpike road, near Ripley, and a Railway to the Derby canal.

For further particulars, applications may be made to Mr. Barber, Solicitor, Derby; or to Mr. Woodhouse, Civil Engineer, Overseal, Ashby-de-la-Zouch.

Derby, January 1st, 1842.

PATENT ROLLING AND COMPRESSING IRON COMPANY, UPPER ORDNANCE WHARF, ROTHERHITHE. — MR. JOSEPH CARTWRIGHT BRETTELL having succeeded Mr. JOHN ATLEE in the Secretaryship of this Company, all letters and orders for bolts, rivets, Railway pins, &c. &c., are in future to be addressed to the said Mr. brettell at the above Works, or at Mr. W. A. Urquhart's Office, No. 27, Mark-lane.

December 23, 1841.

LONDON AND BIRMINGHAM, GRAND JUNCTION, CHESTER, LANCASTER, MIDLAND COUNTIES', NORTH MIDLAND, YORK AND DARLINGTON RAILWAYS.

GREAT YARMOUTH AND NORWICH RAILWAY. — Mr. ROBERT STEPHENSON'S LINE.—This line (for leave to make which a Bill is intended to be introduced into Parliament in the next Session,) is 20 miles long, and presents such extraordinary facilities of construction, that according to the estimates of Mr. Robert Stephenson, the Engineer to the London and Birmingham Railway, it may be made with ease in 12 months, and at a cost of £7,000 per mile.

Great Yarmouth as is well known is the port to the City of Norwich and the surrounding districts, as well as a favourite watering place. The population of the two towns and of the intermediate places adjacent to the line of railway, exceeds 100,000, and the traffic taken at a low estimate is calculated to produce at least £40,000 per annum. The profit therefore of the intended undertaking is likely to equal, if not exceed that of the most successful railways now in operation.

The shares are to be of £20 each, on which a deposit of £2 will be payable at the time of subscription, in compliance with the standing orders of Parliament, but this deposit will be returned to the subscribers, if the proposed application to Parliament should not be made in the next Session.

It is also intended to pay interest after the rate of five per cent per annum on all calls made prior to the completion of the railway.

The capital is to be £150,000, of which a large proportion has been already subscribed for; applications for the shares remaining undisposed of, may be made to Messrs. White & Borrett, 35, Lincoln's-inn-fields, Messrs. Rackham and Cooke, and J. O. Taylor, Esq., Norwich, and to C. J. Palmer, Esq., Great Yarmouth, of whom detailed prospectuses of the undertaking and any further necessary information on the subject may be obtained.

CONDENSING STEAM ENGINE FOR SALE.—A Twenty-Horse Power, on Bolton and Watt's principle, in first-rate condition, with boiler, &c., complete, may be seen daily in full operation.—Apply to Mr. W. G. Wardle, Stangate Sawing and Planing Mills, Palace road, Lambeth.

GUARANTEE SOCIETY.—To afford Security to Bankers, Merchants, Commercial and Trading Communities in general, is the *first* object of this Society. To relieve Relatives and Friends from painful obligations and responsibilities the *second*.

The experience of the first year (during which the Society has been eminently successful) already numbers amongst its patrons the principal Bankers, Merchants, and Public Institutions in the metropolis, and provincial districts, and by providing Guarantee for their integrity, has secured a competency for several hundred individuals.

DIRECTORS.

Thomas Attree, Esq.	Lieut.-Col. Prosser,
James Colquhoun, Esq.	James Row, Esq.
William Croft, Esq.	G. Scovell, Esq.
James Law Jones, Esq.	G. E. Shuttleworth, Esq.
John F. Maubert, Esq.	Henry Vaughan, Esq.
Lieut.-Col. Moody, R.E.	B. G. Windus, Esq.
G. Palmer, Esq.	

STANDING COUNSEL—R. Ryder Dean, Esq.
SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, *or being* desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

I.

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

II.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

III.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.: on rollers, 3s. 6d.

IV.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

V.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

VI.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 15, 1842.

Lord Bacon saith truly, "there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 212. Vol. V.—No. 4.] SATURDAY, JANUARY 22, 1842. [Price 6d.

LEEDS SMOKE NUISANCE MEETING.—On the first week in February next will be published, Mr. SAMUEL HALL'S LETTER respecting his Patent Apparatus for the Consumption of Smoke, addressed to William Beckett, Esq., M.P., Chairman of the above meeting.

Also, a Letter to the Committee then appointed, in which Mr. Hall will establish his claim to the originality of his invention and the priority of his Patent for the only method which (although sought for during the last half century) has been devised for the perfect consumption of Smoke unattended by such loss of fuel, diminution of the power of the boilers for the generation of steam, additional labour to the engineers and other practical mischief as the proprietors of steam-engine and other furnaces could not submit to. In these Letters Mr. Hall will clearly show that the plans submitted to the above meeting by C. W. Williams, Esq. and Wm. Bell, Esq., of Edinburgh, are merely clumsy imitations and infringements of his Patents. Mr. Hall in the mean time suggests to all parties the propriety of deferring infringements on his Patents until they have perused his forthcoming statements, as well as the respective specifications of *his* Patents and those of the Inventions said obtained by the gentleman above mentioned.

Published by John Weale, 39, High Holborn.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

Just published in Royal Octavo, 3s. 6d. cloth, lettered, with four engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secresy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,

J. S. YEATS, Secretary.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

EASTERN COUNTIES RAILWAY.—The Directors of the Eastern Counties Railway Company are receiving Loans of Money, in sums of not less than £500 each, on Bond for periods of 12 months, with the option to the holders to renew the same for the further period of three, five, or seven years. Interest under the Company's act will be paid half-yearly on the money so advanced.

By order of the Board,

A. BULKELEY, Secretary.

Eastern Counties Railway Offices, High-street, Shoreditch, January 14, 1842.

EASTERN COUNTIES RAILWAY COMPANY.—ELEVENTH GENERAL MEETING.

Notice is hereby given, that in pursuance of the Act of Incorporation, the Half-yearly General Meeting of the Shareholders of this Company will be held at the Company's Station, High-street, Shoreditch, London, on Wednesday, the 9th day of February next, at One o'clock precisely, for the purpose of receiving a Report from the Directors of the progress of the Undertaking, and of Electing Four Directors in the place of Samuel Anderson, Esq., Robert Crosbie, Esq., Robert Mather, Esq., and Theodore Woolman Rathbone, Esq., who then go out of office; and for the transaction of other business. The Directors retiring are re-eligible under the provisions of the act. The transfer books of the Company will be closed on Saturday, the 30th instant, and will not be opened until Thursday, the 10th of February next.

By section 137 of the Act it is provided that "no Proprietor of any share on which any call shall have been made shall, after the day appointed for the payment of the same, be allowed to vote at any meeting of the Proprietors of the said Company, until the money called for in respect of such share shall have been fully paid."

HENRY BOSANQUET, Chairman.

THEODORE W. RATHBONE, Deputy Chairman.

Offices, High-street, Shoreditch, Jan. 18, 1842.

This day is published,

TEMPLETON'S RAILWAY STATISTICS containing the Names and Termini, Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvass in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office 122, Fleet-street.

PARTNERSHIP.—The Partners of an extensive Establishment in the Practical Engineer and Iron-Founding Business, wish to receive, as an additional Partner, a gentleman of small capital, and of respectability and business habits, with a foreign connection, or acquainted on the Continent, who could conduct the mercantile department of the business. Further information can be obtained from Mr. John Hunter, W. S., 13, Hill-street, Edinburgh, who will arrange an interview between the principals.

LONDON AND BRIGHTON RAILWAY COMPANY—GENERAL MEETING.

The Half-yearly General Meeting of the Proprietors of the London and Brighton Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, John Harman, Esq., in the Chair.

The attendance was extremely large, the great room of the tavern being crowded.

The advertisement calling the meeting having been read, the common seal of the Company was affixed to the register of proprietors.

The Chairman said, as on this occasion there were matters of considerable importance to be brought before the meeting, he should not trespass upon their time by any introductory remarks, but rather call their attention to the Report, reserving to himself an opportunity when that document had been submitted of giving any explanation or further information that might be deemed necessary. Without further delay, he would call on the Solicitor to read the Report.

Mr. Sutton accordingly read the following documents, printed copies of which had been previously distributed in the room.

REPORT.

Gentlemen,—In the various Reports which have, from time to time, been submitted to the general meetings, it has ever been the study of the Directors to afford the most correct information on every subject connected with that undertaking, and when they had the honour to meet the proprietors in August last, there was every reasonable expectation that the present position of the Company would have been such as they then anticipated.

At that time the railway had been opened for some weeks as far as Hayward's Heath, the traffic had been conducted to the satisfaction of the public, the income was gradually increasing, and the works on the remainder of the line were so near completion, that the railway was opened throughout to Brighton, on the 21st of September following.

Thus far everything progressed in the most propitious manner, so much so, that the traffic amounted in the second week after the entire opening to 3,699*l.* 17*s.* 8*d.* Little did your Directors then expect that their prospects were to be blighted by the unfortunate calamity which so immediately followed, and by the extraordinary wet season, producing a succession of difficulties unprecedented, arising from causes over which they had no control.

These circumstances, and the consequences occasioned by them, being so fully adverted to in the Report of the Engineer, the Directors, contrary to their usual custom, beg here to introduce it:—

REPORT OF MR. RASTRICK.

To the Directors of the London and Brighton Railway Company.

Gentlemen,—When I had the honour to furnish you with my last Half-yearly Report, the railway had been opened as far as Hayward's Heath, and the remainder of the line was in so forward a state, that I promised it should be opened throughout to Brighton in the following month. This I accomplished, and I then fully calculated that the works would all have been finished in the course of a short period, and I had every reason to believe that the estimates you laid before the proprietors were adequate for that purpose. The line, however, was scarcely opened, when the most extraordinary wet season I ever remember set in, and has continued almost to the present time. The whole country, as it were, became inundated; and such have been the effects upon the heavy embankments, that it has only been by the most strenuous exertions and constant labour that I have been enabled to keep them in a fit state for the transit of our traffic. The railway, I believe, was worked to the satisfaction of every one, up to the period of that most unfortunate accident which has been the occasion of so much anxiety and regret to every one connected with this undertaking.

I think it right to allude to the interruptions at the Patcham tunnel and at the Merstham cutting. The former was occasioned by the continued wet having choked up the drains behind the front walls of the tunnel, and had nothing whatever to do with the tunnel itself, which is perfectly sound, and is, I believe, as good a piece of brickwork as any in the kingdom: the latter, in the deep cutting near the Merstham tunnel, did not occur from any defect in the stratification of the chalk, but from the accidental circumstance of there being at that particular spot, near the outside of the cutting, what is called "a funnel-shaped pot-hole," filled with pebbles, gravel, and soil, and which becoming charged and saturated with water, forced out the side of the cutting: the chalk being so thin in front of it, could not resist the pressure from within.

I still retain the same opinion I have so often expressed, "that upright cuttings in chalk, similar to that of the formation found on this line, will stand much better than cuttings with any considerable slope;" and I am fully confirmed in this, by the manner in which all our upright cuttings in chalk have stood during this wet season. I do not deny that after a frost, a small quantity will efflouresce from off the surface; but I maintain that the quantity will be much less than that from off a flatter slope.

My attention was called to the earth slopes at the top of the chalk cuttings, and I found the wet had so affected them, that I have had them made much flatter, and taken down to a greater depth, fearing that the materials might have slipped; they are now all perfectly secure: but this has caused an expenditure upon which I had made no previous calculation.

The embankment at Earlswood Common, and those adjoining it, have caused a considerable extra outlay: but, by perseverance, we have now both lines of rails open; there has been no recent settlement upon them, and I may reasonably expect no further expense than that usually attendant upon works of their description.

The same remarks will apply to the embankment at Kemp's Farm. The embankment at Keymer has suffered in a greater degree from the continued wet season: for a short distance there is only one line of rails over it, but no interruption to the traffic is experienced, as, by the crossings which I have had put down, the trains pass very readily from the one line of rails to the other. The road throughout, I am happy to say, is now in good working order, and the embankments and slopes of the cuttings appear to be getting into a permanent state, and I have every reason to believe we have experienced the worst of our difficulties, as all the works stand well, and show no unfavourable symptoms, and surely, if they remain firm and secure after the severe trial of the late season, we need be under no apprehension for the future. The untoward and vexatious circumstances we have had to contend with, no human prudence or foresight could have anticipated or averted, and it cannot be a surprise to any one that they have entailed upon the Company a very much larger expenditure than was ever contemplated, and much as I lament it, I am sure I have not incurred a single expense unnecessarily, and had this been the only line which had suffered from the same causes, you might have had great reason to complain. I have, I believe, called your attention to the chief causes of extra expenditure, appertaining to my department; but, in addition to these, you must remember it was deemed necessary to increase our stock of engines, carriages, waggons, &c., to a considerable extent. Annexed, is a statement of the amount required to finish the works, and what I consider necessary for the convenience of the traffic:—

Required to finish the contract works now in hand..... (Exclusive of the 10 per cent. held back from the contractors, in the hands of the Company.)	£27,851
There will, also, be required for several extra works, part of which were omitted to be estimated in last half year's account, some of which are now in hand, others not yet began upon, but which will be required, including also an allowance for any accidental extras, that may be found necessary.....	31,217
	£59,068

Before long there will be required buildings, machinery, engines, lathes, &c., for the repairs of the locomotive engines, carriages, waggons, &c., as the Company will find it much to their interest to do all this work themselves.

The traders upon the line will also require warehouses both at the Brighton and Shoreham stations, and you are well aware that there is not accommodation at Shoreham Harbour for one quarter of the shipping at our present wharf, and that we are losing our traffic daily from this cause—and consequently there must be a more extensive wharf built, and all the necessary appendages; and as it has been determined to make nearly the whole of the coke at Shoreham, an addition must be made to that establishment, and the ovens, &c., must be roofed in. All of these works will however pay, and secure a revenue independent of that derived from the railway. The sums required for all these works will amount to about 100,000*l.*

I have also to remind you, that I have, jointly with the Engineers of the South Eastern and Croydon Railways, been engaged on the plans of the Joint Station at London Bridge, the specifications of which will be ready in three weeks, and we have calculated that the money required for our share of the expense of the engineering, works, and buildings, now to be done, will be about 30,000*l.*

I am, Gentlemen, your obedient servant,
(Signed) J. U. RASTRICK.

London, 17th January, 1842.

Before submitting to the proprietors the particulars of the liabilities of the Company, and the amount requisite to complete the line, and the manner in which it is proposed to provide the necessary funds, the Directors beg to call the attention of the meeting to the annexed statement of the receipts and payments to the 31st December last, together with accounts of the traffic.

The statement of traffic on the main line, which is included in these accounts, shows the receipts, exclusive of payments for coaching during the partial opening, to be 34,182*l.* 2*d.*, and the expenditure 24,400*l.* 3*s.* 4*d.*, leaving a net surplus of 9,781*l.* 16*s.* 10*d.* This represents the result of scarcely more than three months' traffic, the earnings during the partial opening having been, as your Directors anticipated in their last Report, barely more than equal to the expenditure. Deducting from the whole amount of expenditure as above, the toll, which amounts to 4,574*l.* 16*s.*, and which would not be incurred were the whole line the property of this Company, the working expences in respect of this traffic have been 19,825*l.* 7*s.* 4*d.*

It must be borne in mind that a considerable portion of this expenditure is of a fixed nature, arising from an establishment adequate to carry on a very extensive traffic, on which your Directors fully reckoned, and which would, no doubt, have been secured, but for the unfortunate occurrences on the Brighton Railway already adverted to, and latterly the serious inconvenience to which passengers are subjected by the protracted stoppage on the Croydon Railway. On the increase of traffic, which may be confidently anticipated as the season advances, the ratio of the expenditure to the receipts will, no doubt, be considerably diminished.

Your Directors have considered it of the first importance to insure the public safety, by the utmost care and vigilance of a large police establishment on their works during the present trying season, and they are satisfied that, by re-assuring the public mind in this respect, even at a temporary increase of expenditure, they are best consulting the real interests of the proprietors.

The receipts on the Shoreham line are also subjected to a considerable fixed expenditure; but the traffic of this line, and of the wharf, is increasing, and by the contemplated extension of the wharf, there can be no doubt there will be a material increase of traffic, without a corresponding increase of expenditure, particularly when the conveyance of merchandise is commenced on the main line.

By a minute of 19th November, 1840, the Directors declared 4,409 shares to be forfeited on account of the 8th call remaining unpaid, and on the 6th May, 1841, the Directors declared 3,883 shares to be forfeited on account of the 9th call remaining unpaid, since which periods the 8th call has been paid on 4372 shares, and the 9th call has been paid on 3,709 shares, leaving 37 shares on which the 8th and 9th calls remain unpaid, and 174 shares on which the 9th call only remains unpaid, the forfeiture of which shares the Directors will submit to the meeting for confirmation. These are exclusive of 45 shares against the holder of which the Company have recovered the amount of the calls by an action, and an arrangement has been entered into, by which these calls are to be paid in June next.

At the last general meeting it was stated that the total outlay for completing and opening the line throughout, with a suitable establishment, would be 2,289,081*l.*

By the accounts made up to the 31st December last, the gross expenditure was 2,269,359*l.* 0*s.* 11*d.*; the liabilities under the Seal of the Company were 184,377*l.* 15*s.* 2*d.*; the outstanding debts 61,406*l.* 10*s.* 7*d.*; the 10 per cents. retained from the contractors 50,000*l.*; the amount requisite to complete the line 59,068*l.* 4*s.*; the land for temporary purposes 15,000*l.*; making together 2,639,211*l.* 10*s.* 8*d.*

To meet this, there was cash on the 31st December, 8,222*l.* 14*s.* 7*d.*; due on calls, 5,385*l.*; shares at par, 39,950*l.*; resale of land, 60,000*l.*; and loan to joint station, 50,254*l.* 2*s.* 1*d.*; amounting in the whole to 163,811*l.* 16*s.* 8*d.*; thus leaving a balance to be provided for over the last half-year's estimate of 186,318*l.*

In addition to the sum of 186,318*l.*, required for the present purposes of the railway, the Engineer reports that it will ultimately be necessary to erect workshops, carriage-houses, and wharfs, &c., and which he estimates at 100,000*l.*, but a considerable portion of this outlay may be avoided if the Company contract for the repair of their carriages and engines.

The Directors, however, strongly recommend the proprietors to empower them to provide for these two sums, amounting together to 286,318*l.*

The next subject to which the Directors beg to draw the attention of the shareholders is the station at London Bridge, and to which they so fully adverted at the last general meeting, and the mode of raising the money for erecting it. By the last Croydon Act this Company was empowered to become a joint owner thereof, with the Croydon and South-Eastern Railways, and to raise 120,000*l.* for purchasing the necessary land, and erecting the station by the issue of new shares, and the mortgage of the station and of this undertaking.

The Committee of Management have encountered considerable difficulty in obtaining possession of the various properties required for the extension of this

Digitized by Google

tion; they have, however, at length arranged with the various owners, and plans for the erection of the new station are nearly completed; and as soon as the weather permits, it will be commenced upon. The cost, altogether, to each Company, will not exceed 850,00*l*.

So that altogether we have to raise for the railway	£186 318
For extra wo. kshops, wharfs, &c.	100.000
For London Bridge Station	85,000
	£371.318
To take a safe margin, say	28,682
Total	£400,000

The manner in which this amount is to be raised has had the gravest consideration of your Directors, and they recommend that loan notes be issued, payable at the end of 5 years, at 5*l*. per cent. interest, with an option to the holders of such notes (at the expiration of 3 years) to convert them into quarter shares of this Company, at 10*l*. per quarter share, under the power of an Act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period. The present Shareholders to have the preference of tendering for such loan notes, and such tenders to be made on or before the 1st of February next, when the allotment will take place; 5*l*. upon each quarter share to be then paid, a further sum of 2*l*. 10s. per quarter share, on or before the 15th of April, and the remaining sum of 2*l*. 10s. per quarter share on or before the 15th of July next, and interest to commence from the time of the respective payments.

The Directors of the South-Eastern Company have given notice to this Company of their intention to purchase the moiety of the line, to which they are entitled under their Act of Parliament.

From this source your Directors expect to derive a sum, sufficient to cover the amount requisite to be raised; but, as there is an uncertainty when this money will be paid, they consider it necessary to look to other means to meet their present exigencies.

Five Directors go out of office by rotation, viz.—Messrs. Parker, Gould, Gibson, Smith, and Entwistle, who being eligible for re-election offer themselves to the proprietors accordingly. Since the last general meeting, two vacancies have occurred in the direction by the death of Henry Moreton Dyer, Esq., and by the resignation of Sir Isaac L. Goldsmid, Bart., which have been filled up by the appointment of John Cox, and Edward Watson, Esqrs.

Your Directors cannot conclude this Report without again adverting to the many trials with which they have been surrounded during the last half year. They had no sooner removed the obstructions on their own line, than a considerable slip of earth at New Cross blocked up the line on the Croydon Railway, and has continued ever since to be a great interruption to the Brighton traffic. It has prevented this Company from carrying any goods or merchandise, and has had a great influence in deterring the public from availing themselves of the Brighton Railway; but looking to the great increase which took place in the traffic upon the opening of the line throughout, and the many applications that have been made for various kinds of goods and merchandise to be conveyed over the line, the Directors still retain the same opinion they have always expressed, that the traffic will ultimately realise their most sanguine expectations.

(Signed) JOHN HARMAN, Chairman.

Total		£6,859 2 8	

The reading of these documents was received in silence.

The CHAIRMAN then said, that if the proprietors compared the Report just read with that which was submitted to them in August last, they could not but experience bitter feelings of disappointment, (Hear, hear, hear,) In these feelings the Directors fully participated, and had participated day by day and week for week for some time past. They found their position such, that they were compelled to incur large outlays which had not been anticipated, but they were there to day prepared to show that they had not incurred any expense which a careful consideration of the best interests of the undertaking did not warrant. In the Report it was stated, that the farther amount to be raised for the purposes of the railway was 186,318*l.* Of this amount the sum of 97,565*l.* had been expended, in consequence of the extraordinary and long continued wet weather. Thus, in the first district, there had been rendered necessary during the half year an additional expenditure of 15,997*l.* 15s. 8d.; in the second 41,087*l.* 1s. 4d.; in the third district 29,291*l.* 3s.; and on the tunnel 16,121*l.* 11s. 6d. These amounts, added to the amount required for the works still to be done, and other items which he would presently notice, brought up the total sum required to 186,318*l.* When the Directors had the pleasure of meeting the proprietors on the last occasion, they had anticipated that a sufficient staff had been provided for the proper working of the line, but they had since found the necessity, as the traffic began to increase, of securing a larger supply of engines and carriages. They had accordingly ordered 12 extra engines, 13 extra first-class carriages, 6 horse-boxes, 2 carriage trucks, 6 luggage vans, and 98 waggons. The engines had cost 24,000*l.*; the first-class carriages 5,000*l.*; the waggons 7,160*l.*; and the other vehicles in proportion. These items combined made up an amount within a very small sum of that which it was now proposed to raise. Now, what other course could the Directors have pursued than that which they had adopted? They had always relied on the confidence which the proprietors had placed in them, and had entered into engagements which he had no doubt the meeting would that day ratify. On the 31st December, the exact amount for which liabilities had been incurred was 184,377*l.* 15s. 2d., of this amount the principal items were 33,454*l.* 9s. 8d. to complete the works; for stations 14,397*l.* 3d.; for the London joint station 5,000*l.*; for rails 12,448*l.* 3s. 1d.; for engines 13,217*l.* 18s. 6d.; carrying establishment 15,964*l.* 17s. 6d.; stores 4,763; loans 71,000*l.*; and interest on debentures 14,197*l.* He had entered thus much into detail, because there was every disposition on the part of the Directors to give all the information in their power relative to the state of the undertaking. On the 31st December, their outstanding debts were; for works, 5,736*l.*; stations, 9,299*l.*; engines, 12,935*l.*; carriages, 10,841*l.*; sleepers, 3,149*l.* 4s. 7d.; law charges, 5,664*l.* 11s. 4d.; land, 2,500*l.*; making, with items for advertising, printing and sundries, a total of 61,406*l.* 10s. 6d. The sundries included a toll of 2,107*l.* 15s. 11d. These accounts would show how the excess had arisen—and he would only add that he should be happy to give any further information. Before sitting down, he would advert to an item of 100,000*l.* recommended by the Engineer for building workshops and wharfs. He had a detailed estimate in his hand. [The honourable gentleman here read it.] These items amounted in the whole to 95,960*l.*, or, in round numbers, to 100,000*l.* This was an expenditure which had never been contemplated in the estimates previously laid before the proprietors, and it would be for the meeting to determine whether it should be incurred, or whether the Company should contract for the repair of their carriages and engines. It was possible that it might be as well to defer this expense for the present. The next point was the station at London Bridge. They had power under a recent Act obtained by the Croydon Company to raise, for the purposes of the station, the sum of 120,000*l.*, but it was now clear that not more than 85,000*l.* would be required. The whole of the items, added together, made, as he had already stated, an amount of 371,318*l.* It was, he would admit a large sum, but it should be borne in mind that only 186,318*l.* was required for the direct purposes of the railway. One word as to the mode proposed to raise the money. In the Report it was said:—"The manner in which this amount is to be raised has had the gravest consideration of your Directors, and they recommend that Loan Notes be issued, payable at the end 5 of years, at 5*l.* per cent. interest, with an option to the holders of such notes (at the expiration of 3 years) to convert them into quarter shares of this Company at 10*l.* per quarter share, under the power of an Act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period. The present Shareholders to have the preference of tendering for such Loan Notes, and such tenders to be made on or before the 1st of February next, when the allotment will take place; 5*l.* upon each quarter share to be then paid, a further sum of 2*l.* 10s. per quarter share, on or before the 15th of April, and the remaining sum of 2*l.* 10s. per quarter share on or before the 15th of July next, and interest to commence from the time of the respective payments." This subject had received a great deal of consideration and discussion, and to the Directors the mode proposed appeared the best, as affording to the present proprietors the means of retrieving themselves from any difficulties that might now embarrass them. If the shares should ever be worth anything, it would be by the end of three years, at which time it was proposed the loan notes should be converted into shares. At the same time, if any better plan could be suggested, the Directors would be happy to give their best consideration to it. It was to be recollected, too, that although 400,000*l.* was now asked for, all that amount, or nearly all, would come to them from the South-Eastern Company. The proprietors were aware that the South-Eastern Company had power to purchase a portion of the Brighton line, and so much was this arrangement to their advantage, that he had no *doubt* they would avail themselves of it at as early a period as possible. He was not aware that he need allude to any other matter, except perhaps to the Chancery suit between Sir Isaac Lyon Goldsmid and the Company. Sir Isaac had filed an amended *bill*, which he (the Chairman) had looked into, and he need now only say that he thought the Company had nothing to fear from it. There was one other point to which he would refer, and he did so with very considerable pain, he meant the conduct of their late Secretary. The Directors were much surprised on reaching the offices one morning, to find a letter announcing that the Secretary had quitted his employment for ever. At first they were very naturally afraid that the Company would have been great sufferers by his flight, but he was happy to state that the amount of the late Secretary's delinquencies so far as the Company were concerned did not exceed 566*l.* 14s. 10d. The deficiency had arisen in this way. He had been entrusted with a cheque for 274*l.* 12s. 1d. to pay the Government duty, and this he had appropriated to his own use. There was also a cheque for 8*l.* 8s. 6d. for the payment of police; for 49*l.* 17s. 6d. and 23*l.* 12s. 6d. for fees to agents; for 46*l.* 0s. 3d. due to the Asphalte Company; for 75*l.* to Messrs. Reynolds and Son of Liverpool; for 15*l.* to the Company's agents at Glasgow, and for 74*l.* 4s. for mortgage stamps, making in the whole the amount above stated. All these cheques he had appropriated to his own use. There was also a cheque for 192*l.* drawn in favour of the Patent Rivet Company, and respecting this a letter had been left, stating that he had paid himself out of this cheque 175*l.* for his quarter's salary, and had left the balance of 17*l.* in the office. (Laughter.) He (the Chairman) would now resume his seat, only hoping that as the interests of the undertaking were so closely interwoven with their own, or rather as the two were identical, any business that might be brought forward that day, would be conducted with calmness and good temper, as the only means whereby they could arrive at a satisfactory result. For the purpose of bringing the several matters contained in the Report formally before the meeting, he would move, that the Reports and Accounts be received, adopted and

Digitized by Google

printed for circulation among the proprietors. (Applause.)

A PROPRIETOR enquired how much the Company would receive from the South-Eastern.

The CHAIRMAN—At least 350,000*l.* or 400,000*l.*

Mr. HENDERSON inquired when that amount would be paid?

The CHAIRMAN said, the South-Eastern Company had, as the Act required, given notice of their intention to purchase, but there was no specific time fixed for payment. From the interviews, however, which he had had with the Directors of that Company, he was sure that every effort would be made to complete the purchase, and for this reason that they were in expectation of being able to open their line to Tunbridge in August next,* and if the purchase were not then completed, they would have to pay toll. He was happy to see that the affairs of the South-Eastern Company were so improved that they would have little difficulty in raising the money. If the purchase were not completed within a reasonable time, of course the South Eastern Company would have to give it up. Any Court would enforce such terms.

Mr. WHISHAW said, it appeared to him that the Chairman had given the strongest possible reason why the South-Eastern Company should pay the amount as speedily as possible. It had also been stated, that the sum referred to would be sufficient to meet the further amount now wanted, and that some of the works contemplated in that estimate were not required immediately. It appeared to him, therefore, that it was premature to seek to raise so large a sum of money, which could not fail to depreciate the existing stock of the Company. (Hear, hear, hear.) He thought the matter might safely be left over, especially as there was not much of the money wanted at present. If it were found that the South-Eastern Company did not pay speedily, then a special meeting might be called. He felt extreme regret, in common, he was sure, with the proprietors at large, that any extra amount at all should be required, so strongly and so unequivocally had it been stated in the last Report, and in the speech of the Chairman, that the capital of the Company would be ample. (Hear, hear, hear,) He would repeat that it was with extreme regret that he heard so large a sum as 400,000*l.* would now be required. (Hear, hear, hear.)

Mr. HENDERSON had to object to the shortness of time granted to the shareholders to choose whether they would take the loan notes. Only twelve days were allowed, and if before that time they did not take the option, they were left entirely at the mercy of the Directors. (Hear, hear, hear.) Moreover, on the 1st of February they would have to pay down one-half of the money, and upon what security? Upon the security of a loan note, the Act of Parliament to legalize which had not yet been applied for. When they got the security of an Act then the option would have ceased to the proprietors, and he did not think this was just to them. Let them first obtain an Act of Parliament, and then appeal to the proprietors. He did not think the Directors had the power legally to depreciate the stock of the Company by reducing, as was now proposed, the amount of the new shares by one-fifth. If the Directors said there was no help for it—that they must raise the money, he would answer that they ought to have foreseen and provided for the necessity. It was true that a part of the money was to be expended on future works, and it was highly proper that this should be done, but the Directors ought to have foreseen the expenditure included in the other items. (Hear, hear, hear.)

Mr. PARSONS said, that finding the last two speakers disapproved of the course recommended by the Directors, perhaps the present was the proper time for him to move an amendment, which he had in contemplation. On former occasions he had by questions put at the time of the meeting, elicited considerable information, but this course he found neither convenient nor satisfactory. He had therefore on the 17th addressed a letter to the Board recommending that the Report and Accounts should be circulated among the shareholders previous to the meeting. (Hear, hear, hear.) It was totally impossible for any one to form an opinion that could be worth anything upon the accounts as read at these public meetings. He regretted that the Directors had not therefore circulated the accounts, as this imposed upon him the painful necessity of proposing that the adoption of the Report be postponed. (Hear, hear.) He trusted the Directors would not oppose the proposition. He would assure them that it had originated in no feeling of hostility to them—(hear, hear, from the Chairman)—but from a desire that the affairs of the Company should be examined into, so that the proprietors might proceed with harmony. He would base his amendment solely on the ground that the proprietors required more time fully to investigate the state of their affairs. With respect to the misfortunes which had occurred through the weather, all railways had been subject to similar casualties, and therefore he would not enter upon that point. Forgetting the past they ought to endeavour to proceed better for the future, and should begin now by adopting a better system with regard to the accounts. He would therefore propose as an amendment that the consideration of the Report be adjourned at the conclusion of this meeting to a day to be fixed by the meeting, and in the meantime that the accounts be open at the office to the inspection of the proprietors. (Applause.)

The motion having been seconded,

The CHAIRMAN craved leave to say a few words before the amendment was put. He fully agreed with honourable gentlemen that the proprietors were entitled to every information, but he thought an untrue view had been taken of the Company's position. It seemed to be thought by some that there was no immediate want of money, but this wss a mistake. It was wanted directly. It was then said, the more shame to the Directors, who ought to have foreseen the necessity. But how was it possible this could have been the case? In what position had they been placed? They had been compelled to incur expenses which week after week they hoped would be at an end; and for what purpose, then, should they have called a special meeting? To state that great damage had been done to the works by the weather, which the Directors, in common with the proprietors, hoped would not have been so long protracted? They had thus been compelled to incur liabilities to the extent of 184,000*l.*, and he did not think there was an individual present who would quit that room leaving such a weight of responsibility on the Directors. Whether the money should be raised in the way recommended in the Report was matter for deliberation. The Directors were not at all wedded to the precise date of Feb. 1, but that had been fixed in order that the proprietors might be fully aware that the liabilities must at once be met to the extent of at least 184,000*l.* As to the 100,000*l.* for future works, that matter might be postponed till the next meeting, although it had generally been deemed desirable that when money was to be raised, enough should be raised at once, rather than to render it necessary to appeal repeatedly to the proprietors for further capital. With respect to the station at London Bridge, they had already power to raise the requisite funds, but the Directors thought the mode now proposed better than that laid down in the Act, for by the latter, they would be compelled to issue new shares, and in the present state of the market, it was not likely that these shares could be issued at more than 35*l.* or 36*l.*, whereas by the mode now recommended, the stock need not be depreciated, as three years would elapse before new shares need be issued, and by that time the shares if worth any thing at all, would have arrived at something like a legitimate value, thus conferring a benefit upon the present proprietors. He thought they would be damnifying the undertaking if, by adjournment, they adopted any course which out of doors might look like a stigma cast upon the Directors—a course which would effectually prevent the raising of the money on the terms proposed. He was content to confine the money to be raised to that wanted for the railway and the station. (Hear, hear, hear.) The Directors had always endeavoured not to have recourse to the last call of 5*l.* per share, but if the meeting threw upon the Directors the responsibility of 184,000*l.*, they must make this further call. ("Oh! oh!") No one had a greater respect than he for the proprietors, and in conjunction with his colleagues he had strained every nerve to further their interests, but if now the proprietors were to turn round upon them, and to throw cold water upon their efforts for the prosperity of the undertaking, he did not believe that there was a Railway Direction in the kingdom who would not do as they would do. For his own part, he should not for a moment hesitate to recommend the 5*l.* call, in order to relieve the Directors from their responsibilities. (Cries of "Oh! oh!" much hissing, and other marks of disapprobation.) He knew that this was very unpalatable; but were the Directors, who had struggled early and late in the cause of the proprietors—who had borne the brunt of the battle—who day by day, and night by night, and week by week, had cheerfully undergone labour and anxiety for the benefit of the railway, were *they* to be thus deserted, when they had honestly and faithfully done their duty? (Disapprobation, and cries of "Hear, hear.") He did not think the meeting were dealing fairly with the Directors, when they said in effect, "We will leave you with these heavy responsibilities pressing upon you." He said this with no bad feeling; far from it. There wsa the responsibility on their backs, and if the proprietors did not relieve them they themselves must. (Hear, hear, and disapprobation.) He would repeat, that he meant nothing in the smallest degree offensive to any one, but the Directors had nothing left but this painful alternative. Hitherto they had enjoyed the full confidence of their constituents, and he knew of no reason why the same confidence should not be continued to-day. If the meeting thought that the 100,000*l.* should be deferred, so be it; if they thought the money for the station at London Bridge had better be raised under the Croydon Act, the Directors had no objection, only he had told them that the effect would be to depreciate the Company's stock. One word as to the Act for which they proposed to apply. There was no doubt that such an Act could easily be secured, as had been done by other Companies. The time for limiting the option as to the loan notes was short, and there could be no objection to lengthen it, but the money must be raised. The Directors had been placed in their present position not from any mismanagement, but through circumstances over which they had no control. The railway was now in as good a state as any line which had been opened for the same time, and if the liabilities for which funds were now asked had not been incurred, the railway must have been stopped. Sooner or later these liabilities must have been incurred, or all the money which had been invested in the undertaking must have been irretrievably sunk. If he had given utterance to anything offensive to any one, he deeply regretted it. (Hear, hear, hear.) He had entered into the subject solely because some might think that an adjournment for a week or a fortnight would be attended with no inconvenience. Now at once he would say, that if some plan for raising the money were not adopted that day, the works could not go on. There were parties—creditors of the Company—looking to the result of that day's proceedings, and for his own part he would not assent to the expenditure of another sixpence, but at once stop everything, if the proprietors did not meet the engagements into which, on the faith of their support, the Directors had entered. If one single item of liability could be pointed out that had been improperly incurred, there would be some reason for refusing to sanction it, but the Directors were fully prepared to justify all that they had done, and to give any further explanation of doubtful points that might be required. If they chose to reject the

* It will be seen from a notice in another column, that this part of the line is expected to be ready by May.—ED. R. T.

Digitized by Google

100,000*l.*, they would, he trusted, grant at least the 300,000*l.* Any other course would, as he had already said, be inflicting detriment on the undertaking—an undertaking which wanted nothing but unanimity on the part of the proprietors to return an adequate remuneration at no distant day. If they consented to an adjournment, without providing the means of meeting the liabilities already incurred, they would in his opinion be taking a course of ruin; but if, on the other hand, they should, either in the mode recommended, or in any other way, authorise the raising of the amount absolutely indispensable, he had no doubt that they would take a safe course, and a wise course, and that hereafter they would thank him for his advice, whether he happened then to be Chairman, or a Director, or merely a shareholder in this great undertaking. (Hear, hear.)

Mr. R. Sutton, sen., inquired if any notice of the intended adjournment had been given to the Directors.

The Chairman replied in the negative.

Mr. Sutton thought the amendment was, under such circumstances, uncourteous to the Directors. (No, no.) He saw no reason why a different course from that which had been pursued at former meetings should be adopted on this occasion. If any thing impugning the correctness of the accounts could be brought forward it would be another matter; but this had not been attempted, and therefore he thought the Directors would be, as they deserved to be, supported by the meeting. (Hear, hear, hear.) Delay would paralyze their exertions in obtaining an Act of Parliament. Even if it were illegal to raise money in anticipation of such Act, Parliament would take the circumstances of the case into consideration. They would see that the Company could not control the storms which had worked so much mischief—that this was a source of expense beyond their calculations to dream of. He was prepared to give his full confidence to the Directors to enable them to make good those breaches in their estimates which it was not in their power to anticipate. He had no doubt of obtaining an Act of Parliament. The very necessity of the case would enforce it. The London and Birmingham Company with much less occasion had obtained an Act legalising the borrowing of nearly an equal sum which the exigencies of that Company had rendered necessary during the prorogation of Parliament. That in this case the expenditure was necessary was evident from the fact that if it had not been incurred, the works would have been greatly deteriorated. (Hear. hear.)

The Chairman was quite sure that the parties who had brought forward the amendment intended no want of courtesy. (Hear, hear.) It was true that the gentleman who moved the amendment had written to the Directors, recommending the prior publication of the Report and accounts, but it was the opinion of the Board that if this prior publication were carried into effect, those who were satisfied with the Report would not attend, while those who were dissatisfied would, and then where would the Directors be? (Hear, hear, and a laugh.) He begged to say, that the Directors were at all times happy to see the proprietors at the office, where every information could be obtained.

Sir Isaac Lyon Goldsmid, Bart., was sure no one would charge him with want of forbearance under the circumstances in which he stood to the Directors of this Company—circumstances which hitherto had led him to abstain from taking any active part in the proceedings. He had been a Director of one Company for 32 years, and of another for 39 years, but never had he heard such a threat uttered as had been put forth from the Chair that day. (Hear, hear, hear.) The meeting would recollect that the Directors had entered into a solemn pledge that the last call of 5*l.* per share should not be made, and yet to-day the Chairman threatened them that, if they ventured to look into their own affairs—to examine the accounts of the Company—that call should be enforced. (Hear, hear.) He should support the motion for adjournment, not to prevent the raising of the money, but to afford an opportunity to inquire how the gross discrepancies between the estimates of last half year and those of the present half-year had arisen, and he was led to do so the rather that the Act referred to might affect his interests very peculiarly. The interests of the proprietors at large were identical with his own. He held 200 shares, and had never sold one of them. By the Company's Act, 20 Directors were appointed, with power to them to nominate two others. He (Sir Isaac) had repeatedly been applied to to become a Director, but he had constantly refused, because he did not think that the estimates of construction would be sufficient. He had stated at the time that nothing would satisfy him but a new survey of the line—not by the Engineer alone, but by other parties who might correct or confirm his calculations. Mr. Locke had accordingly been named, and with Mr. Locke he was perfectly satisfied. The result of the new survey was that Mr. Rastrick, the Company's Engineer-in-Chief, had expressed an opinion that 860,000*l.* would be sufficient for the construction of the works, exclusive of land. Mr. Locke had fixed it at 920,000*l.*, and had added an expression of opinion that contractors might be found to undertake it for that sum—stating, at the same time, that in scarcely any other district was the material so favourable. On the faith of this opinion he (Sir Isaac) had joined the Direction, and had induced four other gentlemen to join it, namely, Mr. Walker, Mr. Cotesworth, Mr. Hodgson and Mr. Cattley—all in the faith, that, as was then represented, the undertaking would not cost more than 1,200,000*l.* It should be remembered that this estimate was not framed during the heat of the Parliamentary contest, when perhaps parties might swear rashly to estimates, but when the matter had been investigated calmly and deliberately. And what had they before them to-day? He did not charge the Directors or their advisers with ignorance or with a studied intention to mislead, but what could he, or what could the proprietors, think when they found the 1,200,000*l.* now swelled to 3,200,000*l.*? Could he think that the whole of this enormous excess was attributable to the God-send of a rainy season? (Hear, hear.) An investigation of the accounts such as was now proposed was necessary for themselves—it was necessary for the well-being of every similar speculation—it was above all things necessary in order that they might again go to Parliament with clean hands, and to show the legislature that their difficulties had arisen from causes that no human skill could have foreseen or prevented. Why should not such investigation take place? There was no secret now as to the cost of land; the Directors could at once tell what the property purchased from him or from Major Payne, or from any other owner, had cost. Why then should the Chairman threaten them? ("Hear, hear," and "no, no.)" Why, at least, should he use such extraordinary language? He did not blame the Directors for coming here to-day to ask for money to relieve them from personal liability, but he did blame them that they had led the proprietors on step by step to their present position. In the Report of July, 1840, the Chairman had said:—

"The Directors, in conjunction with their Engineer, have gone into calculations to enable them to form an approximate of the further amount requisite not only to complete the works, but to provide stations, engines, carriages, &c., and for meeting every other expense incident to the opening of the line throughout, upon a liberal scale; and the result of their investigation has led them to the conclusion that 600,000*l.* will be sufficient for these purposes, and which will bring the whole cost of this great undertaking under 1,800,000*l.*, whilst the Directors have power under their Act of Incorporation to raise 2,400,000*l.*"

At the commencement of the next year he had said:—

"The gross amount at present expended is 1,660,000*l.*, which, added to the 410,000*l.* required to complete the line will make a total of 2,070,000*l.*, from which will eventually have to be deducted 80,000*l.* for extra land to be resold, which will reduce the actual cost of the line to 1,990,000*l.*"

In July, 1841, he had stated that 2,200,000*l.* would be amply sufficient, and yet in the face of these repeated assurances, they were now called upon for an additional 400,000*l.*, and when they asked for a week or a fortnight's time to examine the accounts to see how such excess was justified, they were threatened and told that in defiance of a solemn pledge, the call of 5*l.* should be exacted. (Much applause, and cries of "No, no.") He had been connected with the London Dock Company for 32 years, and he had never heard such language made use of there by their Chairman. The Chairman of this Company, who it seemed could nominate two Directors, said in effect, "I have incurred responsibilities without your leave, and to get rid of them, I will break a solemn promise." Did he not know—[loud cries of "question" here arose, answered by shouts of "It *is* the question," which rendered it impossible for some time to catch the substance of the hon. Bart's. observations.] As to no notice having been given of the amendment, the Act of Parliament allowed an inspection of the accounts for 14 days previous to the meeting, and this was in effect but a similar proposition. It was very well to talk of want of courtesy or want of confidence, but he defied the most skilful calculator to make anything of the accounts as they were read to the meeting. As regarded confidence, they ought not to show a blind reliance upon the Directors, but a confidence founded upon rational grounds, a confidence arising from having compared and contrasted the actual expenditure with the original estimates, and the Reports of one-half year with those of another. (Hear, hear.) One word as regarded himself. The Chairman had stated that he had filed an amended Bill in the Court of Chancery. It was true he had done so, but his proposition now was, as it had ever been, to refer the whole matter in dispute to two honourable gentlemen who should decide finally, whether on the principles of honour he was entitled to what he asked for, and by that decision he was ready to stand or fall. It had been represented by the legal adviser of the Company, that if the Directors consented to an arbitration, it might happen that the land on which the railway was constructed would be taken from them; but he had intimated to the Board, through his friend Mr. Cattley, that even if he possessed such right he would not exercise it. It was not that he feared to venture a few hundred pounds in a Chancery suit that he wanted to have this matter brought to an amicable conclusion, but because as a landowner and a large shareholder he wished to stand well with his brother proprietors, and under these circumstances he did not think it was fair that the Chairman should represent him as in any way hostile to, or as seeking to take an undue advantage of, the Company. (Hear, hear, hear.) He had a large property, the success of which depended very materially upon the success of the railway—he had received a large sum from the Company—and he was deeply interested as a shareholder, and could have no cause for unreasonable opposition to the Company. He had long foreseen the position in which the Company were now placed; and he had resisted every inducement to take a seat at the Board, until the strong opinion expressed by the Company's Engineer-in-Chief had been confirmed and corroborated by so high an authority as Mr. Locke. It was by reason of his differences with his colleagues that he had resigned his seat, and in the very last communication received from them they had expressed their regret at his retirement. He appealed to the Directors—he appealed to the Engineer, who had a large stake of character embarked—to shew that it was to unforseen difficulties alone that their present difficulties were to be ascribed. He appealed not to the new Directors but to the gentleman who now occupied the chair, and who recollecting past difficulties, probably "like a burned child dreaded the fire." Let them investigate the whole concern—let them see that

Digitized by Google

the money had been laid out honestly, and for his part if such were found to be the fact, he would support the Directors and their Engineer. (Hear, hear, hear). If, on the other hand, the Chairman opposed investigation, he (Sir Isaac) would oppose *him* to the last breath in his body. (Hear, hear, hear, and laughter). Let them sift the matter to the bottom, let them see if the Directors had erred through defect of judgment, or if the Engineer had so erred—in which case he ought to be Engineer no longer. He knew that these inquiries could be enforced by proxies, but he would rather appeal to the good sense of the Directors—to the good sense of the Chairman—not to throw any obstacles in the way of a thorough investigation. As regarded himself, he would repeat that it was not the expenditure of a few hundred pounds that induced him to recommend a friendly settlement, but a serious anxiety for the good of the undertaking, with which his own benefit was so closely intertwined. (Great applause.)

The CHAIRMAN was exceedingly sorry again to occupy the time of the meeting, but a more vindictive address he had never listened to. (Cries of "No, no," to which the Chairman emphatically replied, "Isay yes—I say yes—I say yes"). He had had to fight the battle of the proprietors with Sir I. L. Goldsmid, and he knew him well. (Hear, hear.) He (the Chairman) was not, however, to be put down by him. Sir Isaac had said that he (the Chairman) had threatened the meeting. [A VOICE —So you did]. If such was the opinion of the meeting, he at least had not intended it as a threat. (Hear, hear, hear). He had merely told the meeting what the consequences would be if they refused to raise the amount of the liabilities already incurred. Sir Isaac knew the law as well as he himself, and he must therefore know that any creditor could seek a mandamus to compel the Directors to make the 5*l.* call. Sir Isaac had told the meeting that he (the Chairman) had stated from that place that the present capital would be sufficient. He did not in the smallest degree deny that he had said so, and for this reason, that he believed it at the time, and had believed it up to a recent period. (Hear, hear, hear.) But what should be said of Sir Isaac Lyon Goldsmid, who was a party to all these announcements? (Hear, hear, hear.) And yet, now to serve his own purposes, and if possible to crush him (the Chairman), he came forward with his vindictive attacks—for vindictive he must still call them. (Hear, hear, hear.) There was at present a question at issue between Sir Isaac and the Company, and he would ask, if any man but Sir Isaac would have, under the circumstances, stood forward to make such an *ex parte* statement to which he (the Chairman), however reluctantly, was compelled to give a point-blank negative? (Hear, hear.) The fact was, they had given way to the honourable Baronet until they could give way no longer without risk of serious detriment to the interests of the Company. The Directors were quite willing the case should go to arbitration; but one of Sir Isaac's stipulations had been, that the resolution of the Committee, prohibiting the passage of coals down a certain road, should be embodied in the conveyance of the property. ("No, no," from Sir Isaac.) Sir Isaac now said, that even if he had the power of forfeiting the land he would not exercise it; but would the proprietors consent that their rights should thus be jeopardized? (Hear, hear.) As this matter was now before another tribunal, he would not further advert to it. It had been insinuated that he could nominate two Directors. Now, the honourable Baronet had boasted that he had brought Mr. Cattley and Mr. Hodgson into the Direction, and the fact was, that the two last vacancies, Mr. Cattley had nominated Mr. Cox, and Mr. Hodgson had nominated Mr. Watson—both of the new members being perfect strangers to him (the Chairman) until they took their seats at the Board. (Hear, hear.) Such was the use he made of his all-powerful influence in the Direction! (Hear, hear, hear, and a laugh.) Boldly he would say that on no occasion had he made use of his official power to serve his own purposes. (Hear, hear.) Never on any occasion had he sought to appoint any one in any way connected with him to a situation under the Company, whereas no sooner was Sir Isaac Lyon Goldsmid appointed a Director, than he made it an almost *sine qua non* that his son should be appointed one of the standing counsel of the Company. (Great applause.) Had the Directors carried out the example of spleen shown by Sir Isaac? No; they believed his son to be a highly honourable and most competent gentleman, and he was one of their standing counsel up to that day.—(Great applause.) With respect to the main point before the meeting, if an adjournment was unconditionally agreed to, he had no hesitation in saying, that it would have the effect of preventing the raising of further capital, and in that case a call must of necessity be resorted to. If the creditors of the Company should hear to-morrow morning, that no provision had been made for liquidating their claims, he had no doubt that before night a mandamus would be served upon the Directors commanding them to make the 5*l.* call. Would the proprietors wish that such an occurrence should take place? ("No,no.") Would they desire that the Directors who had incurred liabilities not for their own gratification, but to promote the best interests of the Company, should be placed in so painful a position? He was sorry that personal altercation had been introduced into this discussion. For his own part he had made many sacrifices of comfort, personally, and as regarded his family, to promote the interest of the undertaking, and he challenged any one to bring forward a single act of which he need be ashamed. Should any proprietor deem it necessary to acquire further information in regard to the undertaking, the Directors were quite ready to devote days and nights to the supply of it. (Hear, hear.) If after minutely investigating all the circumstances of the Company, the proprietors should be of opinion that their affairs were not properly administered, he, for one, was at once prepared to resign, and could only express a hope that those who might succeed him, would contribute more to the prosperity of the undertaking. (Hear, hear, hear.)

Sir. I. L. GOLDSMID attempted to address the meeting, but was met by loud cries of "SPOKE, SPOKE," in the midst of which he resumed his seat.

Mr. LEWIN MOZELEY (of Liverpool) said he had attended this meeting at the request of the Lancashire proprietors, who were extremely dissatisfied with the constantly accumulating expenditure. Before addressing himself, however, to the main object of his mission, he would beg leave briefly to allude to one or two points which had been started in the course of the discussion. In the first place he regretted the unpleasant personal altercation which had been exhibited. The proprietors, as a body, looked only to the road and its results, and cared nothing for the private feelings that might be mixed up with its operation. He had been much connected with railways, and while on the one hand he could not but complain of the exactions which had been practised by landholders—and unfortunately the higher the rank of the parties, the more prominent were their demands—he could not on the other hand conceal from himself that the soul of a corporation, such as a Railway Company, was, so to speak, no soul at all, and that under the great WE no inconsiderable amount of oppression was practised. At the same time he was strongly of opinion, that except for the purpose of conveyancing or for punishing fraud, Railway Companies should not generally have recourse to law; and in the case of Sir Isaac Goldsmid and the Company, without pretending to know anything of its merits beyond what had been submitted in the public prints, he was decidedly of opinion that when a proposal was made of submitting a dispute to the arbitration of honourable men, it ought at once to be embraced. He said this, he would repeat, without the slightest reference to the merits of the case between Sir Isaac Goldsmid and the Directors of which he was entirely ignorant. With regard to the appointment of Directors he was not acquainted with the requirements of the Company's Act, nor did he know aught for or against the particular gentlemen chosen, but he thought the usual way, and by far the best way, was for the Directors to fill up vacancies caused by resignation or death, subject to the approval of the next general meeting. If the Act of this Company did not require such a course, he thought the courtesy and good feeling of the Directors, and their reliance on their own judgment, ought to lead them to adopt it. Parties so nominated were seldom objected to, and for this reason, that if they were honourable men (and he was to presume that none other would be chosen) no one would allow private pique to interfere with a public appointment. There was only one other minor point to which he would advert, namely, the flight of the late Secretary. He thought it was usual, it certainly was most proper, that from every servant of a Railway Company, from the highest to the lowest, security equal at least to one year's salary should be taken. Had this been done in the present instance, no loss would have been incurred. ("Hear, hear," from the Chairman.) The main subject, however, now before the meeting was the position and prospects of the Company, in considering which all personal and private feeling ought to be put aside. At the last meeting, the total cost of the line had been stated at 2,281,000*l.*, and although the Chairman had manfully and frankly admitted that at the time when this estimate was given in, he believed it to be correct, it was really an awful thing for the proprietors now to look at the great excess which had been incurred. (Hear, hear, hear.) If this had been the first offence—for so he would designate it—of the Directors, little might have been said. It might have been represented that they were subject to the representations of engineers and surveyors, but when they had gone on step after step to their present position, he did not think that any such excuse was tenable. Where were they to stop? By the Company's Act they were empowered to issue 36,000 shares of 50*l.* each, with liberty, he presumed, to borrow one-third more, making in all a capital of 2,400,000*l.* Now, six months ago, it was stated that 2,200,000*l.* would be amply sufficient, and this at a time when the road was just about to be opened, and when from the knowledge which had been acquired in railway operations, the cost ought to have been accurately defined. Whatever might have occurred in the infancy of railways, so large an excess ought not to have been unforseen six months ago. The Chairman had at that period emphatically intimated that 2,200,000*l.* would be sufficient to complete the railway and provide a suitable establishment, and yet they were now called upon for a very large increase. He did not intend the smallest offence to the Management, but the meeting should look upon this purely as a mercantile transaction. They should not attend these meetings merely to play the part of *Noodle* and *Doodle*, paying compliments to each other, but as partners in one concern, and as if they were meeting each other in their several counting-houses. He would say most distinctly that if ever there was a case in the present state of railways that called for inquiry it was this, although that inquiry need not be in the smallest degree tinctured with suspicion. He believed that the undertaking bore within itself the germs of prosperity, but gold might be bought too dearly. They might be told that on an expenditure of two millions a dividend of 8 per cent. would be returned; but if that expenditure were increased to three millions, what would be the result but to blight the hopes of individuals and do infinite mischief to other similar speculations? (Loud cries of "Hear, hear, hear.") Directors at this time of day must look minutely and accurately into all the items of their expenditure, as if the undertaking were exclusively their own. He hoped that the modest manner in which the adjournment had been moved, would disarm all opposition. It might be true that the proposition was unusual, but then it should be remembered that the circumstances of this case were very peculiar. The Directors ought to say, "if you, the proprietors, mean any

Digitized by Google

offence, we will not take it:" they should say, "if you want information you shall have it in your own way." And what would be the result? If men of business were appointed to the investigation, they would probably say to the Directors, "you have been unfortunate in your plans, but you cannot help it. The land has cost more than you expected—the contracts have cost more—the wind and weather have rendered a further expenditure necessary, but you have done your best." Such parties would come to the next meeting with confidence, and give utterance to their sentiments; but if in the face of the modest request that had been made, the Directors should persist in saying, "we give you our honour that we have incurred a debt, and if you don't pay it in one way, we will make you pay in another—if you will not pass our accounts, we shall have recourse to measures which you will not like,"—if this were done, he thought the proprietors had very ample reason to complain. (Hear, hear.) He believed the accounts had been made out to the best of their ability. For himself, he entertained no feeling of hostility to the Board of Management. He knew too well what pain and annoyance Directors must endure, when having discharged their duties to the best of their ability, they were subjected to what might be construed by sensitive minds into an expression of disapprobation or reproach. With respect to the slips on the line, he believed it was usual in Lancashire that the contractors should keep railways in repair for twelve months after their opening, and the margin of their earnings retained in the hands of the Company, was intended as a guarantee for the fulfilment of this engagement and to meet contingencies. If it had been so in the present case, no loss would have arisen to the Company.

The CHAIRMAN said, the 12 months' agreement applied only to the maintenance of way, and had nothing to do with keeping the slopes in repair.

Mr. MOZELEY believed it was different in Lancashire. The meeting must be tired of the present discussion. He had spoken not with reference to this Company only, but as affecting railway interests generally. Many millions had already been embarked in railways, and many more millions would hereafter, under proper management, be embarked, but such had been the shock which had been given to this species of property through the misfortunes of some Companies and the mismanagement of others, that unless steps were taken to re-assure public confidence the results would be most disastrous.

Mr. PARSONS disclaimed all offence towards the Directors.

The CHAIRMAN would with pleasure acknowledge the courtesy of the gentleman who had moved the amendment, and of the gentleman who had last addressed the meeting. In alluding to the mode now recommended of raising money, he had only had in view the effect which would be produced out of doors, by refusing to relieve the Directors from their liabilities. He had not consulted his colleagues, but he would take upon himself to say, that there would be no objection to the honourable proprietor (Mr. Mozeley), and two or three others of the proprietors, investigating fully the accounts of the Company. The Directors would be happy to devote a day or two to the inquiry, and, if it were necessary, a special meeting might thereafter be called. This would be arriving at the same end by different means. He would repeat, that if provision were not at once made for raising the two sums already referred to, the operations of the Company must be greatly retarded, if not entirely suspended. In fact, the liabilities were most pressing. If these were met, the Directors had no inclination, and no motive, to prevent whatever investigation might be thought desirable. They would willingly be parties to a Committee of Investigation, but he trusted that, by their vote to-day, the proprietors would get rid of the responsibility already incurred. The debt had been contracted, and in some way or other it must be paid. If, therefore, they would vote the two items the third might be deferred—he said *two*, because for the reasons already given he believed it would be much more to the interest of the proprietors to raise the money for the London Bridge station, in the manner now recommended, than by the immediate issue of shares at a discount. (Hear, hear.)

Sir I. L. GOLDSMID again attempted to speak, but was assailed by cries of "spoke, spoke." He disclaimed all vindictive feeling towards the Chairman or the undertaking. He was, he said, too deeply interested in the success of the railway to cherish any such feeling. He morever disclaimed all offence towards the Directors referred to at a previous stage of the proceedings, for really he knew nothing of either of them. With respect to the arbitration, he had wished to leave the arbitration perfectly free—

The CHAIRMAN—I am sorry to contradict you, Sir Isaac, but you are most certainly wrong.

Sir I. L. GOLDSMID would insist that he was not wrong; he had distinctly and broadly stated that he left every thing in the hands of the arbitrators.

Mr. MOZELEY after expressing his gratitude for compliments paid him by the Chairman said, it seemed to him that the plan of the Chairman was to confirm the proceedings of to-day, and then to appoint a Committee. He thought that whatever faults the Directors might have committed—however they might have been put into the furnace and not come out unscathed—they must be supported by the payment of the money for which they had become liable. He thought, however, that the proper way would be to consider what was the smallest amount that would meet their liabilities. Let the other accounts stand over, and if loan notes were issued, let the mode of redeeming them be referred to a special meeting. He objected to the issue of any more shares until it was proved that more money was wanted, and to what extent, and whether any better mode of raising the requisite amount could not be adopted.

The CHAIRMAN said, the fact was, that the two sums now asked for were not more than were absolutely necessary to meet the liabilities that had already been incurred. For instance, the land could not be re-sold till the spring, and this was one of the sources from which the extra expenditure was to be met.

A PROPRIETOR—Would not 200,000*l.* be sufficient?

The CHAIRMAN answered in the negative. The works would require 50,000*l.*, and the liabilities would swallow up the balance of the two amounts.

Sir I. L. GOLDSMID thought they had better at once call for the remaining 5*l.* It would always be hanging over the heads of the proprietors, and thus would prevent parties from investing. Would the Directors pledge themselves that the 5*l.* should not be called for?

The CHAIRMAN had no hesitation in saying, that if 300,000*l.* were now raised by loan notes, the 5*l.* would not be called for.

Sir I. L. GOLDSMID—Never?

The CHAIRMAN—certainly never.

Mr. PARSONS thought it would be a bad precedent if accounts were to be passed merely because Directors happened to be in difficulties. When he brought forward his amendment, he was not aware that any practical inconvenience would result from an adjournment. He thought it would be better at once to raise the money, which would be realised from the 5*l.* call, and the 120,000*l.* authorised by the Croydon Act, for then they would have clear Parliamentary grounds upon which to stand, rather than to proceed without the sanction of the legislalature, although he had little doubt that an Act would ultimately be obtained. He did not believe that the accounts were inaccurate, much less that they had been wilfully falsified. In fact it was less with reference to the past—for what had been incurred must be defrayed—than as regarded the future, that he was anxious to have an investigation of the accounts. At meeting after meeting they had been assured that the estimates then presented would be sufficient—that no contingencies could possibly arise to falsify the calculations advanced, and yet they were now reduced to their present plight. He would almost rather submit to anything than allow the accounts to pass without an opportunity of further investigation. (Hear, hear.)

The CHAIRMAN said, it was for the meeting to decide whether the 5*l.* call should or should not be made, and the 120,000*l.* raised under the Croydon Act; only they must not hereafter blame the Directors for doing so. His own opinion was, that the much easier and better way was to raise the money as recommended in the Report. (Hear, hear.) The Directors were extremely sorry to be obliged to call for any further capital, but it was unavoidable.

Sir I. L. GOLDSMID said, it was clear the money must be raised, and in his opinion they had better call for the 5*l.* at once, rather than having it constantly hanging over them. (Cries of "Yes, yes," and "No, no.")

Mr. WALEY said, it was very easy for gentlemen to recommend a call of 5*l.*, but it should be remembered that many of the proprietors who had hitherto made large sacrifices might not be prepared for this. In his opinion—and although formerly a large holder, he had now but a comparatively small number of shares, and therefore could not be supposed to have any personal interest in the matter—the tendency of a 5*l.* call would be to depreciate the shares to an enormous extent. (Hear, hear, hear.) If the 120,000*l.* for the station were to be raised by shares issued at the present moment, he doubted whether the price per share would exceed 30*l.* or 31*l.* 10*s.* (Hear, hear.) It seemed to him that the better plan would be to postpone the adoption of the accounts for the present, and *at* once to proceed to financial matters, namely, as to how the future capital required could be raised.

The CHAIRMAN was of opinion that the proprietors would "cut their own throats" if they did not devise some means for raising the money. If that were done the Directors had, and could have, no objection whatever to the appointment of a Committee.

Mr. MOZELEY thought the money might in the mean time be raised by loan notes as proposed, leaving it to a subsequent period to determine when and how these notes might be converted into shares.

The CHAIRMAN was quite satisfied that without the prospective conversion of the notes into shares no money could be raised. (Hear, hear.)

Sir I. L. GOLDSMID said, it was quite clear the money must be raised, and for his own part he should not object to the terms proposed.

Mr. WALEY would move, therefore, that 300,000*l.* be raised in the manner pointed out in the Report.

Mr. PARSONS had much pleasure in seconding the motion. (Hear, hear, hear.)

After a good deal of conversation it was agreed that for the present the first resolution and amendment should stand over.

In conformity with a request from Mr. Henderson, the time named in the Report for taking up the notes, was extended from February 1st to February 10th or 11th, and in accordance with a suggestion from Sir I. L. Goldsmid, the words "not more than," were introduced before "three years," so as to give proprietors an opportunity of converting their loan notes into shares at an earlier period than three years if they should deem fit.

Captain KELLY inquired whether a clause could not be introduced into the Act which was now to be applied for, rendering it compulsory on the South-Eastern Company to pay the purchase money already referred to, within a specified period.

The CHAIRMAN said, the very best feeling existed between the two Companies, and he should be sorry if any matter now broached should tend to disturb that harmony.

Captain KELLY did not relish being at the mercy of another Company, through an arrangement which had been entered into from want of foresight.

The CHAIRMAN said, there had been no want of foresight. The clause alluded to was a matter of arrangement; and the greatest incentive the Directors of the South-Eastern Company would have to pay up the money, was the fact that they would

Digitized by Google

have to pay up both tolls and interest on the purchase money.

Mr. LEVY thought a clause ought to be introduced into the new Act preventing the further call of 5*l*.

The CHAIRMAN said, the Act would do that of itself.

Mr. MOZELEY hoped there would be no objection to place on the minutes of the Company a memorandum explaining that in consideration of the 30,000*l*. to be advanced, no further call should be made.

The CHAIRMAN saw no objection to the course recommended.

Mr. PARSONS thought it would be desirable if instead of merely the Company's seal and the name of the Secretary, two Directors would affix their names to the loan notes. He was informed by a mercantile friend, that such an arrangement would render the shares more marketable.

Mr. MOZELEY thought it would be better at present not to lead the Directors into personal responsibility, as it was clear that illegality attached to the loan notes.

After some further discussion, the motion for the raising of 300,000*l*. was carried unanimously.

A long conversation then ensued as to the adjournment of the meeting. It was explained that if the present meeting were adjourned, the Company's transfer books must remain closed, thus inflicting a very serious inconvenience upon many persons. Ultimately it was understood that the Directors would call another meeting in about a month.

It was then attempted to form a Committee, but for a long time without success. Mr. Parsons was first proposed, and expressed his willingness to serve, but stated that a defect in his eyesight would probably prevent him from giving to the matter that attention he could wish. There was so much difficulty in forming a Committee, that the meeting was about to dispense with it altogether—leaving the books open for the inspection of all—but after a very spirited appeal by Mr. Mozeley, who said, it was a shame that in the great commercial city of London, when so many had come to the meeting to complain, none should be found ready to incur the labour and responsibility of the office of Committee-men. Messrs. Parsons, Lewis, Brown, Shuttleworth, and Thompson, were finally appointed as the Committee.

Mr. Mozeley and Sir I. L. Goldsmid were named, but the former declined in consequence of private engagements; and the latter because of his peculiar position with regard to the Directors.

A resolution for the confirmation of the forfeiture of shares referred to in the Report, was then carried unanimously.

The Directors noticed in the Report as retiring, were then unanimously re-elected.

Mr. ENTWISLE returned thanks.

Mr. WHISHAW enquired as to the vacant Secretaryship. There had been, he was told, numerous candidates, who had been subjected to great inconvenience through the delay which the Directors had incurred.

The CHAIRMAN said, the appointment of a Secretary was a matter of very grave importance. It was quite clear that on the eve of a general meeting a new Secretary could be of little or no use to them, as being totally unacquainted with the business of the Company, and therefore it had been determined to postpone the appointment for the present. Some of the Directors were of opinion that their present staff was sufficient for the duties—thus saving 500*l*. or 600*l*. a year, while others thought that they ought to have some leading man for Secretary. Whatever determination might ultimately be come to, the candidates would be communicated with.

In answer to a question from Mr. Parsons, it was intimated that the Directors would have no objection to the Committee's calling in an accountant to assist them. The first meeting of the Committee was fixed for 12 o'clock on the following day, (yesterday).

A long and very desultory conversation ensued relative to the differences between Sir I. L. Goldsmid and the Company. The merits of the case have been fully explained in reports of previous meetings. The feeling of the proprietors was clearly against going to law, but it was explained that in this case it was unavoidable as a mandamus was about to be applied for to compel the Company to do that to which Sir Isaac demurred. After much discussion and personal wrangling, it was objected that the proprietors were not in possession of the whole facts to enable them at that late hour to come to a decision, and ultimately the matter dropped.

On the motion of Mr. Henderson a vote of thanks to the Chairman was then carried unanimously.

The CHAIRMAN returned thanks, observing, that if in the heat of argument he had said anything offensive with respect to the 5*l*. call, he regretted it and withdrew it.

The meeting then separated.

SHEFFIELD AND MANCHESTER RAILWAY COMPANY—SPECIAL MEETING.

[Abridged from the *Sheffield Independent*, Jan. 15.]

PURSUANT to notice, a Special General Meeting of the shareholders in this undertaking was held on Wednesday, in the Cutlers' Hall, Sheffield, to consider certain proposals made by the Directors in order to raise the necessary funds for the prosecution of the undertaking. The attendance was numerous. The Chairman of the Company, JOHN PARKER, Esq., M.P., took the chair.

The CHAIRMAN, after some introductory remarks, said, there was no use in retrospect. As practical men, they were called upon to deal with things as they found them. So far as the Directors had been able to revise their former opinions and original estimates, they had been verified by the results of experience. And, however the undertaking might have been affected in public estimation by the revised reports that had been made, the Directors saw no reason to swerve from the opinion that it was a sound one, that it presented a very fair prospect of eventual remuneration, and that it would be especially conducive to the prosperity of this town and neighbourhood. At the general meeting, in Manchester, on the 17th February last, the Directors expressed their confidence that, when the share-list had been effectually weeded, there would remain a sound and responsible proprietary, fully competent to carry on the undertaking to that point when they might avail themselves of the clause for borrowing money, and thus afford relief to the shareholders; and that, eventually, the doubtful shares would get into hands that would secure its successful completion. With a view to arrive at the point that entitled the Company to borrow money, the calls had been persevered in, and the Directors were certainly disappointed that, in spite of every exertion, and (what they felt as much as any one) the heavy pressure they had been forced to put on many shareholders, they had not reached the point at which they could borrow. Unless, therefore, by the plan they proposed to-day, or some better plan that might be suggested from the other side of the table, this point could be bridged over, their financial difficulties were such that at present it could not further be proceeded with. Their capital stock was 700,000*l*., and they were empowered to borrow when half of it should have been paid up. When the difference between this sum and what had bean paid up last spring was considered, it would appear that the Directors had reasonable ground to believe that such a sum would by this time have been raised as would enable them to borrow. That, however, had not been the case. In round numbers, there had now been 300,000*l*. paid up, and there remained from 40,000*l*. to 50,000*l*., which must be raised before they could obtain relief by borrowing. The Directors thought it was their wisest course to direct their views to reach this point. Then, from the traffic, which they expected would by that time be existing, and from the general character of the undertaking, the Directors hoped to be able to borrow the sum allowed by their Act. The present object was to provide the intervening sum; and a plan for that purpose will be proposed by a gentleman who, at the last meeting in this place, made so favourable an impression on the proprietary, that the Directors had since been glad, with the general assent of the shareholders, to ask him to give his services at their Board. He would briefly state the measures proposed. With a view of inducing gentlemen to pay up their calls, to make the shares more marketable, the Directors considered they were justified in proposing, as three years must elapse before the line could be finished, a course which other Companies hae adopted under circumstances of less difficulty, to allow interest, at a rate not exceeding 5 per cent. from the 1st of January instant, on all shares of which the full amount of the calls was paid up. The effect would be strongly to stimulate shareholders to pay up their calls, and also to make the shares saleable in the market. But it was not easy to form an estimate of the sum which such a measure would produce and they could not rely on it alone for supplying the 40,000*l*. or 50,000*l*. It It would be further proposed, therefore, that the Directors should have power to re-issue the forfeited shares, at such a rate of discount as they might find necessary, guaranteeing to the holders of such shares interest not exceeding 5 per cent, for ten years, and giving them, also, a prior claim to interest before the other shareholders. Such shares, however, to be first offered to such as had paid up their calls rateably to the shares they held. Some time ago, a requisition had been signed by a number of shareholders, urging them not to re-issue the forfeited shares at a discount. The Directors, feeling the force of the reasoning of that document, had refrained from proposing the course it deprecated; but circumstances now left them no other alternative. They were unwilling to re-issue these shares in a way that must, to some extent, impair the value of the rest; and they had hoped that an improvement in the trade of the country might have enabled them to avoid having recourse to such a step. But now the time was come when they (the Directors) were bound to say that those hopes had not been realised, and they did not think that the plan which he had before described could be sufficiently relied on to enable them to dispense with this further discretionary power. It would be further proposed to give the Directors a discretionary power to submit a Bill to Parliament, empowering the Directors to borrow, on security of the tolls, and such other general security as such an undertaking could give 100,000*l*. They hoped that the former parts of the plan would render this unnecessary, but it was desirable to have several strings to their bow, and therefore the Directors had thought it right to submit this series of propositions, which they hoped would bring them to the point when, 350,000*l*. having been paid up, they might borrow 233,000*l*. more. They proposed to ask Parliament that, having now paid up 300,000*l*. they might be enabled to borrow one-third of that sum. After a consultation with Parliamentary agents, they were advised that the Standing Orders of Parliament, in a case of this kind, would probably be dispensed with, and that Parliament might allow such a Bill to pass without requiring the ordinary notices. These formed the three main points of the scheme that would be submitted to them; and other resolutions, of a less important character, would follow, that were necessary to carry out the plan. They would be severally discussed, and he was sure they would give them that candid attention which had ever been shown to the proposals of the Directors by the proprietary. The Directors desired only to carry the undertaking to a successful issue, and they thought that the plan now proposed would produce the greatest degree of relief at the least loss of capital. Of course they must be careful lest in the moment of depression, they should make a greater sacrifice than was necessary. Many other railways had been compelled to make similar sacrifices, and that which they now proposed was as small a sacrifice as they thought presented a reasonable chance of attaining the object. When Mr. Locke made his Report on the 13th November, in the driftway of the tunnel, there were 1,157 yards executed. Up to the 25th of December, there

Digitized by Google

were 1,269. In November one shaft had reached the level of the tunnel. There were now two, and the horizontal work was proceeding from shafts 4 and 5. The amount to be sunk in all the shafts, when Mr. Locke reported, was 161 yards. It was now 129, and the tunnel appeared to be advancing in a way that was quite satisfactory. He would not further detain them, but would call on the gentleman who would move the resolutions.—(Cheers.)

Mr. PERRY proceeded to read the following resolutions, and remarked that they had been all but unanimously passed by the Directors:—

1. That it would be for the advantage of the Company that interest, at a rate not exceeding 5 per cent, per annum, be paid, from the 1st instant, on all shares on which the full amount of calls has been paid; and that any proprietor being in arrear on any share, shall forfeit all claim to interest on all monies previously paid by him, so long as he shall remain in arrear; and that the Directors be authorised to pay the same out of the funds of the Company, until such time as the railway shall have been opened six months throughout.

2. That the Directors be and are hereby authorised to issue the shares now forfeited, and which may hereafter be forfeited, at such rate of discount as they may, from time to time, find necessary; and that they be also authorised to guarantee the payment of 5 per cent. interest, for a period of ten years, on all shares so issued; and that the said shares have a prior claim to the said interest over all other shares of the Company; and that such shares be offered, in the first instance, to the proprietors who have paid their calls, in a rateable proportion to the number of paid-up shares which they hold.

3. That application be made to Parliament in the next Session for powers to facilitate the re-issue and disposal of forfeited shares, and to pay interest to shareholders out of the funds of the Company, in accordance with the preceding resolution; and also for such an extension of the Company's powers to borrow money on mortgage, as will allow a present and immediate borrowing to the extent of 100,000*l.* (upwards of 300,000*l.* of the Company's capital being already paid up,) and likewise for such other powers relative to the same subject, and otherwise, as may be deemed advantageous for the Company, and as Parliament in its wisdom may think fit to grant. And that all interest on money borrowed on mortgage shall have priority in order of payment over all other interest payable by the Company.

4. That it is the opinion of this meeting, under the present circumstances of the Company, that the forfeited shares ought to be re-issued, and interest paid thereon, and on the other shares in the Company, in conformity with the first two resolutions, even previous to the sanction of Parliament being obtained to the objects of those resolutions.

5. That all arrangements needful for carrying into operation the objects of the foregoing resolutions shall be effectuated by such ways and means as the counsel of the Company may advise. And the Directors of the said Company, and any Committee to be appointed by them, are hereby empowered and requested to take all steps which they in their discretion may consider necessary or expedient for giving full effect to the same resolutions and to the objects thereof; and are also empowered to act in such other manner in relation thereto, whether in strict conformity with the said resolutions, or otherwise, as circumstances may, in their judgment, appear to require.

With regard to the payment of interest to those whose calls were paid up, the Directors recommended it, knowing that it had worked well in other Companies, under similar difficulties. Whether the rate of interest should be four or five per cent., might be left to the discretion of the Directors hereafter. The amount of arrears on the shares, on which 45*l.* and upwards had been paid, amounted to 47,000*l.* The temptation held out by the offer of 4 or 5 per cent. on the 45*l.* or 55*l.* already paid, and on the further sum to be paid, would no doubt induce many to pay up, for while there was any arrear, there would be no interest paid. If parties who had paid 65*l.* (and three-fourths of the arrears due were from those who had paid 65*l.* or 75*l.*) would pay 17*l.* 10s. more, then they would get 4 or 5 per cent. on the whole; and the Directors confidently expected that this offer would induce parties to make an effort, and even, if necessary, a sacrifice, and so put the Company in possession of money that would enable them to borrow according to their Act of Parliament. This plan had been tried on the Brighton and South-Eastern lines with such success, that the last two or three calls on the latter line had been paid almost with the regularity of banker's bills. After referring to other resolutions, the hon. Director said, the 5th resolution gave the Directors a degree of discretionary power, which he hoped they would not need to exercise. But when any difficulty arose, it was a great inconvenience to have to call gentlemen from all parts of the kingdom, to obtain their sanction. He did not think anything was likely to arise to cause a difference between the Directors and shareholders, and in difficult circumstances it was better to have some unnecessary powers, than to run the risk of wanting the power needful to accomplish their measures. He hoped these measures would be unanimously adopted, and he looked with considerable confidence to the completion of the work in about three years. When he considered the position of the line, the population locally connected with it, the large towns that it would connect, the circumstances of its having no canal competition, so that it would have the whole traffic, light and heavy, between Sheffield and Manchester, he concluded that it would stand in a better position for every thing, from east to west, and west to east, than any other line existing, or that could exist. When he considered also the low cost at which it would be made of 25,000*l.* per mile, the estimated rate of cost for the whole line with all its appendages, and that it rarely happened that any great public work was completed for the precise sum estimated, it must be most gratifying to the shareholders and the Directors, that so far as they had proceeded they were rather within the estimated amount. With regard to its great drawback in public estimation, the tunnel, the progress of that was most satisfactory. He proposed the series of resolutions.

Mr. WM. BUTCHER seconded the motion.

Mr. JOHN SYKES, with perfect good feeling to his colleagues in the Direction, but holding a strong opinion on this subject, rose to propose an amendment. He moved, that interest should be payable, not to those who paid up the full amount of the calls, but to those who paid up the full subscription of 100*l.* per share.

Mr. T. ELLIN, jun., master cutler, seconded the amendment.

Mr. PERRY said, he had given the opinion that the plan proposed would raise the required sum, and that was not a loose opinion. He had spent some time with the Secretary and law agents in examining the share-list, and he found that at every succeeding call a smaller number paid. The amendment would confine the advantage offered to the richer part of the shareholders, but his proposal would spread relief over a much larger number. (Cheers.) And he expected it would be acted upon, because it was manifestly the interest of persons to avail themselves of it. To show how the payments fell off, he stated that 3,850 paid the 7th call; 3,353 paid the 8th; 2,934 paid the 9th; 2,419 paid the 10th; and only 1,517 the 11th. The amendment would enable the majority of the richer shareholders to put 4*l.* or 5*l.* a share in their pockets, while others would be debarred from the advantage. On the plan of Mr. Sykes, those who had paid 65*l.* per share would get nothing unless they could pay 35*l.* more, while he proposed that such persons, on paying 17*l.* 10s. more, should be entitled to receive interest on the whole 82*l.* 10s. they had paid.

Mr. SAXTON asked, if the 250*l.* a week no wreceived for passengers, would pay the interest on the calls paid up.

The CHAIRMAN said, the surplus would be applied to the payment of the interest as far as it would go, and the Directors anticipated that it would increase, but they could not affirm that it would be sufficient.

The amendment was, after some discussion, put to the vote and negatived, and the motion was carried almost unanimously.

The CHAIRMAN then read the second resolution.

Mr. IRONSIDE said, if they had the whole capital of 700,000*l.* paid up, and the 233,000*l.* borrowed, they would still be 200,000*l.* short of Mr. Locke's estimate; and if the shares were now depreciated, how was that further sum to be raised.

The CHAIRMAN said, they might probably have to follow the example of all other Companies, and supply the additional capital required by raising new shares. But if, by the course now proposed, they could get to Glossop, the traffic would then, no doubt, be such as to enable them to proceed.

The resolution was carried unanimously.

The CHAIRMAN then read the third resolution.

Mr. R. SORBY moved as an amendment, that the consideration of the application to Parliament be deferred to the next half-yearly meeting but one. Mr. Sorby's amendment not being seconded, the motion was put and carried.

The remaining resolutions were severally put and carried, without discussion, and after a vote of thanks to the Chairman, the meeting closed about four o'clock.

GLASGOW, PAISLEY, AND GREENOCK RAILWAY COMPANY—GENERAL MEETING.

THE following is the balance-sheet referred to in our notice of the meeting:—

Balance Sheet, 30th November, 1841.

CAPITAL ACCOUNT.

DEBTOR.

To amount of receipts, per last statement		£526,156 1 7	
Arrears since received		8,010 10 0	
Amount of deposit of 1*l.* 10s. per share, on 7,017 new shares, due 1st June, 1841	£10,525 10 0		
Deduct previously paid	4,962 0 0		
		5,563 10 0	
Amount of First Call of 1*l.* 10s. per share, due 20th August, 1841, on 5,987½ new shares		8,981 10 0	
Shares paid up		114 0 0	
Sum received to account of Second Call, due 1st December, 1841, paid in advance		2,152 10 0	
Loans in anticipation of debentures		8,677 15 6	
		£559,655 17 1	
Balance		97,870 3 4	
Total		£657,582 0 5	

CREDITOR.

By amount of expenditure, per last statement		£600,355 16 6	
Expenses of New Acts	568 7 0		
Land and compensation, conveyancing, valuators' accounts and stamps	4,379 4 8		
Works	19,711 7 1		
Iron rails, chairs, keys, and turn-tables	3,649 18 10		
Permanent way	759 0 7		
Locomotive engines	4,051 7 0		
Carriages	4,620 0 5		
Waggons	3,550 15 4		
Store account	300 0 0		
Engineering accounts	897 5 5		
General expenses preliminary to traffic	4,194 1 7		
Interest and agency accounts	5,981 11 9		
Advertising, printing, and stationery	253 6 8		
Office charges, gas, taxes, insurance, station furniture, and miscellaneous payments	1,402 1 4		
Deputation charges	52 12 5		
Sealed certificates	90 7 6		
Joint Committee Account, (See A.)	2,719 16 4		
		57,176 3 11	
Total		£657,532 0 5	

WYNDHAM HARDING, Secretary.

A.—CAPITAL ACCOUNT.

Expenditure of Joint Committee since last Report.

Land and compensation, stamps for conveyancing, and arbitration expenses	£2,260 1 10
Works	3,173 19 5
Charges and petty expenses	5 11 6
	£5,439 12 9
One-half whereof is	£2,719 16 4

WYNDHAM HARDING, Secretary.

Dr. Lardner concluded a course of lectures in New York, on the 30th ult., on the locomotive engines and railways of England.

During the past year 292,000 passengers were conveyed by the railway between Amsterdam and Haarlem. The total receipts, including luggage and merchandise, were 136,698 florins (or 336,745 francs.)

The journey from Boston to Albany is now accomplished in 12 hours, by means of the Great Western Railway, which was opened throughout on the 22nd December.—*New York Herald.*

ASSESSMENT OF RAILWAYS.

To the Editor of the Railway Times.

SIR,—There appears to be some difficulty at the present time as to the proper mode of assessing railways to the relief of the poor and other parochial rates. Will you allow me to make a few observations upon the subject, through the medium of your very useful paper.

The Parochial Assessment Act, under the authority of which all rates are now made, directs that all property is to be rated at such a sum as it will reasonably let for by the year, making a fair deduction for repairs and insurance.

Any property attached to the freehold, and for which a rent can be obtained, is assessable.

What is rent? Such a sum that may be left after paying all outgoings and a fair remuneration to a tenant for management.

The rent of a railway, then, would be such a sum as a solvent tenant would give for it, he paying all outgoings; and the sum at which it ought to be assessed would be this amount, after deducting the cost of repairs and insurance.

Now the question is, how to ascertain what a tenant will give for a property of this description, being as it is of a new and particular description, and of which very few if any valuers have had any experience. The fairest way would be, to be governed by the published returns of the Railway Company itself, as to the amount of interest paid upon the whole of the shares annually whilst under their own management. From this amount a deduction should be made for a tenant's risk and profits. Now this sum would have to be divided between the parishes through which the line passes; not, however, according to a mileage rate, for that would not be just, but according to the value of the railway property within each parish. If there were no buildings, or other matters pertaining to a railway, but the *way* only, then a mileage rate would operate; but the value laid out in the letable portion of the property varying in each parish, the only fair way to arrange the apportionment of the rent would be, to value all the buildings, land, rails, sleepers, blocks, and all other letable property in each parish, then adding them altogether see what relative proportion the whole value laid out bears to the whole rent. Thus—

The whole rent shall be taken at.....	£40,000
The whole value of the assessable part of the railway at	800,000

Thus for every 20*l.* laid out in each parish, the railway would be assessed at 1*l.*

Thus the first parish had laid out in the letable part of the railway		£100,000	..	Assessed. £5,000
Second	ditto.....	70,000	..	3,500
Third	ditto.....	90,000	..	4,500
Fourth	ditto.....	50,000	..	2,500
Fifth	ditto.....	120,000	..	6,000
Sixth	ditto.....	100,000	..	5,000
Seventh	ditto.....	200,000	..	10,000
Eighth	ditto	30,000	..	1,500
Ninth	ditto.....	40,000	..	2.000
		£800,000	..	£40,000

This appears to be the most equitable manner of looking at the question, as it is not practicable to assess a railway in each parish according to the toll taken there and the outgoings; for in some parishes no toll whatever is taken, and that parish therefore would receive nothing.

Another mode is to value all the letable property belonging to the Railway Company in the parish, and fix a per centage which it may reasonably be supposed a Company would realise upon the money laid out. This property should consist of all the buildings and machines fixed to them; the land of the current value in the parish, and its additional value owing to its containing the rails, sleepers, blocks, &c., for the use of which a rent could be obtained. Neither cuttings, nor embankments, nor bridges, nor viaducts should be brought into calculation, because no more rent would be given whether the railway ran on arches, through a cutting, or on plain ground, but on the contrary would rather be a reason for a tenant declining to give so much rent if on arches or in cutting, because of the repairs which arches or cuttings would require.

Perhaps, Sir, you will, to serve your readers and the public in general, be good enough to give your opinion upon this subject; or some of your correspondents will lend their aid, and point out the proper mode of assessing railway property to the parochial rates.

CHARLES PENFOLD.

Croydon, Jan. 15, 1842.

TRAFFIC RETURNS.

To the Editor of the Railway Times.

SIR,—As the railway system ought not to be deprived of anything to which it is legitimately entitled, and which might be of essential service to it, I hope you will allow me, through the medium of your valuable journal, to request that the Secretaries of the Ballochney, Glasgow and Garnkirk, Monkland and Kirkintilloch, Wishaw and Coltness, Edinburgh and Dalkeith, Gosport, Stockton and Darlington, and Sheffield and Rotherham Railways, or such of them as may be opened throughout, will furnish you with the weekly traffic receipts, and the last half-yearly dividends on their several lines; for it is now quite clear that the value of the shares of all railways is entirely governed by the extent of the traffic and the amount of the dividend paid; and as the shares of all these lines are at a very considerable premium, some of them even 250 per cent. or more, it may be presumed the traffic must be proportionably great as well as the dividends, and would therefore have its effect, if weekly quoted in the *Railway Times* amongst the returns of traffic and dividend of the other great railway lines.

I am, Sir, your most obedient servant,

OBSERVATOR.

EASTERN COUNTIES' RAILWAY.

We have but little to communicate respecting the progress of the railway, owing to the state of quiescence which the severe weather has of necessity thrown the operations into. We, however, have the satisfaction of saying that we have ascertained that as soon as the weather permits action, proceedings will be resumed without a moments delay. In respect of the railway labourers, we learn that their good conduct has been unimpaired, and that they have shown a spirit of subordination and obedience to the authorities, that reflects the highest credit on them. Those anticipations, therefore, of outrage and plunder which some fearful persons prognosticated some time back, are not, it appears to be, in the remotest degree realized. While we are on the subject of the railway labourers, we may as well revert to a recent decision of the Colchester borough magistrates in the case of Charles Worthy, a railway labourer, convicted of an aggravated assault on railway constable Sullivan, and fined only seven shillings. The fine was raised by subscription among his fellow workmen, and the release was commemorated by a drinking bout. Now, the magistrates ought to be made acquainted with the total inutility of even a large pecuniary fine—a small one is worse than useless—to restrain such a body of men as railway labourers; and to inspire them with due respect for the constabulary appointed to preserve peace and order. In all future cases, the magistrates, it is hoped, will see the propriety of inflicting such a punishment as will have the effect of reaching the offender, and of deterring others from following his example.

We noticed some time ago an ingenious invention of railway line signals, by Mr. Hall, the able managing director of the company. We find these signals are now at work throughout the line, and a more efficient monitor in cases of danger, we do not think can be devised. It is on the principal of a panel-fan, displaying all its compartments when a train has passed, or when there is danger, and working its panels up gradually into a case so as to indicate the relative circumstances of danger, until being entirely shut up, the train may go on without anything else than the usual circumspection. We are of opinion that other railways would do well to examine and copy this plan, or at least its principles, for we are satisfied it is calculated to do away with many of those untoward mischances by which human life is so fearfully perilled.—*Essex Mercury.*

2. *Minus* toll to London and Birmingham 12*l.* 11s. 0d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

10. The part between Glasgow and Paisley was made at the joint expense of the Glasgow Paisley and Greenock, and Glasgow Paisley and Ayr Companies, but each Company's receipts in respect of that part are now merged in the general returns of each.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 40*l.* 2s. 8d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included. Goods in 1841, 3,425*l.* 3s. 11d. (*Canal stopped*); in 1842, 2,589*l.* 4s. 8d.—Decrease, 835*l.* 19s. 3d.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,784*l.* 11s. 11d. are the receipts after deduction [illegible]

omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 17*l.* 11s. 0d.; horses, 51*l.* 18s. 3d.; dogs, 1*l.* 2s. 6d.; parcels, 206*l.* 19s. 2d.; cattle, 38*l.* 6s. 0d.; corn, 2*l.* 18s. 10d.; heavy goods, 438*l.* 9s. 8d.; coal, 187*l.* 16s. 2d.—Total, 896*l.* 1s. 7d. The dividend is from the time of opening.

28. The details of the receipts are as follows:—Passengers, 1,677*l.* 13s. 7¾d.; parcels, carriages, horses, and mails, 312*l.* 14s. 3½d.; merchandise, 805*l.* 0s. 1d.; minerals, 294*l.* 11s. 2d.; cattle, 35*l.* 3s. 5½d.—Total, 3,125*l.* 2s. 7½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 109*l.* 13s. 1½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

29. The receipts are after deduction of L. and M. toll.

30. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 26 miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

31. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

32. The returns are inclusive of Man. and Bir. toll.

33. The traffic stated does not include the Leeds and Selby

TO CORRESPONDENTS.

We feel much obliged to the writer of a letter from Sheffield marked "Private," which came to hand on Wednesday. We are not unacquainted with the pitiful spite of the "clique" referred to, and their contemptible tool, and were we so disposed, could take ample revenge. For the present, however, we shall be silent. Any further communication from our correspondent shall be received in strict confidence.

C. S.—*The inconvenience is not confined to the line referred to, but it is of rare occurrence, and we do not see how it is to be avoided.*

E. B.—*We fear the remedy would be worse than the disease. The sledge would doubtless throw the second engine off the rails.*

Diogenes.—*Perhaps we ourselves may enter upon the case hereafter. In the meantime we shall be glad to receive the promised particulars.*

B. T. B.—*It matters not at what discount the shares may have been issued. The dividend is paid on the* nominal *value of the stock.*

Weardale Extension Railway.—*We shall be happy to receive any further particulars respecting this project.*

H. B. (Edinburgh.)—*The fault is not in the printing but in the folding. To fold it properly lay it open on a table, and fold it in the middle, the long way of the paper, bringing the outer edges of the print one upon the other; then fold over one end, letting the figures of the page fall on each other. Fold the other end in the same way. If one side of the margin of the paper projects over the other, cut it off, and the paper will then have an equal margin on all sides of every page.*

Quango *came to hand too late.*

North Midland Railway.—*Mr. Frost, the Secretary, writes to us to say that the amount of dividend stated in our traffic returns "is a mistake," but he has forgotten to state what the dividend really is.*

With reference to this railway we shall endeavour next week to notice the printed statement forwarded from Sheffield.

Sunday Travelling on Railways.—*We cannot enter into a theological discussion in reference to this subject.*

Dictator.—*Certainly; there ought to be some limit to the expenses of the Directors in regard to travelling.*

H. H.—*A similar (and shorter) letter was in type before that of* H. H. *came to hand.*

A Railway Traveller.—*The same answer.*

Assessment of Railways.—*We have in type a very full report of an important case relative to the rating of the South-Western Company, but as judgment has been deferred, we may the more easily postpone the publication of the argument.*

Jacobus *and other correspondents next week.*

TRAFFIC OMITTED LAST WEEK.

North Union Railway.—*Week ending January 7, receipts from passengers (3,447) 923l. 17s. 1d.; goods, 132l. 1s. 5d.; total, 1,155l. 18s. 6d.*

Dundee and Arbroath Railway.—*Week ending January 9, receipts from passengers, (4,322½) 194l. 6s. 10d.; goods, 49l. 10s. 10d.; total, 243l. 17s. 8d.*

Great North of England Railway.—*Week ending January 8, receipts from passengers, 629l. 12s. 6d.; merchandise, 377l. 7s. 4d.; total, 1,006l. 19s. 10d.*

The volume of the *Railway Times* for 1841, may now be had neatly and substantially bound and lettered. Those of our subscribers who are in want of single numbers to complete sets, would do well to apply early, as the stock is very limited.

We should feel obliged if any of our friends could furnish us with the numbers of the *Railway Times* for January, 1838, to enable us to complete a set or two. Double the publishing price will cheerfully be paid for them.

THE RAILWAY TIMES.

SATURDAY, JANUARY 22, 1842.

Few Railway Meetings have been of so interesting a character, or are so likely to lead to results of so much importance as that of the London and Brighton Company, held on Thursday last. The very copious account of the proceedings which we give elsewhere will, we are convinced, be read with the deepest attention, not merely by the proprietors of that undertaking, but by every railway shareholder in the kingdom. It will be seen, that after a somewhat stormy discussion, the adoption of the Report is to be taken into consideration at a future meeting—a Committee of five being, in the meantime, appointed to investigate the affairs of the Company.

We are very glad that the Brighton meeting has taken place so early in the season, for we trust that the opinions expressed, and the decision arrived at, will have a good effect upon other Managements. It is quite evident that nothing but a prior publication of accounts will satisfy railway shareholders, who at last seem resolved to look somewhat more into matters so closely connected with their interests. The further sum required by the Brighton Board is certainly very large, and we agree with Mr. Mozeley, that so great an excess over the estimates brought forward only *six months ago*, calls loudly for explanation. Pending the investigation by the Committee, we shall not enter into the matter. When the result of that inquiry transpires, we may have something to say on the subject.

A good deal of the time of the meeting was taken up with discussions relative to the unfortunate dispute between the Directors and their late colleague, Sir I. L. Goldsmid. Without entering at all into the merits of the case, we must say that Sir Isaac's offer to submit the whole matter to arbitration is extremely fair, and whatever the Company's professional advisers may say to the contrary—and it should be recollected that by going to law *they* at least are gainers—we cannot possibly imagine a case in which, both parties giving up technical objections and legal formalities, the decision of two honourable men would not do *justice* between disputants more readily, and at far less expense than any court of law in Christendom. We would strongly urge upon the Directors the propriety and policy of such a course. They seem confident that they have both law and equity on their side; what then need *they* fear?

The Directors of the Sheffield and Manchester Railway Company have determined to have recourse to the fallacious expedient of allowing interest out of capital on paid-up calls. In the seemingly all but desperate condition of the financial affairs of the Sheffield Company we do not feel much surprise that any plan should be resorted to by the Management, which promises a chance of extrication from their present difficulties, but it needs no great gift of prophecy to foresee that something more substantial than this interest scheme must be adopted to afford a reasonable hope of ultimate success.

The great argument for the payment of interest on calls, when this mode of procedure was first proposed was, that it would have a tendency to keep the market price of shares up to something like their nominal value. Admitting that such were the effect of the measure before a line came into active operation, it would still be objectionable, for it is manifest that if a fictitious value were thus given to the stock of a particular Company, such value must be reduced immediately that the payment of a fixed interest ceased, and there was nothing to depend upon but the legitimate results of working. If the interest on calls were paid out of any fund distinct from the resources of the proprietors themselves, and such interest happened to be of sufficient amount to satisfy investors of moderate expectations, there can be no doubt that the shares would keep up to *par*, or nearly so, provided the allowance were permanent. But when the payment of interest is but taking out of one pocket to put into another, and is moreover only temporary, the effect is not likely to be either beneficial or lasting. It is useless, however, to speculate on the probable results of such a plan, when we have the experience of Companies who have tried it, to which to appeal. The South-Eastern Company have adopted the scheme of paying interest: are the shares of that undertaking at par—an undertaking which in our opinion is in every respect superior to the Sheffield and Manchester? The Bristol and Exeter Company have also adopted it—how stand *their* shares? One of the speakers at the Sheffield meeting, where the resolution for the allowance of interest was passed, attributed the prompt payment of the more recent South-Eastern calls to the operation of the interest clause. We have the gratification of knowing that the calls in that Company are now promptly paid up, but the cause lies deeper than the paying or withholding of interest. It is to be found in the fact that the South-Eastern proprietary is at last weeded of those who could not or would not meet their engagements, and through whose apathy or inability the undertaking was at one time encompassed, nay, almost overwhelmed by difficulties. The share register is now one of the soundest in the empire, containing for the most part the names of those only who have faith in the intrinsic merits of the work, and who are content, notwithstanding the caprice of the share-market, to invest their money, in the sure and certain expectation and belief of receiving, at no distant day, a very ample return. Let the Sheffield and Manchester Directors secure an equally firm proprietary, and show that their line offers similar prospects of future advantage, and we venture to affirm that it will not require the payment of interest on calls to diminish the vast amount of arrears which, as we learn, have gradually and progressively been accumulating. How would the payment of 5*l.* per cent. interest (for it seems that so large an amount has been authorised, subject to the discretion of the Directors), how, we say, would it operate as an inducement to the Sheffield defaulters? According to statements made at the meeting, the total amount called for is 82*l.* 10s. per share, the whole of which must be paid up before the interest arrangement takes effect. Now, it seems that on a large number of shares the arrears amount to no less than 37*l.* 10s. per share, while upon a still larger number there is a deficiency of 17*l.* 10s. Is it likely that those who *can* pay and will not, would be tempted to lay down at once either the one sum or the other, for the purpose of securing at the end of twelve

Digitized by Google

months a payment of about 3*l.* 12*s.*, or to speak more correctly, of *receiving back* from the 37*l.* or 17*l.* to be paid, a sixth or twelfth part, or a larger or smaller proportion, as the case might be? Or supposing the defaulters to be willing to pay, but compelled from temporary difficulties to fall into arrear, is it at all probable that the hope of getting again 3*l.* 12s. at the end of the year, would lead them to make sacrifices to the extent of six times the sum to secure the interest, when the dread of absolute forfeiture of the whole amount already paid is insufficient to keep the payments up? As we said before, the plan wants solidity, and if persisted in, will but aggravate the evil which it is intended to cure.

It is very well to talk of encouraging parties to pay up their calls, but surely, we repeat the risk of losing the whole investment, when so large a sum as 72*l.*, or 65*l.*, or even 45*l.* per cent. has been advanced, is sufficient to make every one pay at once who can pay, especially when he knows that he is liable to be charged with interest at the rate of 5 per cent. upon his arrears. The impolicy of adopting an arrangement of this kind in the case of the Sheffield and Manchester Company, must be evident from the admission made by the Chairman, that the net receipts from the portion of the line already opened, are not likely to prove sufficient to meet the claims for interest! What then remains, but that if the Directors require a call of 5*l.* for the prosecution of the works, they will make a call of 5*l.* 5s., applying the additional 5s. to the interest account? No benefit, therefore, can accrue to those who have paid up promptly and in full, but rather a loss from the circumstance that the nominal capital will be larger than the amount actually expended on the undertaking, and the proportion of dividend consequently greater to those who have purchased their shares in the market at a heavy discount.

For a notice of the other business transacted at the meeting, we refer to the particulars given elsewhere. We shall not now comment further upon it. The whole proceedings prove clearly enough that the Sheffield and Manchester Railway is in anything but a prosperous condition. Whether the extensive and unusual powers entrusted to the Directors at the meeting of Wednesday week, are likely to produce a better order of things, we leave to time to decide. We more than doubt it.

Of late we have devoted very considerable space to the differences existing between the Liverpool and Manchester and Manchester and Leeds Railway Boards, on the subject of the once-contemplated junction between these two undertakings. The question is eminently one of a practical character; and although having in one sense but a local application, the principles involved are of very great and general importance. No apology is necessary, therefore, for once more recurring to it; and if there were, the fact that the proprietors of the Liverpool and Manchester Company are called together for Wednesday next, renders it extremely desirable that another attempt should be made to place, if possible, the question fairly and fully before them. We fear there is little to be hoped for from the Directors; and if the shareholders do not take the matter into their own hands, they themselves must ultimately be the sufferers, to say nothing of the present inconvenience and loss to others.

The Directors of the Leeds Company have published, in the form of a pamphlet, a detailed report of the proceedings of their late special meeting, and have prefixed a copy of a correspondence between Captain Laws, the very able Superintendent of the Company, and Mr. Loch, M.P., the agent of the Canal interests—himself a Director of the Liverpool and Manchester Railway, with the power of nominating two others to seats at the Board. We cannot at present spare room for the re-publication of this correspondence, but one thing is clear from it, namely, that the shareholders in the railway ought to look very carefully and closely to the management of their affairs, if they do not wish to see their own advantage postponed to that of others. Nothing that we have yet heard or read on the subject of the now said-to-be intended junction on the other side of Manchester—certainly nothing that appears in Mr. Loch's letters—alters our opinion that it is a *feint* to draw off attention from a really useful and practicable improvement. If we saw anything like a determination on the part of the Liverpool Board to carry out *any* junction, we should not say one word in disparagement either of their energy or good faith, even if we were of opinion that they erred in judgment; but as it is, we cannot give them the benefit of so charitable a construction of their motives.

We gather from the correspondence that the great majority of the Liverpool Directors hold but a small pecuniary interest in the undertaking. Is not this sufficient to account in some degree for the apathy which they evince on so important a subject?

It appears further that "an expression from the Manchester and Birmingham Railway Company has been made to the Leed's Company, that they will extend their line to Hunt's Bank by a tunnel, and that their present capital will enable them to do so." What becomes then of the pretence that the Hunt's Bank junction will not accommodate the other Manchester lines?

In two extracts from the *Liverpool Standard*, which have appeared in this journal, grounds have been alleged to justify the Liverpool Directors in postponing the formation of the junction line to Hunt's Bank, for which they obtained powers about three years ago. These grounds are both of a public and private nature, and at the risk of going over the same ground that we have already traversed, we propose to say a few words upon each, and first of the public. It is intimated that in delaying to exercise their present powers to purchase land (*which will expire in June next,*) the Liverpool Directors are actuated chiefly by consideration for the public convenience, and the interests of certain Companies who would be excluded from the junction by the present scheme, viz. the Manchester and Birmingham and Manchester and Sheffield Companies. But, to obtain credit for public motives, they should be able to show some consistency in making such a claim. Let us look at their conduct to three public bodies who are principally concerned in the execution of the Hunt's Bank line, viz. the Bolton and Bury Railway Company, the town of Salford and the Manchester and Leeds Railway Company. Three years ago the Bolton Company who had themselves given notice of an application to Parliament for powers to make the Hunt's Bank line; viz., the Bolton and Bury Railway Company, the town of Salford, and the Manchester and Leeds Railway Company. Three years ago the Bolton Company, who had themselves given notice of an application to Parliament for powers to make the Hunt's Bank line, were induced to forego their claim in deference to the superior interests of the Liverpool Company, at the same time protecting their own by certain conditions of sharing in the profits of the expected traffic. Are they now to suffer themselves to be deprived—we had almost used a stronger word—of all share in these advantages, and can the Liverpool Company expect any reliance to be placed on their professions, if they exclude the Bolton Company from a junction at all, while their advocate in the *Standard* talks of three important lines entering Manchester, and in his consideration for the Sheffield line which is *not* made, totally forgets the Bolton line which *is* made? We need only hint as an explanation, that perhaps the Liverpool Company are quite as fearful of a *northern line to Liverpool*, as the Leeds Company are of the completion of the Sheffield line. The inhabitants of Salford have now been kept in suspense for three years as to the demand for their land for this junction, and its probable consequent value, as well as the benefits to the town generally, by having the principal railway station within its limits. Will they stand idly by and allow themselves, after so great an interfence with their rights and properties has been sanctioned by Parliament for the public good, to be deserted altogether, and a southern line to be adopted which would necessarily have the effect of enhancing the value of land, buildings, &c., on the latter, and diminishing it considerably on their own line?

Again, the Leeds Company, in *self-defence*, as well as in accordance with the wishes of the proprietors, have decided upon executing their portion of the junction line to Hunt's Bank—for it should be remembered that though the Liverpool Company have a discretionary power, the Leeds Company have not, and a mandamus might issue to compel them to perform what they had undertaken to do. Can they entertain the question of a northern line? Have they not rather sufficient reasons (apart from all jealousy of the Sheffield, which is insinuated by the *Standard* and others) to urge upon the Liverpool Directors every argument which may prevail upon them to persevere in their former (presumed) intention, without rendering themselves liable to the imputation of "unfairness" and "selfishness?"

What real prospects, we ask, can the Liverpool Company have of success in an application to Parliament for powers to make a southern junction line, against such an opposition as must inevitably be thus arrayed in firm combination for their mutual protection? Who will put any faith in their future professions of consideration for public interests, their consistency, decision, or even a *bona fide* intention to make a junction at all, if they allow their present powers to expire? But it seems the Leeds Company seek to "hurry them" into the formation of the Hunt's Bank line through a mean jealousy of the Sheffield line. One would have supposed that they must have considered the question of probable traffic before obtaining an Act of Parliament, by evidence given on oath, to show both the public convenience and the prospect of remuneration of their project; and that in three years more they would have had time enough to exercise their "discretion," without feeling themselves "hurried on" by a fair demand to know their ultimate decision, accompanied by a repetition of the same arguments by which they were convinced before. If they are hurried *now*, what must they have been *then?*

They have private grounds also, it is said. "It is quite possible," states the *Standard*,

Digitized by Google

"that circumstances may develope themselves—which will force upon the mind of every prudent man the conviction that the formation of a junction line through Manchester so expensive as either of the competing schemes is inexpedient," and "the present position of commercial and monetary interests, and of railway interests as well, is quite sufficient ground for unwillingness to embark in new undertakings not urgently required." We fearlessly appeal to the railway public whether vague generalities or possibilities like these can excuse men from the performance of a great public duty to those whose interests will otherwise be so grievously compromised. Moreover, the Leeds Directors have expressed their readiness to recommend to their proprietors a guarantee to the Liverpool Company against loss by this project, and there can be no doubt that their recommendation would be adopted; and is this the use which they intend to make of their "discretionary power," by first involving the Leeds Company in an outlay of 900,000*l.* to meet them, and then playing fast and loose with their Act till they can wring out of those who stand already at an enormous risk with yet uncertain remuneration, a guarantee against loss to a Company which already pays 10 per cent. the extent of their Parliamentary limit? And are these the men that talk of public considerations and the interests of other Companies? We will not stop to examine the comparative cost of the Southern project, but we must say that if the Liverpool Directors have an estimate of it at one-third of the 650,000*l.* (which was stated as the probable cost at the Manchester and Leeds meeting on the 23rd ult.), it is a great pity they did not clearly and fully bring that project forward for discussion instead of merely "pausing" till their powers expire. Even thus they would only reach Store-street for 220,000*l.*, and the junction with the Leeds line would be still unmade—whereas the estimated cost of 450,000*l.* for the Hunt's Bank line is for the *whole of the new line*, not, as the passage in the *Standard* would lead one to believe, of that part only which the Liverpool Company undertook to make.

In addition to all this it is well known that a communication might, and we have reasons (given above) for believing would, be made from the Manchester and Birmingham station in Store-street to join the Leeds line at Hunt's Bank, so that not even that "much vilified undertaking," the Sheffield line, for which the Liverpool Directors are so anxious, would be left without the means of communicating with friends so dear and so considerate. Without wishing to decry the merits of the Sheffield line, we suppose we may state, for the public information, that it is not yet made; that there is a tunnel upon it of some three miles long hardly more than begun; that they are applying to Parliament for more capital, and that the district to which it leads, though populous is far inferior to the densely crowded vicinity of the Leeds line.

Since the above was in type we have received a copy of a correspondence that has passed between Mr. Moss, the Deputy-Chairman of the Liverpool and Manchester Company, and Captain Laws. The only point worth noticing is the following paragraphs in a printed circular from Mr. Booth, the Secretary, prefixed to the correspondence:—

"That measure (a junction with the Manchester and Leeds Railway, through Salford,) has long engaged the anxious attention of the Board, and the course which they consider it desirable to pursue with reference to this subject, will be communicated to the approaching general meeting of proprietors.

"Under these circumstances you will perhaps see the propriety of suspending your judgment until the case, in all its bearings, shall be laid before you; and the Directors will not forget their pledge to convene a special meeting, 'with ample notice of the object of such meeting,' before they call on the proprietors to come to a definitive resolution on so important a subject."

Many of the projects of the Americans are on a most magnificent scale indeed, and of this we have a proof by the last arrivals, which bring us particulars of a very numerous and influential meeting, held in the commercial capital of the States, to promote as speedily as possible the completion of the New York and Erie Railway.

From the proceedings we gather that the line in question is not less than 446 miles in length, extending from the Hudson river near New York, to Dunkirk on Lake Erie. It lies along the valleys of the Delaware, the Susquehannah, the Alleganhy, and many minor rivers, the route embracing the southern tier of counties in the state of New York, and the northern tier in Pennsylvania and New Jersey, and the line when finished forming a connection with a vast number of other railways, as well as with many canals and rivers. Some of the branch lines are already formed, others are in progress, and the rest awaiting the completion of the main trunk of which between 60 and 70 miles from New York are now completed, and in active and successful operation. Two other divisions, embracing a distance of more than 250 miles, are in such a state of forwardness that if means be supplied, they may be completed by next winter, the whole of the work being, by the terms of the contract, to be finished in the year 1843, always provided sufficient funds be forthcoming.

The importance of this extensive work to the future prosperity of New York is very great, and so the meeting seeemed to consider it, for they embarked most enthusiastically in its support, a keen rivalry on the part of the Bostonians to secure by means of a railway now in the course of construction a portion of the trade to which the enterprising inhabitants of New York deem themselves legitimately entitled, stimulating them not a little to this course. One great point impressed upon the meeting—and we wish it were more prominently put forward nearer home—was the necessity of self-reliance, trusting nothing to the State, nor to any party except those to be immediately benefited by the scheme. It was urged, that even if the speculation failed to produce any pecuniary return, the indirect advantage would more than counterbalance the capital invested. We should have better hopes of seeing the railway system extended in the United Kingdom, were similar sentiments more prevalent on this side the Atlantic.

We find from the details given at the meeting, that the road is estimated to cost nine million dollars—a sum which, compared with the cost of English railways, appears ridiculously inadequate, but which, nevertheless, taking into account the different circumstances of the two countries, and more than all the character of their respective railway works, is likely to be pretty correct. In the plan adopted for raising this capital, the fostering influence of the American Republic is most conspicuous. This will be best seen from a Report of a Committee on Railways, appointed during the last session of the legislature. That Committee says, "The policy adopted and pursued by the State for completing this work, as herein shown, *is to advance to the Company one hundred thousand dollars, as often as it shall expend fifty thousand of its own money*. Several efforts have been made to change it, but without success. Assuming that it will continue to be the policy of the State, at least until the road is completed, the Company has made all its contracts with respect to it, and based all its calculations upon it. The cost of the road being estimated at 9,000,000 dollars, of course the amount to be raised and expended by the Company will be 3,000,000 dollars, and the aggregate amount to be advanced by the State will be 6,000,000 dollars." British Railway Companies might look in vain for the adoption of a similar system of "policy" (and good policy it would be) on the part of the Government at home.

A somewhat novel, but under the circumstances a very reasonable and forcible argument was adduced in favour of the completion of the Erie Railway, namely, that as a large proportion of the 60,000 foreign emigrants who annually reach New York arrive in the winter season, the facilities which such a line would afford for penetrating further into the country would at once draw off these parties, very many of whom, it was stated, are now compelled to beg from door to door, until the return of moderate weather throws open the water communication westward.

Every one has heard the anecdote of the great projector of water communication, who affirmed that rivers had been formed by Nature expressly as feeders for canals. A New York orator, at the meeting referred to, improved upon this notion. Canals, he said, were very well at the time when they were first introduced, but tow-boats and sloops, and barges, were too slow for the spirit of the present day. A water communication would no longer answer the purpose. It evaporated in the summer and congealed in the winter: *indeed it was a rude material, fit only to be converted into steam, to propel locomotives!*

Yesterday week a meeting was held in Edinburgh, the Lord Provost in the Chair, for the purpose of supporting the *east* coast line of railway from England to Scotland. A good deal was said respecting the alleged "impracticability" of the west coast route, and the (so-called) "assumptions" of the Government Commissioners, and many lamentations poured forth over the probable "degradation" of Edinburgh into a third rate city should the east coast line be carried, but beyond the appointment of "a Committee to give effect to the expressions which had been so unanimously responded to," nothing was done.

We understand that measures are now in progress to raise subscriptions for presenting a suitable testimonial of esteem and gratitude to George Stephenson, Esq., who has been designated "the Father of the Railway System." Some years since, a memorial of this kind was talked of, but from causes with which we are unacquainted, the matter was allowed to slumber. It has now, we are happy to hear, passed into more energetic hands, and we cannot doubt of its complete success. The public, perhaps, have hitherto, more than the proprietors, reaped the benefits that have resulted from the general establishment of railways, and we

Digitized by Google

make no question that they would cheerfully acknowledge, and in some measure repay, their obligation to one who has been so active in the cause. Without entering into any discussion as to their original projector, it is beyond dispute, that to no other man, living or dead, is so much of the merit due of having practically promoted railways, as to GEORGE STEPHENSON.

WE are sorry to hear that JOHN WARMINGTON, Esq., has resigned the Secretaryship of the London and Blackwall Railway Company. Mr. WARMINGTON'S successor, whoever he may be, will have no easy task to keep up the character for regularity and efficiency which this department of the Company's affairs has acquired under the very skilful and judicious superintendence of the late Secretary.

A LETTER which recently appeared in our columns recommending the use of anthracite in locomotive engines, has led to several other communications on the same subject. Our correspondents will be glad to learn that a locomotive engine has for some time been in course of alteration to enable the efficiency of that fuel to receive a practical test.

It is well known that a chemical analysis of anthracite gives a very near approximation to pure carbon. Its combustion is very perfect and intense, and thus a high evaporating power may, by proper application, be economically obtained from its use, while its freedom from sulphur would probably cause a far less rapid depreciation of boilers than that arising from coke.

The obstacle to its general application to boilers of steam-engines, has been its tendency to decrepitate when thrown on the fire, and the difficulty of lighting it without previous calcination. The patent method introduced by Mr. PLAYER, obviates this difficulty, and has been attended with practical success and economy in the *Anthracite* steamer. Its principal feature consists in a hopper passing completely through the upper part of the boiler, which is kept constantly full of anthracite, and the fuel thus becomes gradually heated by passing through the steam and water space until it is brought nearly to the heat of ignition, at the moment of coming in contact with the live fire.

In the course of a few weeks the system will have had a practical trial in its application to locomotive engines, and although it would be premature at the present stage of the proceedings to enter more into detail, we shall take the earliest opportunity of laying before our readers the particulars of an experiment which we think promises so much for the economy of locomotion.

WE are glad to find that the Scotch Puritans are not likely to have it all their own way. At a meeting of the Town-Council of Linlithgow, held on Monday week, the Provost moved that the Council communicate to the Directors of the Edinburgh and Glasgow Railway Company their approval of running mail trains on Sunday morning and evening, care being taken in doing so to give as little hurt to public feeling as possible; which motion being seconded, was carried by a majority of fourteen to four, two declining to vote—the minority of four being of opinion that the Council should not interfere in the matter.

The solicitation of proxies by the agitators has, in addition to the steps referred to last week on the part of certain Liverpool proprietors, called forth a similar appeal from Mr. A. M'Neill, one of the Directors of the Company. In his circular on this subject, Mr. M'Neill says:—

"Instead of troubling you with observations of my own on this subject, I have applied to Mr. Miller, our distinguished Engineer—and who, you are aware, is to act as Superintendent of the Railway for a considerable time after it is opened—for his views of the profits to be realised; and, in answer, he states it as his opinion, that several thousands per annum of clear profit will be realised by the morning and evening Sunday trains.

"An attempt is made in various quarters to mislead you, by holding out that the public of Scotland are generally unfavourable to the measure proposed. There could not possibly be a grosser delusion. Apply to any plain man in business, who cares nothing for the notoriety of taking part in popular polemical meetings, and you will be assured by such person, and generally by all sober people, that the measure is not only not unpopular, but imperiously demanded by the community. Some well-meaning people, of high standing and worth, have allowed themselves, in this as in other questions now harassing society in Scotland, to be made the tools of agitating zealots: but these persons form an inconsiderable minority—not greater than perhaps would be found on the question whether railways are of any advantage to the public."

As if the public mind were not sufficiently excited by the details of railway accidents which are so fully given in the newspapers, some heartless scoundrel, who professed to be an eye-witness of the scene, has been amusing himself by imposing upon the Editor of a Liverpool journal with a grossly exaggerated account of the occurrence upon the Manchester and Leeds line, which we noticed last week. The story ran, that a passenger train having got on the wrong line, by a misplacement of a shunt, ran against a luggage train at full speed; that both were smashed to pieces, and an immense number of lives lost. The "wreck of matter and the crash of *carriages*" were stated to have covered the parallel line of railway, and the fast passenger train coming up at the moment, ran into the mass—"on horror's head horrors accumulate"—hundreds of lives being lost, the ruins having taken fire, the passengers and guard, and enginemen and stokers, being left under the burning ruins. Of course it was soon discovered that the report of this pretended eye-witness was most grossly and wilfully false, but in the mean time the evil had so far been accomplished, and at the present moment the account given by this veracious chronicler is going the round of the newspapers in districts to which the real facts of the case may never penetrate. The *Morning Post* was a short time since imposed upon by a similar narrative, and in that case it was proved that the writer was decidedly, and had for a length of time been, insane. It is charity to hope that a similar excuse can be offered in the instance of this gross imposition on the *Liverpool Albion*, although for ourselves we could wish to see parties who have so much mischief in their madness more carefully looked after. We would strongly recommend to the Directors of the Railway Company the propriety of tracing out, and if possible, of punishing the author of a fabrication calculated to inflict so much pain upon individuals, and to cast so serious a discredit on their undertaking.

The *Leeds Intelligencer* of Saturday last gives the following account of the occurrence upon which so shameful a superstructure of lies has been raised:—

"Early on Monday *morning*, as one of the luggage trains of the Manchester and Leeds Company was passing between the Sowerby-bridge and Elland stations, a spark fell upon and set fire to a portion of the goods, when the engine-driver, in order to extinguish the same, exhausted the whole of the water which he had to supply the boiler, and by that means put out the fire; but when he attempted to proceed the steam was quite gone, and of course the train could proceed no further. At that moment another luggage train came up at a rapid speed, when a collision took place, and one of the engines and tender was much damaged, as was also a quantity of the goods. We are glad to say no lives were lost, although one man had his thigh severely fractured. The damage is supposed to be near 1,000*l*."

—o—

THE Directors of the Great Western Railway, with their usual alacrity in turning local circumstances to account, have issued notices setting forth that a large number of additional trains will run on Tuesday next between London and Slough, for the accommodation of parties anxious to witness the ceremony of the christening of the Prince of Wales, which takes place at Windsor that day.

—o—

WE call attention to an advertisement in another column respecting a proposed railway in the Vale of Leven in Scotland. The project promises extremely well.

—o—

THE *Derby Mercury* notices a novel application of zinc, namely, at the Chevet tunnel:—"At this tunnel, which is on the North Midland Railway, and about three miles from Wakefield, workmen are busily engaged lining the roof with zinc, which is the means of effectually preventing the continual dropping to which the tunnel was subject."

RAILWAY OFFENCES AND OFFENDERS.

AT the Salford Hundred Sessions on Wednesday week, Samuel Haywood, 27, was placed at the bar, indicted for having embezzled various sums of money, belonging to the Manchester, Bolton, and Bury Canal Navigation and Railway Company, which he had received as their servant, and on their account. Mr. Brandt conducted the prosecution; Mr. Greene defended the prisoner, who, however, pleaded guilty. The circumstances of the case may be briefly stated as follows:—In 1836, the prisoner was appointed the collector of the canal rates, an office created by the Company's Act of Parliament, and from that time to the present, the prisoner not only collected the rates, but kept the books and made out and delivered the accounts for the rate charges; and it would appear that from the period of his appointment to the present time, he has been embezzling moneys paid to him by parties for canal rates, which, by the exercise of much ingenuity and care, he managed to appropriate to his own use without detection. This he effected by his mode of keeping the books, in which, by false entries, he always took care to exhibit balances agreeing with the amount of tonnage in each year on the canal. The books have been examined; but so careful had the prisoner been, that his frauds escaped detection, and they would probably have done so a while longer, but for the following circumstance:—Mr. Hawkshaw, the Company's Manager, both as to the railway and the canal, without having the least distrust or suspicion of the prisoner, who was generally regarded by the Directors as a valuable and

Digitized by Google

trustworthy servant, thought the plan of keeping the books and sending out the accounts was not a good one; and, having first introduced a different mode with reference to the railway, gave notice to the prisoner, two or three months ago, that he (Mr. Hawkshaw) should take the accounts for canal rates into his own hands, and send them to the respective parties through the post; the prisoner, of course, collected the amounts as before. Previously to this change, Mr. Hawkshaw requested the prisoner to balance the books and his accounts; and the morning following this direction it was found by a letter that the prisoner had absconded. Search was made, and the prisoner was ultimately apprehended by the police on board a vessel lying off Liverpool, on the point of sailing for Philadelphia, for which place he had taken his passage. He had only 38*l.*, and it is not supposed that he had embezzled any considerable sum recently before his flight; but that his defalcations had taken place from time to time during the five years of his employment. After a careful investigation, it was found that these deficiencies amounted to an aggregate of about 1,400*l.* As we have stated, the prisoner pleaded guilty; and his counsel, Mr. Greene, was heard in extenuation of the offence, and in mitigation of punishment. The chief points he urged on the merciful consideration of the Court were, the prisoner's youth at the time of his entering the office, and the fact (as stated by the learned gentleman) that his predecessor in the office, who was the prisoner's brother, was considerably deficient in his accounts at the time of his leaving the Company's service, and that the prisoner had been induced to conceal and make up this deficiency. The learned Chairman (J. F. Foster, Esq., in passing sentence, said, that the Court felt the necessity there was of making examples in cases of this kind, where great trust was reposed, and where advantage was taken by confidential servants of this trust and confidence placed in them, to plunder their employers, which they were enabled to do from these very circumstances with less chance of detection. Such cases had become so frequent, that it was impossible to pass over such an offence as that of the prisoner's with a light punishment. The Court then sentenced the prisoner to *transportation* for the period of *ten years*.

THE SLIP ON THE CROYDON RAILWAY.

The thaw which followed upon the late snow has considerably delayed the clearing of the line at New Cross from the body of the slip following up as the lower part was cleared away.

The measures taken for relieving the top by means of carrying the mass of the slip over a stage to an adjoining spoil bank, will effectually diminish the probability of further slips at this point. No change of any importance has taken place in the appearance of the slopes since our last report beyond the rapid removal of a large quantity of earth. The operations are still being continued day and night, and we are glad to observe that the Directors spare no pains to diminish the inconvenience arising from the stoppage, and to shorten its continuance as much as possible.

From the heterogeneous character of the soils composing the upper stratum of the New Cross cutting, we look upon the causes and operation of this slip as a subject of very interesting inquiry to the Geological Engineer.

SOUTH EASTERN RAILWAY.

The works on the upper portion of this line, viz.: between Tunbridge and London, are now drawing fast to a conclusion, and the line will unquestionably be opened in May. Between Tunbridge and Ashford the works are in active progress at every point. The country in this district of the line is extremely favourable. There are no works of any importance, and for many miles the way is little more than the thickness of the ballast above the natural surface. The proceedings in the French Chambers as to the formation of railways in France have given a favourable impetus to the Dover line. The Anglo-Belgian line as it is termed, is intended to connect Paris with Belgium *via* Lille, and the two with Calais, by a branch from Arras. The Report from the *Ponts et Chaussées* to the Chambers places this line as the foremost in point of importance and first to be executed, and we learn that since the opening of the Chambers the Government Engineers have completed their surveys and detailed estimate for this work, which have been within the last week laid before the Ministers. The French authorities are prepared to push the matter, and the subject is popular among all classes in France. It may therefore be confidently expected that this great bond of union between England and France, will without delay be carried into effect, and the three capitals of England, France and Belgium, be brought nearer to each other in point of time, than London, Bath and Birmingham were six years ago.

EASTERN COUNTIES' RAILWAY.

To the Editor of the Railway Times.

Sir,—It would be satisfactory to the proprietors of the Eastern Counties' Railway if the Directors were at the next general meeting to afford them some information as to the state of the *old* share-list. What number of original 25*l.* shares, I would ask, have from first to last been forfeited? and to what extent would the capital represented by *that* stock (less the forfeited portion) participate in the profits of the undertaking?—in other words, what is the absolute amount of capital upon which a dividend would have to be paid? I ask this, because a friend of mine, in writing to me upon the subject of this railway, which appears to be attracting public notice, says, "the worst of it is, that the capital upon which a dividend will have to be paid is so large. Assuming, as would of course be the case, that all the debentures are turned into shares, the capital will be 3,200,000*l.*, for which in fact only 2,100,000*l.* will have been received; that is, 25*l.* on each original share, and 8*l.* 6s. 8d. on each debenture share." As regards the debentures he is right, as no doubt the holders of them will avail themselves of the privilege of converting them into the Company's stock, and therefore there will be 1,600,000*l.* of that *new* stock to share in a dividend. But with regard to the *old* 25*l.* stock, he overlooks or is ignorant of the fact, that a considerable portion, thousands in short, have been forfeited, and that there cannot by any means be 64,000 of *them* to participate in a dividend. It is tolerably well known that this railway, previous to its being taken up by the Lancashire gentlemen, was in all but a bankrupt state, and that it was found absolutely necessary to weed the share-list, and by a most extensive forfeiture of shares, the only alternative, to place the proprietary on a firm and wholesome basis. This has been done, and the result, as connected with the respectability and solvency of the present shareholders, must be pretty well ascertained. In point of fact, the information I require must in a great measure have been obtained, and an opinion formed upon it by those in authority before the attempt was made to raise more money by the debenture scheme or any other. They must by this time then, I may suppose, be in a condition to afford me the information I seek. According to the last accounts, the amount of deposit and calls, in all 23*l.* paid up, on this original stock is 1,280,183*l.*, and there are, excluding forfeited and Company's shares, arrears upon this old stock of 32,833*l.* Do they expect to get any and how much of these arrears? This is, I conceive, all they require to know, in order to enable them to answer my question, viz., what is or will be the amount of share capital represented by the old 25*l.* shares in this railway, which will be entitled to share its profits?

My friend, you observe, says there will be a capital of 3,200,000*l.*, that is, 64,000*l.* old 25*l.* shares, making 1,600,000*l.*, and the same number of debentures, or new 25*l.* shares, making the same amount, together 3,200,000*l.* I say there cannot be any thing like 64,000 *old* shares to pay a dividend upon, because there are numbers in the Company's coffers near having been issued to the public, and some thousands of others which have been forfeited.

Where there has been such an extensive forfeiture of original stock, as in the case before us, it is impossible, without more efficient data, to come to any accurate conclusion as to the amount of capital entitled to a return from the profits of the undertaking it has been embarked in, but I shall be happy to be told that my friend has made a mistake in *his* view of the subject.

A PROPRIETOR.

17th January.

HORSE POWER *versus* STEAM.

To the Editor of the Railway Times.

Sir,—Should a more competent correspondent not offer himself, I beg to submit the following remarks in answer to your correspondent "A Railway Shareholder," in your last publication, on the comparative expense of steam and horse power.

I will select the Edinburgh and Dalkeith and the Chester and Birkenhead Railways, as illustrating the working of the different systems, as they are placed in somewhat similar circumstances as to traffic.

By referring to the published statements of the affairs of the Edinburgh and Dalkeith Railway during the years 1838—39, I find that the average number of passengers was 274,084 per annum, conveyed a distance of 8¼ miles, at a cost of 8,233*l.* By a simple rule of proportion it appears, that if these passengers had been carried 16 miles instead of 8¼, the cost would have been 15,967*l.* Now, I find by the last Birkenhead Report, that by adding 2,500*l.* for maintenance of way, not included in the expenditure the first year, and by deducting interest on loans, the cost of carrying 309,000 passengers the 16 miles amounts to 15,714*l.*, being a less cost (in proportion to the length travelled) for the carriage of a greater number of passengers, at nearly four times the speed.

Yours, very truly,
SCRUTATOR.

Liverpool, January 11, 1842.

[A notice of the Edinburgh and Dalkeith Railway is in type.—Ed. R. T.]

CARRIAGE OF PARCELS BY RAILWAY.

To the Editor of the Railway Times.

Sir,—In your publication of the 15th instant, "A Sufferer" calls the attention of the public to the impositions practised by certain individuals to whom the carriage of goods from one part of the kingdom to another is intrusted, and correctly observes that the additions frequently made to the railway charges are most exorbitant.

I can fully substantiate all that your correspondent has stated, but he should have added,—that all persons receiving goods per railway should require of the party delivering them, *the printed receipt issued at the terminus, and which in all cases accompanies* the delivery there,—without which impositions may still be practised.

I am, Sir, your obedient servant,
OBSERVER.

January 20, 1842.

THE GREAT LINE TO SCOTLAND.

To the Editor of the Railway Times.

SIR,—Although, as a Scotchman, I should rejoice to see a railway constructed connecting England with Scotland, yet I confess I should prefer waiting a few years. The lapse of time may witness improvements in the locomotive engine which may possibly render steep gradients less objectionable, and thus the cost of construction might be greatly reduced.

Should either of the lines into Scotland now proposed be made at present, I am convinced it would prove *a most disastrous speculation*—yes, and *ruinously so*. I knew the line of country well, the population is thin, and the land for 20 and 30 miles together of the most wretched description. so much so, that many Englishmen would not credit me, were I to describe it. Local traffic is, however, out of the question, unless, as I have heard it jocularly observed, the crows were to contract with the railway people to be conveyed at low rates! The prospects of the thorough traffic from Edinburgh and Glasgow to Carlisle or Lancaster are equally cheerless, for there are splendid steam ships which run from Glasgow to Liverpool in 16 or 17 hours from Greenock, at fares from 5s. to 20s., which will be greatly reduced should a railway be formed, as it is well known that the proprietors are realising enormous profits at the present rate of fares. Many of the Edinburgh people would take this route to England, as the third class fare from Edinburgh to Glasgow is only 4s.

The railway to Scotland ought, in my opinion, to be constructed by Government. It is all very well for the Grand Junction and other Companies to take shares; it may answer their purpose by increasing the traffic on their own lines, but to individual shareholders, I repeat that this line will prove a most ruinous speculation.

In these remarks, Mr. Editor, I am actuated solely by a wish to prevent Englishmen from engaging in a bad speculation. I have seen too much misery arising from such causes to remain silent. Let me advise any of your countrymen who feel disposed to take shares in the great Scotch line, to travel the line of country by coach and judge for themselves. And let me remind them, that Scotland is thinly peopled—that many of us can spare nothing to spend in travelling, and that those of us who can, *do not* do so freely, as the English. These three causes, thin population, comparative poverty, and more economical habits in the rich, combine to prevent passenger railways in Scotland paying so well as the English lines. The Scotch are so well aware of this, that the Edinburgh and Glasgow, and other Scotch railway stock is held almost exclusively in England.

I remain, Sir, your obedient servant,
SCOTO-LONDINENSIS.

London, 11th January, 1842.

WEST LONDON RAILWAY.

To the Editor of the Railway Times.

SIR,—I some time since expressed to you my conviction, that the attempt to raise money by shares, for opening *part* of this line, would prove a failure, and the Directors appear to have (on reflection) entertained the same opinion, for the shares have *never* been issued, nor has anything either been done or heard of, in this ill-fated and mismanaged undertaking, for nearly six months!! The half-yearly meeting will shortly take place, and I cannot too strongly urge upon the proprietors the necessity for action. It is a notorious fact, that the terminus of the Great Western Railway is quite unsuitable, and it is equally well known that Knightsbridge would make an excellent one. The land from the West London Railway at Kensington has been surveyed and valued; the proprietors are, with scarcely an exception, favourable, and the property is by no means expensive. The West London line has already cost nearly 100,000*l*.!!! and is not likely *of itself* to become useful; at the same time it would be of immense importance to the Great Western, and might be purchased outright, or by giving its proprietors (as I previously suggested) an interest in the Great Western line.

If this cannot be effected, and if we cannot (of ourselves) complete the line, let us *at once* wind up the concern, compelling all who can to pay, not showing the lenity and favour we have done in some cases, and divide what is left from the wreck. It is useless to talk of waiting for better days, and go on paying Secretary, clerks, and *proh pudor*, Directors.

I am, Mr. Editor, your obedient servant,
A SHAREHOLDER.

January 17, 1842.

NORTHERN AND EASTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—As the Northern and Eastern Railway will shortly open for the whole length, I think it will be interesting to many of your readers to see an estimate of the probable traffic prepared by the late Secretary Mr. Till, and referred to by Mr. Robert Stephenson in his report published in the *Railway Times* of 12th October, 1839.

I am, Sir, your obedient servant,
A CONSTANT READER.

Paisley, 3rd January, 1842.

	No. of Passengers.
Passengers now travelling by stage-coaches weekly	13,386
Increased number of passengers by railway..	6,588

BIRMINGHAM AND GLOUCESTER RAILWAY—GOODS' TRAFFIC.

To the Editor of the Railway Times.

SIR,—A correspondent under the signature of "Observer," in your last week's number, inquires how it is that the amount of receipts for the conveyance of goods on the Birmingham and Gloucester line are so much less in proportion than they are on other lines of railway. The answer to this inquiry is very short, and I hope will prove to "Observer" quite satisfactory. It is this: the Gloucester and Birmingham is at present virtually an unfinished railway. The line *called* the Birmingham and Gloucester is, properly speaking, only a portion of the originally proposed Bristol and Birmingham Railway, and as long as that whole line is incomplete, the transit of merchandise will be incomplete also. But so soon as the Bristol and Gloucester portion shall have been finished, and it is now in active progress, then the amount of the goods' traffic will equal any—nay, surpass most—of the best lines of railway now in action. The same cause keeps down the amount of receipts from passenger traffic which will undoubtedly be considerably increased, on the completion of the whole line. Let not the holders of shares in the Birmingham and Gloucester line entertain any misgivings as to a profitable return on their investments in that undertaking. A little more patience, and their anxieties will be repaid in the receipt of handsome dividends. As an old inhabitant of Bristol, and one who has had ample opportunity of observing the nature of the traffic between London and Bristol, and Birmingham and Bristol, I fearlessly assert my opinion, and I am no holder, at present, of shares in that line, that the goods traffic on the Birmingham and Bristol Railway will exceed that on the Great Western. When the Bristol and Exeter line, and the Bristol and Gloucester line are finished, then, and not till then, will the value of the Birmingham and Gloucester shares be justly appreciated.

I am, Sir, your most obedient servant,
BRISTOLIENSIS.

Bristol, January 17, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY—GOODS' TRAFFIC.

To the Editor of the Railway Times.

SIR,—If your correspondent is what he professes himself, "An Observer," he would have required little pains to have satisfied himself why his expectations have not been realised in the goods' traffic on this line, and as your columns are too valuable for a long detailed account of the causes of disappointment, I recommend his attending the next general meeting, and ask those questions that will elicit an explanation of his present position and prospects. "Observer" would, on consideration, be as much surprised at hearing that a naval Captain, a barrister and two literary men, could successfully manage a large commercial undertaking, as that four commercial men could successfully manage a squadron of ships.

I am, Sir, yours, respectfully,
A SHAREHOLDER.

Edgbaston, Birmingham, January 17, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—The following is the revenue of traffic on the Birmingham and Gloucester Railway, from June 30th, 1841, to December 31st, ending the half year:—

Weekly account of merchandise and passengers previously furnished from June 30, 1841, to October 22, inclusive						£34,356	17	4
Merchandise.								
Oct. 29. ..	£247	14	4	....	Gross	1,677	1	2
Nov. 5. ..	384	6	2	....	,,	1,684	9	5
12. ..	255	12	8	....	,,	1,518	6	2
19. ..	214	2	6	....	,,	1,334	1	7
26. ..	164	7	5	....	,,	1,330	4	5
Dec. 3. ..	252	7	2	....	,,	1,354	3	7
10. ..	207	14	1	....	,,	1,324	15	9
17. ..	205	10	7	....	,,	1,492	7	2
24. ..	237	15	2	....	,,	1,767	0	8
31. ..	188	19	11	....	,,	1,485	6	3
						£49,326	13	6
Deduct 45 per cent. expenses for management, locomotive power, &c., say						22,196	13	6
						£27,130	0	0
Deduct 5 per cent. per annum on borrowed capital and quarter shares, and of say 400,000*l*. for six months, to December 31						10,000	0	0
Net						£17,130	0	0
Undivided profits, June 30, 1841, as per balance-sheet						10,000	0	0
Net profits, December 31, 1841 (which will leave a surplus, after paying a dividend of 2*l*. 10s. per share on 9,000 and some odd shares)						£27,130	0	0

AN ORIGINAL SHAREHOLDER.

GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—I have to thank you for the insertion, in your paper of the 16th October, of my letter, on the insecurity of the third-class passengers on the Great Western Railway. How fatally my prognostics have been accomplished I need not say, and I quite agree with you, in the Editorial remarks which you have made on that sad accident. I do not, as a holder of Great Western shares, hesitate to affirm, that should the Company adopt the plan of starting first, second, and third-class passengers by every train except the mail trains, and do away entirely with the passengers by the goods' train, that their receipts would not be diminished, but on the contrary, would be increased, and the frightful risk of loss of human life be greatly lessened. Besides, at the last half-yearly meeting Mr. Saunders told us that it was by the frequent running of the trains that the traffic was augmented, and I see no reason that what applies to the first and second classes should not be applicable to the third class.

I am, Sir, your obliged and obedient servant,
W. B.

Bristol, January 17, 1842.

THE LATE ACCIDENT ON THE GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—In an article in your last week's journal, on the late accident on the Great Western Railway, you state, that the public confidence in the undertaking has been very much shaken, as will be evident to any one who examined the weekly returns before and after the accident; and you add, "we never heard of a railway accident concerning which the public opinion was less divided than in this instance." Now, Sir, I think, on comparing the weekly returns of this and several of the other leading railways, before and after the accident to which you refer, you will not find generally a greater defalcation in the revenue on the Great Western than on the other lines. I will take, for instance, the Birmingham and South-Western lines by way of comparison for the two weeks preceding and subsequent to the accident as near as can be, for though the accident occurred on the 24th ult., it would have had very little influence on the traffic for the week ending on the 26th.

The revenue, in pounds, is as under:—

	Birmingham.	South-Western.	Great Western.
Week ending 18th and 19th December	£13,982	£4,569	£11,575
Ditto, ending 25th and 26th December	16,907	4,449	12,428
Total	£30,889	£9,018	£24,003
Week ending January 1st and 2nd	11,716	4,127	8,629
Ditto, ending January 8th and 9th	11,988	3,422	8,933
Total	£23,704	£7,549	£17,562
Decrease on the two weeks.	£7,181	£2,469	£6,441

Showing a trifling proportionably larger decrease on the Great Western as compared with the Birmingham, and a smaller decrease as compared with the South-Western. I must also demur to your statement above quoted, respecting the "public mind;" if you had said the public press, you would have been nearer the mark, but the *Times* assumed a very different tone in its comments on the second inquest from those used after the first. I will grant, that a few old women and nervous old gentlemen will be foolish enough to say, they would rather go 100 miles round by a coach, or offer 5*l.* for an inside place, than travel by the Great Western or any other railway; but the public in general have too much sense to be so much frightened as you represent.

I am Sir,
Your humble servant and constant reader,
D.

London, 19th January, 1842.

THE LATE ACCIDENT ON THE PARIS AND ROUEN RAILWAY.

To the Editor of the Railway Times.

SIR,—I observe in your paper an article relating to an accident which occurred here a few days since, and as you have evidently been misinformed, I beg to state that the cause of the accident was the falling-in of the heading on the south side of the Tourville Tunnel, by which five men were buried; in 11½ hours, however, a shaft was sunk 39 feet deep, and the men were rescued. A gratuity was given on the occasion, but no improper use was made of it, nor was it the occasion of any disturbance, as stated in your paper. You will oblige me by inserting the above.

Your obedient servant,
STURGES MEEK,
Resident Engineer.

Tourville la Rivère, Jan. 11, 1842.

[We copied (and acknowledged) the paragraph referred to from a Hampshire paper.—ED. R. T.]

PRESENT POSITION OF RAILWAY INTERESTS.

To the Editor of the Railway Times.

SIR,—To attentive observers it will most likely before now be pretty evident that the long-continued and disheartening depression of railway property is nearly at an end, the intrinsic merits of the Railway System having at last overcome all the difficulties at one time so entirely surrounding it, affording a well-founded hope that brighter days and more prosperous times are at hand. In proof of this we have only to look at the traffic receipts of all the great lines of railway, published weekly in your valuable journal, which, when added together for the half-year just ended, will be found very considerably to exceed the receipts of any former similar period on every line of railway yet opened, one only I believe excepted. The London and Birmingham line, which has appropriately been styled "the Pilot Railway," as being the guide and leader in the railway race, showing clearly what the Railway System is capable of—with a revenue for the half-year ending 30th June last of 382,452*l.* paid a dividend after the rate of 9*l.* 8s. 10d. per cent. per annum. During the last half-year the revenue has reached the amazing sum of upwards of 430,000*l.*, consequently the coming dividend will in all probability be after the rate of 10 to 10½ per cent. per annum, and every one therefore will perceive that no sooner shall this increased amount of dividend be officially made known than the shares must rise to 200*l.*

If 5 per cent. per annum payable half-yearly be considered fair interest for money—and that it is so the present low interest of the funds is the strongest evidence—then the following table will show that many other of the great lines of railway are much below their real value.

Name.	Amount paid upper share.	Rate per cent. per annum of last dividend.	Present price.	Price at which it would pay 5 per cent.	Below the real value.
	£	£ s. d.	£	£	£
Grand Junction ..	100	11 0 0	196	220	24
Liverpool and Manchester	100	10 0 0	198	200	2
London and South-Western.....	38½	7 14 3	58	60	2
Manchester and Leeds	70	6 0 0*	70	84	14

York and North Midland.....	50	10 10 0*	92	105	13

I am, Sir, your most obedient servant,
VERITAS.

THE JUNCTION OF THE MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

SIR,—I have always considered it a very great loss to the town of Manchester in respect of the several railways which terminate there, that, with but one exception, there is no connecting link between each. We have five important lines, namely, the Manchester and Liverpool, Manchester and Bolton, Manchester and Leeds, Manchester and Birmingham, and Manchester and Sheffield, with four termini all separate and distinct. This ought not to remain so; and assuredly it throws a reflection on the projectors of some of these lines, that so great a desideratum was not kept in view by them at the time of their formation.

To connect all these lines of railway with each other would be, without doubt, a most desirable object. Yet I cannot help attaching a primary importance to the conjunction of the Manchester and Bolton with the Manchester and Birmingham, and the former being on a higher level too than that of the Manchester and Liverpool line, it would cross the latter on an elevation, (should the Directors of this line object to its forming one of the proposed junction, as I am sorry to observe they have done in the case of the Manchester and Leeds,) and afterwards would be carried over the Irwell, and continued up through the valley of the Hedlock at a cost, I should say, with deference to some gentlemen, *much below* what it has been represented.

The vast importance of a continuous line of railway from the North *via* Lancaster, Preston, Bolton, Manchester, and Crewe, to Birmingham and London, is too obvious to escape the attention of any one, who will give the subject the slightest consideration.

In the hope that the mere mention of these particulars will draw the attention of the Manchester public to the importance of a subject, in which their relative interests appear to me to be so deeply involved, I beg to request the favour of your inserting these few lines in your valuable journal, and oblige,

Sir, your most obedient servant,
AN OLD CORRESPONDENT.

Manchester, January 13, 1842.

RAILWAY FROM DARLINGTON TO NEWCASTLE.

To the Editor of the Railway Times.

SIR,—I observe in your paper of the 8th instant a letter signed "B.," on the subject of the proposed railways to Newcastle; and, as I feel interested in the Great North of England Railway, and have watched the movements of the parties who have brought forward designs for continuing it northward, I think it will afford some satisfaction to "B." to know the result of my inquiries.

As soon as the circular from Mr. Harris, on this subject, appeared, I suspected the plan would tend to curtail the traffic in coal that might be expected to come upon the Great North of England Railway, after a junction was formed with the various railways communicating with the coal fields northward, seeing that one of the gradients was about 20 feet per mile, which would prevent the transmission of coal at the usual cost on a more favourable inclination, and thereby to a great extent allow the present vendors to maintain a rate of charge prejudicial to an increased consumption; but on inquiry at the proper quarter, I learned that Mr. Harris had two plans designed for promoting this object (the extension to Newcastle). The one was of the gradient above named, and the other about 12 feet per mile, or 1 in 440—the latter is a better gradient than some part of the Great North of England Railway to York—and I learn that it is the intention of Mr. Harris to adopt on his section the one most favourable to the load, viz., 1 in 440, as it appears on calculation that a very trifling additional cost will be required to make this superior gradient.

In reference to "B.'s" second paragraph, I would recommend him to get a better knowledge of triangles before he enters into railway admeasurements.

The other ground of "B.'s" complaint is the pursuing of the Clarence Railway to Coxhoe, but I find, on reference, that the paragraph in Mr. Harris's report relating to that point, does not recommend, but allows it to be practicable. I presume he (Mr. H.) has considered himself at liberty to allude to the subject, inasmuch as it has been thought of sufficient importance to be laid before the Royal Commissioners.

I am, Sir, your obedient servant,
C.

January 18th, 1842.

THE LAST ACCIDENT ON THE GREAT WESTERN RAILWAY.—The jury which sat upon the body of John Dixon, a policeman in the employ of this Company, stationed in the Sunning cutting, who was killed on the evening of Tuesday week as he was signalising the up train, by being knocked down by a train proceeding from Paddington, of which he was not aware, returned a verdict of "Accidental death." The jury stated that they entirely exonerated the Company, and those in their employ, from the least share of blame in connection with the unfortunate occurence.

ACCIDENT ON THE MANCHESTER AND BOLTON RAILWAY.

On Wednesday evening last, shortly after six o'clock, an unfortunate accident (the first for some time) occurred on the Manchester and Bolton Railway, near the Stone Clough station, about three miles on this side of Bolton. On the west side of the line, on which the station-office stands, there is a private footpath belonging to the Company, running along parallel with the railway for about 200 yards, made for the convenience of persons desirous of entering or quitting the carriages at that station. As the six o'clock train from Bolton approached the station, two persons were walking on this footpath (which is on the level of the line, but four yards from the rails, and separated from the railway by a deep ditch), and one of them, a man named John Betley, a warper of this town, intending to return home by that train, and being apprehensive that it would not stop for him, jumped upon the line, and attempted to ascend into one of the carriages whild the train was yet moving at a slackened speed, ane before it had reached the station. It is supposed he was intoxicated; but, however that may be, in his hurry, he missed his hold, and fell backwards, his head towards the footpath and his feet upon the rail, and the wheels of several carriages passed over both feet or ankles. He was immediately placed in a carriage, and brought to the Manchester Royal Infirmary, where it was found, on examination, that each ankle had sustained a compound fracture. Yesterday, both legs were amputated below the knee; and, upon inquiry last night at the Infirmary, we learned that he was still considered to be in a precarious state. He resides somewhere in the neighbourhood of Blackley-street; is a warper; and has a wife and three children depending on him for support—his wife being near her confinement. The accident was, of course, owing to his own imprudence, as no one is permitted to climb upon a moving train. The Railway Company have had great difficulty in preventing persons having no business there, from trespassing on the footpath and the railway; and, in several instances, parties have been summoned before the magistrates for this offence. It has been urged that there ought to be some fence; but, considering that it is not a public footpath; that there is a ditch between it and the line, and that it is four yards from the rails, there does not seem to be any want of proper caution on the part of the Company.—*Manchester Guardian*, Jan. 15.

RAILWAY TRAVELLING.—The Great Western Railway has been opened to a greater or less extent for about three years. We have it on authority on which we can depend, that the Company has conveyed during that period, in their first and second class passenger trains, upwards of 3,150,000 persons; that not a single passenger in a first class train has ever received any injury—not even a bruise, and that no injury has been received by any passengers by a second class train, but on one occasion, on which the mail train went off the rails in the night, in consequence of the sudden subsidence of some newly-formed ground, when one second class passenger had a leg broken, and two or three were bruised. This would be a very remarkable illustration of the safety of any particular mode of locomotion; but when it is considered that this has been accomplished upon a novel principle, by means of new and powerful agents over newly-formed works, and at a threefold increase of speed over that attained by any previously existing mode of travelling, it affords not only conclusive evidence of the superior safety of railway transit, but striking proof of the great foresight, care, vigilance, and good arrangements of those under whose superintendence this has been achieved.—*Gloucester Journal.*

—o—

HARTLEPOOL DOCK AND RAILWAY.—The 100*l.* shares in the Hartlepool Dock and Railway are now quoted at 90*l.* premium, with an upward tendency. The last dividend was 8 per cent.—*Durham Advertiser.*

SLIPS ON RAILWAYS, &c.

To the Editor of the Railway Times.

SIR,—I avail myself of your columns to make the following suggestions to the Directors of the Croydon line. At the cutting at New Cross, where the accident has happened, the most feasible plan is to drive piles of sufficient length to be firmly fixed in the ground below, yet tall enough to clear the chimney of the engine. These being driven through the slipped earth into the solid, at sufficient distance from each other that a double or single planking may be screwed or nailed to the piles quite to their top, made strong enough to resist the pressure of the earth; then, by means of the carts and engines, the rails might be soon cleared to suffer the usual traffic. The same plan might be adopted all through the cutting, if any evidence of slipping should manifest itself; the piling and planking, of course, to be done on the outside of both line of rails.

In a late number of your valuable work I saw a suggestion that the guards should have boatswains' whistles, to convey signals to the driver. I fancy the object would be more efficiently obtained by having a "guard on the tender," who should be the responsible party for delays, rate of speed; and that no engine should have its steam up without this guard being in his place.

I am, Sir, yours, &c.

A WELL-WISHER OF RAILWAYS.

Horley, Jan. 17, 1842.

PROPOSED RAILWAY FROM GRAVESEND TO ROCHESTER.

On Tuesday a meeting was held at the George and Vulture Tavern, pursuant to the following advertisement:—

"We the undersigned being five or more proprietors holding collectively more than ten shares in the Thames and Medway Canal, do hereby give notice, that a special assembly of the Company of proprietors will be holden at the George and Vulture Tavern, St. Michael's-alley, Cornhill, in the city of London, on Tuesday, the 18th day of January next ensuing, at Twelve o'Clock in the forenoon, for the purpose of considering the expediency of converting the said canal into a railway, and for carrying the determination of such special assembly into effect.

"John Moxon	S. C. Hope
James Sutton	Rt. Sutton, Jun.
George Palmer	John Pitman
Samuel Mills	James Neale."

The meeting being merely preliminary, it was not considered desirable that reporters should be present. We understand, however, that the following Report was read, and the subjoined resolutions passed.

Gentlemen,—This special assembly of the proprietors of the Thames and Medway Canal has been convened for the purpose of considering the expediency of converting the canal into a railway, and for adopting such measures as may be deemed advisable thereon.

Your Committee having had a proposition submitted to them for effecting this conversion by certain parties, felt it their duty in the first instance to ascertain its feasibility in an engineering point of view, and accordingly they submitted the plan to Mr. Rastrick, an eminent Engineer, who has reported most favourably upon it.

The following are the principal points adverted to by him.

1st. That the cost of the line, including the land to be purchased, will be 165,115*l.* and that the locomotive engines, carriages, and trucks, will be 12,000*l.*, making the total cost 177,115*l.*, or in round numbers 120,000*l.*

2nd. That a well known contractor has offered to complete the works within nine months at this estimate, and find good securities for their due performance.

3rd. That the line is a dead level, requiring only such undulation as will secure a perfect drainage.

4th. That from the manner in which it is proposed to construct the engines, there will be a great saving in wear and tear, and an extra carriage can always be taken by every train.

5th. That the working expenses of the line will be under 35*l.* per cent.

6th. That there can be no uncertainty as to the nature of the soil.

7th. That there can be no slips or settlements to endanger the working of the line, as it will be effectually secured in its place by the side of the present canal.

8th. That the permanent way being on comparatively solid ground, will be maintained at the minimum expense.

9th. That the stations being situate on the banks of the rivers Thames and Medway, coal, coke and other materials can be brought by water carriage, and delivered upon the very spot where they will be stored for use.

Being satisfied of the engineering practicability of converting the canal into a railway, your Committee next considered whether it would be beneficial to the interests of the shareholders that it should be effected; and with this view they caused the traffic between Gravesend and Rochester to be taken, and the result was, that at the present season of the year the average was considerably above 1,000 persons daily, and they have no doubt but in the summer months the number is much greater. They also ascertained that between the 1st of August, 1840, and the 1st of August, 1841, 963,650 persons were landed and embarked at the piers at Gravesend, and they have estimated that at least 750,000 passengers would annually travel by railway between these places. Looking therefore at the existing traffic and the great increase that a railway always creates, there is little but that a considerable revenue would be obtained from a railway between Gravesend and Rochester, and looking also to the length of time that the canal has been in operation, without rendering any return to the shareholders, and to the fact that very many years must elapse before it can yield any thing, if ever it does, your Committee are unanimously of opinion that it would be to the advantage of the shareholders that the canal should be converted into a railway.

Having determined to recommend this course to the shareholders, it was next considered in what manner and upon what terms the conversion should be effected.

The capital required to be raised for making the railway including land, stations, engines, carriages, and working stock, will, in round numbers, be 120,000*l.* It is, however, intended by certain parties, independent of the Canal Company, to raise 150,000*l.* by the issue of 6,000 shares of 25*l.* each.

It is proposed that the capital of the Thames and Medway Canal proprietors shall be considered as at 150,000*l.*, and that the shares in the canal should be taken as at 5*l.* value, and that each shareholder should accept one share in the railway in exchange for five shares in the canal, and that each loan note holder should convert his loan notes into shares in the railway, by accepting four railway shares in exchange for every 100*l.* loan note, sinking the arrears of interest; and a large majority have already agreed to do so.

The subscribers to the 150,000*l.* are to be entitled to interest at 5 per cent. per annum upon the amount of their deposits and calls until the opening of the railway, and from that time they are to have a preference of receiving interest at that rate out of the profits of the undertaking, before any dividend is paid to the old canal shareholders and loan note holders, until the expiration of twelve months, when they are to have the option of continuing to receive 5 per cent. per annum, or of sharing the profits in common with the old canal shareholders and loan note holders.

The object of giving the preference of 5 per cent. interest to the persons subscribing the 150,000*l.* is to facilitate its being raised, as without it, under the present depressed state of the money-market, there might be some difficulty.

From the returns obtained of the present traffic between Gravesend and Rochester, there can be no doubt but that the proposed railway will yield a profit of 5 per cent. upon the 150,000*l.*, and according to the calculations that have been made, by merely doubling that traffic, it will realise a profit of 8 per cent. upon an assumed capital of 300,000*l.*; so that your Committee may fairly advise you, that you are not injuring your present position, by allowing the first profit to the amount of 5 per cent. to be paid to the parties about to advance the 150,000*l.*

It is proposed that the nominal capital of the Railway Company should be taken at 300,000*l.*, that four gentlemen, who are at present on the Committee of the Canal Company, should be Directors of the Railway Company, in conjunction with three other gentlemen, independent of the Canal Company.

That the property of the Canal Company should not be touched until one-half of the 150,000*l.* proposed to be raised shall be paid up, nor unless an Act of Parliament authorising these terms shall be obtained in the next or then subsequent session of Parliament.

In conclusion, your Committee beg to assure you, that they have given this subject their best consideration; and, looking at it in all its bearings, they are fully prepared to recommend you to accede to the conversion of the canal into a railway, and to the amalgamation of your interests into the securities of the proposed railway.

JOHN MOXON, Chairman.

RESOLUTIONS.

1st. That the Report now read to the meeting be received and adopted.

2nd. That it is the opinion of this meeting, that the seal of the Company be affixed to the consent, authorising the conversion of the canal into a railway.

3rd. That this meeting do consent to take one share in the railway of the value of 25*l.*, in exchange for five shares in the Canal Company, being at and after the rate of 5*l* each; and this meeting strongly recommend all shareholders to assent to this arrangement.

4th. That this meeting empowers the Committee to adopt such measures, either in or out of Parliament, as they may think advisable for carrying this undertaking into effect; so that this Company be at no cost for so doing.

5th. That the thanks of this meeting be given to the Chairman.

[The Prospectus of the Company will be found in our advertising columns.]

EFFECTS OF THE RAILWAY AT CUCKFIELD.—The railway has completely cut up coaching; we have no coach through here now, and posting seems almost extinct.—*Brighton Gazette.*

THE FROST ON THE RAILWAYS.

SUCH was the slippery state of the rails upon the Eastern Counties line on Thursday last, that the morning train was with difficulty conveyed from Romford to Brentwood terminus, at a very reduced rate of travelling, *with the aid of three engines.*—The same difficulty has presented itself, more or less upon all the lines, the engines being at times only made to progress at starting by manual labour.—*Times* of yesterday.

[We are able to give the statement which we have marked in italics a most unqualified contradiction. The trains on Thursday were *not* assisted by three engines, although the incline is 1 in 100.—ED. R. T.]

RAILWAYS IN FRANCE AND GERMANY.—The *Debats*, commenting on the statement that the Austrian government has resolved on the execution, at the cost of the State, of grand lines of railway from one extremity of the empire to the other, says, "This is a solemn example for France. We do not wish to indulge in reproaches for the past, as we are full of hope for the future, but we cannot help reflecting that four years ago the Chamber of Deputies had it in its power to ensure to France the honour, which will be enjoyed by Austria, of having been the first government on the Continent to decree a general system of national railways. The powers of the State in France, and we allude more particularly to the Chamber than to the government, had at that time the choice of the execution of railways by the State or by companies. The first mentioned system was rejected under vain pretexts, the second was rendered impracticable by the rigorous conditions imposed upon it. Under the present circumstances, however, and after the grand demonstration of Austria, it is impossible that the session can pass over without voting the execution of the French lines of railroad."

—o—

CURIOUS ACCIDENT ON THE LONDON AND BRIGHTON RAILWAY.—On Tuesday a singular accident happened to one of the passenger-trains. It appears that a gentleman engaged for the conveyance of his carriage to Brighton, and the truck on which it was placed was the last in the train. The owner, although advised to the contrary, persisted in riding in his own carriage. On the train reaching Balcombe tunnel (one of the largest on the line by some means the truck became disengaged left the carriage in the middle of the tunnel. The unfortunate occupant, perceiving the train leaving him, called after them, but in vain, and finding they proceeded on their journey, he became dreadfully alarmed, being afraid to alight, and not knowing whether in a few minutes he might not be dashed to pieces by the next train. He had not been long in this suspense when an engine entered the tunnel, puffing away, and the whistle screaming. He now considered his doom sealed; but the engine proved to be a pilot one, sent to look after him, the truck and carriage having fortunately been missed on the train arriving at the next station. The carriage and occupant were then conveyed to Brighton, where they arrived soon after the train, and the only damage was the great fright the gentleman sustained.—*Globe last night.*

—o—

FATAL ACCIDENT ON THE HULL AND SELBY RAILWAY.—At the Staddlethorpe station on Friday afternoon last, John Blanchard, the guard of the luggage train from Selby to Hull, in attempting to alight before the train had quite stopped, owing to the slippery state of the ground, fell between the platform and rails, and several waggons laden with coals passed over his right arm and leg, and he was in other respects so much injured as to occasion his death the same evening.—*Eastern Counties Herald.*

—o—

RAILWAY SUICIDE.—A man named Jupp, who kept the Star at Reigate, threw himself under the Brighton train at Red-hill, on Monday, and was smashed to pieces.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE GREENWICH RAILWAY COMPANY.

Bail Court, January 18.—Mr. WALLINGER moved for a *certiorari* to remove into this Court three indictments which had been found against the Greenwich Railway Company, for a nuisance in building certain arches across a road, on the ground that on the trial of those indictments many points of law would be likely to arise on which it would be desirable to have the opinion of the Court.

Mr. Justice WIGHTMAN granted the application.

IN THE MATTER OF JOHN BANGELEY.

Insolvent Debtors Court (Yesterday.)—The insolvent, whose case had been previously investigated before the Court, and was reported in the *Railway Times*, came up again for judgment this morning. He was described as Engineer to the Patent Safety Rotation Company, and the inventor and patentee of certain improvements in railway locomotion.

The COURT ordered him to be discharged.

VALUABLE COAL MINES AND IRONSTONE, AT MAREHAY, NEAR RIPLEY, IN DERBYSHIRE.—To be Sold by AUCTION, by Messrs. BRKAREY and EYRE, at the Royal Hotel, in Derby, on Thursday, the 27th day of January instant, at Four o'Clock in the Afternoon, the Coal, Ironstone, and other minerals under 130 Acres of Land, at Marehay, near Ripley, and the fixed and tonnage rents payable by the lessee. The mines consist of the most valuable seams of Coal in the neighbourhood, being the Main Soft Coal, the Bottom Hard or Denby Coal, the Ell Coal and the Furnace Coal, as also valuable mines of Ironstone and Pot Clay. The three first-mentioned Beds of Coal are leased for a long term at a fixed annual rent of £500, and a tonnage rent upon the quantity gotten beyond what the fixed annual rent will cover. The superior quality of the Coal has been proved by six years working, and the position of this Colliery (the other hard Coal in the neighbourhood being nearly exhausted) ensures the command of the Market, and an extensive sale at good prices.

The Colliery is 7 miles from Derby, and has a Wharf adjoining the Derby and Alfreton turnpike road, near Ripley, and a Railway to the Derby canal.

For further particulars, application may be made to Mr. Barber, Solicitor, Derby; or to Mr. Woodhouse, Civil Engineer, Overseal, Ashby-de-la-Zouch.

Derby, January 1, 1842.

RAILWAY FROM ENGLAND TO EDINBURGH AND GLASGOW.

At a Meeting held here this day, of gentlemen interested in the formation of the Railway from England to Scotland, recommended by the Government Commissioners, as combining a direct communication between London and the Cities of Edinburgh and Glasgow, and which would have the effect of making the distance from London to each of these cities nearly the same, there was laid before the meeting a circular letter from Captain Hulsh, Secretary to the Grand Junction Railway Company, dated 7th instant, in which he states, that in consequence of the subscriptions which had been made for the Parliamentary Survey of the above line, the Directors "have directed Mr. Locke to enter immediately on the survey, so as to lodge the requisite Parliamentary Notices for the formation of a Railway as soon as they can be got ready. Mr. Locke in consequence left Liverpool for the North yesterday, and is proceeding to organise his staff, and give directions as to the definite line to be adopted."

By a letter dated the 14th instant, information has been received from Mr. Locke, that the survey of the English portion of the line has been completed, and the Parliamentary Notices prepared; and that the survey of the Scotch part of the line—including the direct communication to both Edinburgh and Glasgow—is proceeding as rapidly as possible, and that the necessary Parliamentary Notices will be given without delay.

There were other statements made to the meeting, which demonstrated that every exertion is making with a view to the accomplishment of this great national object; and the gentlemen present expressed their surprise to observe, that at a meeting held here, on the 14th instant, relative to a projected Railway between Edinburgh and Dunbar, it had been stated that the Railway from England to Scotland, intended to form a combined communication between London and Edinburgh and Glasgow, was impracticable.

The Surveys already made, the Report of the Government Commissioners, and the Surveys now going on, with a view to a Bill being introduced into Parliament, will afford an abundant answer to the above, and other erroneous statements made at that meeting; and it cannot be doubted that the public will suspend its judgment, on the comparative advantages of the different lines of Railway, for a few weeks, till a full opportunity has been afforded of weighing impartially the result of the Survey for Parliament which is now so nearly completed, and which will be laid before the public.

(Signed) J. J. HOPE JOHNSTONE, Chairman.

Edinburgh, 17th January, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY, Incorporated by Act of Parliament, July 15th, 1837,—At the Half-Yearly General Meeting of the Company, held, pursuant to advertisement, at the London Tavern, Bishopsgate street, on Thursday, Jan. 20, 1842.

JOHN HARMAN, Esq., in the chair;

The advertisement convening the Meeting was read.

The register of proprietors having been produced by the Clerk, the common seal of the Company was affixed thereto by the Chairman in the presence of the Meeting.

The reports of the Directors and Engineer were read to the Meeting.

The following resolutions were unanimously passed:—

Resolved, That the Directors be empowered to raise a sum, not exceeding £300,000, by an issue of loan notes under the seal of the Company, payable at the end of five years, bearing interest in the mean time at the rate of £5 per cent. per annum, with an option to the holders of such notes to convert them, at the expiration of not more than three years, into quarter shares of this Company, at £10 per quarter share, under the powers of an act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period; the present shareholders to have the preference of tendering for such loan notes, and such tenders to be made on or before the 10th day of February next, when the allotment will take place; one-half of the amount tendered to be then paid, one quarter of the amount tendered to be paid on or before the 15th of April, and the remaining quarter on or before the 15th of July next, and interest to commence from the time of the respective payments; it being distinctly understood that the Directors are never to call for the remaining £5 on the shares of the Company, provided the above sum of £300,000 be raised by the means proposed.

That a Committee be formed to investigate the accounts submitted to this Meeting, and report on them to a special meeting.

That the following gentlemen be such Committee:—Messrs. J. M. Parsons, — Lewis, J. C. Brown, G. E. Shuttleworth, and J. Thompson.

That the declarations of forfeiture of 37 shares, numbered 13,261 to 13,270, 4,512 to 4,538 made under a minute of Board of 19th November, 1840, on which the eighth and subsequent calls have not been paid, and of 174 shares, numbered 18,166 to 18,184, 29,108 to 29,117, 29,856 to 29,885, 31,212 to 31,221, 6,275 to 6,311, 31,257 to 31,276, 34,873 to 34,880, 20,551 to 20,570, 12,174 to 12,178, 2,100, 33,549 to 33,558, 6096 to 6,099, which made under minute of the Board of the 6th May, 1841, on which the 9th call has not been paid, making together 211 shares, be and are hereby confirmed.

That Francis Parker, John Gould, Michael Gibson, Newman Smith, and John Entwisle, Esqrs., who this day go out of office by rotation, under the provisions of the Act of Incorporation, be, and they are hereby, re-elected.

JOHN HARMAN, Chairman.

That the thanks of this Meeting be given to the Chairman for his attention to the interests of the Company and his courtesy in the chair this day.

CHARLES R. MACKENZIE, Clerk.

London and Brighton Railway offices,
10, Angel-court, Throgmorton street, Jan. 20, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS. The Directors of this Company are prepared to receive Tenders for Loans, pursuant to a Resolution passed at a General and Special Meeting of Proprietors, held at the London Tavern, the 20th day of January, instant, empowering them to raise £300,000 on Loan Notes, under the Seal of the Company, payable at the end of five years, bearing interest in the meantime at 5 per cent. per annum, payable half-yearly, with an option to the holders of such notes to convert them at the expiration of three years into Quarter Shares of the Company, at £10 per Quarter Share, under the powers of an Act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period, and in the allotment of which notes, the Proprietors are to have the preference. The Tenders are to express the sums proposed to be lent, to be addressed to the Board of Directors, at the Company's Office, No. 10, Angel court, Throgmorton-street, and are to be sent in on or before the 10th day of February next.

One-half of the amount is to be paid on the allotment, one quarter on the 15th day of April next, and the remainder on the 15th day of July next, and interest is to commence from the time of the respective payments.

By order of the Board of Directors,

SWEET, SUTTON, EWANS, and OMMANNEY,
Solicitors.

London, January 21, 1842.

AIRE AND CALDER NAVIGATION.—TO EXCAVATORS, MASONS, AND GENERAL CONTRACTORS.—TO BE LET, the WIDENING AND ENLARGING of the LEEDS CUT, the Building and Completing of an Entrance from the said Cut to certain intended Docks on the South Side thereof, a Bridge over such Entrance, and the Floodgates, Culverts, Retaining Walls, and other Works connected therewith.

Plans and Specifications may be seen, and further Information may be had at the Office of Messrs. George Leather and Son, Civil Engineers, at Leeds, from Wednesday, the 19th instant, to Wednesday, the Second Day of February, on which latter Day, the Work will be Let at the Royal Hotel, in Leeds, at Twelve o'Clock at Noon.

Leeds, January 18, 1842.

YARMOUTH AND NORWICH RAILWAY.—STEPHENSON'S LINE.—The Directors beg to give notice that on and after the 1st of February next, no further applications for shares will be received.

Those parties to whom shares may have been allotted prior to that period, may pay their deposits on such shares to the credit of the Yarmouth and Norwich Railway Company, at Messrs. Glyn, Mills, Halifax, & Co., when receipts for the sums so paid will be given them.

Applications for shares may be addressed in the meanwhile to Messrs. White and Borrett, 35, Lincoln's Inn Fields; Messrs. Rackham and Cooke, Norwich: I. O. Taylor, Esq., Norwich; C. J. Palmer, Esq., Great Yarmouth; and to the Secretary, 6, Warnford-court, Throgmorton-street; with whom copies of the Parliamentary contract and subscribers' agreement lie for signature.

HENRY PATTESON, Secretary.
6, Warnford-court, Throgmorton-street.

To the Provisional Committee of the Yarmouth and Norwich Railway.

Gentlemen,—An objection I understand has been raised to the route which I have proposed for the line of railway from Yarmouth to Norwich, because the terminus is so situated that an extension of the line cannot conveniently be made southwards.

It is impossible that this can have been urged seriously by any one who has deliberately considered the three plans which have been proposed, for all the lines in effect nearly coincide within a short distance from the city of Norwich, and from this common point any direction may be adopted which may be found most expedient hereafter, depending of course upon the nature of the approach from the south.

The position of the line hereafter to be adopted from Norwich towards London is, I apprehend at this moment quite undecided, it seems to me therefore by far the most prudent course to adopt that route which is decidedly the most convenient for the traffic between Yarmouth and Norwich, and this, I am confident, is best accomplished by the route which I have chosen; for you will not fail to bear in mind the importance which I attached to the circumstance of your line not crossing the navigable river with the Yarmouth and Norwich traffic. This I conceive to be an essential feature in the plan I have proposed and calculated to place your line in a very independent position as regards the traffic upon which your present case rests.

It is obvious that you must compete with the river for a considerable portion of your traffic, I therefore hold the non-interference with the river navigation to be of the very last importance to your project.

Your project is now in a very small compass, and unincumbered by any circumstances in my opinion at all calculated to prevent a successful issue. I strongly recommend you therefore to proceed in accordance with the present design, and I have merely to add my assurance that the proposed approach to the City of Norwich in no way interferes with its convenient extension southwards.

Several plans have been carefully considered by me, and I might extend these remarks to great length in reference to them, but since the actual position of any line from Norwich towards London is yet undecided, I cannot see the utility of discussing their relative merits. I have consequently confined my attention to the simple question.

Does the present approach to Norwich by the Valley line create any difficulty to its extension southwards?

This question I unhesitatingly answer in the negative.

I remain, Gentlemen, your obedient servant,
(Signed) ROBERT STEPHENSON,
35½, Great George-street, Westminster.

3rd January, 1842.

LONDON AND BIRMINGHAM RAILWAY, Office, Euston Station, 14th January, 1842.—NOTICE is hereby given, That the Books in which Transfers of Shares of this Company are registered, will be closed from Friday, the 28th of January, to Saturday, the 12th of February, 1842, inclusive, and that the Dividend for the half-year ending 31st December, will be paid to the Proprietor, who may be registered on the Company's Books, on the 28th January.

By Order,
R. CREED, Secretary.

LONDON AND BIRMINGHAM RAILWAY, Office, Euston Station, January 15, 1842.—NOTICE is hereby given, That the February Half-yearly General Meeting of the Court of Proprietors of the London and Birmingham Railway Company, will be held at the Queen's Hotel, Birmingham Station, on Friday, the 11th of February next, at Eleven o'Clock in the forenoon.

The Chair to be taken at Twelve o'Clock precisely.

GEORGE CARR GLYN, Chairman.
JOSEPH F. LEDSAM,
Deputy-Chairman of the Board of Directors.
(By Order) RICHARD CREED, Secretary.

RAILWAY ENGINE.—FOR SALE, A LOCOMOTIVE ENGINE, just completed upon the most approved principles; Cylinders 11 inches in diameter, 2 feet stroke; patent valve and valve gear, 7 feet connecting rods, and 6 feet driving wheels; with boiler, tubes, and copper fire box, of the most approved kind and workmanship.

The framework is of great strength, and capable of sustaining almost any degree of wear and tear without injury. The engine carries its coke and water, and affords every requisite convenience for the Engineer and Stoker, without adding unduly to the weight, which is about *nine tons*. As no Tender is required, the Engine may be worked either way with equal facility.

For inspection, and further particulars, inquire of Mr. Inshaw, Engineer, Sherborn street, Birmingham.

GRAVESEND AND ROCHESTER RAILWAY COMPANY.—Capital to be raised £150,000, in 6,000 Shares of £25 each.—Deposit £2 10s. per Share.

PROVISIONAL COMMITTEE.

George Carter, Esq.	John Moxon, Esq.
Alfred Alers Hankey, Esq.	George Palmer, Esq.
John Harman, Esq.	— Poynder, Esq.
Samuel Mills, Esq.	Robert Sutton, Esq.

With power to add to their number.

Bankers.—Messrs. Hankey and Co., London; Messrs. Williams, Deacon and Co., London; Messrs. D. H. Day and Sons, Rochester.

Engineer—J. U. Rastrick, Esq., F.R.S.

Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney.

The object of this Company is to connect Gravesend with Strood, Rochester, Brompton, and Chatham, by converting the Thames and Medway Canal into a Railway; with the exception of a short distance, where it is proposed to deviate, to avoid a curve upon the Canal.

The proprietors of the Canal, at a meeting specially convened for the purpose, have unanimously resolved upon the expediency of this conversion, and to accept shares in the Railway in lieu of the present shares in the Canal, at the rate of *one* share in the Railway for *five* shares in the Canal.

It is also proposed that the holders of loan notes of the Canal Company should convert them into shares in the Railway, by accepting *four* railway shares in exchange for every £100 loan note, sinking the arrears of interest; and upwards of *three-fourths* of such loan note holders have already agreed so to do.

The cost of making the Railway, including land, stations, engines, carriages, and working stock, is estimated at £117,115; but in order to meet every contingency, it is proposed to raise £150,000 by the issue of 6,000 shares of £25 each, upon which a deposit of £2 10s. per share is to be made.

The subscribers to the £150,000 are to be entitled to interest at 5 per cent. per annum upon the amount of their deposits and calls, until the opening of the Railway, and from that time they are to have a preference of receiving interest at the same rate, out of the profits of the undertaking, before any dividend is paid to the other proprietors, until the expiration of 12 months, when they are to have the option of continuing to receive £5 per cent. per annum, or of sharing the profits in common with the other proprietors.

Great pains have been taken to ascertain the amount of traffic between Gravesend and Rochester, and the result is far beyond what was contemplated; for even at this season of the year the average has been considerably above 1000 persons daily, and there can be no doubt but that during the summer months that amount will be very greatly increased.

The number of passengers landed and embarked on the Piers at Gravesend, between the 1st of August 1840, and the 1st of August 1841, was 963,650; and as the above traffic between Gravesend and Rochester was taken at a season of the year when but comparatively few persons travel between London and Gravesend, it may fairly be presumed that a great portion of such traffic is local, and independent of the steam-boat passengers.

The present fare by coaches and omnibuses between Gravesend and Rochester varies from one to two shillings.

From the foregoing statement of traffic, it is estimated that there will be at least 750,000 passengers annually conveyed upon this railway, producing, according to a moderate calculation, 36,250*l*., to which may be added 1250*l*. for goods, parcels, &c.; thus making the total receipts £37,500*l*.

From this sum is to be deducted 30 per cent. or 11,350*l*. for the working expenses of the line, as stated in Mr. Rastrick's report, say 13,500*l*.; thus leaving a net annual revenue of 24,000*l*. which is equal to 8 per cent. upon an assumed capital of 300,000*l*.

There will also be a revenue of at least 950*l*. per annum, arising from that part of the existing property of the Canal Company which will remain undisturbed.

This estimate is founded upon merely doubling the existing traffic, whereas the result of almost every other line of railway would justify a much larger increase.

The Provisional Committee have submitted the plan of this railway to Mr. Rastrick, who has reported most favourably upon it, and the following are the principal points adverted to by him:—

1st. That the cost of the line, including the land to be purchased, will be 105,115*l*., and that the locomotive engines, carriages, and trucks, will be 12,000*l*., making the total cost 117,115*l*., or in round numbers 120,000*l*.

2nd. That a well-known contractor has offered to complete the works within *nine months* at this estimate, and find good securities for their due performance.

3rd. That the line is a dead level, requiring only such undulation as will secure a perfect drainage.

4th. That from the manner in which it is proposed to construct the engines, there will be great saving in wear and tear, and an extra carriage can always be taken by every train.

5th. That the working expenses of the line will be under 30 per cent.

6th. That there can be no uncertainty as to the nature of the soil.

7th. That there can be no slips or settlements to endanger the working of the line, as it will be effectually secured in its place by the sides of the present canal.

8th. That the permanent way being on comparatively solid ground, will be maintained at the minimum expense.

9th. That the stations being situate on the banks of the river Thames and Medway, coal, coke, and other materials can be brought by water carriage, and delivered upon the very spot where they will be stored for use.

Thus it will be seen, that the proposed undertaking has advantages which are not possessed by any other railway, and are such as cannot fail to make it a safe investment for capital.

It is intended to apply to Parliament in the ensuing session for power to carry the above undertaking into effect, and such shareholders in the Thames and Medway Canal Company as are desirous of taking shares in the further capital are requested to signify their intention immediately.

Application for shares to be made on or before the 3d February next, to Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street, London, (post paid) in the following form:—

To the Provisional Committee of the Gravesend and Rochester Railway.

Gentlemen,—I request to become a subscriber for £25 shares in this undertaking, and agree to take such shares as may be allotted to me, and to pay the deposit thereon of £2 10s. per share, in conformity with the Prospectus dated 19th January, 1842; and I also agree to execute the Parliamentary contract and subscribers' agreement when I shall receive notice so to do.

I am, Gentlemen, your obedient servant,

The Christian and Surname, with date and address, to be signed by the applicant.

London, January 19th, 1842.

LEVEN VALLEY RAILWAY — CAPITAL £65,000; in 2,600 Shares, of £25 each; Deposit £1 per Share.

INTERIM COMMITTEE.

P. M. Stewart, Esq., M. P.
Captain Darroch, Yr. of Gourock and Drums.
A. D. Campbell, Esq., of Asheraig.
Christopher Saltmarshe, Esq., of Grovepark.
Charles C. Scott, Esq., of Hawkhill.
William Dixon, Esq., of Govanhill.
Archibald Falconer, Esq.
Roger Aytoun, Esq., Banker in Greenock.
James Tasker, Esq., Merchant, Greenock.
Robert Ewing, Esq., Merchant, Greenock.

ENGINEERS.

Joseph Locke, Esq., and J. E. Errington, Esq.

The Vale of Leven, from the abundant supply of pure water afforded by Loch Lomond, has now become the principal seat of Calico printing in Scotland. It is closely studded with printfields and dyeworks, and is crowded with a manufacturing and rapidly increasing population. The whole of the cloth printed, bleached, or dyed at these works is brought from Glasgow. The whole dyestuffs used, and the whole coal consumed, is also brought from Glasgow, and the whole of the goods either manufactured or finished at these works are carried back to Glasgow for sale. The business traffic, therefore, in goods and passengers, between Glasgow and the Vale of Leven, is very large, and during summer, the number of tourists to Loch Lomond, and thence to Loch Katrine and the Trosachs, is so great as to give employment to two steam boats on Loch Lomond, and the several coaches and omnibuses through the Vale of Leven from Dumbarton to Balloch.

The present means of communication through the Valley are,—

I. By the turnpike road, which is heavily burdened with tolls, and

II. By the River Leven, which is a rapid circuitous stream. The navigation is performed by small boats, dragged by horses, it is at all times tedious and expensive, and is often interrupted, in winter from floods, and in summer from want of water.

In 1816, the ingenious Henry Bell proposed to effect a junction between the Clyde and Loch Lomond, by deepening the river Leven. And in 1824 a Committee of the principal land-owners of the county of Dumbarton employed Mr. Baird, Civil Engineer, to examine and report on the state of the River, and the benefit likely to result from its improvement; when Mr. Baird, after a careful investigation, found the traffic so great, that he recommended the River to be deepened, by a series of locks, at an expense of 50,000*l*., from which outlay he estimated a revenue of above 5,000*l*. per annum. Insuperable objections, however, were found to exist to the proposed alteration on the levels of the river, and the scheme was abandoned.

Since the date of Mr. Baird's report, the population of the Valley has nearly doubled, and its trade and manufactures have increased in a still greater ratio. The want of an improved communication is therefore felt with daily increasing force, and, as all hope of deepening the River is now abandoned, the promoters of the present undertaking have associated themselves for the purpose of making a Railway through the Valley, commencing at Dumbarton Ferry, and ending at Loch Lomond.

The Glasgow, Paisley, and Greenock Railway Company, are about to establish a station on the opposite side of the Clyde from Dumbarton, and about half a mile distant from the proposed terminus of the Leven Railway. A large steam ferry-boat is also to be maintained by the Greenock Railway Company, for the transmission of passengers, and of goods and minerals in their waggons from the one Railway to the other. And it is intended that the same waggons, which leave Glasgow filled with manufactured goods, dye stuffs, &c., shall return from the Vale of Leven filled with dyed and printed goods; and that the waggons, which leave Glasgow with coals, shall return with the mineral and agricultural produce of the country surrounding Loch Lomond.

The Glasgow, Paisley, and Greenock Railway, the Glasgow, Paisley, Kilmarnock, and Ayr Railway, and the Leven Valley Railway, will therefore be little different from one continuous line, and the numerous works and manufactories in the Vale of Leven, and the picturesque scenery of Loch Lomond, will be brought within one hour's distance of Glasgow, Paisley, Port-Glasgow, and Greenock, and within three hours' distance of Edinburgh, Leith, Linlithgow, Falkirk, Airdrie, Kilmarnock, Ayr, and numerous smaller towns. In short, so many large cities and towns will be linked together by Railways, that a population of nearly a million will be brought within three hours' distance of the Leven Valley and Loch Lomond.

The country to be traversed by the proposed Railway is nearly level, so that the works will be light and the gradients unusually good. The line has been selected by Joseph Locke, Esq., which is a sufficient guarantee for its being well chosen, and the plans and sections have been already deposited, and the requisite Parliamentary notices given.

Mr. Errington states, in his Report, that "**There are few bridges, the stations will not be expensive, and, after allowing a liberal price for the land, I think it safe to state 60,000*l*. as the capital necessary for making this Railway. It is proposed, in the first instance, to lay a single line of rails, with sidings communicating with the stations, and also with the various branches to the works. The distance is under 5½ miles, and, both for economy and safety, I think the line should be worked with one locomotive engine. The total expense of working the line would thus not exceed 3,000*l*. per annum, including every expense.**"

According to the tables of traffic, which have been carefully prepared from accurate data, it appears that at fair railway prices, and in every case, at less than the existing prices, a revenue of upwards of £8000 per annum is to be calculated on; and deducting from this sum the working expenses as before shown, of £3000, there would remain £5000 of nett revenue, which is equal to about 8 per cent on the proposed capital.

Applications for Shares will be received by Messrs. M'Clelland & M'Kenzie, Glasgow; Messrs. Forsyth & Pritchard, Liverpool; and C. & J. H. Mac Rae, 57, Moorgate-street, London.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That the next HALF-YEARLY GENERAL MEETING of Proprietors of this Company, will be held pursuant to Act of Parliament, on Thursday, the 10th day of February next, at Two o'Clock precisely, at the London Tavern, Bishopsgate street.

WILLIAM CRAWSHAY, Chairman.
WM. BOURNE, Secretary.

Shoreditch, London, January 19, 1842.

NEWCASTLE-UPON-TYNE AND NORTH SHIELDS RAILWAY—GENERAL MEETING.—The Annual General Meeting of the Company of Proprietors of the Newcastle-upon-Tyne and North Shields Railway, will be held at the Railway Office, 56, Pilgrim-street, Newcastle-upon Tyne, on Friday the 28th January, instant, at Twelve o'Clock at noon, in conformity with the Act of Parliament.

By Order of the Directors,
W. SWAN, Clerk to the Company.

Railway Office, Newcastle, January 13, 1842.

Just published, 7th edition, price 3s., and sent free on receipt of a Post-office order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection, followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases. &c.

By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs Curtis's work, entitled MANHOOD, is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—*Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—*Age.*

We recommend the work, entitled MANHOOD, &c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—*Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communication must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

COVENTRY, LEAMINGTON, AND WARWICK RAILWAY.—At a Meeting of the Owners of Land and Hereditaments on the Line of the proposed Coventry, Leamington, and Warwick Railway, held at the Warwick Arms Hotel, in Warwick, on Tuesday, the 4th of January, 1842,

LORD LEIGH, in the Chair,

It was Resolved—

1. That nothing having occurred to change the sentiments of the Proprietors on the proposed Line of Railway, they adhere to their Resolution of Dissent of December, 1840.

2. That the same Committee be appointed to watch over the interests of the Dissentients, and to adopt such steps as they may deem expedient to oppose the measure.

LEIGH.

Lord Leigh having left the Chair,

It was Resolved—

That the thanks of this Meeting be given to Lord Leigh, for his kindness in taking the Chair, and the able manner in which he has conducted the business of the day.

AYLESFORD.

By order of the Committee,

THOMAS HEATH.

Warwick, 4th January, 1842.

ADVERTISEMENT RESPECTING TENDERS FOR RAILS WANTED FOR A PART OF THE BAVARIAN RAILWAYS.—With reference to the Advertisement dated 27th October last, respecting tenders for rails, as well as to the printed conditions distributed, we make known in addition,

1. In consequence of a decision of the Ministerium of the Interior, of the 25th instant, the tenders with regard to the examination and approval of the rails, may be given in with the alternative conditions,

a, in case that the examination takes place at Bamberg, as per § 12 of the printed conditions,

b, in case the examination takes place on a different spot, to be named by the person making the tender.

However, as the examination in this latter case, is merely to ascertain the quality of the rails, in accordance with the conditions of the contract in both alternatives, the former condition remains in force, according to which the delivery at Bamberg, or Rotterdam, or Cologne, has to be fulfilled at the expence and risk of the contractor, accordingly as in conformity with § 9 and 12 of the conditions, he selected one of these places for the delivery of the rails, and should one of the two latter towns be fixed upon, the § 13 of the conditions remains applicable.

2. To § 18 of the conditions the term for giving in the franked submission is prolonged to the 31st March.

Have arrived at Bamberg by the end of November, 1842, and the remaining 2-5ths by the end of May, 1843.

4. To § 7 of the conditions, it is moreover to be observed that the Bavarian Ministerium of the Interior reserves to itself the decision respecting the acceptance of the several tenders, either for the whole or in part only.

Nurnberg, the 28th December, 1841.

Royal Bavarian Commission for the Construction of Railways.

DENIS, PAULI, DURIG.

CHRISTENING OF HIS ROYAL HIGHNESS, the PRINCE OF WALES.—Great Western Railway.—Persons wishing to send Carriages and Horses to Slough on the 25th instant, for the purpose of witnessing the ceremony, should make early application at the Paddington Station, to secure trucks and horse-boxes for that purpose, as they will not be conveyed by the passenger trains.

Special Trains for Carriages and Horses will be provided, to leave Paddington early in the morning—not later than Half past Eight o'Clock—so that they may be in readiness at Slough on the arrival of the passengers, and special trains will also be provided for them in the evening.

Passenger Trains will leave Paddington for Slough, and return, as under:—

Down, from Paddington.		Up, from Slough.	
6	o'Clock, morn.	3	o'Clock, aftn.
7	..	Half-past 4	..
8	..	3-qr. past 4	..
Half-past 8	..	Half-past 5	o'Clock, even.
9	..	Half-past 6	..
Half-past 9	..	Qr.-past 7	..
Qr.-past 10	..	8	..
11	..	3-qr. past 8	..
12	..	10	..

Further particulars may be ascertained at Paddington, and application to secure trucks or horse-boxes at stations on the line for that occasion, must be made on or before Monday, the 24th instant.—Jan. 18.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, that the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £1,000 each, secured by the bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payble half-yearly.

By order of the Board,

JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester, January 10th, 1842.

Omnibuses to and from every Train—Fare 6d.

Heavy Goods and Merchandise conveyed from the several Branch Offices, and Hambro' Wharf, Thames-street, to mos parts of the south and western railways.

Vast and Important Sale of Valuable Cart Horses, Slop, Gravel, Brick and Dust Carts, Waggons, Harness, Wheelwrights' and Smiths' Tools, Quantity of Timber, Iron, Corn Bins, Stable Utensils, &c. &c.

MR. DIXON begs to announce that he is instructed by the Assignees of Messrs. Stevens and Drummond, to Sell by AUCTION, on the Premises, Rhodeswell Wharf, Regent's Canal, near the Ben Jonson, Stepney, on Thursday, January 27, 1842, commencing at Eleven o'clock, precisely, on account of the vast number and value of the Lots. The whole of their Extensive and well known Capital Stock,—comprising about 53 Powerful, Active, Seasoned Cart Horses, Three Fast Good Nags, Seven New Slop Carts, Two Night Waggons, 85 Gravel, Brick and Dust Carts, Thill and Chain Harness for about 60 Horses, the Implements, Timber, Iron, &c. of Wheelwrights' and Smiths' Shops; Running Tackle Gear, Chaff Machine, Wheels, Corn Bins, Stable Utensils, and a vast quantity of other Useful and Valuable Effects.

This genuine, entire, and really excellent Stock is worthy the immediate attention of Contractors, Carmen, Corn and Coal Merchants, Wharfingers, Carriers, Farmers, Brickmakers, Wheelwrights, &c. &c. having been carefully selected at great cost; now in excellent condition—and for sale without the least reserve.

On view the day previous and Morning of Sale, at Rhodeswell Wharf, as above; and opposite the London Maritime Alms Houses, Bow Common; and Catalogues may be had also of J. F. Groom, Esq., Official Assignee, 12, Abchurch-lane; C. Robson, Es., Solicitor, 13, Clifford's Inn; Mr. John Gore, 12, Wharf Road, Paddington; the New Globe, Mile-End; and of the Auctioneer, at his Repository, Barbican.

YORK AND NORTH MIDLAND RAILWAY. NOTICE is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the offices of the said Company, Tanner Row, in the city of York, on Tuesday, the 8th day of February next, at Twelve o'Clock at noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders at Nine o'Clock, a.m., on Tuesday, the 8th of February.

GEORGE HUDSON,
Chairman of the Board of Directors.

GEORGE BAKER,
Clerk to the Company.

Railway Office, York, January 22, 1842.

CRANES AND HOISTING TACKLE of every description, of the best materials and workmanship, and capable of lifting from 5 cwt. to 20 tons and upwards, with or without steam power, made by ELLIS & NOTON, who take this opportunity of respectfully soliciting an inspection of their Drawings and Patterns, at the IRWELL FOUNDRY, Salford, Manchester.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—Call of £10 per Share, being the Eleventh Instalment, and making with former Calls, the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give Notice, that the Proprietors of Shares are required to pay on or before the thirty-first day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz.:—

London—Messrs. Glyn, Hallifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.; the Devon and Cornwall Banking Company; Messrs. Milford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent. per annum on all arrears.

FREDERICK RICKETTS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, Jan. 7th, 1842.

Interest at the rate of 5 per cent. will be allowed on payments in anticipation of Calls.

TO RAILWAY SHAREHOLDERS, ENGINEERS, CONTRACTORS, AND OTHERS.—IMPORTANT RAILWAY CASE.—Just published, price 2s. 6d., a Report of the Case, "Irving, a Contractor, v. the Maryport and Carlisle Railway Company;" referred from the Carlisle Assizes to R. B. Armstrong, Esq., Q. C., and heard at Carlisle on the 7th of September, 1841, and the four following Days, in which Mr. Thorpe, of Thorne, Yorkshire, appeared as Attorney for the Plaintiff; and Mr. Tyson, of Maryport, Cumberland, and Mr. Mounsey, of Carlisle, for the Defendants.

London: Whittaker and Co., Ave-Maria-lane; and may be had of all Booksellers.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

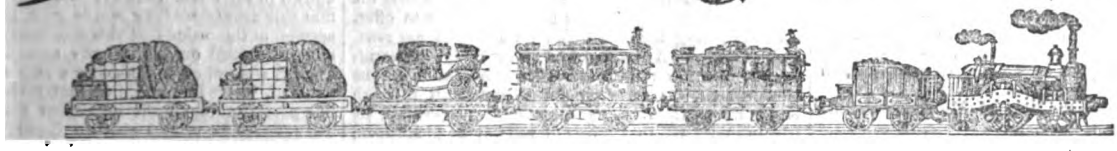
ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.



TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, January 22, 1842.

EASTERN COUNTIES RAILWAY COMPANY.—ELEVENTH GENERAL MEETING.

Notice is hereby given, that in pursuance of the Act of Incorporation, the Half-yearly General Meeting of the Shareholders of this Company will be held at the Company's Station, High-street, Shoreditch, London, on Wednesday, the 9th day of February next, at One o'clock precisely, for the purpose of receiving a Report from the Directors of the progress of the Undertaking, and of Electing Four Directors in the place of Samuel Anderson, Esq., Robert Crosbie, Esq., Robert Mather, Esq., and Theodore Waximus Rathbone, Esq., who then go out of office; and for the transaction of other business. The Directors retiring are re-eligible under the provisions of the act. The transfer books of the Company will be closed on Saturday, the 29th instant, and will not be opened until Thursday, the 10th of February next.

By section 137 of the Act it is provided that "no Proprietor of any share on which any call shall have been made shall, after the day appointed for the payment of the same, be allowed to vote at any meeting of the Proprietors of the said Company, until the money called for in respect of such share shall have been fully paid."

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE, Deputy Chairman.
Offices, High-street, Shoreditch, Jan. 18, 1842.

YORK AND NORTH MIDLAND RAILWAY.

Notice is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the offices of the said Company, Tanner Row, in the city of York, on Tuesday, the 15th day of February next, at Twelve o'Clock at noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders at Nine o'Clock, a.m., on Tuesday, the 8th of February.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

Railway Office, York, January 22, 1842.

COVENTRY, LEAMINGTON, AND WARWICK RAILWAY.

—At a Meeting of the Owners of Land and Hereditaments on the Line of the proposed Coventry, Leamington, and Warwick Railway, held at the Warwick Arms Hotel, in Warwick, on Tuesday, the 4th of January, 1842,

LORD LEIGH, in the Chair,

It was Resolved—

1. That nothing having occurred to change the sentiments of the Proprietors on the proposed Line of Railway, they adhere to their Resolution of Dissent of December, 1840.

2. That the same Committee be appointed to watch over the interests of the Dissentients, and to adopt such steps as they may deem expedient to oppose the measure.

LEIGH.

Lord Leigh having left the Chair,

It was Resolved—

That the thanks of this Meeting be given to Lord Leigh, for his kindness in taking the Chair, and the able manner in which he has conducted the business of the day.

AYLESFORD.

By order of the Committee,
THOMAS HEATH.

Warwick, 4th January, 1842.

This day is published,

TEMPLETON'S RAILWAY STATISTICS

containing the Names and Terminal Length in Miles and Chains, Counties through which they pass, Ruling Gradients, Rise in Feet per Mile, Effect of Gravity, Gauge of Way, Date of Royal Assent to Bill, Number of Shares, Total of Capital, when Opened, and Average Time in running the Trains, of all the Principal Railways in Great Britain, in a Tabular Form. Price, in Sheets, 1s. 6d.; on Canvas in Case, 2s. 6d.; mounted on Rollers and varnished, 3s. 6d.

Railway Times Office, 122, Fleet-street.

THE ELECTRIC TELEGRAPH ON RAILWAYS.

In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings,

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY,

recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.

—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.

—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d.; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

SOUTH-EASTERN (LONDON and DOVER) RAILWAY COMPANY—TENDERS FOR LOANS ON MORTGAGE.

—The Directors of this Company are prepared, under the powers of their Acts of Parliament, to receive Tenders for the Loan of Money for a term of Three, Five, Seven or Ten Years, at the option of the Lender, and to grant Mortgages of the Rates and Tolls of their undertaking as security for the same, bearing interest at the rate of 5 per cent. per annum, payable half yearly at the Bank of Messrs. Glyn and Co., London. The Tenders are to express the sums and term of years for which the Loan is proposed to be made, and are to be addressed to the Secretary at the Company's office, 10, Coleman-street, London.

By order of the Board of Directors,
J. S. YEATS, Secretary.

RAILWAYS.—Parties contemplating purchases

in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome quarto volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND

practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C.E.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom."—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

TO BE SOLD BY AUCTION, By MR. DIXON,

at his Repository, Barbican, on Friday February 4, 1842, commencing at Twelve o'Clock precisely, about Twenty-five valuable, fine shaped, active, young, powerful CART HORSES, and a remarkably Clever Buggy Horse, being a portion of the well known excellent stock of Messrs. Treadwell, of Redhill, sold in consequence of having nearly completed their extensive Contract with the South Eastern Railway Company,

Colours—Bays, Browns, and Blacks; including remarkably handsome teams of well matched Greys.

RAILWAY BETWEEN DUBLIN AND CORK.

COUNTY MEETING.

[Abridged from the *Cork Constitution*, Jan. 22.]

THE High Sheriff of the county of Cork, James Barry, Esq., Ballyclough, convened a meeting of the noblemen and gentlemen of the county in pursuance of a numerously signed requisition, containing the names of the majority of the nobility, magistracy and gentry of the county, at the County Court-house, on Thursday.

On the motion of the Earl of Mountcashell, the HIGH SHERIFF took the chair.

The CHAIRMAN said, that in compliance with a requisition, most numerously and influentially signed, he called this meeting, over which he had now the honour to preside. It was a meeting of the landed proprietors, and other inhabitants of the county, the object of which he expected would be fully explained by those who were more conversant with the subject than he possibly could be. He therefore would be glad to hear any gentleman who had a proposition to make. (Cheers.)

Mr. H. FITZSIMONS said, that since the High Sheriff had signed the requisition handed to him, a great number of noblemen and gentlemen had forwarded their names to be attached to it, to whom it was due to apologise for not having them published. This arose from the hurry in which it was necessary to get up the meeting, owing to the near approach of the meeting of Parliament, and the levee to be held at the Castle of Dublin. (Hear, hear.) He would now conclude by saying that the accredited agent of the Great Leinster and Ulster Railway Company was in attendance, and would, if called on, lay before the meeting some general propositions. (Hear, hear.)

Mr. SMITH being called on said, that he wished the explanation on behalf of the Great Leinster and Munster Railway Company had been confided to some other person, as his attendance might have an interested appearance; but after the manner in which the requisition was signed, it might be considered an act of discourtesy, if the personal attendance of some person on the part of the Company was not given, to offer every explanation, and inform the meeting of the precise nature of the propositions and plans suggested on behalf of the Company. He would endeavour to state as briefly as possible the exact position of the Company at present. The Company was formed in 1835, for the purpose of establishing a railway from Dublin to Kilkenny, the undertaking being entered on after receiving the approbation of the Grand Juries along the line all the way to Cork. He believed, as well as his recollection served him, that the Grand Jury of the county of Cork approved of it, but he was certain that the Grand Jury of the county Tipperary did. The Company at that time was undertaking a private speculation, and had 8,000 shareholders subscribing 800,000*l.* to carry out the railway to Kilkenny. In 1837, they procured an Act of Incorporation, and shortly after the Report of the Irish Railway Commissioners appeared. That Report admitted that the Kilkenny line was laid out with great judgment—that the gradients were exceedingly favourable, and the returns made by the Commissioners substantiated the returns of the Company previously procured: these were returns of the actual number of people travelling along the line, besides the amount of merchandise, and as they coincided with the returns of the Commissioners, they formed a good test of the soundness of the data on which the expenses of the Company and their risks were calculated. But the Railway Commissioners projected another line, which they thought better, and they saw that if the Kilkenny line were made it would frustrate their plans, and they recommended that if the private Company continued their work, the Government should at the public expense lay down a line alongside theirs. Seeing that there was danger in carrying out the plans of the Company, a proposition was made to Government in respect to it, to which no specific answer was given until 1840, when the Government scheme was abandoned. Under these circumstances it was perfectly impossible for a private Company to venture its capital in an undertaking which might be met by a public one. After the Railway Commissioner's Report of course no persons offered to contribute funds, and the Directors thought proper, instead of insisting on proceeding with the work, to declare all shares after the lapse of three years forfeited, and release all the shareholders. This affected about 6,000 out of the 8,000 shareholders. That was the state in which the Company was at present; the only thing that was done being to obtain an Act—to continue its powers so as to enable parties at any future time to carry on the line to Kilkenny. A Bill was brought in last Session, which seemed one that originated a scheme that was doubtful of being sanctioned by parties along its line. It gave a plan by which the profits along the line were exceedingly doubtful, but even if the line were sanctioned he was almost certain that no Bill would be allowed to pass into a law, giving the shareholders the power of taking land at any price they chose to offer, besides making the land liable for a certain per centage. (Hear.) A few months since a plan was suggested, and was now under the consideration of the Government, for carrying out a line direct through Kilkenny to Cork. The substantive proposition he had to make was that a line of railway be made from Dublin to a certain distance by private capital, which railway would enhance all traffic between Dublin, Waterford, Cork and Limerick, and assist the traffic to Wexford. It was obvious that such a line held out the most profitable results, and if a portion were constructed it would return a large income. The private Company by their profit and capital would thus gain a considerable income to carry on from this point their railway at once to the city of Cork, if the Government lent money at 4 per cent., or guaranteed 4 per cent. to others lending capital to half the amount of that provided in the ordinary manner by shares. The guarantee of the Government would then be but 2 per cent. on the whole capital, and no guarantee being required on the profitable portion, which was made from the fund in existence, at once the Government would be indemnified against risk. Such was the plan suggested on the part of the Company, and which they were attempting to carry out. If the plan, therefore, were approved of, the result would be a line of railway direct from Dublin to Cork, and they would not only run a direct line of communication between this important city and Dublin, but they would also contribute to benefit the important towns of Athy, Carlow, Clonmel, and others, which no other line would touch on in its way to this city. Independent of its benefitting these towns directly, it would also benefit the trade of Waterford, by coming so near to it; and also open up Wexford, which latter place any other line would entirely exclude. (Hear, hear.) Such, therefore, was the plan which the Company hoped might be permitted to be carried out—it was a very important and vast undertaking—and he thought the public ought to look favourably on that which was attempted to be carried out. If the railway were limited in extent to Kilkenny, there would be little difficulty in effecting it, for the difficulty existed in the extension of the line to Cork, which would involve a considerable expense, caused by the existence in some places of difficulty of execution. He was only now speaking from the opinion given him by their Engineer. The extension from Kilkenny to Caher could be effected without any difficulty, yet from Caher to Cork there were difficulties to be encountered. It might be evident that there were difficulties from Holycross to Cork, when, in the Report of the Railway Commissioners, Mr. Vignoles, the eminent Engineer, stated that the expense would be 15,000*l.* per mile. This estimate was, however, revised, and the gradients altered, and the estimated expense of the entire was put down at 8,800*l.* per mile. Mr. M'Neil, the Engineer to the Leinster and Ulster Railway Company, intended to have been at the meeting this day, but other engagements prevented him, but on inquiries he (Mr. S.) made of him, M'Neil stated that the safest plan, including all the line, was to put down the cost at 12,000*l.* per mile, from which it was obvious that the line from Kilkenny to Cork, would involve an expenditure of about 1,000,000*l.* or 1,200,000*l.* To carry that out they would require a private capital of 500,000*l.* or 600,000*l.*, the other portion to be borrowed at 4 per cent. interest. He put this forward merely as a proposition, and he hoped the meeting would not be misled into the supposition that he came forward to canvass the county to support a private Company. That Company required no support so far as the profitable portion of the line was concerned—that to Kilkenny—for which they had an Act of Parliament. The character of that line was so well known that the Directors entered into agreements for the land along it in the course of one month, with he believed nine exceptions—the exceptions not being hostile to the object. Therefore the Company had the power of carrying their line so far, but they said to the South of Ireland generally, including Waterford and Wexford, was this a plan that they wished to see in the first instance adopted? (Hear, hear.) So far as the railway to Kilkenny was concerned, the Company had the sanction of every gentleman along the intended line, and the Company would not think of extending the line to Cork unless they had the co-operation of the landed interest; and therefore, the question was how and in what manner it interested the south of Ireland to get this line carried out? (Hear, hear.) These were points he was not come here to canvass on the part of the Company, his object being merely to lay the plan before the County—a plan that he was anxious should be known to the whole country, and he would be glad that this county meeting would give an independent opinion of the value that this line would be to themselves if carried out. The only question then to be decided was, whether supposing a line was to be constructed, which line would be preferable?—whether a line passing through the important district which he had referred to, or one passing through a district of less commercial importance. He hoped that on this point they would individually adopt the means of investigating the subject themselves, now that for the first time they had a distinct idea of the plan—a plan free from any county tax or rate—a plan that was intended to be carried through without resorting to any measure that would increase the burdens of the country. (Hear, hear.) It was now admitted that a line carried out by private means was much better for the country and for individuals. He was aware that he stood in an invidious position in regard to his acting on behalf of a private Company, speculating for profit, and who sought to carry out their own objects. So far as profit was concerned, the line ought to stop at Kilkenny, or conclude at Clonmel, for every step further it was taken reduced the return. But then the entire line to Cork being a complete undertaking, the Company expected of course to receive additional support. The details respecting this it was impossible to enter into at a meeting. All that was at present sought was co-operation, which would go far to secure the extension of the line to Cork, while there were matters of detail, which they could protect themselves in by appointing a Committee of ability in whom they could confide, and by whom they would be sufficiently protected. There was one point which he purposely omitted, for he considered the present question more of principal than detail, involving a question of greater interest and importance to the country than a detail of pounds, shillings, and pence. The question he omitted was one of profit and loss, but he was perfectly willing to enter into that question with any person. There was one thing, however, notorious, that the line to Kilkenny, separated from the extension to Cork, would be much more profitable—the cost of making being also much cheaper. The peculiar recommendation of Mr. M'Neil was, and it was important, that all his works were effected at a less amount of cost than his estimates. That gentleman, when he (Mr. S.) was last speaking to him, said, that he had no doubt that the line to Kilkenny would be made far within 10,000*l.*, but he would not risk his opinion that the line to Cork would be executed at less than 12,000*l.* a mile. It was evident that that portion which would cost less would make the greatest return, while that which cost most would give a diminished return. It was therefore a matter of some consideration, if, under these circumstances, Cork could ever establish a railway of itself as a mere profitable speculation. Supposing the profit to Kilkenny was 10 per cent. and to Cork 5 per cent., the profit on the extension would never be sufficient to induce capitalists to take up the speculation, but when the two lines were blended together, it would give a large amount of profit, for if 500,000*l.* was subscribed and that 500,000*l.* more was borrowed, Government guaranteeing 4 per cent. on it, that would be 2 per cent. on the whole outlay, and if the profit on the whole was 6 per cent., that sum, less the 4 per cent. to the lenders, would leave the shareholders 8 per cent. on their amount of shares. With these observations on the plan as a matter of profitable speculation, he would say that it was obvious that unless Cork was assured of getting a line of railway to Dublin direct, it was in danger of not getting a line at all, for the object of those laying down lines was to get to the sea on the cheapest terms. Now Waterford was nearer Kilkenny than Cork, and if the project was not taken up as a whole at Waterford, the Kilkenny line might stop. (Hear, hear.) Cork stood in the same position with respect to the Kilkenny line as Plymouth did in respect to the Great Western line. It was found that the extension of a railway to Plymouth would involve great difficulties, and the line was taken to Bristol, and an agitation was now raised as to whether the packet station should not be changed to some little port in the south of England, the consequence of which would be that Plymouth must lose the great importance it heretofore possessed. He would now only repeat that he was most anxious to furnish every information within his power, and he assured them that he would not shrink from telling anything within his knowledge, and he hoped it would be believed that any omissions he might

Digitized by Google

have been guilty of were not occasioned by the slightest wish to avoid explanation. (Cheers.)

Mr. CROKER believed that every one met to-day was anxious for the same result—the procuring of a railway communication between Dublin and Cork, in the speediest manner. (Hear, hear.) He begged to occupy the attention of the meeting for a moment, while he endeavoured to reply to some of the observations of the highly-talented agent of the Leinster Company. He thought that this county ought to be cautious of what proceedings it now adopted. A short time since they addressed the Irish Government, who, he was aware, had at present under consideration plans for carrying out a more extended system of railways than that at present before the meeting. He thought he was in a position to assert that as the fact. (Hear, hear.) He candidly confessed that he was very suspicious of the present meeting. (Cheers.) At the moment the county and city of Cork made a stir, they found an agent of the Munster and Leinster Railway Company came down to Cork to seek to carry out their plan. That was at the very moment the Government had under consideration a more extended plan. (Hear, hear.) He (Mr. C.) saw Mr. Smith for a few minutes on his arrival on that occasion, and he said to him, "I care not how a railway comes to Cork so we get it." (Hear, hear.) "But how are we to be secured that it will extend so far as we give you our assistance?" The answer was, "We will get a new Bill on the meeting of Parliament by which we will bind ourselves to carry on the line to Cork." "That will do very well," he (Mr. C.) replied, "but where are you to begin?" "Oh," answered Mr. Smith, "at Dublin of course, and work down." "That will never do for me," said he (Mr. C.) "I shall never give my consent or aid the project, unless you provide by the Act that when you borrow money you commence simultaneously at Dublin and Cork." (Cheers.) His proposition was at once objected to, because the Cork end of the line was the most expensive, and involved the greater difficulties, to which he (Mr. C.) said, that if there were any reason to commence it soon, it was the difficulties it presented. (Hear, hear.) He would say, that if the Company co-operated with the Cork people, they would have their aid, for the Cork people were not wedded to any line; all they wanted to see was, that the county of Cork was not left to the last, during which time they would be labouring under heavy poor rates, with an idle population anxious and willing to work if they could get it. (Hear, hear.) He therefore hoped that this great county would pause and consider well before it lent its aid to making the Kilkenny Railway, for clearly the object was nothing else. (Cheers.) He conceived he had a good deal of knowledge on the subject of railway communication in Ireland, after bestowing his attention on it for five or six years, and he could not shut his eyes to a project which threatened to shut out Cork. (Cheers.) The week before Christmas he had an interview with some of the highest authorities in the country in relation to railways in Ireland, and he had a letter in his pocket which, if he did not look on it as private, would give much information to the public on the intended plans. There was at present a plan under consideration for bringing a line to Limerick, extending to Mullingar and other places, and on to Cork. For this there was 3,000,000*l.* ready to be paid down, and the whole project was on terms far more palatable to the Government, and the counties would be better pleased at it than with the plan brought forward to-day. (Hear, hear.) They were now on the eve of the meeting of Parliament, and the Government was considering the plans before them, and he was sure that their better course would be to wait. (Hear, hear.) From a conversation that he had had with one of the Government Engineers, he could say that no Government aid would be given to any line not calculated to benefit the whole of Ireland. (Cheers.) He was sure that the Irish Government felt the greatest anxiety on the subject, particularly his Excellency the Lord Lieutenant, and Lord Eliot. (Cheers.) The agent said that the proposed line would cost to Kilkenny 10,000*l.* per mile, and to Cork 12,000*l.* each mile. Now he (Mr. C.) had it from Mr. Griffiths and Colonel Jones, the Government Engineers, that from the great improvement in the construction of railways, the Commissioners' line would cost considerably less than the original estimate of 8,800*l.* a mile. It should also be recollected that these estimates were made with reference to English lines, while in Ireland labour was much cheaper; besides that there would be a considerable saving in other respects; besides that he expected that the land through which it might pass would be given for nothing. (Hear, hear.) It might be said that he had an interested feeling for one line more than another. It was no such thing, for no railway could come into Cork without passing through Mallow along the valley of the Clyde, and should of necessity pass through his estate; and he offered his land to any person making a railway before for nothing, and he repeated his offer now. (Cheers.) He was glad that the meeting was convened, for on a subject of the kind there was nothing like agitation, and he would recommend that this great county petition Parliament on the subject, for agitation would be a great means of making the Government come half way to meet them; however, he hoped that in any resolution proposed to-day, they would not forget Cork. (Cheers.) Railway communication would go far to relieve the burden lately imposed on this wretched country—wretched for want of employment, while it had great advantages—its streams were now running idle, which were sufficient in abundance and power for any manufactures, and if brought into operation would supersede the expense of steam—it would open up tens of thousands of rich acres now unproductive—the valuable mines of Ireland would be explored, and her important fisheries would be made productive. (Hear, hear.) He therefore called on this county and Ireland at large to agitate the question, and not look on it with a partial eye to Kilkenny or Cork, which would be narrow-mindedness, but implore the Government to take up this national question, and intersect the country from north to south, and then they would enjoy peace, prosperity, and tranquillity. (Loud cheering.)

The CHAIRMAN inquired if the hon. gentleman proposed any resolution.

Mr. CROKER replied not—that his observations were merely cautionary.

Earl MOUNTCASHELL moved this resolution—

Resolved—That a communication between Dublin and Cork, by means of a railway, would be of great advantage to the interests of the south of Ireland.

Mr. J. R. BARRY seconded the resolution, which was put and carried.

The Hon. Mr. HARE had the honour of proposing the second resolution:—

"Resolved,—That the extension to Cork of the proposed railway from Dublin to Kilkenny would not only open a direct communication between the metropolis and Cork, along with the existing stream of traffic, but would also provide for the cities and towns of Carlow, Kilkenny, Clonmel, Waterford, Wexford, and Ross, a more ready means of intercourse than any other line could give, while at the same time such main line would admit of easy extension to Limerick."

Mr. THOMAS WARE seconded it.

The resolution was put and carried.

Mr. G. S. BARRY was very much afraid that that resolution committed the county.

The CHAIRMAN said that the resolution was duly put and adopted.

Mr. G. S. BARRY for one would not consent to it if it gave a preference to any line, for that might prejudice the public, who were in favour of the best line between Dublin and Cork. (Hear.)

The CHAIRMAN said that it passed the meeting.

The Earl of MOUNTCASHEL did not think that they were committed by it. (Hear).

Major BEAMISH said the resolution with which he was intrusted was—

"Resolved,—That the proposition before the Government on the part of the Leinster and Munster Railway Company, suggests the means by which that important national object would be most readily effected, and this meeting earnestly solicits the sanction of the Government to such proposition, on the express understanding that the entire line to Cork be undertaken."

In conformity with the suggestion of Mr. Croker, he took the liberty of making an addition to the resolution, as he saw the meeting was favourable to it,—"and commence simultaneously at either end."

Major BRODERICK seconded the resolution.

Mr. ROCHE, M. P., would move an amendment to this resolution, for he viewed it as committing the county to the adoption of the Company's line. (Hear, hear.) It was true he signed the requisition to the High Sheriff, but by that he merely wished to sanction the massive principle involved, for it was of the greatest interest to this country that this great county and the metropolis should be united by a line of railway, and he attended the meeting to assert that principle. (Hear, hear.) But if there was a chance of anything better for the country being adopted than the line proposed to-day, he thought the country ought not to committ itself to this particular line. They were told by a gentleman who made a very eloquent and convincing speech that he had it from a high authority that the government contemplated taking the general subject into consideration, and he (Mr. R.) could not but look back with regret at a period when another government had taken the subject up, but were obliged to abandon it from the opposition given by important parties. He thought therefore that before they passed a resolution committing themselves to the adoption of any line they should know the views of the Government on the subject, which could be ascertained within a very short time. (Hear, hear). If the Government was determined to do nothing, and that the Leinster and Munster line was the best private speculation with regard to Cork, it should have his warmest support, but being at present in ignorance of these facts, and viewing the second resolution but as setting forth geographical facts, he proposed as an amendment—

"Resolved,—That this meeting do not commit itself entirely to the adoption of the Leinster and Ulster line, until the views of the Government be learned on the subject of railways generally in Ireland."

The Earl of MOUNTCASHEL rose with much satisfaction to second the amendment.

After some discussion between Messrs. G. S. Barry, N. L. Beamish, E. B. Roche, H. Mannix, J. D. Croker, Daniel Meagher and E. J. Finn, the amendment was withdrawn, and the resolution was carried after being revised, as follows:—

"Resolved,—That the proposition laid before Government on the part of the Great Leinster and Ulster Railway Company suggests the means by which this important national object may be readily effected, and this meeting earnestly solicits the sanction of the Government to such proposition, provided no more advantageous line be contemplated by the Government, or by any other Company, on the express understanding that the entire line to Cork be undertaken, and commence simultaneously at each end."

Mr. H. TOWNSEND proposed with a short speech, and Gen. AUSTEN seconded the fourth resolution:—

"That a committee be appointed to assist in securing the extension of the line of railway direct to Cork, and for that purpose to ascertain the extent of aid and co-operation which would be obtained from this county in support of such extension, so soon as the arrangements necessary for effecting the formation of the entire line be completed."

On this another discussion arose, and Mr. Croker and Mr. Roche, M. P., moved an amendment, but the resolution being altered was carried. It was as follows:—

"Resolved,—That a Committee be appointed to attend to the interests of this county in respect to any line of railway that may be undertaken to connect Dublin with the city of Cork."

The following committee was then appointed to be in conjunction with the committee to be appointed by the city meeting:—Earl of Mountcashel, Earl of Kingston, Lord Viscount Bernard, Lord Listowell, Daniel O'Connell, M. P; E. B. Roche, M. P.; N. P. Leader, G. S. Barry, N. L. Beamish, R. D. Beamish, T. Ware, H. Townsend, M. Roberts, R. H. Purcell.

The High Sheriff being moved from the chair, on the motion of the Earl of Mountcashel, seconded by Mr. Roche, M. P.—

"Resolved,—That the thanks of this meeting be given to the High Sheriff of the county, for his readiness in calling this meeting, and for his impartial and proper conduct in the chair."

The High Sheriff having returned thanks, the meeting separated.

CITY MEETING.

The Right Worshipful the MAYOR took the chair at a quarter to one o'clock yesterday, in the City Court House.

Mr. SMITH being called on, came forward and stated the plan proposed by the great Leinster and Ulster Company to carry out the formation of a railway between this city and Dublin, to the same effect as that which he delivered at the county meeting. There was an alteration proposed in a resolution at the meeting yesterday with respect to carrying out the work simultaneously at Dublin and Cork, which would involve a great cost, and might create some little amount of difficulty.

Major BEAMISH then came forward, and concluded by proposing the first resolution:—

"Resolved,—That a communication between Dublin and Cork, by means of a railway, would be of great advantage to the interests of this city and of the south of Ireland."

Mr. JOSEPH M'MULLEN seconded the resolution in a brief speech.

The resolution was put and carried.

Mr. FAGAN proposed this resolution—

"Resolved,—That the extension to Cork of the proposed railway from Dublin to Kilkenny would not only open a direct communication between the metropolis and Cork, along the existing stream of traffic, but would also provide for the cities and towns of Carlow, Kilkenny, Clonmel, Waterford, Wexford, and Ross, a more ready means of intercourse than any other line could give, while at the same time such main line would admit of easy extension to Limerick."

Mr. GEORGE CRAWFORD seconded the resolution

Digitized by Google

Mr. CROKER then rose, and entered into a similar statement to that he made at the county meeting, cautioning the citizens against pledging themselves to any plan at present until they knew what projects were before the Government, and moved as an amendment that the words "than any other line," be erased.

Mr. F. B. BEAMISH trusted that Mr. Croker would not do anything that would be injurious.

Mr. HAYES said that when Mr. Croker concluded his speech, which was made to damage the proposition, he made an amendment without a reason either in point or in fact, for the line was better with respect to the towns which were referred to, for they were not touched on by any other project. He told the meeting that the Commissioners' Report gave information without any hope, but it gave an interested party a hope of carrying the line to the city of Limerick and passing by Cork. When first he met Mr. Smith he asked for assistance, not to carry the railway to Kilkenny, but to extend it to Cork, on which he (Mr. H.) struggled to have it commenced at Cork; but Mr. Smith proved to him that such a project would be destructive to the plan, and having made it clear that Cork would be secured in having it extended the entire way, he (Mr. Hayes) immediately withdrew his opposition, for he saw that they could only move on step by step, by beginning at the most productive end to secure means. When the 200,000*l.* was laid out on the line to Naas, they would then get 100,000*l.* on loan at 4 per cent. Government security, and have 100.000*l.* by shareholders who would subscribe, with 30,000*l.* of profit; for it was estimated that the line between Dublin and Naas would return 15 per cent. profit, and he added his firm conviction that if this project were abandoned, they would never see a railway to Cork. This being a private Bill, it could not be before Parliament before 1843, and if in this year the Government held out any prospect of doing anything, he would next year oppose this project. Therefore he hoped they would not commit the suicidal Act of stopping the serving of the necessary notices in consequence of the crotchets of those who might have other projects in their head. He concluded by saying, that if he had 100*l.* above the price of his breakfast, he would give it to this undertaking, for he was sure that it would be beneficial to the shareholders and to the public.

Mr. CROKER said, that from the explanation that was given, that the Bill could not be before Parliament until 1843, he withdrew his amendment; but if the observations of personal interest referred to him, he treated them with the contempt they deserved.

The Earl of MOUNTCASHELL regretted that the amendment was not persevered in and carried, for he feared the resolution might create a difference between the Committees.

Lieut.-Col. WESTROPP, in a brief speech, in which the referred to having been one of a deputation that went to Dublin about two or three years since on this subject, moved:—

"Resolved—That unless the Government contemplate the introduction of a measure by which a line of railway from Dublin to Cork may be at once commenced, this meeting considers that the plan suggested on the part of the Great Leinster and Munster Railway Company affords a ready means by which so important an object may be effected; this meeting, therefore, earnestly solicits the aid and sanction of the Government to carrying out such plan, on the express understanding that the entire line be undertaken."

Mr. R. DOWDEN seconded the resolution.

Earl of MOUNTCASHELL rose—he said, merely to propose an addendum to the resolution, which was that these words be added, "that the work be simultaneously commenced at both ends." The proposition merely referred to the work in the event of its being taken up by the Government.

The amendment was agreed to by the proposer and seconder of the resolution, and the resolution with the addendum was put from the chair, and carried amidst loud cheers.

A Committee was then appointed.

Mr. R. L. JAMESON was happy to second it.

Mr. CROKER said that before his Worship left the chair, he wished, on the part of the County Committee, that the City Committee would appoint some early day to meet on, and he would summon his Committee to meet the city gentlemen.

Mr. DOWDEN inquired whether Wednesday would answer? and the Earl Mountcashell having intimated his intention of being present on that day, it was agreed on by both gentlemen for the Committee to meet at the Committee of Merchants' Rooms, Commercial Buildings, at 1 o'clock.

A vote of thanks was passed to his Worship the Mayor; and he having returned thanks, the meeting separated.

LIVERPOOL AND MANCHESTER RAILWAY COMPANY—GENERAL MEETING.

[From the *Liverpool Mail* of Thursday.]

THE Annual General Meeting of the Liverpool and Manchester Railway Company was held, pursuant to advertisement, at the Cotton Sales' Room, in the Exchange Buildings, yesterday, for the purposes of, and pursuant to, the several Acts of Parliament incorporating or otherwise relating to the said Company. It was very numerously attended, and the proceedings excited considerable interest.

Shortly after One o'Clock the Chair was taken by CHARLES LAWRENCE, Esq.

Mr. CLAY, Clerk to the Company, having read the advertisement convening the meeting,

The CHAIRMAN announced that, according to the usual custom, the proceedings of the day would be commenced by reading the Report.

Mr. BOOTH read the Report accordingly. The following is a copy:—

REPORT.

The Directors, in submitting to the proprietors the twentieth half-yearly report of their proceedings, would have been happy if they could have congratulated the shareholders on any improvement in those great departments of trade and manufactures, the prosperity or depression of which is so sensibly felt in the daily operations of this concern.

But the same general gloom and stagnation which have characterised the commercial and manufacturing interests of this district for several years past, have continued to mark the occurrences of the railway during the six months just ended. The receipts both in the merchandise and passenger departments are rather less than in the corresponding period of 1840. In coals there is a small increase, owing to several coal proprietors who had previously received the whole of their stock by the Leeds and Liverpool canal, having recently sent a portion of their best house coal from the neighbourhood of Wigan, by railway. The public has reaped the advantage of this change, in a more plentiful supply of the best coal, at a reduction in price (including the cartage) of about 1s. per ton. The following is a statement of the receipts and disbursements for the half-year ending 31st December, 1841:—

RECEIPTS.

Coaching department		£80,549 14 7
Merchandise ditto		53,974 19 11
Coal ditto		2,006 3 4
Total		£137,530 17 10

EXPENSES.

Bad debt account	£282 10 2	
Coach disbursement ditto	11,966 0 3	
Carrying ditto	14,512 13 8	
Coal ditto	830 17 0	
Cartage (Liverpool and Manchester) ditto	1,479 14 11	
Charge for direction, ditto	388 10 0	
Compensation (coaching) do.	98 9 0	
Ditto (carrying) ditto	100 8 8	
Coach-office establishment do	987 18 4	
Engineering department ditto	565 4 3	
Interest and rent, viz.—		
Interest £3,967 7 6		
Less Cr. per bank, &c., and balance to the credit of rent account 2,193 17 1		
	1,773 10 5	
Locomotive power account	17,891 3 7	
Law disbursement, ditto	45 4 0	
Maintenance of way, ditto	5,666 13 10	
North Tunnel disbursement, ditto	1,874 16 7	
Office establishment, ditto	1,187 3 5	
Police, ditto, ditto	2,001 6 10	
Petty disbursements, ditto	60 0 0	
Repairs to walls and fences, ditto	569 15 7	
Stationary engine disbursement, ditto	610 19 2	
Tunnel disbursement, ditto	894 9 0	
Tax and rate, ditto	4,010 15 7	
Waggon disbursement, ditto	2,282 1 4	
		70,080 5 7
Net profit for the half-year ending December 31, 1841		£67,450 12 3

Statement of Receipts and Expenditure on Capital Account, from the commencement of the undertaking to the 31st December, 1841.

DEBTOR.

To amount of joint capital in shares and loans		£1,440,485 0 0
Ditto, dividends not paid		1,087 4 11
Ditto, reserved fund and interest		4,387 3 4
Ditto, surplus in hand after payment of twenty-second dividend, and second instalment of interest		6,731 17 4
Ditto, net profit for the half-year ending the 31st December, 1841		67,450 12 3
Total		£1,520,041 17 10

CREDITOR.

By amount of expenditure on the construction of the way and works		£1,436,382 17 7
Ditto, of arrears on calls		90 5 0
Ditto, in the hands of Moss & Co., bankers, viz., reserved fund and interest £4,337 3 4		
Balance		54,302 17 8
		58,640 1 0
Ditto, balance of book debts due to the Company		24,928 11 3
Total		£1,520,041 17 10

From the foregoing statement of accounts it appears that the net proceeds for the half-year amount to		67,450 12 3
To which must be added surplus from the half-year ending 30th June, 1841		6,731 17 4
Making a disposable fund of		£74,182 9 7
The number of shares entitled to a dividend amounts to 12,090 £100 shares.		
The Directors recommend a dividend of 5*l.* per share, amounting to	£60,450 0 0	
Also the payment of a third instalment of the reserved interest, viz.—		
On the 5,100 original 100*l.* shares, 1*l.* per share	£5,100	
And on the 5,100 1st quarter shares (No. 5,100 to 10,200), 2s. per share	510	
	5,610 0 0	
		66,060 0 0
Which several sums being deducted from the available fund, as above stated, will leave a balance of to be carried to the next half-year's accounts.		£8,122 9 7

At the general meeting in July last the proprietors were informed that the Manchester and Leeds Railway had been opened throughout its whole length since the first day of March of that year. During the first eight months after the complete opening of the line, namely, from the 1st of April to the 31st of December last, the quantity of merchandise passing between the Manchester and Leeds and the Liverpool and Manchester Railways has averaged about 350 tons per week. The total amount of traffic in raw material or import goods which has passed up the Leeds Railway towards the interior, in the last six months, according to a return which Mr. Jellicorse, the Secretary of the Leeds Railway, has been so good as to furnish, is about 2,500 tons.

To the important question of a junction railway to connect the Liverpool and Manchester with the Manchester and Leeds line, the Directors will now call the serious attention of the proprietors. It will be recollected that the proposition for a junction line was first brought under the consideration of this Company by the Manchester and Leeds Board, in the summer of 1838. The proposed plan of junction was by a line extending from Crossland-bridge, in Salford, in the direction of the New Bailey, passing over and along the Manchester, Bolton, and Bury Railway, as far as New Bailey-street, thence through the town of Salford to the River Irwell, and by a bridge over that river to Hunt's Bank, the intended station of the Manchester and Leeds Railway. The selection of this line rendered necessary an arrangement as to rates and tolls with the Manchester, Bolton, and Bury Company over a portion of whose railway the junction line was to pass. A negociation was opened for that purpose, but the two Boards had come to no arrangement of terms, when it became necessary that the November notices should be given, to enable the Company to apply for a Bill in the ensuing Session of Parliament. At the solicitation of the Manchester and Leeds Board, the Directors published the requisite Parliamentary notices, whilst as yet they had not been able to make any agreement with the Manchester, Bolton and Bury Company. When before Parliament in May, 1839, the negociation which had previously failed was renewed, and the terms then required by the Manchester and Bolton Company were such as your Directors would not have been warranted in acceding to, except in the full assurance of a most extensive and lucrative traffic; and it became a question with the managing deputation in London, whether to throw up the Bill altogether, or to conclude such an agreement with the Manchester and Bolton Directors as might be practicable, reserving to this Company the alternative distinctly recognised in the Act—of carrying into effect, or of abandoning the undertaking, according as more mature consideration and a fuller knowledge of all the bearings of the case, whether as regarding the immediate interests of the Company, or as affecting the public convenience, should enable them to determine.

The proprietors are aware that the first estimates of traffic expected to accrue from a junction with the Leeds line, as furnished by the Manchester and Leeds Company, were not substantiated by subsequent investigation; and this circumstance, added to serious embarrassments in the money market, and to a general depression of trade and manufactures soon after the Act was obtained, induced your Directors to pause in their proceedings—and during that pause, to look around with the view of ascertaining whether, if a junction line was to be accomplished, a more comprehensive plan for a general central station on the south side of Manchester might not be practicable, thereby effecting several most important objects.

First, affording the means of a junction with the Manchester and Leeds line at their station in St. George's-road.

Second, relieving this company from the serious objections attaching to the scheme of passing over a portion of the Manchester and Bolton line.

NEWSPAPER ARCHIVE

Digitized by Google

Third, effecting a junction with the Manchester and Birmingham, and with the Sheffield and Manchester Railways, in the neighbourhood of Stone-street, and a junction between these lines and the Manchester and Leeds Railway.

And, lastly, by means of this concentration of railway termini, in one of the best situations of Manchester for such a purpose, promoting the general convenience of the public and the town of Manchester, not less than the immediate interests of the railways themselves.

The proprietors have been informed, that with these objects in view, a deputation from the Liverpool and Manchester board waited on the Directors of the Manchester and Birmingham Company, in January 1840, to whom they explained their ideas of a central station in the neighbourhood of Stone street. The Manchester and Birmingham Directors, who had themselves previously proposed parliamentary plans for a similar object, expressed themselves favourable to the proposed scheme, as a prospective measure, but stated that their engagements were such as to preclude their affording it at that time, any pecuniary assistance. This was in January, 1840, and before proceeding further with their review of the prominent circumstances involved in the consideration of this question, the Directors beg leave to revert very briefly to a few of the epochs in the history of these proceedings (which have afforded subject for much public comment) in order that any proprietor may have the opportunity of expressing his opinion thereupon.

In the first place, when the scheme of a junction line was submitted to their consideration, the Directors advised the shareholders to make the requisite application to parliament; influenced by a broad and general view of the importance of a continuous line of railway communication, and by the earnest representations of the Manchester and Leeds Directors, respecting the advantages of the particular scheme proposed.

Secondly, when before Parliament, and unable to conclude any satisfactory arrangement with the Manchester and Bolton Company, your Directors conceive that they exercised a sound discretion in making as advantageous an agreement as they were able, reserving to the proprietors the option of proceeding with the undertaking or not, as they might thereafter think fit, rather than preclude all future consideration of the whole scheme, by throwing up the Bill altogether.

And, thirdly, when the first large estimates of traffic did not seem likely in the judgment of your Directors to be realised, and it became doubtful whether the pecuniary result to the proprietors would be such as to warrant the carrying into effect the proposed scheme, subject as it was, to the difficulties contingent on the arrangement with the Manchester, Bolton, and Bury Company, your Directors conceive that they were fully justified in recommending to the proprietors to suspend operations, and at the same time, to endeavour to ascertain whether some more comprehensive scheme possessing equal, if not superior advantages, and free from the objections of the Parliamentary line, might not be practicable.

Such was the position of this question at the general meeting of proprietors in July last. Nor was its aspect materially changed till a few weeks back, when the Manchester and Leeds Company announced their intention of proceeding with the execution of their projected line from St. George's-road down to Hunt's Bank. And it was only at a still more recent period that your Directors were first informed, that the Manchester and Birmingham Board were now disposed to adopt prompt and efficient measures for making a junction between their station in Stone-street and the Manchester and Leeds Railway, at Hunt's Bank.

It became evident, on this intelligence, that the period was arrived when the scheme for a general union of railways should be definitively settled; and it will be allowed on all hands, that the judicious settlement of this scheme, on a comprehensive plan, having reference to the public convenience as well as to the immediate interests of particular railways, is an object of paramount importance.

Your Directors lost no time in deciding on the course which, at this juncture, it was expedient to pursue. Regarding the scheme of a junction line by Hunt's Bank with reference to pecuniary considerations (to the amount of return to be expected on the capital required), there appeared no inducement to execute the work, nor warrant a justification to the Directors, to recommend to the proprietors the large outlay that would be demanded. The question remaining for consideration was this: whether the carrying into effect the original plan of a line to Hunt's Bank could be justified on the grounds of general policy, as a great measure for the public accommodation, and as part of a comprehensive scheme for uniting the various railways terminating in Manchester. An inspection of the map, with a pretty accurate knowledge of the local circumstances of the town, made it evident that the most eligible site for a general central station looking forward to the probable increase of Manchester, in the next twenty-five years as well as to its present position and circumstances, must be on the upper level of the town, as near as practicable to the great thoroughfare and centre of business, Piccadilly and its vicinity. All the railways approaching Manchester from the south and east—the Leeds, the Sheffield, the Birmingham, enter Manchester on this level. On the same level and in the same locality, are to be found the various lines of canal communication—the Rochdale, the Ashton, the Stockport, and the Macclesfield. On this level and in this locality, are the great warehouses and places of business of the merchants and manufacturers, not only of Manchester, but of the surrounding towns and districts. In this locality has been the great increase of the town during the last fourteen years, and, probably, will continue to be for the next eight-and-twenty.

The site of the Manchester and Birmingham station in Stone-street, London-road, approaches very near to this great centre of population and of business, and consequently, will possess the advantages which belong to so favourable a locality.

The Directors request a comparison of the prominent character and features of the situation they have described (the present site of the existing railways from Leeds, York, Hull, Sheffield, Birmingham, and London,) with the proposed station at Hunt's Bank, in a remote corner, and in the very lowest section of the town; and whose principal feature of recommendation appears to be that by means of a considerable outlay of money, a wharf, or quay, may be constructed, and thus the means be afforded of transferring goods from the said station to the boats of the Old Quay Company, in the river Irwell.

The Directors entreat the shareholders of the Liverpool and Manchester Company to divest themselves of preconceived opinions, and especially of such as may have been the result of interested and *ex parte* statements, and, after a personal survey and investigation (if possible), to take the map of Manchester in their hands, and form their own judgment of the comparative merits of Hunt's Bank and Stone-street, for a central junction station; bearing this important fact always in mind, that with the probable increase of Manchester, and the populous surrounding districts, in the ratio and in the direction witnessed in the last twenty years, the Stone-street station will become, year by year, more central and more convenient for all the great purposes of business and general intercommunication, while the site of Hunt's Bank, already in a comparatively distant quarter of the town, seems likely to become in the course of years still more remote from the great central localities, whether of business or of general and miscellaneous resort.

Such is a brief exposition of the comparative merits of the two rival localities for a general and central union of railways. Your Directors are aware, that had the more limited object of the Hunt's Bank line, namely, a junction with the Manchester and Leeds Railway, been in itself a satisfactory scheme, this Company might have been excused taking any further steps with a view to combine more broad, and general, and public objects, with the specific junction scheme at first proposed. But your Directors have stated their conviction that there was no prospect of a pecuniary return sufficient to warrant the proposed outlay: and as their view of the merchandise traffic at present passing from Liverpool, through Manchester into Yorkshire, and consequently of the remuneration to be expected from that source, has been formally impugned by the Manchester and Leeds Company at their late general meeting on the 23rd ultimo, it will be necessary to state briefly the grounds on which they retain the opinion which they formed two years ago on this subject.

The Directors agree with the Chairman of the Manchester and Leeds Company that it is very difficult to give formal proof of the precise amount of traffic passing in a particular direction. They are quite willing, however, to take the printed report of the proceedings of the Manchester and Leeds Company, at their late general meeting, as data from which to satisfy any unprejudiced mind that the Manchester and Leeds estimate of traffic is, undoubtedly and greatly, erroneous, and consequently that any calculation of pecuniary return founded on that estimate must be altogether fallacious.

In the speech of the Chairman of the Manchester and Leeds Company it is assumed that "210,000 tons of merchandise per annum pass through the town of Manchester on the Rochdale Canal." It is further assumed that "the Liverpool and Manchester Company carry 4,000 tons per week," and "the water communications," it is observed, "have a traffic which he has heard stated as high as 30,000 tons per week"—but he will take it at *ten thousand tons*." But your Directors would ask why take the traffic by canals at only 10,000 tons per week, when 30,000 tons had been "stated?" Was 30,000 tons a quantity so palpably and monstrously exaggerated that the worthy Chairman at once rejected it, as not entitled to credence? but if so, why refer to it at all as one of the estimates of the traffic between Liverpool and Manchester? Absolutely and completely fallacious, however, as it is, the Directors believe that this discarded statement is not more wide of the mark than the previously named estimate of 210,000 tons, passing from Manchester up the Rochdale Canal. The Chairman estimates the population of Manchester and the surrounding districts at from 700,000 to 900,000, and the population of Yorkshire, contiguous to the Leeds Railway, at more than 1,000,000! and then proceeds to remark that the supplies for this million and upwards of people must be drawn "either from Liverpool or London." But why so? One great item in the supply of this large population—their food—the Directors apprehend is drawn neither from Liverpool nor London, but in part from the surrounding country, and still more by canal from the eastern and midland counties, Wakefield, the great central depot, and one of the most important corn markets in the kingdom, deriving its supply from these sources.

With respect to the traffic in raw materials, passing upwards by various modes of conveyance from Liverpool to Manchester, the directors believe it will not exceed, if it reach 1,200 tons each working day, or 375,600 tons per annum. Of this gross traffic, cotton, the great staple of this district, constitutes above one third, almost the whole of which is used in Manchester, and within 14 miles round; a very small portion indeed passing up the Rochdale Canal. Another great item of this aggregate traffic is grain, or flour, constituting the principal supply for the 900,000 inhabitants above mentioned, while, at the same time, this populous district frequently derives part of its supply from the Wakefield market above referred to. And yet the Manchester and Leeds report assumes that 210,000 tons per annum, more than half the immense tonnage from Liverpool, by all modes of conveyance, passes to the interior, exclusively in one direction, up the comparatively limited channel of communication—The Rochdale canal!

The Directors do not think that any more minute proof is necessary of the utter fallaciousness of such an estimate.

The gentlemen of the Leeds Railway, indeed, seem now very much to have moderated their ideas of the quantity of traffic necessary to constitute an ample return on the required outlay; and one hundred tons per day, or 31,000 tons per annum of increased traffic is announced to be abundantly sufficient for the purpose. The Directors will say a very few words on this fresh estimate (which, however, like the former one, is only an estimate) and it is obvious the rate of freight will form an important item in the calculation. Captain Laws, the manager of the Leeds Railway, has turned his attention to the subject, and he assured the late general meeting of that company "that he was perfectly safe in saying that if they were at Hunt's-bank with their railway, they could, at once, get goods conveyed from thence to Liverpool for 6s. per ton." Now, supposing this to be the rate per railway, if we take 2s. per ton as profit out of the 6s., a pretty large allowance from so limited a source, we have an income of 3,100*l.* to pay a charge for interest and other contingencies, amounting to about 15,000*l.* per annum.

Allusion, it is true, was made to an increase of passengers as one item of remuneration, in addition to the assumed 100 tons per day; but no data are stated, and probably not even an estimate made of the supposed remuneration from this source; and if it be alleged that the railway, by its expedition, might possibly command a higher rate than 6s. per ton, the Directors would remark that, with reference to any assumed ratio or scale of traffic, in proportion as you enhance the charge, you will generally diminish the quantity; while this further consideration cannot prudently be overlooked, that the Manchester and Leeds Company have recently assumed to themselves the character of irresponsible arbiters of the whole traffic passing along their line, with power to direct it, in its transit to and from Liverpool, through whatever channel it may please them to select.

The Directors will not pursue this part of the subject further, considered as an affair of profit or loss of capital to be expended on the one hand, and income to be derived on the other; and regarding the question simply in that light, the Directors do not consider themselves warranted in recommending to the shareholders to execute the proposed line of communication to Hunt's Bank. Again, if the proprietors, influenced by motives of general policy, feel disposed to take a broader view of the great question of intercommunication between the different railways centering in Manchester than what is included in present pecuniary consideration, then the Directors are of opinion that the line through Salford would not best accomplish that more extended purpose. Under this conviction, therefore, and under the circumstances stated, the Directors (having given to the subject the best consideration in their power) have come to the conclusion to recommend to the proprietors not to carry into effect the proposed junction line to Hunt's Bank.

The remaining great branch of this important question must now claim the attention of the proprietors, namely, the more extended plan of communication with the several railways entering Manchester on the south and east sides of the town.

This southern line of communication has been several times surveyed—once by the Manchester and Birmingham Company, who were then anxious for a junction with the Liverpool and Manchester. The line passes through Castlefield, the property of the Bridgewater trustees, who opposed the Birmingham Company, and refused to allow any access to the south side of Manchester through their property. This difficulty, which at that time was fatal to the scheme, no longer exists, and the Directors have reason to believe that the Bridgewater trustees, instead of being opponents of the measure, will be parties to the scheme. It appears by the documents lately circulated by the Manchester and Leeds Company, that they attempted to negociate with the Bridgewater Trustees, proposing to allow to their vessels access to the projected new quay, and wharfs at Hunt's Bank, on condition that they would contribute their quota to the expense of constructing the said wharfs and quay. The trustees declined this overture, but it is understood they would be willing to bear part of the expense of a south junction line, on condition of facilities of access being granted similar to what were lately proposed to them by the Manchester and Leeds Company.

While submitting these observations, the Directors do not mean to call on the proprietors to offer any opinion—much less to come to any decision on so important a measure as the proposed junction line on the south side of Manchester, without ample notice and time for consideration—but they do not hesitate to state explicitly their own views on the subject, which are these:—that the public convenience would be largely promoted by a concentration and junction of the principal railways entering Manchester; and that this great object might be accomplished by mutual co-operation on the part of the different Companies, on the basis of this intelligible principle, that the union should be effected on such plan as shall combine the greatest measure of public accommodation with due regard to the convenience of each railway.

At this juncture, when the Manchester and Leeds Company have already announced their intention of coming down to Hunt's-bank, and when the Manchester and Birmingham Company are understood to be desirous of forming a junction with the Leeds Company, and it is presumed, with the Liverpool, it is evident that prompt measures must be taken, or it may be too late to secure any union of purpose for successfully promoting the desired objects. Under this conviction, the Directors have ordered a survey to be made, and plans and sections to be prepared, for a general connection line on the south side of Manchester, in order that the requisite Parliamentary notices may be given, and plans lodged to enable the proprietors to apply to Parliament next year, for powers to construct, or to co-operate in constructing, the proposed south line, if, when they have the plans and estimates, and the whole case before them, they shall deem it expedient so to do. The Directors trust that this proceeding on their part, will meet the approbation of the shareholders, and they can assure them, that on the present, as on all former occasions, they have been actuated solely by an anxious desire to promote, as far as in

Digitized by Google

them lay, the best interests and permanent prosperity of the concern.

One other subject the Directors will now beg leave to submit to the proprietors, and which will require their consideration in connection with the question of the Hunt's Bank line; it is a proposition recently received from the Directors of the Manchester and Leeds Railway in the following terms:—"That the Manchester and Leeds Company is prepared, in the event of the junction (by Hunt's Bank) being completed forthwith, by the Liverpool and Manchester Company, to submit to the proprietors of the Manchester and Leeds Company, with the strongest recommendation of the Board, a proposition to secure to the proprietors of the Liverpool and Manchester Company for a term of years, an annual dividend of 10 per cent. on 1,434,725*l*., the total capital of the Company as reported in the last published balance-sheet, together with the same rate of dividend upon the cost of the Salford junction line."

This is a proposal with which the proprietors will deal as they shall think proper; the Directors however would consider that they failed in their duty to the shareholders if they did not state unreservedly their sentiments on the subject. It is not very clear in what way this proposition to secure a dividend of 10 per cent. is to be understood, whether simply or on the principle of a bond, with obligation to make good to proprietors of this Company any amount by which their future dividends for a certain number of years shall fall short of 10 per cent. on their whole capital expended, including the Hunt's Bank line, without the parties who give this security exercising any control or taking any part in the management of the concern whose dividends they guarantee; or whether it is to be understood as an offer to lease the concern for a number of years, in the confidence that under their own management it would afford 10 per cent. on a much larger capital than the amount of its present expenditure; on either supposition the law clerk of this Company has advised the Directors that the proposition is illegal, that no power exists in either of the Companies to make such an agreement. But supposing such a contract, whether legal or illegal, nominally to be made, on the principle of a bond or guarantee, the difficulty of practically carrying it into effect, it is plain, would be almost if not altogether insuperable.

On the other hand, if an undertaking to lease the whole concern be the meaning of the proposition, the Directors cannot hesitate to advise the proprietors at once to reject it. Their experience of Railway Management having been sufficient to teach them that it would be an easy matter for a lessee to pay liberal dividends for a few years, and at the end of the term to leave the railway like an exhausted farm, incapacitated for profitable working for a long period to come.

The Directors have now frankly stated their sentiments on the several subjects, which the proprietors were aware would be submitted to their consideration at the present meeting. It remains with the shareholders to afford their sanction to the views which the Directors have taken, and have now briefly explained to them, or to adopt such other course in regard to the several matters above referred to, as shall, in their judgment, be safe and expedient.

The reading of the Report was followed by loud and general cheers from the meeting.

A SHAREHOLDER said, he was sorry to perceive a particular clause inserted in the Report, because, as it seemed to him, it amounted to a complete rejection of the proposal.

The CHAIRMAN begged to be permitted to say a few words in the first instance, which would, he believed, be an answer to what had just fallen from one of the shareholders. (Hear, hear.) He then spoke as follows:—

The Report just read by the treasurer, except upon the important subject of the junction at Hunt's-bank, contains so little but routine business, that it requires no comment upon my part. It is so full upon the first point that it would be a waste of your time to enlarge upon it. I am, however, particularly instructed by Directors to state to you, that though they do recommend the abandonment of the Bank's junction, they request the Report may be received, with an understanding that an early special meeting shall be called to receive your ultimatum on this subject, and to lay before you such information as they may be enabled to procure respecting the south line. Their object is evident—namely, to give you time to consider their report, and only to decide after due consideration. (Hear, hear.)

A SHAREHOLDER.—But do we not, by the adoption of the report sanction the rejection of the proposal?

The CHAIRMAN.—No; the report does not commit you to anything of the kind. The Directors merely tell you what their recommendations are, and when the next meeting is convened you will be called upon to decide. (Hear, hear.) I hope this will satisfy you.

A SHAREHOLDER.—I was merely desirous of saying that before we came to the conclusion that it is illegal to form a leasing of the line, some other legal opinion should be taken For my own part, I do not think it illegal. It has been done before, and may be done again.

The CHAIRMAN.—Before requesting you to proceed to the business for which you have been convened, I am under the necessity of calling your attention to a publication entitled, "The Report of the Special Meeting of the Manchester and Leeds Railway Company," which has been very generally circulated amongst the proprietors by one of their number, for the professed object of advocating the junction at Hunt's-bank, now under consideration. (Hear.) It is a matter of much regret to me, that the author, Captain Laws, has not contented himself with supporting the cause of his employers without condescending to libel the Directors of this Company; for, if the arguments in favour of the junction are so conclusive, supported also by all the practical information of the manager of the Leeds Railway, they can require no aid of invectives. (Hear, hear.) If, on the contrary, they are weak and inconclusive, they will gain little strength by the use of them. Captain Laws is, however, of a different opinion, and has made a direct attack upon myself and colleagues, for what object it is not for me to express an opinion. I will, however, take the liberty of reading the extract I complain of from one of his letters. It is as follows:—

"Firstly, the cause of obtaining an Act by the Liverpool Company to form a junction. The general feeling is, that that Act was obtained with an optional clause, for no other reason than to prevent the power falling into other hands, and a perfect understanding with the Duke of Bridgewater's trustees that it should never be acted on. A person less familiar than yourself with the trade between Liverpool and the district above alluded to, might naturally ask, what possible influence could the rival carriers of the Liverpool and Manchester Company exercise over their proceedings in a matter so importantly involving their interest? To such a question, a correct answer would be that with the exception of the representatives of the Duke of Sutherland, there is not an individual either in the Liverpool and Manchester Board, or among their law, or other officers, who has now a personal interest in that undertaking, to make it an object with them whether this important means of extending the interest of the shareholders be made or not; and as the identical individuals had, shortly after the question of the junction was first agitated, (in the session of Parliament, 1836, and the arrangement between the Liverpool and Grand Junction Companies was announced in the Grand Junction half yearly report of August of the same year,) made an arrangement, as joint Directors of the Liverpool and Manchester and Grand Junction Railways, (in the latter of which they are known to hold very large investments), by which the latter Company has ever since divided 13 per cent. of the profits of the former, it is not out of the pale of possibilty that the one arrangement was contingent on the other; as it is hardly to be conceived that the clear head to which the management of the Duke of Sutherland's property on the one hand, and the Duke of Bridgewater's Trust on the other, is intrusted, would have submitted to the arrangement that exists between the same parties governing the two railways, giving to the one in which they hold a large stake, so large a portion of the profits of the other, in which some of them hold barely sufficient to retain their seats at the Board (small as that is), without some guarantee that appeared likely to protect, to a certain extent, the important interest intrusted to his charge."

Now, gentlemen, I have read and re-read this paragraph until I became weary, but it is in plain English this;—That those of your Directors who are chosen by the proprietors not only sacrifice your interests, but actually apply the funds of this Company to increase the dividends of the Grand Junction—(hear, hear,)—whilst Mr. Loch, the Director of the Duke of Sutherland, whose influence could have prevented this juggle, is induced to connive at it, having been guaranteed something for the Duke's Trust, to make it worth his while. It is not my intention to go further into this publication, nor to comment on its inconsistencies in lauding Mr. Loch's integrity, and recommending your Deputy-Chairman as the person of all others most worthy the confidence of the proprietors; but I will read Captain Laws' finishing postscript.

"If, in discussing this purely public question, I should in any way have implied individual feeling that might be thought disrespectful to either of the noblemen, or to any of the gentlemen who are named or alluded to, I sincerely regret it; and beg to disclaim any such intention in commenting upon what they have done under very conflicting circumstances, in their official capacity."

Now, gentlemen, the few civil expressions contained in this postscript, do not alter the main charge in the slightest degree. The substantial parts, the fraudulent conduct of your Directors, remains (Hear, hear.) The assertion of their innocence against Captain Laws' assertions of their misconduct would prove nothing. It, therefore, becomes a duty you, gentlemen, owe to us, as well as your absent proprietors, to take immediate measures to satisfy yourselves that the charges are totally unfounded, or to fill our places with better men. It is not for me to point out what course you ought to follow to obtain this object. But as my colleague, Mr. Moss, wishes to make some suggestion, permit me to caution you against delay, or adopting the common idea of many persons—that "Nobody believes the charges of Captain Laws." The rank in society which that gentleman holds, as an officer in the British navy, must and ought to give weight to any assertion that he makes, and the hundreds of proxies which have been transmitted at his call proves the fact, and makes your investigation of his charges the more imperative. Whilst on the other hand, Captain Laws, as a British officer, will feel the necessity of satisfying you, or whomever you depute, that he had full and clear evidence, to justify that unqualified attack upon the honour and honesty of your Directors, which I have had the painful duty of laying before you. (Cheers.)

Mr. MOSS then rose and said—I trust I may be excused for thus early calling the attention of the meeting to the very extraordinary position in which I feel myself placed as one of your Directors. (Hear, hear.) Without any application from myself, either directly or indirectly, no less than 261 shareholders have sent me their proxies, and of this large number, only nine have stated to me how they wish me to act on their behalf. These proxies appear to have been sent to me in consequence of a letter from Captain Laws, accompanying a pamphlet of his, censuring, in no measured terms, myself and the other Directors of this Company, whilst it is only fair to Captain Laws to state that, in the postscript of his pamphlet, he declares that his observations on the Directors apply to their "official capacity," yet I am of opinion that if we, as Directors, have acted as is represented by Captain Laws in his letter of 31st October, (page 2), it is high time that we should be removed from the Direction, for such conduct could not be excused on the ground of mere error in judgment. If all the shareholders in this great concern resided in Liverpool, I dare say all we Directors should be perfectly satisfied to let our character and station in life answer the charge brought against us in Captain Laws' pamphlet; but the 261 persons whose proxies I hold are almost all distant shareholders, and they are entitled to be satisfied as well as our neighbours. In order, therefore, to their satisfaction, as well as my own, I shall, before I sit down, beg leave to move—"That a Committee of persons, not shareholders in the Grand Junction Railways be now appointed, of which Captain Laws be one, to make deliberate investigation into the charges made by him in his letter, dated October 31, 1841, against the parties who made the agreement; and that the election of Directors, to replace myself and my four colleagues who this day go out of office by rotation, be deferred until that Committee have reported—such report to be made to an adjourned meeting to be held in this place on Wednesday, the 23rd February." With this motion it is my intention to close the few remarks I have yet to trouble you with. (Hear.) Previous to receiving Captain Laws' pamphlet, or any of the proxies, I had intimated my desire to retire altogether at this time from the Direction of your concern, and not to offer myself for re-election; but, publicly accused, along with my colleagues, to my constituents, as I am in that pamphlet, I feel that I am no longer a free agent, but am bound, before I resign the trust with which I have been honoured from the very earliest days of this undertaking, not to deny the charges brought against me and my colleagues—for that we should none of us think it necessary, or condescend to do—but to claim the judgment of the proprietors upon the imputations publicly cast upon us by one of their body. I may add, that my first wish and determination, upon receiving the proxies sent to me, was to return them at once, not knowing why they should be sent to me; but, upon further consideration, I thought I should best show my deep sense of the confidence placed in me by using them in support of the motion with which I have stated my intention to conclude. As to the important subject brought forward in Mr. Laws' pamphlet, I am now only prepared to say, for myself, and in my individual capacity, that I think it must be admitted by all impartial persons that a continuous line of railway from the Irish Channel to the German Ocean, and connecting Liverpool with all the great manufacturing towns in Lancashire, Cheshire, Yorkshire, and Derbyshire, would be a great public convenience; and that if it can be effected without a loss of income to this Company, we ought heartily to concur in the immediate formation of it, without considering its possible operation upon other means of communication between those important districts.

Digitized by Google

(Hear, and cheers.) These are my general views, and I see that I am not yet prepared, any more than some of my colleagues, to commit myself to any definite plan, involving necessarily most important consequences, in various ways, both to ourselves and to others. I am inclined to think that the best thing, under the present circumstances, would be to let the whole matter be discussed and decided at the adjourned general meeting, both proprietors and Directors in the meantime giving the subject the serious consideration which it really is entitled to, and some friendly communication being opened with the other Companies interested, with a view to our adoption (when we meet again,) of that plan which shall be in the meantime found to be most advisable for all. Having stated thus generally my opinion on the subject I beg to say that, as to the proxies which I now hold in my hands, it is my intention immediately to return them all, as I feel that to be due to those who honoured me with their confidence without knowing my sentiments. Allow me Mr. Chairman, to do that which is not customary—namely, to ask you to second the resolution for inquiry. You and I filled the office of chairman and deputy-chairman of both the Companies at the time when the agreement between this Company and the Grand Junction was made (so improperly as Capt. Laws states), and I am sure, therefore, that we have no other course to follow but to solicit an inquiry into our official conduct. With these remarks, I beg leave to conclude by moving the resolution which I previously read. (Cheers.)

The CHAIRMAN seconded the resolution.

Captain LAWS asked whether the Grand Junction Company would be prepared to produce such documents as the Committee might wish to inspect.

The CHAIRMAN replied in the affirmative, and asked whether there was any objection on the part of the meeting to postpone the election of the Directors until the next meeting should have been held?

Mr. E. F. JONES inquired whether the fact of the non-election of the Directors would not be calculated to lead the public to think that there was some truth in the charges advanced by Captain Laws?

The CHAIRMAN thought not.

Mr. JONES said, that for his own part, he was perfectly satisfied with the conduct of the Directors. He was of opinion that the meeting ought to proceed at once to their re-election, convinced, as all present seemed to be, that they would do everything right and proper. (Hear.) He thought a Committee might be formed for the purpose of investigating the truth or falsehood of the charges, and that the re-election of the Directors might be proceeded with immediately. (Hear, Hear.)

The CHAIRMAN asked whether, by the adoption of such a course, the meeting would not be acquitting the Directors before the trial?

Mr. GILL thought the next meeting of the Company should be convened on an earlier day than the 23rd of February, because the meeting was not perhaps aware that the compulsory powers of the Act would cease in June next, and that they were, therefore, late in the day at present for putting those powers into execution. He designated a map of the several lines of railway passing through Manchester, which had been handed about for inspection at the commencement of the proceedings, a caricature, and said that the place marked out for crossing Piccadilly was out of level, and not in conformity with the requirements of the Act of Parliament.

The CHAIRMAN said, that the map had been brought to the meeting by some gentleman, and that it had not originated with the Directors.

Mr. BENISON said, it had been taken from the map of Manchester.

Mr. GILL said, that as it was not official he had nothing more to say on the subject. He was glad to learn that it had not originated with the Board. He begged that a letter which had been received from the Manchester and Leeds Company might be read to the meeting.

Mr. BOOTH read the letter accordingly. It had been received from the secretary of the Company in question, and enclosed a proposition on the subject of the ten per cent.

Mr. GILL said there was a clause in the second Act, page 10, which empowered the Liverpool and Manchester Company to make negociations with any other company.

Mr. CLAY having read the clause in question,

Mr. SANDERS asked whether it had any relation whatever to the granting of a certain rate of interest to the Liverpool and Manchester Company.

Mr. CLAY was about to reply, when

Mr. ROBINSON moved that the meeting, entertaining the most unbounded confidence in the Directors and convinced of the groundless nature of the charges advanced against them in Capt. Laws' pamphlet, proceed at once to their re-election.

Mr. MAXWELL seconded the motion.

The CHAIRMAN thought the meeting had previously adopted the motion made by Mr. Moss for the appointment of a Committee to investigate the charges. He said the high character of the gentleman who had advanced them rendered it impossible to pass the subject over without investigation. Could any greater proof, he asked, be given to the meeting of the weight which had been attached to the name of the author of the pamphlet than that, from the mere word of Captain Laws, no fewer than 250 proxies should have been sent to Mr. Moss? Under these circumstances, he expressed a confident hope that the meeting would adopt the original motion and appoint a Committee.

Mr. ROBINSON said he had moved his resolution in the form of an amendment.

Mr. CLAY observed that although five of the Directors should retire at the meeting, it was in the power of the shareholders to adjourn part of the proceedings, specifying at the same time that particular part. They might, for instance, adjourn the election of the Directors, if they pleased.

A SHAREHOLDER was of opinion that if the election of the Directors were postponed some inconvenience might be felt in carrying on the general business.

The CHAIRMAN said that if it was the pleasure of the meeting the outgoing Directors might be re-elected with an understanding that the Report should come before the next meeting, and that they be then continued in office or displaced, as to the shareholders might seem advisable.

Mr. ROBINSON said he was determined to press his amendment.

The CHAIRMAN said he had no objection to the passing of the amendment, provided it embodied a clause authorising the investigation to be proceeded with.

Mr. MAXWELL believed there was no opposition on the part of the meeting to the appointment of a Committee to investigate.

The CHAIRMAN here read the original motion and amendment, and was about to take the sense of the meeting on the latter, when

Mr. THEODORE RATHBONE rose and said, he thought he could state certain facts which would induce Captain Laws to admit that he had been in error. (Hear.) He had been one of three Directors, who were appointed by the Board, to enter into the arrangement in question with the Grand Junction Company. The three of them were deeply interested in the success of the Liverpool and Manchester Railway, and had no interest in the Grand Junction. (Hear.) Mr. Curry, Mr. Benson, and himself constituted the three. He never had a share in the Grand Junction himself, and he believed he might say the same for Mr. Curry and Mr. Benson; at all events he knew that the three of them considered the undertaking then made a good one, because their deliberate judgment was that it was a judicious arrangement. He believed the Board had placed reliance upon himself and his colleagues upon that occasion; and he was willing to take fairly on himself the whole responsibility of going into the arrangement which had been then effected. (Hear, hear.) It was an arrangement terminable upon notice. No individual belonging to the Company ever yet thought it desirable to bring it to a termination, but on the contrary, many were disposed to let the agreement continue. If any better terms could be proposed, he thought they ought to be obtained; but at all events, the question had been deliberately considered at the time, and was thought to be desirable. Under those circumstances, he thought Captain Laws would see that he had made a statement for which there could be no possible foundation. (Cheers.)

Mr. MOSS said that six persons had been appointed to draw up the agreement, three on each side. The Grand Junction chose three persons who were Directors of the Liverpool and Manchester Railway, and the Liverpool and Manchester chose three persons, none of whom were Directors of the Grand Junction. (Hear.) He begged to ask the meeting whether, under such circumstances, anything injurious to the Liverpool and Manchester concern could have been contemplated or effected. The preponderance of interest, was, moreover, ten to one, so far as shares went, in favour of the Liverpool and Manchester Company; and if Captain Laws had looked into the share list, he would have seen immediately that this statement was substantially correct. Mr. Benson was appointed upon the occasion, because he represented all the Quaker interest; Mr. Curry was appointed in preference to the Chairman, the latter having been a shareholder in the Grand Junction; and Mr. Theodore Rathbone, who, upon his own confession a few minutes before, never held a share in the Grand Junction, was also appointed; so that to suppose the Directors of the Liverpool and Manchester Company were disposed to do anything unfair, was to suppose what the circumstances of the case utterly repudiated. (Hear, and Cheers.)

Captain LAWS said, that nothing could be more satisfactory to his feelings than to explain away any charge which he had felt it his duty to advance; but no course was so clear to him as to have the investigation. If that investigation were carried on with proper feelings it would set the Directors in a much better light than any discussion which might take place at the present meeting. If four impartial persons, who had no stake in the Grand Junction, were appointed upon the Committee, and if his charges should turn out to be unjust, nothing would afford him greater pleasure than to say that they were unjust.

Several voices—And to retract.

Captain LAWS.— Most certainly, to retract. But though the Directors were as pure as Cæsar's wife, his was not the only opinion which prevailed against them. It was the opinion of others also. The public had never known what the compact between the two companies was; he ventured to say that few of the proxies which had come to Mr. Moss were acquainted with the nature of it; and therefore what could be more gratifying to the Directors than to have the opportunity of shewing that it was a right and proper contract to continue. It surely ought, in his opinion, to be fully understood.

Mr. MOSS hoped the inquiry would extend not only to the contract, but to those who made the contract. (Hear, hear.)

Captain LAWS said his charge was not against those who made the contract.

Mr. MOSS said his motion would have the effect of extending the inquiry to the persons who made the contract, and he was most anxious that such an inquiry should be instituted. (Hear.)

Captain LAWS was proceeding to state the substance of his charge, when

Mr. SANDERS observed that there was a distinct charge of turning over the property to the Grand Junction. (Hear.)

Captain LAWS expressed a hope that the proprietors would consider the consequences which had resulted from the contract in question.

Mr. T. RATHBONE presumed, from the last observation which had fallen from Captain Laws, that that gentleman retracted the charge of motives which he had advanced.

Captain LAWS said, that he did not attribute infallibility to Mr. Rathbone or to any other man.

Mr. RATHBONE repeated his question—namely, whether the Captain withdrew the charge?

Captain LAWS said he wanted the investigation, and then he would retract, if his charges should turn out to have been unjust.

Mr. MOSS said, that in offering his observations at the commencement of the proceedings, he particularly directed attention to the fact, that the charge was one which could not be called an error of judgment. (Hear.) If Captain Laws had merely said that he (Mr. Moss) erred in judgment, that might be true enough, because he erred in judgment perhaps every day; but, in the present instance, the charge was of a weightier description.

A SHAREHOLDER.—The charge here is, of sacrificing one Company to another. (Hear, hear.)

Mr. GILL—But let it be recollected that Captain Laws has not singled out any individual of the Board.

Captain LAWS—Certainly not.

Mr. SANDERS—There is a charge in the pamphlet to this effect—that there are certain individuals on the Board who possess a small interest in the undertaking, just sufficient to entitle them to be Directors. I am one of the persons on the Board, and I tell Captain Laws that I hold a much greater interest in the Liverpool and Manchester Railway than I do in the Grand Junction. (Hear.) I hold 48 shares in this Company; and before his pamphlet had been published I was an advocate for the Hunt's-bank line, but now I think it would be an act of deliberate suicide, and I never will give my consent to it. (Hear.)

Mr. Councillor HODGSON—I am also a member of the Board, and I will take the opportunity of saying here, that I considered the pamphlet to be a personal attack on every gentleman at that Board, and further, that I hold the assertions of Captain Laws not worth a rush. (Hear.) Other gentlemen hold the same opi-

Digitized by Google

nion of them, and it was a subject with us whether the pamphlet should not be treated as a libel, and whether he himself should not be prosecuted. (Hear, hear.) Captain Laws now says that he is willing to take another view of the subject, but he has not, to this hour, admitted that he did not make an attack on ——

Captain Laws—I made it on their body as a Board. (Great uproar.)

Mr. Hodgson—Here is a man making an attack without offering any reasons of his own, but merely offering the impression of a mind which we cannot envy. (Hear.) Here is a man, who takes up a subject, and gives publicity to his impressions! He charges the Board with having so small an interest in the undertaking, that they cannot afford to do it justice, as if honourable men were to be bought and sold by the mere consideration of what they had laid out! (Hear.) And what is the position of the single-minded individual who makes a charge of this kind? What is the position of this gentleman, who seems to think that others may be tortuously directed by the situation they hold, and that they cannot be acting rightly because their interest is small? What is the position of this large proprietor in the Liverpool and Manchester Railway, for I find he holds one share? (Hear, and great laughter.) Why this—that he seems to think he is qualified, while pursuing a sinister interest, to try to set the whole country in a flame from a zeal to protect his interest in a share! (Great laughter and cheers.) I do not mean to deny that his one share may be as valuable to him as —

Captain Laws.—As 100 to you, perhaps.

Mr. Hodgson—I know Mr. Moss's feelings on this subject; but I do not think that there is any necessity for a Committee, and I shall tell you why. I think such a charge ought to be treated with the contempt it deserves. (Hear, hear.) I think that it is even a compromise of your dignity and character to a certain extent, to allow the possibility of its being supposed of you that such can be in any wise necessary. Nay, I adduce against such a weak, foolish position, the fact that after all those base insinuations which have been attempted to be thrown on the character of the Directors—that after the all base attempts which have been made to injure the character of men who stand far above the reach of detraction, the very proprietors, in whose hands those scandalous productions were placed, sent to Mr. Moss no fewer than 250 proxies, thereby showing that they had no confidence in the author of the charges, that threw to the winds all the attempts to injure Mr. Moss's character. (Hear, hear.) I therefore hope that Mr. Moss will see that he is falling into an error by submitting to any examination on the subject. (Cheers.)

Mr. Moss said, he was exceedingly desirous that an inquiry should be instituted, inasmuch as the charges decidedly went to criminate the Directors. He, therefore, wish to give Captain Laws the power of going into the Board-room and investigating the matter, in order that the characters of the Directors might be cleared of every imputation. He wished particularly that a deliberate investigation should be instituted against all the parties who made the agreement. (Hear, hear.)

Captain Laws said, he could not attend such a Committee, because he had not made an individual attack. Although Mr. Rathbone stated that he had no sinister motives in view at the time of making the agreement, it would be admitted that he might have made, nevertheless, a very injudicious contract. He concluded by saying, that he would move an amendment to the following effect: That as it required four years notice to terminate the arrangement in question it was necessary that an inquiry should take place, and that the proprietors would be governed by the Report of the Committee as to whether the notice should be given or withheld.

Mr. Rankin said, that the proprietors had already left the settlement of this matter to the Board.

Mr. Cropper said, that he held 150 shares in the Liverpool and Manchester Company, and that he was satisfied there had not been any fraud.

Another Proprietor remarked, that he held 59 shares in the Company, and that he had no reason to complain of the Directors.

Mr. Garnett said, he never had a share in the Grand Junction, but he was a shareholder in the Liverpool and Manchester, and was actuated by a sincere desire to promote the interests of the Company. He did not hesitate to say that he had, among his brother Directors, spoken to them as to the propriety of giving a notice on the subject of the contract, and that he had been advised not to moot the question, for very sufficient reasons, which he would state to the meeting if desirable. (Several voices—"No, no.") He therefore would distinctly declare that any charge which had been mode against the Board was totally unfounded. (Cheers.)

Mr. Moss said, that at the time the agreement was made Mr. Loch had not the charge of the Bridgewater trust at all.

Captain Laws admitted the truth of this assertion, but said the change had occurred immediately after.

Mr. Halston said, that after the violent discussion they had had during the day, he believed the characters of the Board never stood higher than they did at that moment. (Loud cheers.) But as the pamphlets had been circulated all over the kingdom, he thought it necessary that their effect should be neutralised. He would therefore vote in favour of the motion submitted by Mr. Moss.

Mr. Robinson said, he wished the meeting to express an opinion upon the amendment.

Mr. Rathbone reminded the meeting of what Captain Laws had previously said, namely, that he would not act upon the Committee unless the inquiry was directed in a particular way. He thought it might be exceedingly improper to thrown open the books of the Company to the Captain's inspection, because he might make his information derived therefrom advantageous to other Companies. (Hear, hear.)

A Shareholder was of opinion that Captain Laws was a good military man, and that he was acting the part of a tactician in the present instance. (Hear, and a laugh.)

Mr. Robinson again pressed his amendment to a division.

The Chairman once more suggested to the meeting the propriety of having the conduct of the Directors thoroughly investigated. He then read the motion and amendment, and took the sense of the meeting on the latter, which was carried, we may say, unanimously, there being only two hands held up against it, those of Captain Laws and his friend, Mr. Gill. The result was hailed with loud cheers by the meeting.

Captain Laws said, that the only way in which he could consent to act upon the Committee, would be upon condition that the contract was admitted to be fully partaking of the effect he had stated. In that case, he would consent; but he never would consent to go into the spirit of the thing with his hands and legs tied. (Ironical laughter.)

Upon the motion of Mr. Robinson, the Report was received and adopted, subject to an understanding that another meeting would be called for the purpose of considering one of the subjects mentioned therein, in reference to Hunt's-bank.

The five retiring Directors were then re-elected unanimously, with the exception of one hand, that of Captain Laws, which was held up against them. It was ordered that the dividend, as recommended by the Directors, be paid.

It was then moved, seconded, and carried, that the proceedings of the day should be published for the information of the shareholders at large; after which, thanks were returned to the Chairman, and the meeting separated.

THE PROPOSED RAILWAYS FROM NORWICH TO YARMOUTH.

[From the *Norwich Mercury*, January 22.]

A Meeting of the Committee appointed to watch the proceedings for promoting Railways from Norwich to Yarmouth was held on Tuesday last. The Mayor presided. The Committee present consisted of Messrs. G. D. Palmer, R. Ferrier, R. S. Lonsdale, S. Palmer, R. Hamond, W. Yetts, C. Cory, B. Fenn, C. Woolverton, T. Lettis, and W. H. Bansby. The Meeting was also attended by Messrs. W. D. Palmer, C. Smith, R. H. Beart, G. Costerton, G. Everitt, C. Symonds, H. Daveney, and Captain Baines. Messrs. Staff, Beckwith, and Cufaude, Solicitors for the East Anglian, Messrs. C. J. Palmer, J. O. Taylor, and H. Cooke, for the Valley Line.

We have received a very long report from the Solicitors of the East Anglian Line, and other reports of the proceedings, but as the Meeting had more of the nature of a private than a public discussion, we shall merely, give an extract of the account we have received.

The Mayor having opened the business, by stating the object to be to consider what course it was the duty of the Committee to pursue, said that he had hoped to have congratulated the meeting on the union of the solicitors supporting the two lines, but the arrangement had not succeeded He believed it was the wish of the inhabitants that a public meeting should be called to determine which line was most worthy of support. The question was whether as a committee they could decide, or whether they should call a public meeting. They ought to, adopt measures most conducive to the public good.

Mr. R. Ferrier considered they were tied down to the resolutions of the public meeting of February the 27th, 1841, and that they were not there to discuss the merits of the two plans.

Mr. Staff, one of the solicitors of the East Anglian line, after admitting that certain proposals had been made by the solicitors of the Valley Line, and considered by those of the East Anglian which had not been concluded, and stating that they had no other interest but carrying that line approved of by Yarmouth and Norwich, entered into a statement of what he considered the superiority of the East Anglian Line. Mr. S. asserted they were in as good a position for local shares as the Solicitors of the Valley Line; and he had no doubt shares would be taken at Hull, York, Birmingham, &c. if it were but shown that persons in the two towns supported their plan by taking shares.

Mr. Yetts considered that the parties in favour of the East Anglian Line had, at the meeting in February last, pledged themselves to go through with the whole line, and for that reason that line was adopted. The real question seemed now to be which of the two short lines should be preferred, without reference to any former resolution.

Mr. G. D. Palmer suggested an union of the two parties.

Mr. C. J. Palmer, Solicitor for the Valley Line, considered that if the Committee felt itself bound to the resolution mentioned by Mr. Ferrier, it would be useless for the Proprietors of the Valley Line to say anything, and he should therefore decline to offer any remarks.

A long and desultory discussion of no public interest followed upon this subject, in the course of which Mr. I. O, Taylor and Mr. Cooke expressed their surprise at the course taken by Mr. Staff. They had not understood that the meeting of the Committee had been called to discuss the merits of the two plans. They urged a public meeting, at which the Engineers could attend and describe the two lines, and thus enable the public to judge of their respective merits. They believed the promoters of the East Anglian were not in a state to go to Parliament. The promoters of the Valley Line were fully prepared.

Mr. C. Cory suggested that they should hear both sides: in this the Mayor agreed. On this Mr. Taylor urged a public meeting, as the Valley Line had never been before the inhabitants of Yarmouth. Mr. Yetts urged the attendance of the Engineers at a meeting. The Mayor was ready to call a meeting if the Committee so decided.

Mr. Ferrier moved a resolution in favour of the East Anglian Line, whether it terminated at Norwich or elsewhere, and that a report be made to a meeting, which was seconded by Mr. G. Palmer.

Mr. Cooke, before they decided, thought it fair to state that the promoters of the Valley Line came to that meeting under the impression that they were to have a final answer to the proposition that had been made and entertained by the Solicitors of the East Anglian Line for the abandonment of their line. If the Solicitors of the Anglian Line were really so confident of the superior merits of their line, and of their ability to obtain sufficient funds, how came Mr. Staff and his colleagues to have entertained terms for the actual and entire abandonment of this hopeful scheme? Which terms, to the very moment of Mr. Staff's commencement, he did not know had been rejected; for on the very last interview which took place between Mr. Spanton, Mr. Kitton, Mr. Rackham, and himself at their office, (after a long discussion which had previously taken place in Mr. Staff's room, in the Town Hall, at which Mr. Staff and nearly all the local professionals of both lines were present), Mr. Spanton stated, that he was instructed to say "their connexion with Mr. Rastrick would not permit them to accept our terms;" upon which Mr. Rackham en-

Digitized by Google

quired "whether he was to consider that they were rejected," to which Mr. Spanton replied in the negative.

Mr. STAFF at first did not admit the negotiation, but on Mr. Cooke appealing to Messrs. Beckwith and Kitton as to the fact, Mr. Staff stated, that Mr. Spanton was merely his agent, and had no authority to exceed his commission.

Mr. YETTS moved a resolution to the effect, that a public meeting be called in order that Mr. Stephenson's and Mr. Rastrick's opinions of the merits of their respective lines might be heard.

Mr. SMITH said the Committee had a right to make their report as they liked.

Mr. I. O. TAYLOR urged that they would scarcely pass a resolution without hearing Mr. Stephenson.

Mr. FERRIER suggested an union, and after some further discussion the promoters of the two bills retired, but soon returned being unable to agree.

Mr. FERRIER then proposed the following resolution—"That it is the opinion of this Committee that that portion of the line which has been twice before considered (that is Mr. Rastrick's line) is the most beneficial for Yarmouth, and is the best to be promoted by the town of Yarmouth."

On the motion being put, there appeared nine of the Committee for the resolution, one against, and one did not vote.

The Committee separated after a vote of thanks to the Mayor.

NORTH UNION AND LANCASTER RAILWAYS.—We hear of heavy complaints being made by passengers travelling to the north of the unnecessary detention they now experience, on their arrival at Preston—the want of exertion, and now visible slow movement amongst the porters and servants of the North Union Company, on delivering the train to the Lancaster Company, is a great annoyance and, from what we learn, an inexcusable detention. Surely railway travellers are not to be so treated to gratify the bad feeling now existing between the two Companies, it must eventually prove a serious loss to both, and reflects little credit on the respective managements. If the Directors of the two Companies cannot themselves adjust the differences now existing, let them as discreet men anxious to lay aside all personal feeling, call in the assistance of some competent referee, to whom shall be given the power of making such regulations, in regard to the passenger traffic passing between the two stations, as he may deem best for the public safety and convenience. The demand made by the North Union Company of *sixpence* per passenger upon all passengers travelling between their own station and the terminus of their line, between 200 yards, is, we believe, *illegal*—that it is highly impolitic seems to be admitted by all, and the sooner it is abandoned the less opprobrium will attach.—*Lancaster Guardian.*

CONVENTION OF ENGINEERS.—A circular is on the point of being issued by the Chevalier de Wiebeking, the constructor of the railways betwixt Munich and Augsburg, Furth and Nuremberg, in which all the celebrated engineers who have been concerned with this new mode of transit will be invited to assemble at Munich in the course of the current year, mutually to communicate information touching their profession. This cannot but lead to the best results; though our Stephensons, and Walkers, and Brassels, and Lockes, should they accept M. Wiebeking's invitation, will prove, we imagine, sowers rather than reapers.—*Athenæum.*

RAILWAYS IN IRELAND.—We drew attention lately to the various projects which have been from time to time mooted relative to providing a comprehensive system of railways for this country. It seems that something is to be done, and that the Government are about to move in the matter. From the *Railway Times* of Saturday we copy the following. [Here follows our article of last week but one.] It is unnecessary to offer any detailed observations on the above: we are entirely opposed to the rumoured plan of creating a guarantee fund by the imposition of an additional halfpenny on Irish letters.—*Dublin Monitor.*

JUNCTION BETWEEN THE STOCKTON AND DARLINGTON AND BISHOP AUCKLAND AND WEARDALE RAILWAYS.

ON Monday week, the ceremony of opening the tunnel formed at Shildon, near Bishop Auckland, for the purpose of facilitating the communication between the extensive coal field in that neighbourhood and the shipping port at Middlesbro', took place amidst great rejoicings.

Hitherto, the coals from this district have been conveyed along two inclines, called the Black Boy and the Brussleton inclines. This operation was frequently found to be attended with great delay; and to be injurious, likewise, to the waggons and the coals. To obviate these inconveniences and loss, several spirited individuals projected the formation of a tunnel underneath the hilly ground on which Old Shildon stands; and after making the necessary preparations, the work was commenced rather less than three years ago. The tunnel has now advanced to a state of completion, at an expense, we have been informed, of about 100,000*l.*; and Monday was the day fixed upon for placing *the last brick* in the position of the key-stone of the arch at the last junction of the tunnel.

In the words of a scientific gentleman, we may state that the objects proposed to be attained by the tunnel, are—

"1. Uninterrupted railway communication by locomotive engines from the staiths to the pits.

"2. A direct communication from the coal pits to the shipping port, without the intervention of other power than horse or locomotive engines.

"3. By thus conducting the business, the coal owners and the Railway Company will both derive considerable benefit—the coal owners in the capital required in the transit of their coals, and the Company by dispatch of business. The coal owners will save full 30 per cent. in their waggon establishment."

The disadvantages which have attended the use of inclined planes are stated, on the same authority, to be as follows:—

"1. Great delay in the transmission of waggons from the pits to the shipping port.

"2. Great expense to the coalowners in finding and supporting waggons.

"3. That 2, 3, or 4 days are consumed in the progress of waggons from the pits to the staiths, while one day only will be required by the tunnel."

"In fact," concludes our informant, "the tunnel will be the salvation of this part of the coal district, and very much reduce the expense of coals to the community."

We understand this is the only tunnel, properly so called, in the county of Durham. It is 1,300 yards long, or nearly three-quarters of a mile. Its height is 23 feet 4 inches, and its breadth 21 feet at the point whence the arch springs. The greatest depth from the surface is about 20 fathoms. The tunnel is constructed for two lines of railway, and during its formation has been worked by seven shafts from the surface. It passes principally through the coal stratification of the neighbourhood—penetrating the main coal seam, which has been already worked, and passing also through two unexplored seams which lie beneath the main coal, but all of which ascend to day in the immediate vicinity. A considerable quantity of white post stone was obtained in three of the shafts, and in the southern open excavation to the tunnel; and was rendered available for the construction of the works. The sides of the tunnel are formed of stone, and he beautiful span of the arch entirely of bricks—upwards of seven millions having been employed in the work. The operations of sinking, &c., were commenced on the 22nd of April, 1839; 21 months only have been occupied in the construction of the tunnel itself, which forms a junction between the Stockton and Darlington Railway and the Bishop Auckland and Weardale Railway, now in progress up the Wear valley to Crook.

Dinner was provided, at six different houses in the town, for all the workmen who had been engaged in the construction of the tunnel. Upwards of 400 partook of the substantial fare, and drank success to the undertaking.—Abridged from the *Durham Chronicle*, Jan. 14.

WEARDALE EXTENSION RAILWAY.

AN adjourned meeting of the Provisional Committee, and others interested in this undertaking, was held at Wolsingham, on Monday, 17th instant, G. H. Wilkinson, of Harperley Park, Esq., in the Chair. Notwithstanding the inclemency of the weather, the meeting was well attended.

The names of Robert Duncombe Shafto, Esq., of Whitworth Park; John Davidson, Esq., M.D.; and Nicholas Chapman, Esq., of Wolsingham, were added to the list already published of the Provisional Committee.

Messrs. Storey and Lax, the Engineers, informed the meeting that the severity of the snow storm had prevented the completion of the survey of the line, and obliged them to postpone their formal Report, but that they had completed the section of the entire line, and a large portion of the Parliamentary survey, which were exhibited.

It further appeared, that although it would be found expedient, for the more effectual working of the western incline plane (from Woodifield to the River Wear), to divide the same, and work it by means of two fixed engines, whereby an additional expense of 1,200*l.* or 1,400*l.* would be incurred, yet the remainder of the line had been ascertained to be of easier construction than was anticipated, and the earthwork unexpectedly light, so that there seemed no reason, from present appearances, to apprehend a heavier outlay, on the whole, than that originally reported.

The survey of the western portion of the line was then submitted to the several landowers present, and approved; and the meeting was adjourned to Monday, the 7th of February, at the Black Bull Inn, Wolsingham, at noon.—*Durham Advertiser.*

CLASGOW AND GREENOCK RAILWAY.

THE advantage of this line, in affording easy communication with Glasgow, was strikingly shown lastweek. A large party of gentlemen were anxious to be present on Friday at the Anti-Corn Law Banquet, in the City Hall, Glasgow, provided it could be arranged that they might be home the same evening. On this being mentioned to the Secretary and Directors, they instantly, and in the handsomest manner, agreed to put on an extra train, to leave at the close of the proceedings. The result was, that between fifty and sixty gentlemen from this neighbourhood, who would otherwise have been deprived of the gratification, and who were unanimous in their thanks to the Directors for their readiness in affording the accommodation, embraced the opportunity of being present, were probably in their own houses in Greenock as soon, and much more comfortably, than a considerable portion of the inhabitants of Glasgow who were present at the banquet. While speaking of the railway, it cannot be out of place to allude to the excellent way in which the traffic has been carried on during the last week, when it might have been expected, from the heavy and continued fall of snow, that considerable irregularity in the arrival of the trains would have arisen, as has been the case elsewhere. By the untiring zeal and activity of the Directors, Secretary, and Engineers, however, with the able and energetic assistance of their Inspector, Mr. Ross, the communication has been kept up with the usual praiseworthy regularity. A number of labourers have been employed on the line constantly removing the snow, and only one or two trains have been slightly detained. Everything is so well managed, that although a great deal of snow fell on the afternoon and evening of Friday, and though the special train was not on the rails for four or five hours after the ordinary traffic of the day was over, still the distance was performed, with the usual stoppages, considerably within an hour. As a proof of the anxiety of the Directors to add to the comfort of the passengers, we may mention, that jars of hot water were placed in the carriages; and, indeed, everything was done, by applying additional locomotive power, and otherwise, to carry on the work regularly, and to the satisfaction of travellers.—*Greenock Advertiser.*

NORTH MIDLAND RAILWAY.

To the Editor of the Railway Times.

SIR,—"A Railway Shareholder" from Manchester, in reference to my observations in your paper of the 8th instant, relative to the reduction of the clerks' salaries on the North Midland Railway, asks me with apparent triumph, "How many clerks, aye, and efficient ones too, might be found in Manchester and elsewhere, whose pittances are from 60*l.* to 90*l.*, and who would be exceedingly glad to obtain a situation of 100*l.* a year, if they knew where to find it?" More's the pity.—There are, no doubt, many railway shareholders, and Manchester ones, who would willingly assent to this, but I beg to tell him and other railway shareholders who think with him, that there are also others, whose opinions are equally deserving of attention, perhaps more so, who take a different view of these proceedings. As I observed before, all great railways can afford to be liberal, without being prodigal of their means. The "Shareholder" asserts, "that the proposed reduction does not affect any clerk having a salary of not more than 100*l.* per annum;" perhaps not, but he omits to notice, that it was intended to jump over these intermediates down to the porters, who were at the same time to have been docked something per week from their pittances. Can the "Railway Shareholder" inform us if this very notable piece of economy has been carried into effect, and if so, how far has it proved consistent with the efficient working of the line? My object has been to point out what, in my opinion, would be the consequences resulting from so ill-judged and ill-advised a proceeding, as that which the North Midland Directors seemed resolved to carry to extremities, not only in this but in every other department, let the consequences be what they may; and as a proof of the inconsiderate recklessness with which they dogmatically persevere in effecting these cheese-parings and candle-end savings, I need only refer your readers to the evidence adduced at the Coroner's inquest on the body of Henry Hoyle, the driver who was killed by the engine being thrown off the line, as published in your paper of the 8th instant. Can any one reading that evidence, and judging of it impartially, say otherwise than that the uneveness of the road was the main cause of accelerating the accident? The wheel, if faulty, might have snapped on the smoothest part of the road, but it was pronounced sound, and its having travelled so long, subject to daily inspection since being repaired, would warrant any one in presuming upon the evidence adduced as to the uneveness of the road, which caused bumping and ultimately breaking.

Now, why was the road so uneven? Because it wanted repair. Then, I may be told by the "Railway Shareholder" that it was the duty of the contractor for repairs to look to this. I admit it so far, but the contractor for repairs cannot go further than the means allowed him by the Directors will enable him; he will not advance a shilling out of his own pocket,—why should he?—he is not paid a per centage on the receipts of the line, or no doubt he would take care to render it as acceptable to the public as possible, by keeping it in the best possible order; he is paid just as much as the Directors in their wisdom think fit to allow him, and in this particular case of the North Midland, I maintain a sum is wholly inadequate for the purpose; hence the deplorable consequences of ill-judged economy.

These very long-headed Directors have (at least if their own printed reports be correct), in their zeal to economise, contracted for the maintenance of the Leeds end of the line at 12½ per cent. less per mile, than a month or two previously they agreed to pay for the Derby end, where fewer trains travel by one-half than at the Leeds end in consequence of the Manchester and York lines pouring in their respective quotas. Will the "Railway Shareholder" or North Midland Directors, (who may well exclaim, "save us from our friends,") maintain that this is economy consistent with the efficient working of the line, or the safety of the ublic, which in the case alluded to, was dreadfully jeopardized? How will these Directors face their constituents, at least such of them as hold their interests in the concern for the purpose of a permanent investment, and not as speculating jobbers, who would advocate economy of any sort, so that it suited the day to his purposes, of which class I strongly suspect your Manchester Shareholder to be?

These are occurrences which must, sooner or later, open the eyes of the public to the urgent necessity of calling legislative interference to their aid in compelling Railway Managers to do their duty by them. Travelling by rail is liberally paid for, and if the lavish expenditure upon any line in its formation requires an unusual degree of rigidity as to the cost of its equipments and maintenance, it behoves the public to take care that such economy is not, as in this case, carried to such lengths as to endanger their lives every time they risk travelling upon it.

Woe to the North Midland Directors, if such an accident should again happen, and that it can be incontestibly proved that they stint the means for preventing it. If, unhappily, these predictions should so soon prove as true as those of "Vincit Veritas," in your paper of the 11th December last, in regard to the Great Western Railway, I would not be in the place of one of them for all their line is worth. I am, Sir, yours, &c.,

JACOBUS.

London, January 19, 1842.

WORKING EXPENSES OF RAILWAYS—COST OF COKE.

To the Editor of the Railway Times.

SIR,—To form a proper opinion as to the relative value of railway shares, regard must be had to something besides the cost of construction and the amount of weekly traffic. The notes at foot of your railway traffic returns contain much valuable information on other points, to which parties who contemplate investing money in railway stock would do well to attend. The cost of coke in the different localities ought also to be taken into the calculation, and also whether the Companies are carriers on their own account, or merely receivers of a toll on the goods' traffic.

The cost of coke is of much more consequence to the success of a railway than is generally supposed; and in my opinion it is owing to the enormous price paid for coke in London and the south of England, that we are to attribute the small amount of *net profit* realised on most of the metropolitan lines.

It has often surprised me that the South-Western Company have not been enabled to make a higher dividend, considering the great amount of *passenger* traffic. The high price of coke may partly account for it.

The consumption of coke on the Manchester and Leeds line is about 50 tons per day—per annum 18,250 tons. The price paid till recently was 13s.; it is now procured, I believe, for 12s. per ton. Some other Companies pay from 23s. to 37s. 6d. The effect of this on the *net* annual profit will appear from the following calculation:—

18250 Tons coke at price paid by Leeds Company, 12s.	£10,950 0 0
Ditto at price paid by Liverpool line, 28s.	20,987 10 0
Ditto ditto by Grand Junction, 26s. 6d.	24,181 5 0
Ditto ditto by Great Western, 37s. 6d.	34,218 15 0

In a letter (under same signature) you did me the honour to insert in your publication of the 8th instant, I showed that the weekly published traffic receipts on the Leeds line would have averaged 800*l.* per week more, for the six months ending on 31st December, had their accounts been kept in the same manner as those of the Grand Junction Company. From the above calculation it appears, that during these six months the Leeds Company have saved in the item of coke, as compared with the price paid by the Grand Junction, 7,000*l.* This, added to 800*l.* per week, would have raised the working expenses on the Leeds to upwards of 50 per cent,

The low price of coke, then, and the fact of the Leeds Company not being carriers of goods on their own account, sufficiently explain the low percentage at which the line is worked, and prove that the clamour raised by your correspondent, Mr. "Joseph Walker" and others, that the Directors were giving too favourable a view of matters, has no foundation in fact. Mr. "Joseph Walker" appears to be conscious of this himself, for he has taken no notice of my request that he would favour us with his authority for stating that the *net* profit was less than Mr. Entwisle assured us it amounted to.

I trust, Sir, that at the ensuing half-yearly meetings, railway shareholders will insist on the accounts being kept in the manner insisted on in several of your leading articles twelve months ago, giving the exact cost of each item separately, and *in the form of a percentage* on the gross receipts, as practised on the London and Birmingham line. Thus, and thus alone, can the shareholders ascertain if their lines are economically worked.

I am, Sir, yours respectfully,

A HEAVY HOLDER IN THE LEEDS AND MANCHESTER LINE SINCE 1838.

January 25, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY—GOODS TRAFFIC.

To the Editor of the Railway Times.

SIR,—Your correspondents, "Bristoliensis" and "A Shareholder," who have favoured the public with the shadow of a reply to my inquiry as to the reason why the merchandise traffic on the above railway is so small, do not appear to me to have exhibited anything more than a shadow, and the substance of a reply is, I hope, yet to come.

The point of my inquiry was, to ask why the *proportion* of revenue derived from merchandise is smaller on the Birmingham and Gloucester than it is on 29 out of the 32 railways usually reported weekly in your paper.

"Bristoliensis" says, that it is so because the line is not yet opened to Bristol; but if he will look to the calculated traffic stated before Parliament, and more than once repeated in the official statements of the Directors subsequently, he will find that hardly one-third of the so-stated amount has been realized, whereas the passenger traffic has nearly, if not quite, come up to the Parliamentary statements. He will also find that the Glasgow and Ayrshire, and the Great North of England Railways, raise more than half of their receipts from merchandise, although they are only partially opened between their termini, whereas the Birmingham and Gloucester is wholly opened between its termini. Your tables of traffic give more examples to the same purport, and "Bristoliensis" will, by considering them, see that his reply is not borne out by facts.

Whether the reply of "A Shareholder" hits the real truth or not is less easy to discover. The management of the Grand Junction and the Manchester and Leeds would seem to be instances rather adverse to his abstract position; but perhaps "A Shareholder" will render his position less vague and abstracted by informing us of the circumstances under which his opinion has been thus arrived at. The subject is of such importance to the real shareholders that it well deserves full explanation.

I am, Sir, your obedient,

OBSERVER.

Birmingham, Jan. 26, 1842.

CARRIAGE OF COAL BY RAILWAY—BIRMINGHAM AND GLOUCESTER RAILWAY.

WE copy the following from the *Cheltenham Examiner*, to the Editor of which it is addressed:—

SIR,—An inquiry having been made in the *Railway Times* of this week, by a proprietor of the Birmingham and Gloucester Railway Company, why it is that the receipts for merchandise on that line are so trifling, the following remarks and statements I think will satisfy him:—The Birmingham and Derby Railway Company having made arrange-

Digitized by Google

ments, so that coals might be carried from Clay Cross, Derbyshire, to Cheltenham, in the same trucks, without being shifted from the time they are first put into the truck until they arrive at Cheltenham market, and agreed to pay the Birmingham and Gloucester Railway Company 4s. 9d. per ton for their portion, being 44 miles. Fifty tons of the same coal were forwarded to Cheltenham on trial, which gave very general satisfaction. An agreement was about being entered into for at least 40,000 tons per annum, provided the Railway Company would continue to carry without raising the price, when, surprising to say, the whole arrangements were put aside, by a statement of the Chairman of the Birmingham and Gloucester Railway Company, that he would not guarantee to carry more than 500 tons at the above mentioned price; the reasons, I suppose, must have been that they had not yet calculated properly whether it would leave them a profit or not, which led to the following offer by a gentleman of this town, who has two engines now ready to go to work, one of which has already done a large portion of work in forming the said railway, and I am satisfied will bring double the quantity from Birmingham to Cheltenham of any engine now on the line:—

"Cheltenham, Jan. 8, 1842.

"Sir,—I request that you will lay the following communication before the Directors of the Birmingham and Gloucester Railway Company, at their next meeting:—

Upwards of 40,000 tons of Staffordshire coal are annually consumed in Cheltenham, the principal part of which is delivered at Coombe Hill, and carted from thence; about the same quantity of Forest coal is annually delivered by the Cheltenham and Gloucester Tramway. At the ordinary rate of charge for heavy traffic, adopted by the Derby and Birmingham Railway Company, the London and Birmingham, and other Railway Companies, a supply of coal may be delivered in Cheltenham, of a superior quality and at a lower price than either of the above deliveries, and an additional revenue from 15,000*l.* to 20,000*l.* be received by the Company. On the other hand, the present rate of charge of 6s. per ton entirely keeps this traffic off the line. It is under these circumstances that I offer to pay to the Birmingham and Gloucester Railway Company, the price of 4s. 6d. per ton for the transit of coal from Birmingham to Cheltenham, or if their locomotive power be inadequate to the supply I should require, I offer to supply my own men, engines, and waggons, to place them under the control of the Company's officers, and to pay 2s. per ton for the use of the Company's rails, water, stations, and assistance up the incline on returning with the empty trucks: this offer, if accepted, will give the Company an income of 10*l.* per train, against which would only have to be set the trifling extra wear of the rails, while the Company's own trains do not earn more than from 15*l.* to 20*l.* each on an average, and have all the expenses of the line to support. The result would be the payment, in two years at furthest, of 10,000*l.* per annum into the Company's coffers, which would be all but net revenue. I cannot suppose that the Directors can hesitate to accept of one or other of the two offers so advantageous to the interests of the Birmingham and Gloucester Railway Company, and only await their reply to commence my arrangements.

To the Secretary of the
Birmingham and Gloucester Railway Company.

The aforesaid offers have been laid before one of the most eminent engineers in England, who has constructed more lines than any other engineer in Great Britain; his reply is, that the offer is a most reasonable one, and the Directors of the Birmingham and Gloucester Railway Company ought to accept it: again, strange to say, it has been refused. As a shareholder of the above-mentioned line, I would offer a few remarks. The following charge for carriage of coal will show the untradesman-like manner in which this line has been conducted:— Within months ago, the Directors of the above-mentioned line charged upwards of 10s. per ton for carrying coal from Birmingham to Cheltenham, which naturally drove the trade from the road; the Secretary came to Cheltenham a few months after, and offered parties, if they would again come on the line, to carry at 7s. per ton; their charge now is 6s. per ton; but should parties find their own trucks, they would charge 4s. 8d.—thus charging 1s. 4d. alone for the use of the trucks that short distance of 44 miles, while the charge of the Derby Company for the use of their trucks, from Clay Cross to Cheltenham, being nearly 120 miles, is only 9d. per ton.

I think by these few statements that the chosen few, acting under the new system of executive government, must yet have a great deal to learn before they are capable of conducting the affairs of the Birmingham and Gloucester Railway Company to the advantage of the shareholders at large. The meeting will now take place in a few weeks, when I trust every shareholder will either attend or send his proxy, so that these matters may be properly discussed. The traffic I was led to believe, when I first subscribed to this Company, would be 800*l.* per week for merchandise alone. I am sorry to say it only shows this very week a return of 114*l.* for merchandise at this season of the year, when the greatest traffic ought to be on the line; but still I have yet a good prospect before me, knowing so many reinforcements may be added by good management, which I have no doubt we ultimately shall succeed in getting. It has been a bye word all over the kingdom, the bad construction and the bad management of this unfortunate line, the former we cannot alter, the latter we have in our power to alter in such a way that it will bring a trade and ample return for the money we have invested in the same.

A WELL-WISHER AND ORIGINAL SHAREHOLDER IN THE BIRMINGHAM AND GLOUCESTER RAILWAY.

SHEFFIELD AND MANCHESTER AND BRIGHTON RAILWAYS.

To Joseph Locke, Esq., C. E.

Sir,—I am reminded by the proceedings of the Brighton Railway Company, last week, of a fact which had escaped my recollection, namely, that at the outset of that undertaking, you made a careful examination of the character of the country, and of the necessary works; and that from that examination you were enabled to state "that in scarcely any other district was the material so favourable," that "920,000*l.* would be sufficient for the construction of the works," and that contractors might be found to do it for that sum. Adding the cost of the land, &c., the total estimate before breaking ground, thus amounted to 1,200,000*l.* The result of the works, so far as they have progressed, is, that we must multiply your estimate by two, with a fair probability of being compelled to make your multiplier three, or, at least two and a half.

Two or three months since, you made a rigid investigation of the estimates of the probable cost of the Sheffield and Manchester Railway, when you were enabled to pledge your personal veracity and your professional reputation,—the same veracity and reputation which had been previously staked *in re* Brighton, as above—to the declaration that the railway may be completed for 1,113,500*l.*, (a sum, by the way, ominously near the Brighton estimate,) and that you could find persons (another ominous coincidence with the Brighton estimate,) willing to enter into contracts for the formation of the line at that sum.

May I take the liberty of inquiring whether your Sheffield arithmetic is equally faithful with your Brighton arithmetic, *i. e.* that in virtue of the Locke multiplier we are to read some 2,500,000*l.* or 3,000,000*l.* instead of 1,113,500*l.* And further, I would ask, whether you *named* the contractors who could make the Brighton Railway for your estimates to the Directors, and if so, why were they not engaged? And, moreover, I should be glad to be informed if you have *named* the contractors who will perform a similar kind duty in reference to your estimates for the Sheffield line? I am urgent in asking these questions, as I am one of the poor people whom the Sheffield and Manchester Directors are hunting into the Insolvent Court, and even beyond it, on the strength of your figures.

I have the honour to be, Sir,
Your obedient servant,
A SHEFFIELD SUFFERER.

THIRD CLASS CARRIAGES — MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

Sir,—Seeing an article in your very useful paper of January 8th, signed "Jacobus," relative to the defective management of the Manchester and Leeds Railway, I cannot refrain from adding a few words, as I was on that line a short time ago, and was enabled to ascertain some facts which were not very favourable to it.

The Managers seem to make a point of rendering the third class carriages as unpleasant as possible. They are very properly called tubs, for there are no seats, and very frequently they will not even allow passengers to take so much as a basket or small bag with them. The porters at the stations have probably orders to throw every obstruction in the way of third class passengers, for a gentleman, with whom I travelled, stated that he saw a woman come with a small box to the Manchester station, and as she was not able to carry it herself, her son was going to take it up the stairs from the booking office to the train, but that was not allowed, and the porters refused to carry it. So the poor woman, because she could not afford to ride in a second class carriage, would have been obliged to leave her box behind her, if some kind gentleman had not assisted her with it up stairs. They also frequently leave the last carriages in the train (if they are third class) just beyond the shed, so as to catch the dripping from the shed and the rain.

The comfort and the lives of our fellow creatures ought not to be trifled with in this way by a public Company, or I should not think of rendering public any information of this sort, for I found every accommodation in the first class carriages.

I am, Sir, yours obediently,
S. R.

PROPOSED GRAVESEND AND ROCHESTER RAILWAY.

To the Editor of the Railway Times.

Sir,—I am glad to find this project now fairly brought before the public, for I am not acquainted with any short pleasure line which is so likely, from the present great traffic between the termini, to answer the expectations of its proprietors, provided that the capital is not thrown away by constructing a *double* line, and by the introduction of ornamental station houses; nor would I recommend rails heavier than 56lbs. to the yard lineal, which if made of the strongest section will answer all the purposes of a line on which the carriage of merchandise may not be expected to any considerable extent. Without these precautions, the shareholders will in vain look for a sufficient return for their outlay; nor will it avail anything to say, "that a well-known contractor has offered to complete the *works* at this estimate, and find good securities for their due performance," unless a similar guarantee be given for the cost of the stations, carrying stock, and all the furnishings of the railway, to render the line, in every sense of the word, fit for carrying on the traffic.

It will not be out of place to mention in conclusion, that I examined this proposed line in the autumn of 1836, and recommended its adoption early in 1837.

I am, Sir, your obedient servant,
FRANCIS WHISHAW.

January 24, 1842.

2. *Minus* toll to London and Birmingham 112*l.* 10s. 1d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the *L.* and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅔ (83¾+21+31.)

13. The 5,331,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 43*l.* 5s. 2d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, an 1 is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25. The 3,784*l.* 11s. 11d. are the receipts after deducting 9s. 0d.; horses, 38*l.* 11s. 6d.; dogs, 0*l.* 11s. 6d.; parcels, 169*l.* 19s. 10d.; cattle, 30*l.* 8s. 0d.; corn, 21*l.* 9s. 6d.; heavy goods, 49*l.* 1s. 9d.; coal, 95*l.* 16s. 0d.—Total, 913*l.* 6s. 1d. The dividend is from the time of opening.

29. The details of the receipts are as follows:—Passengers, 1,964*l.* 14s. 2¾d.; parcels, carriages, horses, and mails, 312*l.* 12s. 7¾d.; merchandise, 1036*l.* 3s. 4d.; minerals, 240*l.* 9s. 4d.; cattle, 43*l.* 17s. 8½d.—Total, 3,597*l.* 17s. 2¾d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 102*l.* 15s. 0d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

30. The receipts are after deduction of *L.* and M. toll.

31. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

32. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

TO CORRESPONDENTS.

A Lover of Justice.—*The case does not come within the scope of our journal. We cannot comply with our correspondent's request, as we are not aware that there is any journal in London called the* Weekly Times.

Mr. H. *(Manchester.) who complains of the non-arrival of his copy of the* Railway Times, *is informed that it is not sent from our office. He must address his newsman, whose name will probably be found printed on the wrapper of the present number. Very generally the irregularity in the arrival of newspapers does not rest with the news-agents, but with the Post-office people, from a cause alluded to in the following paragraph, which we copy from the* Scotch Reformers' Gazette:—"*We are glad to find that certain persons are now in custody for intercepting or purloining newspapers sent through the Post-office, greatly to the annoyance of the newspaper offices and to the disappointment of their readers. We have had our full share of that annoyance, but an example will now probably be made which will have a most salutary effect all over the country in time to come.*"

B. S.—*The distance must be measured from* London, *not Croydon.*

Electro-Magnetic Railway Train Controller.—*Why should we puff off this (so-called) "grand discovery?" We must have something more than the mere* ipse dixit *of An (anonymous)* Engineer *to convince us of its efficacy.*

Birmingham and Gloucester Railway.—*Perhaps the letters published elsewhere will meet the views of* C. W.

R. H. *advances no new fact, and his assertions ought to have the authority of his name when opposed to statements to which the name of the writer was appended. The further discussion of the matter is, besides, not likely to be of service.*

Mr. S. *(Leeds.)*—*To carry out our correspondent's suggestion would destroy the uniformity of the volume, nor would it, in our opinion, be any great improvement.*

South-Eastern Railway.—*In answer to the inquiries of our correspondent* Ebor, *we beg to state that the arrangement between the Brighton and South-Eastern Companies is, that the cost of so much of the Brighton line as lies between Croydon and the junction at Redstone Hill, Reigate, (12 miles) shall be stated and vouched. The South-Eastern Company then pay to the Brighton one-half of such cost, which will entitle the former to the possession of the southern six of the twelve miles in question, the Brighton Company retaining possession of the northern six. After the transfer, each of the two Companies is entitled to run its own traffic over the whole 12 miles without paying any toll to the other, so that the property and control of one 6 miles will be in one Company, and the property and control of the other 6 miles will be in the other Company. The result is, that each Company will, for its own traffic, get the full use of 12 miles of line at the expense of one-half of the cost of such 12 miles, whilst each being in possession of a portion of line which the other must use, mutual accommodation is ensured.*

The long Report of the Liverpool and Manchester meeting coming to hand at a late period of the week, has compelled us very reluctantly to postpone the letters of Mr. C. Hood *and* One of the Old School *(on Four and Six-wheeled Engines); of* Captain Watts *(on the Northern Union Scheme); of* A Manchester Man; *a* Holder of 100 Shares, R. C., *and other correspondents, as well as our law cases and miscellaneous matter. The whole are in type, and shall appear next week.*

THE RAILWAY TIMES.

SATURDAY, JANUARY 29, 1842.

Two meetings were held in Cork in the course of last week, with reference to the construction of a line of railway from the Irish metropolis to that city. These meetings appear to have been got up by the advocates of the Dublin and Kilkenny Railway Company, which our readers will recollect has for many months been virtually defunct, nor do we think that the recent demonstration at Cork will do much to resuscitate it.

It will be seen from the abstract of the proceedings, which we give in another page, that the Directors of the Kilkenny Company propose to construct their line from Dublin as far as the funds they now have in hand will carry them, and then to extend it to Cork, provided Government will lend money at 4 per cent., or guarantee 4 per cent. to others lending it, to half the amount of the share capital. This would be a guarantee of 2 per cent. upon the entire capital; but as no security is required on the portion constructed from the existing resources, which portion it is believed would be extremely profitable, it is contended that Government would be indemnified against all risk. There could be no great risk, we think, under any circumstances, in such a guarantee, as it is allowed on every hand that the upper portion of a line from Dublin to Cork would return a very fair per centage; nor can there be a doubt that a line so carried out would be beneficial to the city of Cork, and to a very important district of Ireland. The main points to be considered are, whether the Government support of such a scheme might not interfere with a more comprehensive system of Irish railways, and whether the Dublin and Kilkenny Company have it in their power to carry out, with such support, the scheme which they now propound. We shall address ourselves to the last question first.

We have always had a very favourable opinion of the Dublin and Kilkenny project, and believe that from the easiness of the country, the cheapness of Irish labour, and the absence of extortion on the part of the landed proprietors along the route, the speculation is an inviting one to private capitalists. It would seem, however, that the subscribers take a different view of its probable productiveness, since having obtained an Act of Parliament, and entered into arrangements for a great portion of the land required, they have allowed the scheme to languish, so that, as explained by the accredited organ of the Directors at the Cork meeting, 6,000 of them out of 8,000 have suffered their interest in the undertaking to expire, through the forfeiture of their shares. We are aware that the apathy of the subscribers is attributed to the dread of collision with any future Government scheme, but this is no adequate cause for their holding back, since no one can imagine for a moment that had the Kilkenny line been vigorously proceeded with and completed, the legislature or the Government would ever have sanctioned any rival scheme likely to interfere with the Company's prospects, without affording ample compensation to those who had embarked their capital in the speculation on the faith of an Act of Parliament. Had the general good of Ireland, and the success of a comprehensive plan of railways, rendered any interference with private undertakings necessary (which, however, we do not think would have been the case), does any one suppose that these parties would not have been dealt with, we will not say with merely bare justice, but with undeniable liberality? There must have been other reasons then, besides the fear of having their property ruined, to induce so many of the Kilkenny Railway Proprietors to forego the money they had already advanced.

Whatever these reasons may have been, they must now exist in still greater force. If it were the doubt of an adequate return on the money invested, how is their position altered for the better, by having a confessedly less productive speculation attached to the original project? If the line from Dublin to Kilkenny costing, or rather estimated to cost, less than 10,000*l.* per mile, and passing through perhaps the most populous district in Ireland, were not likely to "pay" what shall be said of the extension from Kilkenny to Cork, at an estimated average of from 12,000*l.* to 15,000*l.* per mile through a less productive country? And what is the temptation held out to induce them to agree to this extension? A Government loan at the rate of 4 per cent. interest, when for 1 per cent. additional they might raise, as other Companies have done, a portion of their capital in the market, provided their orginal scheme were likely to be as productive as they would represent. The agent of the Directors, in his attempt to enlist the people of Cork in favour of the plan, proves too much, so far as the Kilkenny proprietors are concerned. He assumes that the profits from the line up to Kilkenny would be 10 per cent., and from Kilkenny to Cork 5 per cent., thus giving on these lines when blended, a return of 8 per cent. to the subscribers, after paying interest on the Government loan, and thereby making it appear that for the sake of serving the city of Cork, or from some other motive not connected with a pecuniary return, the Directors are counselling their constituents to sacrifice just 2 per cent.! If 10 per cent. be insufficient to attract capitalists to the one line, will 8 per cent. attract them to the two combined? But it seems that even the prospect, or promise by Directors and Engineers, of 15 per cent. on a portion of the proposed Kilkenny Railway will not bring subscribers to the undertaking, for that large return, it was stated by one of the speakers, was "estimated," on the expenditure from Dublin to Naas! We think we have said enough to show that the subscribers to the Dublin and Kilkenny Railway would not be likely to embark in this more extended venture. The number of shareholders, it is allowed, has been reduced by the forfeiture of shares to one-fourth what it was at first, nor is it at all clear that any considerable proportion of even this small remainder would voluntarily choose to proceed—for it should be remembered, that not a few may have paid up their past instalments from fear of legal proceedings, or with a view to participation in any scheme of Government compensation, and to compel them to go on with this extension, tacked to the original plan, would be impossible. The consequence would inevitably be, that were Government to entertain the proposition of the Kilkenny Directors, the line would be carried but a short way from Dublin, and Cork be as far off a line of its own as ever. This appears to have been feared by some of the parties at the meeting, when they insisted upon the commencement of the works, at both ends simultaneously—a stipulation which, we venture to predict, will put a complete stop to all further agitation of this Kilkenny proposition.

As regards the propriety of public assistance being lent to limited schemes like that now proposed, there could be but one opinion, if it necessarily followed that such aid would prevent or postpone the execution of a more extended system, but we do not see that any danger of such a result would be incurred. A beginning must be made somewhere, and why not a line to Cork in the first instance?

Digitized by Google

We take it for granted that the proprietors of the Kilkenny line would be content, in consideration of Government *assistance*, to submit the management of the railway to Government *superintendence?* Indeed, any other arrangement would, in the present state of Ireland as regards railways, detract most seriously from the utility of even the most comprehensive system that could be carried into effect.

We gather from the speech of Mr. CROKER at the Cork meeting, that the serious attention of Government is at present directed to some such system. Whether it is to be carried into operation in the mode which, a few weeks ago, we on good authority promulgated as being in contemplation—namely, an additional tax upon Irish letters—matters comparatively but little. We have no doubt that were the question taken up by Government with proper spirit, the details might be easily and satisfactorily arranged. The importance of the subject is now generally acknowledged, and it is high time that something were *done*.

We cannot conclude without a passing reference to the most handsome offer made by Mr. CROKER to give *for nothing* whatever of his property might be required for the construction of a line to Cork. Such a proposal reflects the highest credit on that gentleman, and were his example generally imitated in Ireland, the effect upon Government in inducing them to put forth or support some general scheme of railway communication, would be much stronger than the united call of twenty meetings, whether county or city, at which flashy speeches are made, and "patriotic" resolutions passed, and there an end.

A GENTLEMAN of Sheffield, named WILEY, in a letter inserted in the local journals, gives the particulars of a detention at the Normanton station which reflects anything but credit upon the parties to whom the management of that important junction is entrusted, and against the recurrence of which we trust the Directors of the North Midland, and Manchester and Leeds Companies will take effectual measures to guard. The short facts, as stated by Mr. WILEY, are these:—

On Tuesday week, the parties who had booked upon the Manchester and Leeds Railway, to be taken forward by one of the afternoon trains on the North Midland line, found on their arrival at the Normanton junction that the train by which they should have been conveyed onwards had started *not more than two minutes*. No attempt was made to stop the out-going train; nor, although there was a spare engine standing at the station with its steam up, was the request of the disappointed passengers acceded to, that it should be attached to the *North Midland* carriage in which they had come, so as to overtake the train which had just started. The excuse made for non-compliance was, that the engine did not belong to the North Midland but to the York and North Midland Company, as if the serious inconvenience of a large number of the Company's customers were of less moment than an infringement upon the formalities which we suppose regulate the arrangements of the two Companies! It never seems to have occurred to the parties at the station that the use of the spare engine for less than half an hour would have sufficed to overtake the other train, and could not possibly have occasioned much inconvenience to the York and North Midland Company, even had the engine been waiting at the station in momentary expectation of a load. But no! nothing of the kind had ever been done before, and therefore could not be done now.

There, then, at Normanton, stood Mr. WILEY and his fellow travellers, with the pleasant reflection that no other passenger train would start for the south till next morning. The Normanton officials, however, were not without *some* consideration for the customers of their employers. An offer was made, says Mr. WILEY, "not to send us south, according to the engagement of our tickets, but to send us north to Leeds! where we might stay for the night; and whence gentlemen who had important engagements in London for the next morning, might then, instead of being at their destination, start for town! This insulting proposal was, of course, indignantly rejected." Ultimately the carriage was attached to a luggage train, by means of which the passengers for the south reached Derby at a late hour, where they had to remain till 8 o'clock the following morning before they could proceed to town, the Sheffield passengers being taken on from Masbrough to that town by a pilot engine ordered out by Mr. STANSFIELD, one of the North Midland Directors, who was himself one of the disappointed passengers at Normanton, but who, although he is stated to have behaved with the utmost politeness, did not think it necessary to exert his official authority at an earlier stage of the proceedings.

We cannot do better than give Mr. WILEY's inferences, from the facts of which the above is the substance. He is addressing the Directors of the Manchester and Leeds, and North Midland Companies:—

"I have thus given you a plain statement of the facts, and I remark that no sufficient reason but bad management or negligence can be assigned for our arriving at Normanton too late for the south train; that arriving there immediately after the train had started, it would have been the easiest thing imaginable to stop the train for the few moments necessary to attach our carriage, and even had the detention amounted to five minutes, the loss could have been recovered with the utmost ease before arriving at the next station; and my third remark is, that if the Normanton station be, as we were assured, unprovided with a pilot engine, if the station master has no authority to fulfil the engagements of the Companies with their passengers, this state of things betrays a shameful disregard of the rights of the public, and of the contract into which the Companies enter with their passengers. Under the old system of coaching, the public were protected by the power which passengers had to provide themselves with another conveyance, at the cost of the coach proprietors. But since the Railway Companies, by keeping exclusively in their own hands the passenger traffic on their lines, deprive the public of this remedy, it is incumbent upon them not only to make such arrangements as shall reduce the uncertainties of travelling to the minimum, but also to make provision for the prompt redress of such wrongs as the mismanagement of their servants may at any time cause. *Their engagements with passengers ought to be kept with scrupulous fidelity.* They have no right to throw upon the public all the loss and inconveniences of the casualties of the line. *When a bargain is made with a passenger, by the issue of a ticket, to convey him to a given place, by a given time, that passenger has a right to expect the utmost exertion to be made by the Company to overcome any accidental difficulty that may arise.* But for Railway Companies, that have contracted to deliver passengers in London, on the Wednesday morning, to suffer their understrappers at Normanton to offer, as the only alternative in the case of disappointment, a conveyance back to Leeds, is adding insult to injury, and is a flagrant violation of that good faith which the public have a right to expect."

In every word of this we entirely concur. Of course it is for the interests of both Companies that vexatious detentions like that complained of should not occur, and from all that we have heard, we believe that in general their arrangements are marked by good sense and an anxious desire to accommodate the public. Under these circumstances we should be sorry to visit with severity of censure a solitary lapse, but we would earnestly impress upon the Directors the absolute necessity of having some person placed at so important a station as Normanton, upon whose judgment and tact and ready resources in cases of emergency, they could fully depend. We trust that the late reductions in the North Midland salaries have had nothing to do with the *seeming* inefficiency of the Normanton staff.

THE discussion which has been carried on relative to the junction of the Manchester railways—a discussion in which this journal has borne a prominent part—has excited so much interest, that the unusually lengthy Report of the Directors of the Liverpool and Manchester Company laid before their constituents at the general meeting, on Wednesday last, comprises nothing else. We have deemed it but fair to give unabridged the document referred to, as well as a full report of the proceedings, which terminated in its unanimous adoption by the meeting; and here for the present we may leave the matter in dispute, satisfied that there is now a better prospect than before of *some* junction line being formed, whether that proposed by the Leeds Company or not being of comparatively minor moment.

In truth *our* great object throughout has been not to advocate, as partisans, this plan or that, but to impress upon all parties concerned the propriety and policy of consulting the public convenience, and at the same time of promoting their own true interests, by completing an unbroken chain of railway communication through a district so important. We have been anxious to see some symptoms of a disposition on the part of an influential Company to carry into effect the arrangements which they voluntarily undertook to accomplish, or a determination, if a more advantageous scheme had since been discovered, to enter upon the execution of such scheme zealously and at once; in a word, we desired, and still desire, to have unequivocal proof that the fault now found by the Directors of the Liverpool and Manchester Company with the Hunt's Bank project is not a mere pretence to put off the formation of every connecting line whatever—such proof as nothing but a *bona fide* endeavour to carry out the (so-called) superior scheme can supply. If so much as this has not yet been secured, a step has at least been taken towards its attainment, in the understanding that a special meeting of the Liverpool Company is speedily to be called to take into consideration the comparative merits of the two undertakings, with a view, we presume, to the immediate adoption of either the one or the other. We trust that the preliminary investigations will be instituted fairly and fully, so that the really preferable route may be selected. For ourselves we care not one jot

Digitized by Google

[redacted] of the two is adopted, further than that we should extremely regret if the procrastinating policy of the Liverpool Board should have involved their neighbours of the Leeds Company in needless trouble and expense.

We are sorry that the discussion of this question should have taken so personal a turn as was displayed at the meeting on Wednesday. No one, we believe, imputes to the Directors of the Liverpool Company personal fraud; *we* certainly do not, although we think they have allowed their peculiar position to suggest and magnify difficulties which otherwise would have had no weight—difficulties which their neighbours have, perhaps, not always taken the most judicious means to diminish or remove.

The following circular, copies of which have been forwarded to us by several correspondents, has recently been sent to the proprietors of the Birmingham and Gloucester Railway:—

"Liverpool, January 17th, 1842.

"Sir,—In common with my Liverpool friends, I became a subscriber to the Birmingham and Gloucester Railway, with every confidence that it was a valuable undertaking; and feeling satisfied that our property is in the present miserable state from bad management, I respectfully urge your presence at the next general meeting, with a view of making such alterations as may be deemed necessary. If you are unable to attend, let your proxy be used out of the influence of the Directors.

I remain, Sir,

A Disappointed Shareholder.

The writer of the above, whoever he may be, has erred in two respects. In the first place, he should have appended his name to his appeal, if he expects it to have any weight. There *may be* "bad management" in the undertaking, and the "Disappointed Shareholder" *may have* no object in view except the benefit of himself and his co-proprietors; but assuredly the circulation of an anonymous letter is not likely to convince the shareholders at large on either head. In the next place, *he should have paid the postage of his missive.* This is an apparently trifling matter; but one is apt to think that the "Disappointed Shareholder" holds no great stake in the concern, nor is very anxious for its regeneration, if he scruples to disburse a few hundred pence to effect his object. The result of the circular, we have little doubt, will be a re-action in favour of the (alleged) "bad management."

A good deal has recently been said in our columns with respect to the comparatively small amount of goods' traffic upon this line. On this subject a letter which we give elsewhere from the *Cheltenham Examiner*, with reference to the conveyance of coal, merits the best consideration of the proprietors. Our contemporary, in noticing that letter, says:—"A regular supply of coal, cheap, and of good quality, is what we [at Cheltenham] have long wanted, and what, from the establishment of the Birmingham and Gloucester Railway, opening as it does a direct communication with the great northern coal fields, we had a right to expect. The reason that this expectation has been frustrated, our correspondent shows, does not arise from any want of facility of communication, or any lack of spirit in private individuals, but from the arrangements of the Railway Company itself; the price hitherto charged for the transmission of coals from Birmingham being so high as to completely shut us out from the advantages we are fully entitled to. We hope the shareholders in this undertaking will peruse carefully our correspondent's letter, as, whatever interest the town of Cheltenham may derive from his suggestions, the Company itself will derive far greater advantages. He shows that the merchandise traffic on their line, instead of being 800*l.* per week, is little more than one-sixth of that sum, and, instead of forming, as is the case on most other lines, one-third part of the gross revenue, it is barely one-half the amount; and yet this line possesses peculiar advantages of situation, and, under proper management, may be made to realise a handsome return on the capital employed. Our correspondent further shows that, by merely granting the use of their rails from Birmingham, at 2s. per ton, persons are willing, by the employment of their own locomotives, trucks, and carriers, to bring sufficient coal down the line to yield the Company an additional revenue of 15,000*l.* per annum, and, at the same time, to supply the inhabitants of Cheltenham with coal of the very best quality, at a greatly reduced price." A double charge for freight (remarks one of our own correspondents) is an excellent means of keeping uninjured the Severn and canal navigation, as well as the Cheltenham and Gloucester tramway. The latter, it is true, is the property of the Birmingham and Gloucester Railway Company, but it is surely very bad policy to encourage the traffic of 40,000 tons of coal per annum, by a means of transit so little superior to the common road, for eight miles, in preference to one of 100,000*l.* per annum for the whole distance from Birmingham to Cheltenham, to say nothing of the intermediate stations. The actual diminution in the goods' traffic since this time last year, gives additional interest to the question, which appeals in the most direct manner to the pockets of the shareholders.

A valued correspondent is anxious that we should call the particular attention of such railway proprietors as may have an opportunity of attending the approaching half-yearly meetings, to the following matters relating to Railway Management, which, bearing as they perhaps directly do, on the future welfare of the system, railway proprietors, he urges, ought at the coming meetings to be prepared to enon the serious consideration of the Directors—

First. The necessity of holding all future half-yearly meetings as early after the termination of the half-year as their several Acts of Parliament will allow, and then promptly and immediately afterwards paying down the dividends. The Manchester and Leeds Company did not hold their last half-yearly meeting till the 16th September, nor was the dividend paid till the 6th October, just three months and six days after the termination of the half-year!

Second. The great advantage that must needs arise, and the high standing railway stock would take, if railway dividends were paid quarterly. In case this cannot be done under the present Acts of Parliament, the very first occasion of applying for amended Acts should be taken to remedy the defect. The Edinburgh and Glasgow and other Railway Companies are about to apply for amended Acts, and have therefore the desired opportunity.

Third. Railway proprietors must make up their minds to vote fearlessly for the adjournment of all meetings where the accounts appear mystified, and are not minutely and clearly stated, and at once on such occasions should appoint a *Committee of Investigation*, as has been done in the case of the Brighton Railway.

Fourth. They ought to insist upon the Secretaries making a weekly return to the *Railway Times* of the traffic on their several lines, and also of the amount of the last dividends; stating whether such dividends have been paid out of the half-year's profits or otherwise—for it is now quite evident, that the marketable value of the shares of any railway, is nearly altogether governed by, and dependent on, the extent of the traffic, and the amount of the dividends paid, or likely to be paid, by such railway line. Many of the Scotch railways—and those, too, such as are most prosperous—make no weekly returns; and this is also the case with several very good English Companies—the Stockton and Darlington, Sheffield and Rotherham, Leicester and Swannington, Hartlepool Dock and Railway, and some others.

Lastly. Directors should be narrowly questioned as to the degree of economy that may have been used; and should be required to publish, along with the usual half-yearly statements, a list of the salaries of all persons in their employment. Thus (to show that it would not be voluminous):—

12 Directors, at per annum each	.....		£100
1 Chief Engineer,	do.	.....	800
2 other Engineers,	do.	.....	300
12 Clerks, at from	£70 to	.....	90
6 ditto,	..	80 to	90
3 ditto,	..	90 to	100
20 Engine-drivers,	70 to	.....	90
10 ditto,	..	80 to	90

And so on for every other description of servant.

It will then be pretty apparent which of the Companies pay extravagantly, and which economically, for working their respective lines; for it is in vain proprietors flatter themselves that Directors will exert themselves to the utmost *without their looking after them.* To trust, indeed, to this, all experience teaches us is fallacious. It is holding far too high an opinion of human nature. As in all other matters, railway proprietors must attend diligently to their own affairs.

We have to-day devoted very considerable space to the report of a trial in the Court of Queen's Bench, in reference to the assessment of a portion of the London and South-Western Railway; and we have done so because, as was announced at the last half-yearly meeting, the decision in this case will, as agreed upon, decide the rate of parochial charge upon other portions of that line, and because, moreover, there can be no doubt that the judgment of the Court, which for the present is deferred, will materially influence similar cases in future. The arguments adduced by the respective counsel, comprise nearly all that can be said on the subject.

A very sensible letter on the same question, which is beginning to attract much attention, appeared in our last number. The writer (Mr. Penfold) is, we believe, Clerk to the Croydon Magistrates.

Her Majesty, the Queen Dowager, has recently been pleased to present a gold watch, chain, and seals, to Mr. Robinson, the head of the booking department at the Euston station of the London and Birmingham Railway, in token of approval of the attention shown by that gentleman on the many occasions on which Her Majesty has travelled by that line. Her Majesty has likewise honoured Mr. Creed, the respected Secretary of the Company, with a similar mark of her royal consideration. These gifts are not only highly flattering to the

Digitized by Google

gentlemen on whom they have been bestowed, but evince her Majesty's satisfaction with the admirable arrangements for which the London and Birmingham Railway is famed.

We are informed that the Directors of the Hayle and Redruth Railway Company have requested Captain W. Moorsom to take the necessary steps for extending their line from the port of Hayle, on the north coast, to the harbour of Penzance, on the south coast, of Cornwall. The existing line is 15 miles in length, and the proposed extension will be 11 miles. The railway is at present used only for the conveyance of minerals and general merchandize, but we understand that it is a line of extraordinary capability.

The following circular has recently been addressed to the several Companies by the Railway Department of the Board of Trade. Out of evil will arise good. We have no doubt that the answers sent in to the questions of the Board will elicit much valuable information relative to the treatment of third class passengers:—

"In consequence of the recent accident on the Great Western Railway, the Lords of the Committee of Privy Council for Trade have thought it their duty to ascertain whether proper precautions are taken to ensure the safety of the poorer class of passengers upon railways generally. I am therefore directed by their Lordships to request that the Directors of the ——— Railway Company will furnish them with answers to the following questions:—

"1st. By how many and what description of trains in the course of the 24 hours are third class passengers taken?

"2nd. At what hours do such trains start, at what speed do they travel, and how long do they take to perform the journey?

"3rd. What is the construction of third-class carriages, specifying—

"1st. Whether provided with springs and spring buffers, the same as other passenger carriages?

"2nd. Whether closed, partly closed, or open?

"3rd. Height of framing, or panneling at ends and sides?

"4th. Whether any partitions in the body of the carriage, and if so, their height and position?

"5th. How many passengers each carriage is constructed to carry?

"6th. Whether there are seats for the passengers, and if so, how arranged?

"7th. Where third-class or other passenger carriages go with trains partly composed of luggage waggons, are such carriages placed before or behind the luggage waggons, and is such position invariably preserved, or is it altered according to the weight of the train and other circumstances?"

"(Signed) "S. Laing."

In our last number we copied from the *Manchester Guardian* a notice of an accident on the Manchester and Bolton Railway, ending fatally to a man named Betley, in which it was represented that the deceased had met with the injuries while attempting to climb into one of the carriages as a train passed him. The *Manchester Courier* says, there is no shadow of a pretence for supposing that the poor man had made such an attempt, and gives the evidence on the inquest, which certainly alludes to nothing of the kind. The accident seems to have arisen from the reprehensible practice of permitting unfenced footpaths to exist close to railways. The deceased and a friend had in the dark strayed from the path upon the line as a train was approaching. "The jury (says the *Courier*), found a verdict of 'Accidental death,' and accompanied it with an expression of their opinion that the footpath, which it appears is a public one, ought to be separated from the line by a wall or fence, and they required the coroner to make a communication to that effect to the Directors of the Railway Company."

—o—

The general meeting of the Grand Junction Railway Company is to be held in Liverpool on Wednesday next. To the circular convening it, the Directors have added the following postscript:—

"As the Company's establishments for engine and coach building and repairing are about to be removed to the new works at Crewe, and several hundred men with their families will thereupon be taken away (for the Company's advantage) from their present residences and means of spiritual and temporal instruction, and compelled to reside in a district almost wholly unprovided in both those respects; it is the intention of the Directors, (and they take this opportunity of distinctly stating it beforehand), to submit for the consideration of the shareholders at the general meeting on the 1st of February, the propriety of authorising the appropriation, out of the Company's funds, of a sum not exceeding 1,000*l.* towards the establishment of a church and school in the neighbourhood of, and in connection with, the new works."

We cordially approve of this proposition, and trust it will be unanimously carried out. We are happy to find the example set by the London and Birmingham Directors thus followed. Should opposition to the vote arise, dissentients should have the power of withdrawing their quota of the grant. If this were at once announced, it would probably prevent much needless discussion.

—o—

The *Hull Packet* says: "In these days of 'cheap bread' humbug, it is refreshing to find something practically beneficial attempted in favour of the poor. With this object a novel duty has been undertaken by the several railways between Manchester and the German Ocean, in conjunction with the 'Flamborough and Filey Fishing Company,' viz. the supplying of the manufacturing towns of Wakefield, Dewsbury, Huddersfield, Brighouse, Bradford, Ellan[illegible], Halifax, Sowerby Bridge, Hebden Bridge, Burnley, Todmorden, Rochdale, Oldham, Manchester, &c., regularly every morning, with fish caught fresh the previous evening. The Companies state that the arrangement is entered into in order 'to place within the reach of the most humble class the means of obtaining cheap and nutritious food, as they are determined to sell cod, haddock, ling, skate, halibut, and plaice, at a price not exceeding *two shillings per stone of fourteen pounds*, and other fish at proportionably low rates."

—o—

We learn from the *Durham Advertiser*, that "the Stockton and Darlington Railway Company have presented a donation of 10*l.* to the Rev. J. Manisty, in aid of the fund for building a parsonage at Shildon." We have heard many objections (in our opinion of little weight) urged against the votes of money by Railway Companies even for the religious and moral instruction of their own servants, but what possible connection there can be between a commercial Company like the Stockton and Darlington Railway Company and "a parsonage at Shildon," we have yet to learn.

—o—

A correspondent urges us to recommend to the notice of Railway Managements the propriety of paying the forthcoming dividends at as early a period as possible after they are declared. We willingly comply with his request. We see no reason why an interval of seven days might not suffice. The accounts are usually not made up within a month of the day of meeting, so that there is plenty of time for preliminary arrangements. This hint and others are enforced in another column.

—o—

The *Cambridge Chronicle* gives the particulars of an inquest held on the body of a man named Thomas Simpson, occasioned by the upsetting of the Lynn coach. It appears that when the accident occurred the guard, Thomas Webb, was driving, and deceased sitting by his side. The coach was overturned in consequence of running against a bank hidden by the snow; it fell on the near side, and the deceased's body was under it as far as the loins. He never spoke after the occurrence; indeed he was quite dead when removed from under the coach. *A labouring man was stationed at the turnpike-gate to warn passengers of the dangerous state of the road, but it appeared the mail passed without receiving from him the necessary caution.* Had such an instance of neglect occurred on the part of a railway policeman, we should have heard no end to the denunciations of that portion of the press which so generously takes under its especial care the safety of the travelling public.

—o—

The *Falmouth Packet*, after quoting with approbation our recent leading remarks on the proposed Cornish railways, says:—"It is only fair to Lord Vivian to say, that if every member of the Committee had been as earnestly impressed with the practicability of constructing a railway through Cornwall—of the immense benefits that would necessarily result therefrom, and of the almost certain fair return of interest for money invested in it, as is his lordship, the work would have been commenced at least twelve months ago. The Committee, however, was encumbered with acre-owners, who, generally, with some few remarkable exceptions, have no 'speculation' in them. They will subscribe five sovereigns a year to an association 'for the encouragement of agriculture,' and profess that they are vastly liberal in so doing, which some people are weak enough to give them great credit for, forgetting that the liberal landlord knows full well that five sovereigns thus bestowed will bring a handsome return, as the more the tenant can extract from the earth the greater the amount of rent the landlord will exact from the tenant. But railways, they will tell you, can in no way benefit landlords; they are for the benefit of commerce, and if merchants and traders require this mode of transit let them bear the charge of constructing them; it is their business not ours. The roads we have very well answer our purpose—they are good enough for yoke oxen; no matters in which we are concerned require any such mighty quick conveyance as railways afford.

"We are satisfied (adds our contemporary) that no railway will be constructed through Cornwall unless the mercantile and trading interests take the affair into their own hands. Let them cast off the

Digitized by Google

dead weight with which they are clogged and get up a Company themselves—the thing will pay—if they wait for the landlords to take the initiative and to give any really effective assistance in such a *desideratum*, the present generation will not see the commencement of the work."

—o—

A PROVINCIAL paper gives the following very gratifying notice of the works on the unopened portion of the Bristol and Exeter Railway, and of the beneficial results which have already followed its partial opening:—

"GLASTONBURY, Jan. 15, 1842.—The works of the Bristol and Exeter Railway between Bridgewater and Taunton are going on with great rapidity, and will be finished a month sooner than was expected. One hundred cows and oxen were sent from Bridgewater by the railway to London last week. The Bristol butchers now come to Highbridge and Banwell to buy fat stock, which they convey home in two hours, and at a very cheap rate. No class of men have more reason to praise the railways than the Bath and Bristol butchers. The best fresh butter is now selling by the farmers of Wedmore, Cheddar, and Wookey, for 11d. per lb. The reason why butter is so cheap at Mark, Wedmore, and Wookey, is, that these places are so far from the railway."

—o—

IN our number of last Saturday, we gave an unqualified contradiction to a statement put forth in the *Times* of the previous day, to the effect that in consequence of the late frost three engines had been attached to one train on the Eastern Counties' Railway. On Monday, the *Times* itself admitted the incorrectness of its paragraph (which it professed to have copied from the *Essex Herald*), and added:—"A plan is used on this line which, if more generally adopted, would prevent much of the delay that often occurs upon railways at this season of the year. Whenever there is a fall of snow an engine is employed during the night to sweep the rails with brooms attached to the front of the engine, so that the rails are free from snow by the time the morning trains commence running. In consequence of this arrangement no detention of the trains in consequence of the snow has occurred on this line during the present winter."

—o—

THE number of passengers carried on the Great Western Railway on Tuesday last (the day of the Christening of the Prince of Wales), was 6,375. Trains ran every half-hour between London and Slough, the nearest point to Windsor.

—o—

SLIP ON THE CROYDON RAILWAY.—The east line of rails at the New Cross slip is now cleared, and unless any farther fall should take place, the trains will run as usual in the course of a few days

—o—

LONDON AND BRIGHTON RAILWAY.—We are requested to state that the whole of the paragraph which went the round of the press on the 21st inst. (copied on the following day by us) and which depicted in frightful colours the situation of a gentleman whose carriage was said to have been detached from the train and left in the middle of Balcombe Tunnel, is a fabrication.

RAILWAY OFFENCES AND OFFENDERS.

ON Wednesday a weaver named Prince, and his sister, were fined, the former 4*l.* and the latter 2*l.*, by Mr. Broderip, the sitting magistrate at the Thames Police Court, for a severe assault on the Limehouse station clerk of the Blackwall Railway, and on a policeman. The prisoners had gone to the station drunk, and being most properly refused a ticket to proceed by one of the trains, became disorderly and committed the assaults complained of. Being unable to pay the fines, the man was sent to prison for six weeks, and the female for three weeks.

—

Last week Thomas Henderson, of Heworth, near Darlington, was fined by the magistrates at that town 1*l.* and 11*s.* 6d. costs, for walking upon the Stockton and Darlington Railway, being at the time in a state of intoxication. It was fortunate that he escaped with his life.

SUNDAY TRAVELLING ON THE EDINBURGH AND GLASGOW RAILWAY.

ANOTHER of the Agnewite associations—those impertinent meddlers with business not their own—has issued a circular, through the medium of the Glasgow papers, to the shareholders in the Edinburgh and Glasgow Railway with reference to the question of Sunday travelling.

It were superfluous in us to enlarge upon this matter. To all sensible *Englishmen* the few sentences which we propose to extract from the Puritanical address referred to, will speak more loudly as to the course they ought to pursue at the approaching meeting than any comments or exhortations of ours.

The address commences with a notable specimen of the language of the tribe:—

"In the mysterious ordinations of God, it has devolved on you to say whether Scotland is still to enjoy her Sabbaths, or henceforth to mourn them lost—whether the next generation of our countrymen shall retain their fathers' birthright—one whole day in seven for sacred rest—or be doomed to toil incessant [ly?] on from the cradle to the grave. An instrument has been put into your hands, and soon you must wield it, wherewith to bless or to curse this nation. We are watching the issue. Trusting in the Lord who ruleth over all, we address ourselves to the creatures of his hand. Having first made our *prayer* unto God, we now employ the *pains* to persuade men."

These saints forget to mention, that having "made their prayer to God" they have "employed the pains" to split shares in order to carry their object into effect.

Then comes something more of the disgusting cant about the morality of Scotland:—

"We beseech you, ladies and gentlemen, to respect *our feelings as Scotsmen* (!!) Be assured they are not the least reputable and influential portion of the community to whom the sight of Sabbath traffic on the railway will be bitterness of spirit. It is painful to think that, though our cause is good, and our argument valid, we should be driven to plead anxiously for our Sabbath *with men who, treating the Divine authority of the Sabbath as a mere matter of speculation and controversy, allow passion and interest to overbear our righteous claim.*"

We have no doubt the last sentence is aimed at those infidel English shareholders who place as little reliance in the pretences of these Sabbatarians as in their assertions that the running of a train on Sunday is criminal.

"Moral Scotland" again, with a very plain indication of a desire to "deal damnation round the land":—

"The safety of the passengers depends very directly on the high character of the servants; and the gain of the Company depends very directly on the safety of the passengers. It is stated in the newspapers, that the receipts on the Great Western Railway during the week following the late accident, were *fifty per cent.* less than they had been on the week preceding. Let it be remembered, too, *that in Scotland you must go much lower down in the scale than it is necessary to go in England*, to get men who will work for gain on the Sabbath. Godliness is profitable to all things."

Next follows a threat, and with respect to this we have only to repeat our previously expressed wish, that means could be devised to prevent any one of these ultra-godly gentry from travelling by the railway on *any* day:—

"In another way, ladies and gentlemen, you may find out that our warning has some weight. We represent a portion of the community who, we hope, will be able to bring an argument into position against Sabbath trains, which will tell directly on the sense of profit and loss. No one supposes that the profits of the Sabbath traffic will be great. It is no extravagant calculation to expect that, by withholding all support from the railway, we shall lessen the amount of the week's gain by more than the whole receipts of the Sabbath. In this way we have been signally successful in Scotland already. We shall try again."

With a specimen of cant we began, and with a similar specimen we shall for the present end, only declaring once more our firm conviction that the shareholders of the Edinburgh and Glasgow Railway will, on the forthcoming occasion, do their duty, by recording such a majority as shall shame (if possible) these Barebones agitators into a more decent course:—

"We will not let them alone. We will cry aloud, and spare not. Already you spend too much time on the world, and too little for a near and rapidly-approaching eternity. You must soon depart. You cannot take your riches with you. You should have *some time* secured for setting your heart on a better inheritance. The use made of the Sabbath trains by very many would be to spend the holy Sabbath in business or amusement. It is thus that the Sabbath-breaker lives without God in the world. We know he must meet with God soon—we wish to afford him time for it now. The present aim of the destroyer is to blot out the hallowed light of the Sabbath, that in the darkness he may more securely prey upon your life. We will continue to bear testimony for God and his law. We will continue our effort to save money-making and pleasure-seeking men from destroying themselves. Ladies and gentlemen, the decision of this question lies in your hands; but remember you are in the hands of God. His eye is on you, and his judgment will await you. You may, by your Secretary's pen, blot out the Sabbath's rest from the book which records your gains; but it remaineth written in another book which you cannot reach. You may put down the uplifted voice of God's people in the bustle of a railway meeting; but the whispering of an aggrieved conscience may yet be heard within the curtains of a dying bed. You may vote away from Scotland her Sabbath; but you cannot vote the Sabbath-breaker into heaven."

The most famous author that Scotland ever produced, has been accused of caricaturing its "religious professors;" could he, or could any one else, have put into the mouth of an imaginary personage a speech more redolent of sanctimonious pretence, of blasphemous familiarity with things sacred, and of Pharisaical denunciations of the less "holy" multitude, than is exhibited in the deliberately-issued address of which we have above given a few specimens?

The Rev. Robert Murray MacCheyne, minister of St. Peter's, Dundee, has published in the *Witness* of Saturday last, a long letter, in which he declares that such of the Directors of the Edinburgh and Glasgow Railway as are favourable to the mails being carried on that line on Sunday, are "infidels, scoffers, men of unholy lives, the enemies of all righteousness, *moral suicides, sinners against light, traitors to their country, robbers, and murderers.*" The italics are the rev. gentleman's own.

—

GREAT WESTERN RAILWAY—THE SLOUGH STATION.—The two rooms at the Slough railway station, which were built and for some time past have been appropriated exclusively for the accommodation of royalty, have just been fitted up to great splendour for the reception of those distinguished personages who will come by train to attend at the royal christening. The saloons are of an octagon shape, and the ceilings are decorated in arabesque, the walls are hung with fluted chintz drapery, of an entirely new and elegant pattern. The chimney-pieces are composed of statuary marble of exquisite workmanship, over which are placed looking-glasses reaching to the ceiling. There are two plate vitrified windows in each room, and the furniture consists of tables beautifully inlaid, and chairs and Ottomans of rich blue damask. The furniture and fittings-up of the rooms correspond in every respect. The whole has been completed under the directions of Messrs. Crace and Son.—*Bucks Herald*, Jan. 22.

ASSESSMENT OF RAILWAYS.

THE QUEEN *v.* THE DIRECTORS OF THE LONDON AND SOUTH WESTERN RAILWAY COMPANY.

Court of Queen's Bench, January 15.—The defendants by a rate made for the relief of the poor of the parish of Mitsheldever, in the county of Southampton, on the 6th of November last were rated at the sum of 4,320*l.* by a rate of which the following is a copy:—"London and South-Western Railway Company; railway, four and a half miles, 4,320*l.*" This rate was confirmed subject to the opinion of the court on the following case:—

The London and South-Western Railway Company are established and act under a certain Act of Parliament, passed in the fifth year of the reign of his late Majesty, king William the 4th, entitled, "An Act for making a railway from London to Southampton," and four other Acts of Parliament, respectively passed in the first, second, and fourth years of the reign of her present Majesty, and respectively entitled, "An Act to alter the line of the London and Southampton Railway, and to amend the Act relating thereto." "An Act to amend the Acts relating to the London and Southampton Railway Company, hereafter to be called the London and South-Western Railway Company, and to make a branch railway to the port of Portsmouth." "An Act to amend the Acts relating to the London and South-Western Railway Company," and "An Act to amend the Acts relating to the London and South-Western Railway Company, and to authorise an agreement between the said Company and certain inhabitants of Wandsworth and Battersea, respecting an alleged loss in their supply of water." Copies of these Acts, accompanying this case, and are deemed to constitute part thereof, and may be referred to by the Court or either party at the hearing thereof.

Under the powers contained in these Acts, or one of them, the Company have formed and completed a line of railway from Vauxhall, in the county of Surrey, to Southampton, being a length of 77 miles, and this railway for 4½ miles thereof, passes through the parish of Mitcheldever aforesaid, and in pursuance of the powers and provisions of the Act, especially those contained in the 150th to the 161st section of the first mentioned Act, the Company have caused lists to be made of the several rates, tolls, and sums, which the Company have appointed to be taken and received by virtue of the said first mentioned Act. And the said Company have duly kept, and do duly keep, a separate account, showing the amount of rates or tolls which would have been received by them for the use of the said railway, in respect of passengers, cattle, or other animals, goods, wares, &c., if carried by any other party or parties, to which said account the overseers of the poor of the several parishes and townships through which the railway passes, have free access and have liberty to inspect in manner by the said Act provided.

The sum which should have been so received by the Company for the use of the railway, by such other parties in the year next immediately before, and up to the time of the making of the said rate, in respect of so much of the railway as lies in the said parish, amounts to 3,470*l.* 13s. 2d., being such portion of the tolls as is earned by the Company in the said parish of Mitcheldever.

The whole sum, however, received by the Company for the conveyance of passengers, &c., by the Company, in carriages provided, manned, and worked by the Company, at their own sole expense, including the said sum of 3,470*l.* 13s. 9d., amounts to 13,880*l.* per annum in respect of so much of the railway as lies in the said parish.

The former sum of 3,470*l.* 13s. 9d. constitutes the proportionate sum for the said parish, which any individual who contracted with the Company for the exclusive right to take tolls for the use of the railway by persons using the same under the powers and subject to the regulations of the aforesaid statutes, for the transmission of goods, cattle, and passengers along the line, in carriages provided by such persons, would receive from such persons; and the sum of 1,293*l.* constitutes the rent which a tenant from year to year would give to the Company, for the exclusive right to receive tolls for the conveyance of goods, cattle, and passengers in the manner mentioned in section 157 of the said first-mentioned Act, along so much of the railway as lies in the said parish, free of all usual tenants, rates, and taxes, and tithe commutation, rent charge, and making all deductions for the average annual cost of repairs, insurances, and other expenses necessary to maintain the way, its fixtures and appurtenances, in a state to command such rent.

The respondent parish contends that the annual value is not to be estimated on the basis of the tolls alone, nor is to be limited to such tolls or their value. But that the advantages which a lessee of the railway may be expected to derive from his lease by supplying power and by carrying upon it, may be taken into account.

That if a lessee is to be supposed capable of deriving from the use of the railway all the profits which now accrue to the Company from the conveyance of passengers, cattle, and goods, under the powers of their Acts, such lessee finding locomotive power, carriages, &c., and paying all expenses incidental to working the railway, then the whole railway, with its fixtures and appurtenances, might be reasonably expected to let from year to year at a rent which, for the purposes of this rate, may be assumed as 70,000*l* per annum at the least, free of all usual tenant's rates and taxes and tithe commutation, rent charge, and making allowance and deductions for the average annual cost of repairs, insurance, and other expenses necessary to maintain the way, its fixtures and appurtenances, in a state to command such rent.

That, supposing such rent to be given for the whole line, much of the railway as lies in the respondent parish is to be assumed to be the net sum of 4,320*l.* per annum, being the amount at which the appellants were rated in the above rate.

The questions for the opinion of the court are—

Whether the Company are rateable upon the principle contended for by the parish; that is to say,

Whether, upon an estimate of the net annual value obtained from the statement of the tolls which would be received by the Company aforesaid, forming the basis of the rent which a tenant would give as before mentioned, subject to proper deductions, or upon an estimate of the net annual value as ascertained by a rent given by a tenant under the circumstances and for the purposes above stated, as contended for by the parish.

Lastly, whether the annual value upon which the parish rate is to be made should be such proportion of the estimated rateable value of the whole line (whichever basis is adopted by the Court) as the length of the part situate in the parish bears to the whole line, or such proportion thereof as the receipts actually derived from or in respect of the carriage of passengers, cattle, and goods, or from tolls upon so much as lies in the parish bear to the receipts throughout the whole line.

If the rateable value is to be proportioned to the length of the railway in the parish, and not to the receipts, then the estimate as contended for by the Company should be the sum of 1,400*l.*

If it is to be proportioned to the receipts as above, and not to the length of the railway in the parish, then the estimate as contended for by the parish should be 3,800*l.*

The rate is to be confirmed, quashed, amended, or sent to be re-heard by the sessions, according to the opinion of the Court upon the above points.

Mr. CRESWELL appeared to support the rate. Here was a railway 77 miles long, 4½ of which miles were within this particular parish. The occupation of this railway produced certain profits, and the question was, whether those who occupied the railway were to be rated in respect of such profits whatever they might derive in this parish from the railway, or whether, taking the whole of the profits together on the whole of the line the rate was to be imposed on such proportion of them as 4½ miles bore to 77. The rating was to be taken on the annual value, whatever might be the principle which the court might think fit to apply in order to ascertain that value. If the traffic was to be the criterion of value, and there was more traffic on this than on the other parts of the line, of course the rate would be proportionably greater here. It was exactly the same as in the case of a farmer holding two farms of different value in two parishes. Of course the rate in the parish where the farm was more profitable would be calculated on the profits of that particular farm, and would be larger there than in the other parish. The case was the same in many of the northern counties. If there were two farms belonging to one farmer, though extending through two parishes, there being in the one highly cultivable land, and the other stretching over a long extent of moor, it could not be said, and never was said, that the rating was to be one-half the value of the aggregate; it must be on the value of each in its separate parish.

Mr. HILL (who, with Mr. Kelly and Mr. Gunning, appeared for the defendants) said that if this was the only proposition his learned friend had to contend for, he should not give his friend the trouble of further arguing it. The defendants meant to say that the rate in each parish was to be calculated on the earnings in each parish, and not upon the whole earnings of the whole length of the line.

Mr. CRESWELL said that this seemed to him to be the correct rule of rating, and he should not therefore argue the case on any other principle, for on that alone he thought the rating in this respect ought to proceed.

Mr. HILL observed that the question then would be whether the rating was to be calculated upon a sum of 3,800*l.* or 1,293*l.*

Mr. CRESWELL continued: The next principle to be settled was, whether the defendants were rateable only for the tolls which were received there, and without reference to the profits; or whether they were to be rateable on a calculation of the rents which might be received by them for the railway, from a person whom they put exactly in their own place. The sum of 1,293*l.* was that proportion which the Company would have received in this parish from the lease of the exclusive right to the tolls on the railway. The sum which would have been so received by the Company for the exclusive use of the whole line of the railway, so far as related to the part within this parish, the lessee using his own carriages, &c., would have been 3,470*l.* 13s. 9d. The question was, whether the Company was rateable only on the tolls actually received, or on the whole profit that might be made by the Company on transferring the railway to the hands of a lessee. The defendants said that they were only rateable on the tolls actually received. That was a singular argument. In all cases of this sort provision was made for two different states of things. The railway was made a public concern, so that it might be used by any member of the public that chose to use it, and the public were not bound to travel in the Company's carriages, but might put on the railway their own engines and carriages, and work them, paying therefore to the Company their tolls for the use of the road. The 149th and 150th sections of the Act referred to having been referred to in the case, gave the Company the right to take certain tolls, in case of such a use of the line of railway. The 150th section required that in all cases in which the Directors of the Company carried for themselves a separate account should be kept of what would have been received by the Company for tolls, had other persons used the railway in the manner already mentioned. The main stress of the argument would probably be upon that section, for that afforded the only ground for any real contest in the case. It would be said that such a provision in the statute, that the defendants might take tolls in respect of passengers, and tonnage in respect of goods, and that if the Directors carried for themselves, a book should be kept, showing how much they would have received for tolls if all the traffic had been in the hands of third persons, and that, as the overseers were to have free access to this book, these provisions imported that the overseers must make the rate on the footing of the accounts to be found in that book. That consequence, however, by no means followed from these provisions. It might be material to the overseers to have a sight of this book, in order that they might ascertain the extent of the traffic of the railway, and thus form a correct judgment of the amount of the profits on which the rate was to be imposed. If the law established as to the construction of the statutes passed for the maintenance of the poor was to be adopted, these provisions must be construed as authorising the overseers to fix a rate on the value of the things, such as they would fetch if let to a *bona fide* tenant. That was the general rule of law, and there was nothing at all in the statute to take away that right so vested in them. There was nothing in the statute which even presented a limit to the exercise of this general power. There was, indeed, nothing of a particular directory sort, nothing declaring on whom the rate was to be made by the overseers of the poor. Then how could it be said that the statute limited the right possessed by the overseer. The Leeds and Liverpool Canal Act was one which contained some very peculiar provisions. There the Company was authorised to take land, and to employ it in making the canal, and the rate was to be laid upon the land. The same was the case with regard to the Regent's Canal Act. In both cases the Companies were not to be rated on the improved value of the land as used by them, but the value of the land so used was to be ascertained by taking the value of the land adjacent to that which they had appropriated for the purposes of the canal. Those cases were authorities in point here; they established that here the ordinary mode of rating must be adopted, because they were only excepted from that ordinary mode in consequence of the very special provisions introduced into them. Nothing of the sort existed here, nor was anything special or peculiar directed with respect to the imposition of the rate. The Act merely said that this separate account should be kept, and that the overseers should have access to it. There was, therefore, in this Act nothing to prevent the overseers rating this Company according to the usual and ordinary principle. Now, what was that usual and ordinary principle? It was, that the rate should be imposed on the profits which might be obtained by the Company from any person carrying on the same business as was conducted by the Company. That

Digitized by Google

rinciple was distinctly established in the case of he King *v.* The Birmingham Gas Light Company, 1 Barn. and Cres. Rep. That case, which might be considered the leading case on the subject, was confirmed in a great variety of instances. One of these was the King *v.* The Oxford Canal Company, in 4 Barn. and Cres. Rep., where the principle of making these rates was stated by Lord Tenterden in this manner: "As to the amount, it appears that other lands are rated according to the amount which would be obtained by letting them at a rent; this Company, therefore, must be rated according to the same rules." In the case of the King *v.* The Bridgwater Trustees, in 9 Barn. & Cres. Reports, rent was declared in like manner to be the criterion of the value of the occupation of the land, and the owners were held rateable on that value, and not on the gross receipts, minus the expenses. Here the rate was not levied on the gross profits, but on such sums as the railway would let for to persons who carried on the business of a railway company. The cases of the King *v.* Tomlinson and the King *v.* Lower Mitton, both in the same volume of reports, justified this mode of proceeding. If this railway was let, it would not be a mere letting of the right to take tolls, but of the right to use the line as a railway. The rent would be calculated on the complete use of the line. Under these circumstances, the question for the Court was whether the rating was to be calculated on the net annual value which a tenant would give, or on the estimate of the net annual value of the tolls. If the defendants let it, the rating would clearly be on the annual rent. Why should not the same rule be applied if the defendants continued in occupation for their own purposes. The principle adopted by the overseers here was the right one, it was that of rating the defendants on such sum as it was calculated they would have obtained had they let the property to a tenant.

The SOLICITOR-GENERAL, on the same side, did not mean to enter on the question which had already been discussed, but to refer to some few authorities to explain the way in which he intended to present the case to the notice of the Court. The case of the King *v.* Woking, in 4 Adolphus and Ellis's Reports, showed how the calculation of rate was to be made in a particular parish. It was there said—"the true principle is, that the Canal Company is to contribute in proportion to the profits derived from the use of the Company's land in this parish." It appeared that under the Act of Parliament creating the railway, the railway was supposed to be used by other parties besides those constituting the Company—by parties employing their own locomotive engines, and the Directors of the Company were declared entitled to receive certain tolls from those parties. This was one mode in which the defendants might get money from the use of their railway. Another was that of the defendants employing their own engines on the railway. If they had none of their own, but satisfied themselves with permitting other persons to use engines on this railway, then, supposing that there was the same degree of traffic on the railway as at present, the estimate of the tolls must be made on the whole sum now received by the defendants from the use of the railway with their own engines. So that assuming that the passengers and things carried would be carried by other persons, and not by the defendants, the rating must be calculated up to the sum now actually charged upon the defendants, namely, the sum of 3,470*l.* 13s. 9d. The sum stated as actually received by the defendants for the carriage of passengers and goods within this parish was 13,880*l.* Then it was clear, that on the principle of being allowed the full and exclusive use of the line, the sum which a tenant would give in the way of rent would be calculated on the 13,880*l.*, and in the same way ought the calculation for the purpose of the rating to be made. The 1,293*l.* constituted the sum which a tenant would have to pay the Company for the exclusive right of receiving tolls for the conveyance of goods. So that, supposing the defendants let that right with the restriction that the enant was not to use the railway for other purposes, the tenant would receive that sum. But if the letting took place without any such restriction—if the whole use of the railway was let to a tenant—then the whole would be let at a sum of 70,000*l.* a year—and the proportion in respect of which the parish of Mitcheldever would be entitled to recover rates, would be considerably larger than on the letting for the tolls alone. The question, in short was, whether the proper mode of estimating the value on which to place the rating was not to take that which the railway would let for without imposing on the lessee any restriction as to the use he was to make of it, but allowing him as much the exclusive use of it as was possessed by the Directors themselves. It might be let in that manner. The Great Western Railway was so let, and it was clear, therefore, that the letting might take place, and that the calculation of the rating might take place on such a letting. Whatever profits the parties taking it might make more than the Company asked them in the shape of rent, they would be at liberty to make, but the amount of rating would be properly calculated on the rent they paid to the Company. The mode of rating the occupiers of the land in this parish under the provisions of this Act would be free from doubt, but for one of the clauses in this Act. That was the clause ordering the Directors to keep certain accounts; but that clause did not change the general nature of the liability to rate The cases established this general proposition in the clearest manner that overseers must rate land according to the rent which a *bona fide* tenant would pay for it. Then it was said that this particular Act affected in this case the application of that general proposition. But now came the consideration whether that argument could be maintained after the 6th and 7th Wm. IV, c. 96, the Parochial Assessment Act. The Act under which this question arose was the first of those passed to establish this railway, and it was passed antecedently to the Parochial Assessment Act. If, therefore, the two were conflicting, the Railway Act must give way. The Parochial Assessment Act contained these positive directions: "No rate for the relief of the poor in England and Wales shall be allowed by any justices, or be of any force, which shall not be made upon an estimate of the net annual value of the several hereditaments rated thereunto; that is to say, of the rent at which the same might reasonably be expected to let from year to year, free of all usual tenants' rates and taxes and tithe commutation rent charge, if any, and deducting therefrom the probable average annual cost of the repairs, insurance, and other expenses, if any, necessary to maintain them in a state to command such rent." This was a legislative adoption of the various cases which had made rent the criterion of rating. In what way, then, was this railway to be rated; in what way would any warehouse which had particular privileges be rated? Most certainly on the sum which any tenant would give for its free use. In that use he was not to be put under restriction, and then have the rating calculated on the rent paid for the restricted use of the property. What would the lessees of this property give as rent for it if they were put in the same situation as the owners of the property. It was clear that this principle would apply to the letting of canals and docks, and it must equally apply to the letting of railways. In the case of the Duke of Bridgewater's trustees, in the ninth volume of Barnewall and Creswell's Reports, Mr. Justice Bayley said, "the trustees must be rated as occupiers of land, and the same principle of rating must be adopted, whether the party be owner and occupier, or occupier only. The value of the occupation is known by the rent paid for it." And after noticing the fact that the trustees were carriers of goods, he added, "the same rule is to be applied to all occupiers, and the rent or sum at which the land will be let is the criterion of the value of the occupation. Here the Directors, who were the owners of the property, were likewise the occupiers of it—they now used it for their own benefit; but if they were to put in a lessee to-morrow, enjoying the same exclusive rights as themselves, he would give 70,000*l.* rent for it.

Mr. Justice COLERIDGE asked whether there was any clause in the Railway Act which empowered the defendants to let the railway?

The SOLICITOR-GENERAL answered, that there were the 167th, 168th, and 169th clauses, which conferred this power upon them, so far as the tolls were concerned, and by law they would require such a provision to enable them to let the tolls; but as to the railroad itself, they might let that without the grant of any specific power for the purpose.

Mr. Justice COLERIDGE said, that the power to the Directors to let the tolls would not enable the tenant to use locomotive engines on the railway.

The SOLICITOR-GENERAL said, that as the Act stood, any one might do that on paying tolls to the defendants for the right of so doing, and it was these tolls that the Act gave the Directors the power to let. But even if the actual power of letting did not exist, the principle on which the rate was to be calculated would not be thereby affected—the proper rateable value would still be what the property would let for if the owners of it had such a power. But that question, as to the power to let, did not arise here. Suppose certain persons were to take the branch of the Great Western Railway going from Bristol to Exeter, they would stand in the situation of the proprietors who had made that branch of the railway, and they would have the power to take all the rates, tolls, &c., which those who made the railway would have had. In what way was the amount of rate payable by them to be calculated? On the rent they paid. And the same calculation must be applied in the present case. Then the simple question was, there being this description of property making a return to an amount that would fetch a rent of 70,000*l.* a year, how that was to be rated. If let to a tenant, after making all the proper deductions, a tenant would pay that sum for it. On that sum the rent must be calculated. It was said that the tenant must be considered as restricted not to have the exclusive use of the railway himself, but to allow others to use it. But no consideration of that restriction ought to be made here, for in fact no such restriction existed. None existed with respect to the railway proprietors themselves, and the tenant would be placed exactly in their situation. There need not be an exclusive occupation of the land itself, but if, in addition to the complete use of the land, the tenant was entitled to receive the tolls, that would be a benefit *plus* the occupation. In principle, there was no reason whatever to confine the rating to the tolls. The 157th section of the Act was that which related to this matter. That section made no difference as to the rateability of property from the ordinary law. This was a private Act of Parliament brought in by a company, but unless it expressly altered the general law, and put this property under special regulations, the same rules must be applied as in ordinary cases. Now, the section which related to the keeping of the accounts of the tolls received or receivable by the Company, that section directed the Company to keep a separate account of the rates or tolls received by the Company in respect of carrying passengers, cattle, &c., "and also a separate account of the amount of the rates or tolls which should from time to time be received by the Company for the use of the railway, in respect of any passengers, cattle, &c., carried by any other parties; and that the overseers of the poor of the several parishes through which the railway passes shall have free access to and liberty to inspect the same," and the direction to keep these accounts, and to allow the inspection of them, was enforced by a penalty of 50*l.* for every day of neglect or refusal. These accounts could not in any way show the value of the railway, as related to the tolls, for supposing the railway to be let, it did not follow that the same number of persons would go with their own carriages as when the Company carried the passengers. These accounts would give the overseers of the poor the power of knowing what was the actual business of the Company, and that was the sole object of the legislature in directing that the accounts should be kept, and not that the keep of such accounts should alter the rule of law applicable to them.

Digitized by Google

Mr. Justice PATTESON—If the keeping of these separate accounts is solely for the purpose of ascertaining what the Company actually receives, it is merely requiring a troublesome calculation for no earthly purpose. If the rating is to be on the whole amount which the property would obtain in the way of rent for the use of the railway by a tenant, and not merely for the right to receive the tolls, the keeping of these separate accounts would not assist the overseer in making the rate in any way whatever.

The SOLICITOR-GENERAL—The clause was intended to assist the overseer in ascertaining what were the real profits obtained by the Company from different sources. But certainly the necessity to keep these accounts could not alter the principle of the mode of rating.

Mr. Justice PATTESON—Yet the direction to keep these separate accounts, is made with reference to the question of rating.

The SOLICITOR-GENERAL said that it must of course be for that purpose. It was clear, however, that the mode of ascertaining the rate must be, that which had been settled by different cases, and adopted by the Parochial Assessment Act. That mode was to take the sum which the railway would pay as rent to the proprietors, if let to a tenant, and if such was the rule adopted and recognised by this court, then the order of sessions confirming the rate must be affirmed.

Mr. SMITH, on the same side, observed that the sections 27 and 50 of the Act gave the fee simple of the railway to the proprietors of the Company, and consequently there was no necessity for an express power to be granted to them to let the railway. The necessity for the grant of a power of letting applied only to the tolls, and such a power was actually given them. The maximum of the tolls was studiously fixed by the Act, the minimum of the tolls was not, and it therefore became necessary that the separate accounts should be kept, in order that the overseer might know their real amount, and be able to settle the rate accordingly. The legislature seemed to have thought that the proprietors of the Canal Company would stand on the footing of a Canal Company which allowed others to use the means of carrying goods, and derived profits from tolls only. But such had not been the case with railways, nor could such be the case with railways, or the engines and the carriages of persons allowed to go on the road must be subject to regulations which the Directors of the Railway Company might make, and which might be made with so many restrictions on persons using their own engines and carriages as effectually to put a stop to that mode of travelling, and to make the carrying of passengers, as in fact it was, a monopoly in the hands of railway proprietors. But it was for this reason that the legislature had directed that the Company should keep accounts of all tolls which would have been received by the Company if other persons had not been permitted to travel on the railway with their own carriages. The tolls were not the only subject of rate, for the case of the King *v.* Guest, in 7 Adolphus and Ellis Reports, showed that all the engines and fixtures were liable to be included in the rating. The case of the King *v.* The Liverpool Exchange Company, showed that whatever contributed a particular value to a hereditament, rendered such hereditament liable to an increased assessment. This case was brought exactly within the provisions of the 6th and 7th Will. IV., and this rate must therefore be confirmed, unless the rate of rating was altered by the Railway Act itself. Now that could not be the case, for there was no provision in it expressly declaring that such rule should be altered in this particular case. If the two statutes was not consistent, the last must prevail. One thing was quite clear, that if these separate accounts were not directed to be kept, the railway proprietors might make all their profits depend on their tolls, or all depend on their carrying business, and thus render it impossible for any rate to be imposed on them. And that, no doubt, was the reason why the keeping of separate accounts was directed. The toll which they were authorised to demand was arbitrary within certain limits. They could not raise it beyond a certain sum, but they might lower it to almost nothing.

Mr. Justice PATTESON—If they did so, would not they tempt persons to come with their own carriages, and so destroy the carrying business of the Company?

Mr. SMITH answered, that nothing in the Act restricted them from doing so, if they should find it answer their purposes. All the amounts were found in the case, so that, if the court thought the rate now imposed was not the proper one, it might be corrected. But, taking these accounts to be correct, it was plain that the principle to be applied to them was that of calculating the rate on the rent that a tenant would give, and this rate, having been made on that calculation, must be affirmed.

The further hearing was postponed to Wednesday.

On Wednesday, Jan. 19, the case was resumed.

Mr. M. D. HILL first addressed the Court. The case resolved itself into two questions; and, first, he contended that the rate must be calculated upon the produce of the railway in the particular parish, in respect of its locality, in which the rate was demanded. And that was a principle to be collected, to be well established, from the decision of this Court in the case of the King *v.* Woking, 4 Ad. and El., p. 50, in the following terms:—"The rule by which Canal Companies are to be rated is laid down in the case of the King *v.* Kiregswinford (7 B. and C. 242), in these words:—'The true principle is this: a Canal Company is to contribute to the relief of the poor in each parish through which the canal passes, in proportion to the profit which they derive from the use of their land in that parish.' It is also truly observed, in the same judgment, that if the traffic be the same through the whole line of canal, every part of the canal will earn an equal proportion of the tolls. On the other hand, that if the profit vary in different parishes, the rate also must vary." Proceeding upon that judgment, the simple questions were, whether the profits were the same throughout the whole line of railway, or whether they varied, and then what was the amount of profits in this particular parish, in respect of which the rate would be chargeable? That there was a difference in the amount of traffic on various parts of the railway was beyond a doubt, and the rate must therefore vary, as it was said in case cited in each parish, according to the amount of profit derived from the traffic therein. The learned gentleman having referred to one or two unimportant cases cited on the side, said he would proceed at once to that which was in truth the great question in dispute between the parties. That was a question of the very highest importance, and it was one which, as regarded a railway, had never before been brought under the consideration of the Court. That question was, whether the rate was to be made in respect of the whole amount of profits of the Company, taking into consideration the advantages arising to them from carrying passengers and goods. Many propositions had been suggested on the other side, as those against which he, on the part of the defendants, should argue; but he assented to many of those points, to which it had been represented he would object, although at the same time he took leave to enter his most strenuous opposition to many of those which had been assumed by his learned friends to be true. He repudiated all idea or intention of contending that the case was taken out of the provisions of the General Parochial Assessment Act, 7 Will. IV., c. 76, by anything contained in the private Acts of the Railway Company, and all he called upon the Court to do was, to enforce the law as it stood upon that statute and the decided cases, before those Acts were passed. The object of the Railway Acts was to bring into existence a railway for the benefit of the public, which the public was to have an indefeasible right to use according to their own will and pleasure, on complying with certain conditions with regard to payment of toll, &c., which were set out. The object of the Acts was, therefore, to create a statuary highway for the benefit of the public, and the intention of the legislature that the public should be benefitted was obvious, from multitudes of enactments contained in the railway statutes. One of their provisions was (by sec. 72) that all persons should have free liberty to pass along and use the said railway on payment of such rates, tolls, and sums as should be demanded by the said Company, not exceeding in amount the rates by this Act directed to be called for by virtue of the powers herein given, and other clauses rendered it necessary to exhibit a table of tolls in every station-house, so that it might be publicly seen, and besides rendered the amount of tolls subject to revision by the Board of Trade. Another set of provisions gave the Directors power to make regulations for the conduct and management of the railway, and undoubtedly a more fit or proper set of persons could not have been selected, for none could be supposed to be so likely to take care that the orders and regulations were calculated to secure the success and good management of the railway. But the legislature, lest even there might be any difficulty arise upon this point, had empowered the appointment of superintendents over superintendents of the Company; and by the 3rd and 4th Victoria, c. 97, a power was given to the Board of Trade to affirm or disaffirm the regulations of the Company if they should think fit. Another set of provisions was contained in the Acts with regard to the Railway Company as carriers, but it would be found that these were rendered requisite only to place the Company, which was an incorporate joint-stock company, in the same position as a Company not so incorporated. But it was said by his learned friend on the other side, that a distinction existed between the Railway Company and a private individual or large body of persons, which consisted in their possessing a monopoly, and that the rate must therefore be founded upon a different basis with regard to that monopoly. First, he denied that there was any monopoly at all, because the public had an equal right to traffic on the railway with the Company itself; and secondly, he denied that even if it was a monopoly, there ought not to be any difference in respect of the rate made upon the Company. For what might be the consequence of the Company being rated as if their railway was a private road? It might be this, that in case of the abuse of any of the powers given to the Company by their statutes hereafter, they might well answer to any attempt to charge them with the consequences of such an act. True, our Acts of Parliament forbad our doing this act; but the Court have decided that we possess a monopoly, and we will do what we like in respect of our own private property. But, in truth, the question was, what was the amount of profits drawn by the Railway Company, and how were these profits to be calculated? And he contended that for the purposes of this rate, in profits, were derived from the road, except those arising from the tolls collected under the Act. He admitted, that any incidental profits proceeding from the cultivation of the slopes or sides of the road would create an extra profit, so as to render the land liable to additional rating, but the question here was of a different character. He would take the test applied to the case by his learned friend, the Solicitor-General—What was the amount of profit which would arise to a tenant who took a lease of the railway, its appurtenances, and fixtures? The powers of the Company would not go to the tenant; but all that would pass would be the mere railroad, devoid of tolls, of engines, carriages, stations, or any of the other paraphernalia necessary to carry on the traffic. The profits from the railway merely would amount to nothing, for, without such additions as as carriages, &c., the railway for the purposes of traffic would be valueless. In Rex *v.* Cook, 5 B. and C. 797, by letters patent, a light-house was granted by the Crown to Lord Lovell, with liberty to retain lights therein, and to take tolls from certain vessels, in respect of such lights, and it was held that it was the privilege which was

Digitized by Google

[illegible] to be rated, and not the house, for that there was no connection between the freehold interest in the tolls and the right to toll. So here the tolls were separate and distinct from the railway; the profits of the railway to its proprietors in their character as such proprietors consisted in the tolls, and any profits which they derived from it, in their capacity as carriers, were perfectly free and distinct from those produced by the tolls, and were not the subject of any rate. The real basis of this rate was a supposed rental of 70,000*l.*, a rental calculated not only upon the amount of tolls, but also upon the amount of profits yielded to the Company upon their business of carriers, and upon the ground of the improper calculation of that suppositious rental, the Court would hold with the defendants that the rate was excessive. But if any doubt could otherwise exist, all hesitation must be removed from the minds of their lordships by the provisions of the Act, which clearly drew a distinction between the sums of tolls received by the Company, and sums received by them in their capacity as carriers, and which rendered the accounts of tolls, as well as the private accounts, liable to be inspected by the parish officers, so that the amount of tolls received by them, as well as the amount receivable upon their own traffic might be calculated. If therefore the defendants were right in the first part of their contention, the rate must be reduced from 4,200*l.*, and if they were right in the second part of their argument, it must be reduced from 3,800*l.* to a sum of 1,293*l.*

Mr. KELLY, on the same side, having referred to the case of "The King v. Woking," which he contended was conclusive upon the first point of the case, and which had been recently recognised in the decision of this court in "The Queen v. the Bristol Dock Company," 1 Gale and Davison, 92; and saying, that upon these authorities the Court would fix the amount of the rate at 1,293*l.* or 1,800*l.*, according to the determination at which they should arrive on the second question, proceeded at once to the consideration of that point. The question of the case, he said, was this:—If the defendants were right in contending that the tolls, and not the whole receipts and profits of the Company were to be the basis of the rate, the amount of the rate would be 1,293*l.*, which, by calculation, would be payable in respect of the same derived by the Company in the way of profits in the parish of Middlewich. If the defendants were right on the point that the rate was to be calculated according to the amount of the tolls, and not according to the whole receipts and profits of the Company, but wrong as to the minor point, and the rate was to be calculated according to the amount of mileage of the railway within the parish in proportion to its whole length, the rate was to be 1,400*l.* If the defendants were right with regard to the rate being calculable only according to the amount of profits produced within the parish, but wrong upon the other point relating to the calculation of the rate upon the tolls, or upon the receipts and profits of the Company, the rate was to be 3,800*l.* If the defendants were wrong upon both points, the rate was to be 4,200*l.*

Mr. Osborne said, that he was prepared to contend, that the rate was only payable in respect of the amount of profit derived by the Company from that portion of the railway within the parish, and that he did not mean to contend that the rate must be raised upon an amount of profits derivable from the different proportionate to the whole amount received. The effect of this would be to render the rate either 1,293*l.* or 3,800*l.* in amount, as the Court should decide the other point.

Mr. Hislop then said, that he thought the argument raised on the other side was founded upon erroneous anticipations of the points for which he, upon the part of the defendants, should contend. It had been suggested that it would be argued for the defendants that the 157th section of the Railway Act was intended to alter the law, with regard to the principle of rating public undertakings of the kind, but in that he had no intention to raise any such point, for, in reality, he meant to contend that the provisions of that Act showed clearly and obviously that the legislature were well acquainted with the decisions of this Court, and that it was contemplated by them, therefore, that the rate to be imposed upon this Company was calculable upon the amount of tolls received. The law of the case needed no discussion, but all that was necessary for him to discuss was the application of the law already laid down, to the question now before the Court. The case on which he should rely was that of "the King *v.* the Trustees of the Duke of Bridgewater," 9 Barnwall and Creswell's Reports. That was admitted on both sides to be a sound authority, and the Court, he was convinced, would upon that case give their decision in favour of the present defendants. There a canal had been formed, the proprietors of which united in themselves two different characters; they were proprietors of the canal, and they were also carriers on it. As proprietors, they would be entitled to receive the tolls and profits in respect of traffic on the canal, and that was held to be a fit subject for rating; but in their character as carriers they received other profits, and those were held not to be fit subjects of rating—the distinction being drawn between the profits of the canal, and the profits of the proprietors as carriers. Applying that case to the present, he thought that it would be found that they were as nearly identical as possible. A canal was valuable to its proprietors, by reason of the tolls which they were entitled to receive for the passing of vessels upon it. A railway was valuable to the proprietors, *qua* proprietors, only by reason of the tolls which they were entitled to demand for the use of it by carriers. So far, then, the cases were the same. Again, it might happen that the same persons who were the proprietors of a canal, and were in that capacity entitled to demand tolls, were carriers, and instead of receiving tolls from others, might carry on a traffic on the canal, and might so be liable to pay tolls as well as derive a profit entirely separate from the profits arising from the land. So a Railway Company might be carriers on their railway—they might have their engines and carriages, as the Canal Company had its boats and barges, but they would do so in their capacity of carriers, and for the profits derivable from such trade they would not be rateable. So it was held in the case referred to, and so the Court would be disposed to hold in the present case; and the distinction was so clearly laid down in the judgment of Mr. Justice Bayley, that the Court would have no hesitation in saying that the liability of the defendants in this case was confined to the amount of the tolls received by them as proprietors of the Railway Company. The profits of carrying goods and passengers in no wise belonged to the occupation of the railway, but to the use of the engines and carriages—they were the profits of carrying on a trade as carriers, and as such were not rateable; but the tonnage in the case of a canal, and the tolls in the case of a railway were the real profits of the land, and constituted the proceeds of the occupation of the freehold, which were liable to be rated. The only difference which could possibly be supposed to exist, was this, that in the case of a Canal Company, the canal being more easy of use by strangers, the tonnage was actually paid by the persons who used the canal, who were in some cases strangers; while in the case of a railway, there were few instances of the tolls being actually paid, because few strangers made use of the railways as carriers; but first, the case cited did not proceed upon such a distinction; and, secondly, the Acts by which this railway was established required an account to be kept of the aggregate amount of tolls not only received, but receivable upon the traffic upon the railway, which would apply as well to the tolls received from strangers as to those payable by the Company itself. Then how could any possible distinction arise between this case and that which was cited? With regard to the object of the clause of the statute (sec. 157,) by which this keeping and publishing of the toll accounts of the Company was required, it was to be observed that the legislature, by the enactment contained in it, clearly showed the view which they had had in inserting it in the Act; and there could be no possible doubt, that their intention was to afford the parish officers the means of arriving at the knowledge necessary to enable them to discharge the duties of their office. With regard to the application of the principle of law which he contended to have been established, by the case which he had cited, he must not be supposed to contend that in no conceivable case could the Company be liable to assessment except in respect of the tolls received by them; and although he did not admit that there was any case in which such a state of facts could arise, it was not necessary for him to carry his argument so far. All that he contended was, that on the facts of this case tolls, and tolls only, formed the basis of the rate, and the Court would not go into the question of what might be done under different acts with respect to other railways, because such inquiries could have no god effect. But turning now to the terms of the case:—It was said by it, "The respondent parish contends that the annual value is not to be estimated on the basis of the tolls alone, nor is to be limited to such tolls or their value. But that the advantage which a lessee of the railway may be expected to derive from his lease by supplying power and by carrying upon it, may be taken into account." With regard to the lessee supplying power he begged leave to deny that he would derive one farthing advantage by so doing. It was a fallacy upon which the whole of the arguments of his learned friends had rested, that under a lease a tenant could derive the advantage which was stated, and which the Court was called upon to take into consideration in fixing the amount of rent. What would pass supposing a lease to be actually granted of the railway?—a lease, not of tolls, but of the railway itself? What advantages would the tenant derive? He contended that he would not, under such a lease, derive one shilling benefit, but that he would be in just the same position in which he now was. Supposing the lease to be of the railway and its appurtenances and fixtures; what would pass? Nothing but the bare land and the rail upon it; neither engines, carriages, stations, nor any of the other necessaries for working the line. It was suggested in the case, that the tenant would derive an advantage in supplying the power. That meant engines. How would he derive that advantage? Every person, be he whom he might, would have an equal right with himself to supply power and to carry passengers, under the direct provisions of the act, upon the payment of tolls from which he would not be exempted, and, in point of fact, no right would be conveyed to him under such a lease, except such as he might possess as one of the public before the lease was made and granted. The same observations applied also to the lessee carrying upon the railway, and the court in considering the amount likely to be obtained for the annual rent of the railway, would perceive at once that from the mere letting of the railway, which was in truth the property of the public upon certain conditions to be performed, would confer no benefit upon the lessee, whatever such a letting, combined with other terms and advantages, might effect in his favour. Without over-ruling the case of Rex *v.* The Trustees of the Duke of Bridgewater, it was submitted that the court could not decide in favour of this rate; and it was, therefore, urged that the court would give their judgment in favour of the defendants.

Mr. F. GUNNING having addressed a short argument to the court upon the same points,

Lord Chief Justice DENMAN said the case was one of importance and nicety, and therefore the court would take time to consider the judgment.

The Directors of the Leeds and Manchester Railway have lost no time in commencing the carrying into effect the instructions of the proprietors, which were given at their last general meeting, namely, for the continuation of the present line from Lees-street, Oldham-road, to Hunt's Bank, the intended permanent *passenger* station. Operations have been commenced.—*Leeds Mercury.*

THE TESTIMONIAL TO MR. GEORGE STEPHENSON.

To the Editor of the Railway Times.

Sir,—Having read with much pleasure a paragraph in your valuable paper of the 22nd instant, wherein is stated a proposition to present George Stephenson, Esq., properly styled "Father of Railways," with a piece of plate for his ingenious and indefatigable exertions after many years study, toil, and anxiety to bring railways to that perfection they have arrived at, I, who had the honour of being engaged by that much respected gentleman on the first railway, and also with laying the *first* rail under his superintendence, should act ungratefully were I not to contribute my mite in so deserving a cause.

My greatest ambition will be in seeing my name, if possible, first on the list for five pounds, as I wish to show my feelings towards one whose services have proved invaluable to his country, and whose name will be cherished for ages to come.

I am, Sir, yours obediently,
THOMAS GREENER.

2, Rose-lane, Stepney, January 24, 1842.

DUKE OF CORNWALL HARBOUR AND LAUNCESTON AND VICTORIA RAILWAY COMPANY—GENERAL MEETING.

THE Half yearly General Meeting of the Proprietors of the Duke of Cornwall Harbour and Launceston and Victoria Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street, JOHN RAMSBOTTOM, Esq., M.P., in the Chair.

It will be recollected that there has for some time past been no prospect of proceeding with this undertaking; indeed the Company would have long since been broken up, but for certain claims made upon it by Mr. George Ross, the late Secretary, and at one period Managing Director, of the concern. These claims, made under circumstances which have been repeatedly described in the *Railway Times*, the Company determined most strenuously to resist, and an action was accordingly brought against them by Ross, which ended in a reference to Mr. Wilson.

On Thursday, after the advertisement calling the meeting had been read, and the minutes of the last meeting confirmed, strong complaints were made that the arbitrator should, after a lapse of more than 12 months, not yet have made his award, and ultimately, on the motion of Mr. Richardson, seconded by Mr. Jefkins, the following resolution was unanimously carried:—

Resolved,—That the present position of the Company renders it extremely desirable that the matters in dispute should be closed as speedily as possible; and that Mr. Cole (the Solicitor,) be therefore requested to communicate this resolution to the arbitrator, stating the loss occasioned to the Company by the delay, in consequence of the failure of many and the decease of other proprietors, which will render the winding up of the affairs of the Company more onerous to the remainder.

After a good deal of conversation it was deemed desirable that the present meeting should not be adjourned, but that in order to save expense, a special meeting should be called by the Directors, as soon as the demand was received, in order to the immediate close of the concern. A resolution to that effect was moved by Captain Bond, seconded by Mr. Kinnaird, and carried unanimously.

On the occasion of a vote of thanks to the Chairman and Directors, it was explained that their services were entirely gratuitous, as also were those of Mr. Dyson, the present Secretary, and that the delay in winding up the affairs of the Company was in no way attributable to them.

The meeting then separated.

GRAND JUNCTION RAILWAY.—NOTICE is hereby given, That a Special General Meeting of the Grand Junction Railway Company, will be held at the Cotton Sales Room, in the Exchange-buildings, in Liverpool, on Wednesday, the 2nd day of February next, at one o'clock in the afternoon, for the purpose of declaring a dividend, and on other special affairs.

Dated this 6th day of January, 1842.

J. SWIFT, Clerk of the Company.

P.S. As the Company's establishments for engine and coach-building and repairing are about to be removed to the new works at Crewe, and several hundred men with their families will thereupon be taken away (for the Company's advantage) from their present residences, and means of spiritual and temporal instruction, and compelled to reside in a district almost wholly unprovided in both these respects, it is the intention of the Directors, (and they take this opportunity of distinctly stating it before hand, (to submit for the consideration of the shareholders, at the general meeting on the 1st of February, the proprietary of authorising the appropriation out of the Company's funds, of a sum not exceeding £1,000, towards the establishment of a church and school, in the neighbourhood of, and in connection with, the new works.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, that the HALF-YEARLY GENERAL MEETING of Proprietors of the Birmingham and Derby Junction Railway Company will be held, in pursuance of the provisions of the Act of Incorporation, at the Waterloo Rooms, in Waterloo-street, Birmingham, on Wednesday, 16th day of February next, at Twelve o'clock at noon.

The Chair to be taken at One o'Clock precisely,

HENRY SMITH,
Chairman of the Board of Directors.

Waterloo-street, Birmingham, January 25, 1842.

Extract from the Act of Incorporation.

SEC. 98.—"And be it further enacted, that no proprietor of any share on which any call made shall be unpaid, shall, at any meeting of the Proprietors of the said Company, be allowed to vote, either personally or by proxy, until the money called for in respect of such shares shall have been fully paid."

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—Notice is hereby given, that the Books kept by the Birmingham and Derby Junction Railway Company, for entering the Memorials of the Transfer of Shares in that Company, will be closed, in pursuance of the provisions of the Act of Incorporation, from Monday, the 7th day of February, to Wednesday, the 16th day of February next, both days inclusive.

By order,
THOMAS KELL, Secretary.

Waterloo-street, Birmingham, January 25, 1842.

RAILWAY MANAGER.—Birmingham and Derby Junction Railway.—The Directors of the Birmingham and Derby Junction Railway are desirous of engaging the services of a Gentleman who, in addition to the duties of a Traffic Manager (as formerly advertised), is qualified to undertake the General Superintendance of the Concern, including such of the official duties usually undertaken by the secretary as may attach to that department.

With other necessary qualifications, the possession of experience in the practical working of railways will be deemed most important.

The salary will be £500 per annum.

Applications, with testimonials, must be addressed to the Chairman of the Board of Directors, at Birmingham, on or before the 7th of February next.

Birmingham, January 25, 1842.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS. The Directors of this Company are prepared to receive Tenders for Loans, pursuant to a Resolution passed at a General and Special Meeting of Proprietors, held at the London Tavern, the 20th day of January, instant, empowering them to raise £300,000 on Loan Notes, under the Seal of the Company, payable at the end of five years, bearing interest in the meantime at 5 per cent. per annum, payable half-yearly, with an option to the holders of such notes to convert them at the expiration of three years into Quarter Shares of the Company, at £10 per Quarter Share, under the powers of an Act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period, and in the allotment of which notes, the Proprietors are to have the preference. The Tenders are to express the sums proposed to be lent, to be addressed to the Board of Directors, at the Company's Office, No. 10, Angel-court, Throgmorton street, and are to be sent in on or before the 10th day of February next.

One-half of the amount is to be paid on the allotment, one quarter on the 15th day of April next, and the remainder on the 15th day of July next, and interest is to commence from the time of the respective payments.

By order of the Board of Directors,
SWEET, SUTTON, EWANS, and OMMANNEY,
Solicitors.

London, January 21, 1842.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

BIRMINGHAM AND GLOUCESTER RAILWAY.—The Eleventh Half-Yearly General Meeting of the Proprietors of the Birmingham and Gloucester Railway will be held at the Bell Hotel, Gloucester, on Friday, the 18th of February next. The Chair to be taken at One o'Clock precisely.

The Books in which Transfers of Shares are registered will be closed from Wednesday, the 9th, to Friday, the 18th of February, both days inclusive.

NOTICE is also hereby given, That the question of Additional Trains on Sundays will be brought before the meeting.

(Signed) C. R. MOORSOM, Chairman.

12, Waterloo-street, Birmingham,
January 25, 1842.

NORTHERN AND EASTERN RAILWAY.—NOTICE is hereby given, That the Books in which Transfers of Shares are registered in this Company, will be closed from Monday, the 7th of February, till Thursday, the 10th of February, both days inclusive; and that the Dividend for the half year ending 31st December last, will be paid only to the Proprietor who may be registered on the Company's Books on the 7th of February.

By Order of the Board,
WILLIAM BOURNE, Secretary.

Shoreditch, London, 26th January, 1842.

GARNKIRK AND GLASGOW RAILWAY.—NOTICE is hereby given, that the Annual General Meeting of the Company of Proprietors of the Garnkirk and Glasgow Railway, will be held in the George Hotel, Glasgow, on Wednesday, the 16th day of February next, at two o'clock afternoon.

No Transfers of Stock will be registered between the 10th and 17th of February.

Copies of the Report by the Committee of Management will be delivered to the Proprietors previous to the Meeting.

CHAS. ALEX. KING, Secretary and Manager.

Glasgow, 27th January, 1842.

TO CONTRACTORS.—A Gentleman who has had several years experience in railway work, wishes to engage with any respectable Contractor, as Engineer or Inspector. He understands earthwork, bridge building, measuring, levelling, drawing, getting up estimates, &c., &c., will be responsible for the proper gradients, widths, proper level and construction of masonry, and would make himself in any other way useful to his employer, and can give the best testimonials as to character and ability. Address, G.G.S., *Railway Times* Office, Fleet-street.

TO ENGINEERS, MILLWRIGHTS, FOUNDERS, SMITHS, and others.—To be disposed of, an Old-Established Engineer's, Millwright's, and Founder's Concern—(the present proprietor retiring from the manufacturing department)—situated in London. The premises and plant are arranged for a most extensive business, and have been erected during the last 25 years at a considerable cost, but from the above cause will be disposed of upon extremely favourable terms. The premises will be let on lease, and the Machinery and Tools disposed of at a valuation.

Apply for particulars to John Evans, Esq., 51, Lincoln's Inn Fields.

COAL, IRONSTONE, and LIMESTONE.—TO BE LET.—1. A field of several thousand acres of Ironstone and Great Mountain Limestone, of first-rate quality, lying contiguous to each other, with several seams of Coal producing the best Coke in the immediate vicinity, all within the Manor of Wolsingham, in the County of Durham, and having railway communication to the Sea.

2. A field of several hundred acres of Coal, in the Manor of Seaton Carew, in the County of Durham, intersected by the Stockton and Hartlepool Railway, and distant within 8 miles from the Port of Hartlepool. The recent winnings of Coal in the near neighbourhood have established the existence of the main seams of the Durham coal field at workable depths.

For further particulars inquire of G. H. Wilkinson, Esq., Harperley Park, Bishop Auckland.

CRANES, ROPE BLOCKS AND SCREW JACKS, Manufactured by ELLIS AND NORROY, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Cranes for builders, and Hoisting Tackle of every description on the most improved principle.

Drawings of the above may be seen and particulars obtained at the Works in Manchester, and at the office of C. F. Cheffins, 9, Southampton-buildings, Holborn, London.

GARDENERS' CHRONICLE.—THE COTTAGER'S GARDEN CALENDAR, by Mr. RAYTON, Gardener to the Duke of Devonshire, will not appear till Saturday week (Feb. 6). This Calendar will comprehend full details relating to all the garden operations which concern a cottager. It will be illustrated with woodcuts, and will be printed in this cheap form, that every Gentleman may, if he pleases, distribute copies among his cottage neighbours and dependents. The EXTRA copies must be ordered at once, either of the regular News Agents, or direct from the Office (8, Charles-street, Covent-garden, London), by forwarding a post office order for the numbers required. The GARDENER'S CHRONICLE of the 5th of February will be enlarged to include the Gardener's Calendar, but will still go free of post, being stamped, and may be ordered of all newsvenders, price 6d. each.

[redacted] COMMITTEE.

[redacted], Esq., M. P.

[redacted], Yr. of Overwick and Dunstall.

[redacted], Esq., of Ashenaig.

[redacted], Esq., of Grovesparks.

[redacted] C. Scott, Esq., of Hawthill.

[redacted] Rhins, Esq., of Govanhill.

[redacted] Falconer, Esq.

[redacted] Esq., Banker in Greenock.

[redacted] Esq., Merchant, Greenock.

[redacted] Esq., Merchant, Greenock.

[redacted] J. E. Errington, Esq.

[redacted] of Leven, from the abundant supply of pure [redacted] by Loch Lomond, has now become the prin- [redacted] and of Cotton printing in Scotland. It is closely [redacted] with printfields and dyeworks, and is crowded with [redacted] and rapidly increasing population. The [redacted] printed, bleached, or dyed at these works [redacted] from Glasgow. The whole dyestuffs used, and [redacted] and uncoloured, is also brought from Glasgow, [redacted] of the goods either manufactured or finished [redacted] are carried back to Glasgow for sale. The [redacted] traffic, therefore, in goods and passengers, be- [redacted] Glasgow and the Vale of Leven, is very large, and [redacted] immense, the number of tourists to Loch Lomond, [redacted] to Loch Katrine and the Trossachs, is so great an [redacted] employment to two steam boats on Loch Lomond, [redacted] several coaches and omnibuses through the Vale of [redacted] from Dumbarton to Balloch.

[redacted] present means of communication through the Valley [redacted] the turnpike road, which is heavily burdened [redacted] and [redacted] river Leven, which is a rapid circuitous [redacted]. The navigation is performed by small [redacted], dragged by horses, it is at all times tedious [redacted] expensive, and is often interrupted, in winter [redacted] floods, and in summer from want of water.

[redacted] the ingenious Henry Bell proposed to effect a [redacted] between the Clyde and Loch Lomond, by deepen- [redacted] the river Leven. And in 1824 a Committee of the [redacted] land-owners of the county of Dumbarton em- [redacted] Mr. Baird, Civil Engineer, to examine and report on [redacted] of the River, and the benefit likely to result from [redacted] improvement; when Mr. Baird, after a careful investi- [redacted], found the traffic so great, that he recommended the [redacted] to be deepened, by a series of locks, at an expense of [redacted], from which outlay he estimated a revenue of above [redacted] per annum. Insuperable objections, however, were [redacted] to exist to the proposed alteration on the levels of [redacted] river, and the scheme was abandoned.

[redacted] the date of Mr. Baird's report, the population of [redacted] has nearly doubled, and its trade and manufac- [redacted] increased in a still greater ratio. The want of [redacted] communication is therefore felt with daily in- [redacted] force, and, as all hope of deepening the River is [redacted], the promoters of the present undertaking [redacted] associated themselves for the purpose of making a [redacted] through the Valley, commencing at Dumbarton [redacted] reaching at Loch Lomond.

[redacted], Paisley, and Greenock Railway Company, [redacted] establish a station on the opposite side of the [redacted] Dumbarton, and about half a mile distant from [redacted] premises of the Leven Railway. A large steam [redacted] also to be maintained by the Greenock Rail- [redacted], for the transmission of passengers, and of [redacted] and minerals in their waggons from the one Railway to [redacted]. And it is intended that the same waggons, which [redacted] Glasgow filled with manufactured goods, dye stuffs, [redacted] return from the Vale of Leven filled with dyed and [redacted]; and that the waggons, which leave Glasgow [redacted] shall return with the mineral and agricultural [redacted] the country surrounding Loch Lomond.

[redacted], Paisley, and Greenock Railway, the Glas- [redacted], Kilmarnock, and Ayr Railway, and the Leven [redacted], will therefore be little different from one [redacted], and the numerous works and manufacto- [redacted] of Leven, and the picturesque scenery of [redacted] will be brought within one hour's distance of [redacted], Port Glasgow, and Greenock, and within [redacted] distance of Edinburgh, Leith, Linlithgow, [redacted], Kilmarnock, Ayr, and numerous smaller [redacted], so many large cities and towns will be [redacted] by Railways, that a population of nearly a [redacted] brought within three hours' distance of the [redacted] and Loch Lomond.

[redacted] traversed by the proposed Railway is [redacted] the works will be light and the gra- [redacted] good. The line has been selected by [redacted], Esq., which is a sufficient guarantee for its [redacted], and the plans and sections have been [redacted], and the requisite Parliamentary notices [redacted]

[redacted] this Report, that "There are few [redacted] will not be expensive, and, after al- [redacted] price for the land, I think it safe to state [redacted] necessary for making this Railway. [redacted] in the first instance, to lay a single line of [redacted] communicating with the stations, and [redacted] branches to the works. The distance [redacted], and, both for economy and safety, I think [redacted] be worked with one locomotive engine The [redacted] of working the line would thus not exceed [redacted] including every expense."

[redacted] of traffic, which have been care- [redacted] accurate data, it appears that at fair [redacted], and in every case, at less than the existing [redacted] of [redacted] per annum is to be calculated on; and deducting from this sum the working expenses as before shown, of £3000, there would remain £5000 of nett revenue, which is equal to about 8 per cent on the proposed capital.

Applications for Shares will be received by Messrs. M'Clelland & M'Kenzie, Glasgow; Messrs. Forsyth & Pritchard, Liverpool; and C. & J. H. Mac Rae, 57, Moorgate-street, London.

G. Palmer, Esq.	

STANDING COUNSEL—R. Ryder Dean, Esq.
SOLICITORS—Messrs. W. & S. Cotton, No. 76, Basinghall-street.

This Society presents to the Public (and particularly to Bondsmen) the following advantages:—

1. No individual need hereafter incur the responsibility of becoming security for the integrity of another.
2. Individuals who are already surety for the fidelity of others, may immediately protect themselves from loss by insuring with the Society.
3. The expense and painful obligation of obtaining approved Sureties, or of replacing them when removed by death or otherwise will be altogether obviated.
4. All risks attending irresponsible sureties will be removed.
5. The submission to the loss, or the distressing alternative of instituting legal proceedings against the friends who are surety, will be avoided.

Also to Agents, Travellers, and Clerks holding, or being desirous of holding, confidential and responsible situations, the Guarantee Society presents immediate facilities, where for a moderate premium, surety for integrity may be acquired.

The Prospectus, Form of Application, and other particulars, may be obtained at the Office, No. 28, Poultry, London.

By order,
THOMAS DODGSON, Secretary.

AIRE AND CALDER NAVIGATION.—TO EXCAVATORS, MASONS, AND GENERAL CONTRACTORS.—TO BE LET, the WIDENING AND ENLARGING of the LEEDS CUT, the Building and Completing of an Entrance from the said Cut to certain intended Docks on the South Side thereof, a Bridge over such Entrance, and the Floodgates, Culverts, Retaining Walls, and other Works connected therewith.

Plans and Specifications may be seen, and further Information may be had at the Office of Messrs. George Leather and Son, Civil Engineers, at Leeds, from Wednesday, the 19th instant, to Wednesday, the Second Day of February, on which latter Day, the Work will be Let at the Royal Hotel, in Leeds, at Twelve o'Clock at Noon.

Leeds, January 13, 1842.

Just published, 7th edition, price 3s., and sent free on receipt of a Postoffice order, for 3s. 6d.

MANHOOD: the Causes of its Premature Decline, with plain Directions for its Perfect Restoration; addressed to those suffering from the destructive effects of excessive indulgence, solitary habits, or infection; followed by observations on the treatment of Syphilis, Gonorrhœa, Gleet, &c., illustrated with cases, &c.; By J. L. CURTIS and Co., Consulting Surgeons, London.

SEVENTH EDITION.—Published by the Authors, and sold by Balliere, Medical Bookseller to the Royal College of Surgeons, 219, Regent-street; Strange, 21, Paternoster-row, London; Guest, Steelhouse-lane, Birmingham; T. Sowler, No. 4, St. Ann's square, Manchester; G. Philip, South Castle-street, Liverpool; Tannin and Co., 41, Grafton street, Dublin; Duncan, 114, High-street, Edinburgh; and to be had of all Booksellers.

The following are a few of the numerous testimonials this popular work has received, and which the limits of an advertisement will only allow of being published:—

Messrs Curtis's work, entitled MANHOOD, *is one of the few books now coming before the public on such a subject which can lay claim to the character of being strictly professional, at the same time that it is fully intelligible to all who read it. The moral and medical precepts given in it, render it invaluable.—Magnet.*

The perusal of Messrs. Curtis's book, entitled MANHOOD, *has really astonished us by developing a series of maladies, the never failing consequence of the vicious habit of which it treats. The clear connexion pointed out between the assigned cause and the effects is perceptible to every capacity. We strongly recommend the work.—Age.*

We recommend the work, entitled MANHOOD, *&c., to the careful perusal of persons of all classes. The moral as well as physical advantages sure to result from such perusal, will be most readily recognised and felt by those who stand most in need of them.—Statesman.*

Messrs. Curtis and Company are to be consulted daily at their residence, No. 7, Frith-street, Soho-square, London.

Country Patients are requested to be as minute as possible in the detail of their cases. As to the duration of the complaint, the symptoms, age, general habits of living, and occupation in life of the party; the communications must be accompanied by the usual consultation fee of £1, without which no notice whatever can be taken of their application, and in all cases the most inviolable secrecy may be relied on.

GRAVESEND AND ROCHESTER RAILWAY COMPANY.—Capital to be raised £150,000, in 6,000 Shares of £25 each.—Deposit £2 10s. per Share.

PROVISIONAL COMMITTEE.

George Carter, Esq.	George Palmer, Esq.
Alfred Alers Hankey, Esq.	— Poynder, Esq.
John Harman, Esq.	Robert Sutton, Esq.
Samuel Mills, Esq.	Alex. Luard Wollaston, Esq.
John Moxon, Esq.	

With power to add to their number.

Bankers.—Messrs. Hankey and Co., London; Messrs. Williams, Deacon and Co., London; Messrs. D. H. Day and Sons, Rochester.

Engineer—J. U. Rastrick, Esq., F.R.S.

Solicitors—Messrs. Sweet, Sutton, Ewens, and Ommanney.

The object of this Company is to connect Gravesend with Strood, Rochester, Brompton, and Chatham, by converting the Thames and Medway Canal into a Railway. Satisfactory arrangements have been made with the Thames and Medway Canal Company. The cost of making the Railway, including land, stations, engines, carriages, and working stock, is estimated at £117,115; but in order to meet every contingency, it is proposed to raise £150,000 by the issue of 6,000 shares of £25 each, upon which a deposit of £2 10s. per share is to be made. The subscribers of the amount now to be raised are to be entitled to interest at £5 per cent. per annum upon the amount of their deposits and calls, until the opening of the Railway, and from that time they are to have a preference of receiving interest at the same rate, out of the profits of the undertaking, before any dividend is paid to the other proprietors, until the expiration of 12 months, when they are to have the option of continuing to receive £5 per cent. per annum, or of sharing the profits in common with the other proprietors.

Considerably above 1000 persons at the present season of the year daily travel between Gravesend and Rochester, and there can be no doubt but that during the summer months that amount will be very greatly increased.

The number of passengers landed and embarked on the Piers at Gravesend, between the 1st of August, 1840, and the 1st of August, 1841, was 963,650. It is estimated that there will be at least 750,000 passengers annually conveyed upon this railway, producing, according to a moderate calculation, £36,250, to which may be added 12501. for goods, parcels, &c.; thus making the total receipts £37,500: which after deducting £13,500 for the working of the line, will leave a net annual revenue of £24,000, equal to 8 per cent. upon an assumed capital of £300,000. This is founded upon merely doubling the existing traffic, whereas the result of almost every other line of railway would justify a much larger increase.

The Provisional Committee have submitted the plan of this railway to Mr. Rastrick, who has reported most favourably upon it, as having advantages which are not possessed by other railways, and which cannot fail to make it a safe investment for capital.

It is intended to apply to Parliament in the ensuing session for power to carry the above undertaking into effect, and such shareholders in the Thames and Medway Canal Company as are desirous of taking shares in the further capital are requested to signify their intention immediately.

Application for shares to be made on or before the 3d Feb. next, to Messrs. Sweet, Sutton, Ewens, and Ommanney, 6, Basinghall-street, London, (post paid), in the form mentioned in the prospectus, which may be had at the office of the Solicitors.

London, January 19th, 1842.

To the Proprietors of the Thames and Medway Canal.

Whereas certain parties who are Proprietors of Shares in the above Canal, and whose residences are unknown, and to whom letters addressed for years have been returned to the Company, are hereby requested to forward their addresses to the office of the Company, No. 11½, Union-court, Old Broad-street, as an application is about to be made to Parliament to convert the Canal into a Railway.

The Committee strongly recommend all proprietors to assent to the proposal for converting the Canal into a Railway, as unanimously agreed to at the late Special General Meeting of the Canal Proprietors.

By order,

EDMUND COLLIER, Clerk to the Company.

Union-court, Old Broad-street, 25th January, 1842.

GREAT WESTERN RAILWAY.—Notice is hereby given, that the Next Half-Yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's Offices, Princes street, in the City of London, on Thursday, the 24th of February next, at Twelve o'clock, for the Election of Four Directors in the place of the same number who will retire by rotation, and for other purposes of business.

The Chair will be taken at One o'clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGAT, Deputy Chairman.

The Directors retiring are re-eligible, under the provisions of the act.

The Transfer Books will be closed on and from Monday, the 14th February, and will not be re-opened until after the said Half-yearly General Meeting on the 24th of February; and the Dividend for the half year ending 31st December last will be paid to the Proprietors who may be registered on the Company's books when closed.

By order, C. A. SAUNDERS, THOMAS OSLER } Secretaries.

26th January, 1842.

YARMOUTH AND NORWICH RAILWAY.—STEPHENSON'S LINE.

LIST OF PROVISIONAL COMMITTEE.

H. Bolinbroke, Esq., Norwich.
A. Duff, Esq., London.
W. Herring, Esq., Norwich.
Captain Laurence, London.
John Longe, Esq., Shirworth-park, Norfolk.
F. R. Reynolds, Esq., Yarmouth.
— Reed, Esq., Norwich.
George Stephenson, Esq., London.
T. F. Stewart, Esq, Yarmouth.
J. C. Smith, Esq., Yarmouth.
Captain Tyndale, London.

With power to add to their number.

The Directors beg to give notice that on and after the 1st of February next, no further applications for shares will be received.

Those parties to whom shares may have been allotted prior to that period, may pay their deposits on such shares to the credit of the Yarmouth and Norwich Railway Company, at Messrs. Glyn, Mills, Halifax, & Co., when receipts for the sums so paid will be given them.

Applications for shares may be addressed in the meanwhile to Messrs. White and Borrett, 35, Lincoln's Inn Fields; Messrs. Rackham and Cooke, Norwich: I. O. Taylor, Esq., Norwich; C. J. Palmer, Esq., Great Yarmouth; and to the Secretary, 6, Warnford-court, Throgmorton-street; with whom copies of the Parliamentary contract and subscribers' agreement lie for signature.

HENRY PATTESON, Secretary.
6, Warnford-court, Throgmorton-street.

To the Provisional Committee of the Yarmouth and Norwich Railway.

Gentlemen,—An objection I understand has been raised to the route which I have proposed for the line of railway from Yarmouth to Norwich, because the terminus is so situated that an extension of the line cannot conveniently be made southwards.

It is impossible that this can have been urged seriously by any one who has deliberately considered the three plans which have been proposed, for all the lines in effect nearly coincide within a short distance from the city of Norwich, and from this common point any direction may be adopted which may be found most expedient hereafter, depending of course upon the nature of the approach from the south.

The position of the line hereafter to be adopted from Norwich towards London is, I apprehend at this moment quite undecided, it seems to me therefore by far the most prudent course to adopt that route which is decidedly the most convenient for the traffic between Yarmouth and Norwich, and this, I am confident, is best accomplished by the route which I have chosen; for you will not fail to bear in mind the importance which I attached to the circumstance of your line not crossing the navigable river with the Yarmouth and Norwich traffic. This I conceive to be an essential feature in the plan I have proposed and calculated to place your line in a very independent position as regards the traffic upon which your present case rests.

It is obvious that you must compete with the river for a considerable portion of your traffic, I therefore hold the non-interference with the river navigation to be of the very last importance to your project.

Your project is now in a very small compass, and unincumbered by any circumstances in my opinion at all calculated to prevent a successful issue. I strongly recommend you therefore to proceed in accordance with the present design, and I have merely to add my assurance that the proposed approach to the City of Norwich in no way interferes with its convenient extension southwards.

Several plans have been carefully considered by me, and I might extend these remarks to great length in reference to them, but since the actual position of any line from Norwich towards London is yet undecided, I cannot see the utility of discussing their relative merits. I have consequently confined my attention to the simple question.

Does the present approach to Norwich by the Valley line create any difficulty to its extension southwards?

This question I unhesitatingly answer in the negative.

I remain, Gentlemen, your obedient servant,

(Signed) ROBERT STEPHENSON,
35½, Great George-street, Westminster.

3rd January, 1842.

LONDON AND BIRMINGHAM RAILWAY, Office, Euston Station, 14th January, 1842.—Notice is hereby given, That the Books in which Transfers of Shares of this Company are registered, will be closed from Friday, the 28th of January, to Saturday, the 12th of February, 1842, inclusive, and that the Dividend for the half-year ending 31st December, will be paid to the Proprietor, who may be registered on the Company's Books, on the 28th January.

By Order,

R. CREED, Secretary.

LONDON AND BIRMINGHAM RAILWAY, Office, Euston Station, January 15, 1842.—Notice is hereby given, That the February Half-yearly General Meeting of the Court of Proprietors of the London and Birmingham Railway Company, will be held at the Queen's Hotel, Birmingham Station, on Friday, the 11th of February next, at Eleven o'Clock in the forenoon.

The Chair to be taken at Twelve o'Clock precisely.

GEORGE CARR GLYN, Chairman.
JOSEPH F. LEDSAM,
Deputy-Chairman of the Board of Directors.

(By Order) RICHARD CREED, Secretary.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Hallifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,

J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

BRISTOL AND EXETER RAILWAY.—Call of £10 per Share, being the Eleventh Instalment, and making with former Calls, the sum of £70 per share.—The Directors of this Company, under the provisions of the Act of Incorporation, hereby give Notice, that the Proprietors of Shares are required to pay on or before the thirty-first day of January instant, at any of the undermentioned Banks, the sum of Ten Pounds on each of their respective shares, viz.:—

London—Messrs. Glyn, Hallifax, Mills, and Co.

Liverpool—The Bank of Liverpool.

Manchester—Messrs. Wm. Jones, Loyds, and Co.; the South Lancashire Bank.

Bristol—Messrs. Miles, Harford and Co.; Messrs. Baillies, Ames, and Co.; Messrs. Stuckey and Co.'s Banking Company, or at either of their Branches; the West of England and South Wales District Bank, or at either of its Branches; the National Provincial Bank of England.

Exeter—Messrs. Sanders, Sons, and Co.; Messrs. Cole, Holroyd, and Co.: the Devon and Cornwall Banking Company; Messrs. Milford and Co.; the West of England and South Wales District Bank, or at either of its Branches.

The Bankers are instructed to charge interest at the rate of 5 per cent. per annum on all arrears.

FREDERICK RICKETTS, Chairman.
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol, Jan. 7th, 1842.

Interest at the rate of 5 per cent. will be allowed on payments in anticipation of Calls.

MANCHESTER AND LEEDS RAILWAY. TENDERS FOR LOANS.—Notice is hereby given, that the Directors of the Manchester and Leeds Railway Company are prepared to receive Tenders for a limited amount of Loans, in sums of not less than £1,000 each, secured by the bonds of the Company, for the period of one or not exceeding five years. The lender to have the option of calling in his money, at any time between those periods, on giving the Company six months notice. Interest thereon will be allowed at the rate of 4½ per cent. per annum, payable half-yearly. By order of the Board,

JOHN JELLICORSE, Secretary.

Clowes's Buildings, Hunt's Bank, Manchester, Jan. 10, 1842.

TO ENGINEERS, FOUNDERS, MACHINE-MAKERS, STEAM-SHIP BUILDERS, &c.—FOR SALE, an extensive and Valuable MANUFACTORY for the construction of Steam-engines, Boilers, General Machinery, Chain Cables, Anchors, Foundry Goods, Forged Goods, and General Blacksmith Work, well known as the FOOTDEE IRON-WORKS, Aberdeen.

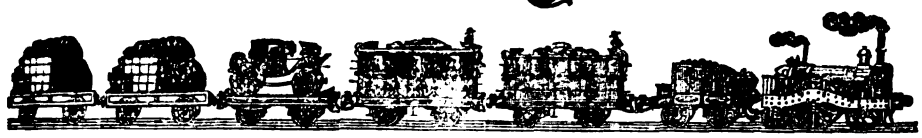
These Works occupy nearly four acres of freehold ground, at a very moderate feu duty or ground rent, and are situated at Footdee, in the populous city of Aberdeen, within 300 yards of the Harbour Quay.

The Engines, Boilers, and Machinery of several of the large class of steam-ships have been wholly constructed and fitted up at these Works, which afford unusual facilities to parties engaged in that branch of business, and such as exist in few other establishments in the United Kingdom. The foreign and coasting trade of the port of Aberdeen is very extensive, and has rapidly increased for several years past, whilst the steam trade to London, Hull, Leith, Inverness, Orkney, Shetland, &c., is carried on to a very considerable extent.

Immediately adjoining the Iron-works, and belonging to the same Proprietors, is an extensive rope, sail, and felt work, which will also be disposed of, either with or without the Iron-work, as may be agreed upon.

To a party desirous of engaging in the building and equipping of steam or sailing vessels, the construction and repairing of Steam-engines, Sugar-mills, and General Machinery, these Works, from their local situation and peculiar facilities within themselves, will be found particularly well adapted.

The whole of the Buildings are substantial, commodious, and suitable for the respective trades carried on within them. The machinery is of the first class, and in excellent order, the whole having been erected at considerable expense.



In the mean time, the work will continue to be carried on in all its branches, and orders executed as usual.

A plan and specification of the premises have been printed, which may, with all particulars and further information upon the subject, be had upon application to Messrs. Johnston and Farquhar, Solicitors, London; John Jopp, Esq., W. S., Edinburgh; or Messrs. Jopp and Shand, Advocates, Aberdeen, in whose hands the title deeds of the property are.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's Fleet-street, Middlesex.—Saturday, January 29, 1842.

The Railway Times.

"Lord Bacon saith truly, there are three things which make a nation great and prosperous,—a fertile soil, busy workshops, and easy conveyance for men and commodities from one place to another; to which, let me add knowledge and freedom."—Bishop Hall.

No. 214, Vol. V.—No. 6.] SATURDAY, FEBRUARY 5, 1842. [Price 6d.

IMPROVEMENT IN THE RAILWAY SHARE-MARKET.—The attention of the Proprietors of Railway Shares is requested, at the ensuing half-yearly meetings, to an important reduction in the expense of working Locomotive Engines, which, if adopted, must have the effect of increasing the dividends, and of course the prices, of railway property.

The economy above mentioned is effected by the use of coal, the results being examined agreeably to Act of Parliament, in lieu of the expensive article of coke.

Taking the cost of coal and coke respectively on the Midland Counties' Railway as the data for calculation, £100 worth of coal will evaporate as much water, and propel a train as many miles as £210 worth of coke. For the corroboration of this statement, application may be made to Mr. Kennedy, Esq., Derby, Chief Engineer on the above railway, and no doubt the Directors would afford all requisite information to any Railway Company.

Further particulars, with drawing, &c. &c., may be obtained of the Patentee (of the apparatus), Samuel Hall, No. 1, King's Arms Yard, London.

LEEDS SMOKE NUISANCE—MEETING AT LEEDS.—In a few days will be published, Mr. SAMUEL HALL'S LETTER respecting his Patent Apparatus for the Consumption of Smoke, addressed to William Beckett, Esq., M.P., Chairman of the above meeting.

In a Letter to the Committee then appointed, in which Mr. Hall will establish his claim to the originality of his invention, and the priority of his Patent for the only means which although sought for during the last half century has been devised for the perfect consumption of smoke, unattended by such loss of fuel, diminution of the power of the boilers for the generation of steam, additional labour to the engineers, and other practical mischief, as the operations of steam-engine and other furnaces could not escape. In their Letters, Mr. Hall will clearly show that the plans submitted to the above meeting by C. W. Williams, Esq. and Wm. Bell, Esq., of Edinburgh, are merely chimney inventions and infringements of his Patents. Mr. Hall, at the same time, suggests to all parties the propriety of deferring infringements on his Patents until they have perused his forthcoming statements, as well as the respective specifications of his Patents, and those of the statement now obtained by the gentleman above mentioned.

Published by John Weale, 39, High Holborn.

COAL, IRONSTONE, and LIMESTONE.—TO BE LET.—1. A field of several thousand acres of Coal and Great Mountain Limestone, of first-rate quality, lying contiguous to each other, with several seams of Coal producing the best Coke in the immediate vicinity, within the Manor of Wolsingham, in the County of Durham, and having railway communication to the sea.

2. A field of several hundred acres of Coal, in the Manor of Tanfield Grove, in the County of Durham, intersected by the Stockton and Hartlepool Railway, and distant within nine miles from the Port of Hartlepool. The recent winnings of Coal in the same neighbourhood have established the existence of the main seams of the Durham coal field at workable depths.

For further particulars inquire of G. H. Wilkinson, Esq., Shipcote Park, Bishop Auckland.

LLANELLY RAILWAY AND DOCK COMPANY.—Notice is hereby given, That a Special General Meeting of the Proprietors of the Llanelly Railway and Dock Company will be held on Thursday, the 10th day of February inst., at One o'Clock in the afternoon precisely, at the London Tavern, Bishopsgate street, in the City of London; at which meeting the objects of the intended application to Parliament, and a draft of the proposed Bill, will be submitted to the Proprietors of the said Company present, for their approval: and at the said meeting, such by-laws, rules, orders, and regulations, for the good government of the said Company, and for the superintendence and management of the said railway undertaking, as may be submitted to the said Proprietors for their approval.

THE ELECTRIC TELEGRAPH ON RAILWAYS.
In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. ALLSOP will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome quarto volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; price £1 11s. 6d.

GRAND JUNCTION RAILWAY COMPANY —GENERAL MEETING.

[From the *Liverpool Mail*, Feb. 3.]

A SPECIAL general meeting of the Grand Junction Railway Company was held at the Cotton Sales Room, in the Exchange-buildings, on Tuesday, for the purpose of declaring a dividend, and on other special affairs. It was most numerously attended, and great interest in the proceedings was manifested. The chair was taken, shortly after one o'clock, by CHARLES LAWRENCE, Esq., when

The Company's Law-Clerk, Mr. SWIFT, read the advertisement; and Capt. HUISH, the Secretary, read the Report,* by which it appeared that the accounts this half year exhibit a greater increase of receipts than those of any former half year, the gross income being 241,816*l.* 4*s.* 6d. The expenses for the same period were 104,988*l.* 7*s.* 8d., leaving a net balance of profit of 136,827*l.* 16*s.* 10d. In the expenditure for the present half year are included the entire working expenses of the Chester and Crewe branch, with two additional trains ordered by the Post-office, while only one quarter's expenditure under this head was incurred in the corresponding half year, and the maintenance of way, over these twenty-one miles, forms an entirely new charge in the present accounts. An increase in the cost of locomotive power has taken place, the necessary result of 32,000 miles of additional duty during the half year, and in consequence also of four new engines and eleven new tenders having been added to the stock. With these exceptions, the ratio of expense to the receipts is again less. The Directors announced that they had abandoned the publication of comparative valuations of stock, convinced of its unsoundness. They recommended that a certain sum be periodically laid aside as a fund for the improvement of the stock, and to meet that insensible, but sure decay, which is perpetually going on, and which no care or expense can prevent. The sum they proposed to appropriate on the present occasion was 5,000*l.* Adding to the profit of the half year, 900*l.* 19*s.* 2d. as the reserve fund, we have a total of 145,829*l.* 16*s.* From this the Directors recommend a dividend of 6 per cent. to be paid on the whole capital of the Company, amounting to 132,198*l.*, but of the surplus of 13,631*l.* 16*s.*, the Directors had set aside 5,000*l.* for the depreciation and renewal of stock, leaving the reserved fund, 8,631*l.* 16*s.* The net receipt from Sunday travelling is 10*s.* 11d. per share of 100*l.* The propriety of paying the dividends quarterly the Directors would not recommend at present. A reduction in the short fares had been tried with doubtful success. The arrangements with the Manchester and Birmingham Company for the use of the line between Crewe and Birmingham are completed. The returns on the Chester and Crewe branch have fallen short of what was expected; but the traffic is improving, and hopes are entertained that it will ultimately be a source of profit. The attempt to carry out a line of railway to connect England and Scotland by the west coast, has assumed a more important form since it was last mentioned: and the Directors, sensible of the influence which the completion of such a railway would exercise upon their interests, have, with other Railway Companies similarly situated, subscribed to procure a Parliamentary survey of the line between Lancaster and Carlisle. The Report spoke most favourably of this project and its prospects. At a future day it would be for the proprietors to determine whether the Grand Junction Company should not take a direct interest in the undertaking, as one that could not fail to benefit their revenues materially. The Report then said, "intimation has been sent to every proprietor, that it is the intention of the Directors to propose the appropriation of a thousand pounds towards the erection of a church at Crewe. The Company's establishments for the repairs of engines and carriages will shortly be removed there, and some hundreds of men, with their families, will then be deprived of their present opportunities of religious instruction, and settled in a spot possessing provision only for its own very limited population. In these circumstances the Directors consider they are performing their duty no less to the shareholders than to the workmen that are dependant upon them, in commending to your favourable judgment the motion of which they have given notice. The amount per 100*l.* share caused by the appropriation of 1,000*l.* for the above purpose, would be about 10¾d., and the Directors are prepared to recommend that any proprietor who may object to this appropriation should have the option of receiving his portion of the amount.

Captain HUISH next read the accounts. In the capital account the total receipts appeared to be 2,273,354*l.* 4*s.* 10d., and the balance with the bankers 11,299*l.* 10*s.* 5d. The total receipts and expenditure in the income account have been already set forth in the abstract of the Report. The net proceeds of the half-year is 136,827*l.* 16*s.* 10d.; the reserved fund, with interest, 9,001*l.* 10*s.* 2d.; total 145,829*l.* 16*s.*; less amount set aside, 5,000*l.*; equal to 140,829*l.* 16*s.* The number of shares entitled to a dividend amount to 22,033 hundred-pound shares, which, at 6*l.* per share, gives 132,198*l.*, which, deducted from 140,829*l.* 16*s.*, leaves 8,631*l.* 16*s.* for a reserved fund.

The reading of the Report and accounts was received with loud and general cheering.

The CHAIRMAN said, that in submitting the Report and the accounts of the Directors to the consideration of the meeting, he did not think it would be necessary for him to enlarge upon them. He believed they touched on every important point. It would be for the meeting to consider them carefully, and the Directors were present to give any information which might be required in reference to either the Report or the accounts. He thought it but due to the Directors to state that no exertion had been wanting on their parts to increase the funds, and that everything had been done by them that was possible; and, though the amount on traffic had not increased to any very great extent, he believed the public had reaped very considerable advantages, because the quantity of goods carried was large in proportion to the amount received. (Hear.) One subject in particular claimed attention — namely, the appropriation of a certain sum of money for the erection of a church at Crewe. He trusted sincerely that such an appropriation would meet with the approbation of the proprietary at large. (Hear, hear.) The project had not originated with the Directors of the Grand Junction line; they had, in recommending it, merely followed the example of the great Company of the London and Birmingham Railway, where it had succeeded so admirably and given such satisfaction to all parties that the Directors of the Grand Junction would not have done their duty if they had not proposed the same. (Cheers.)

Mr. LAWRENCE HEYWORTH asked whether the reserved fund of 8,000*l.*, mentioned in the Report, would be applicable to the payment of the dividends?

The CHAIRMAN said it would be applicable to anything the proprietors might think proper or expedient.

Mr. L. HEYWORTH expressed himself satisfied with the answer, and hoped it would not be laid out in any other purpose. He presumed the 5,000*l.*, also mentioned in the Report, was intended to meet any depreciation in the stock?

The CHAIRMAN replied in the affirmative.

Mr. L. HEYWORTH believed he was correct in understanding that the payment of the subscription for the erection of the church should be quite optional with any party?

The CHAIRMAN also replied to this question in the affirmative.

Mr. L. HEYWORTH said, that under such circumstances, there could be no objection to the passing of the recommendation of the Directors on the part of any of the shareholders. (Hear, hear.)

Mr. JOHN MOSS said, a resolution regarding the church had been placed in his hands, which, if allowed, he would take the liberty of reading. It was as follows:—

"That the Directors be empowered to subscribe the sum of 1,000*l.* towards the erection of a church or chapel at Crewe, for the accommodation of their workpeople and their families; and that any proprietor of the concern objecting to the outlay, be paid, upon application to the Treasurer, 11d. per 100*l.* share, or in the same proportion for halves and quarters, at the ensuing half-yearly meeting, being the proportion which will be required from each 100*l.* to raise 1,000*l.*, and that the Treasurer keep a particular account of these payments, which will be made good by voluntary subscriptions."

He had very great pleasure, he said, in moving this resolution, because the shareholders would not be doing their duty to themselves or to the concern if they did not carry it out. They were about to remove such a large establishment as theirs from the town of Liverpool to a place where there was no church within two miles and a half; and it was as much their duty to subscribe for the erection of a place of worship under such circumstances, as it was to build cottages for the workpeople who were going there. (Cheers.) He had great doubts himself how far the Board should not, in appropriating this money, rather reserve a portion of the church for themselves, to be let to workmen, rather than to give them free seats. In his own neighbourhood the labouring classes disliked the of free seats; and finding that the party would pay something for them, in order that he might as independent as the gentleman frequenting place, the seats were made small, and let for sums of money. He therefore hoped the Direc would take into consideration the propriety of res ing a part of the church for themselves, to be le the workmen, rather than to turn the interior into sittings. (Hear.)

Mr. L. HEYWORTH asked whether the chu after having been built, would entail any expense the Company.

The CHAIRMAN said, he should hope not.

Mr. L. HEYWORTH presumed that if it shou the same option would be given the shareholder was now given in the question of its erection?

Mr. J. SWIFT, Clerk of the Company, repli that in such case a similar option would, of course, given.

Mr. MOZLEY said, that the peculiar circumstan of the case induced him to record at that meeting same approval of the mode intended to be adop which he had previously recorded when the subj had been under the consideration of the Board. a citizen of the world, mixed up, as he was, with undertaking which was to render profit, wishing improve the moral conduct of the persons employ offering premiums as they were for their good cond and habits of industry, he thought they could better promote their moral conduct than to adopt mode they were about to adopt, namely, to in the erection of the church. (Cheers.) With t feeling, and disconnected from any ground of princi in religious faith, he felt they were bound to offer encouragement of right to those they wished to pr tise it. He concluded by saying that he had greatest satisfaction in seconding the resolution.

Mr. GEORGE H. LAWRENCE said, he had not ris to oppose the resolution; on the contrary, he heart concurred in it. But he wished to express his surpri and regret that the Directors appeared to have ab doned their original intention of erecting schools the juvenile portion of the population. It appear essential that the Company should have schools for t rising generation, in order to teach them their du to their neighbour and to their God. He hoped Chairman would be prepared to tell the meeting th the Directors had not omitted the consideration of t subject. (Hear.) It would be hardly just towards t proprietors at a distance, who had been invited to t meeting to consider the subject, to leave it untouche and when they recollected that the Directors of t London and Birmingham Railway had succeeded establishing a school where all sects could obtain i struction together, he hoped their example would followed by the Directors of the Grand Junction lin and that the Chairman would be able to give t meeting some assurance that schools would be erect —because he felt that schools were at first almost mo important than the church itself. (Hear, hear.)

The CHAIRMAN said, he had not the least doul but that schools would be established. The Director however, had thought it desirable to ask only for small grant in the first instance; and it was impossibl for them to undertake to erect a church and build school out of 1,000*l.* They trusted that the liberalit of the funds at their disposal, part of which had arise from "the Adelaide Fund" (a fund left with the Com pany from those who objected to Sunday travelling and from other sources, schools would, hereafter, b erected; but at the first it was thought desirable no to press too hard on the proprietors for too large sum. (Hear.)

Mr. G. H. LAWRENCE was of opinion that th schools should be erected in the first instance.

Mr. MOSS said, he could not fancy it possible, tha if a church were erected the clergyman would not tak care of the education of the children. Besides, th very high wages paid the workpeople would enabl them to pay something for the erection of schools No population but a poor one required free schools; but the workpeople who were going to Crewe were no poor; they could and would afford to pay for th erection of schools. He should himself be glad eithe to assist individually or otherwise towards their estab lishment; but he thought the sum of 1,000*l.* wa quite sufficient to ask from the proprietors in the firs instance. He was glad that the schools had been lef out of consideration for the present, because 1,000*l* would be barely sufficient for the erection of th church, which, in his opinion, was the first object to b effected. (Hear, hear.)

Mr. HARDMAN EARLE said, a difficulty had been felt by the Board in voting money out of the pockets of the proprietors for the erection of an establishment,

* We shall give the Report and Accounts in full next week.—ED. R. T.

Digitized by Google

the health of which could not, perhaps, be partaken of by the workmen located at Crewe. He owned that he himself had entertained this difficulty. He did not doubt a school would be built there; and so long as the clergyman who had the care of the parish was a quiet, temperate, and discreet man, so long might all who went there participate in the secular instruction afforded at the school. But a clergyman might be appointed who would think it his duty to introduce certain regulations which would prevent a portion of the children from partaking of the instruction, and this would be a great evil. He was glad Mr. Lawrence had announced the subject, because it would elicit discussion, and, he hoped, of an injurious tendency. He thought the subject should be most amply discussed; and he also thought that a school was as necessary as a church, provided it were conducted on a proper and liberal basis.

Mr. J. E. TAYLOR (of Manchester) was desirous of saying at the present meeting what he had said in a parallel case at Birmingham, namely, that he was not prepared to share in the responsibility of depriving the workpeople employed by the Company of religious instruction; but, at the same time, he should have opposed the resolution, if it had not been for the special clause attached to it, believing that they had no right (although there were many who agreed with him as to the propriety of erecting a school as well as a church) to impose a burthen on the consciences of those who might be opposed to such an expenditure. The immediate object, however, which he had in rising, was to ask two questions. The sum of 1,000*l.* for building the church appeared to him to be small; and he was desirous of knowing, supposing it should be considerably deficient, what were the provisions proposed by the Directors for completing the structure in a proper manner. He also wished to know the hands from which the clergyman who was to officiate was to be remunerated. He concurred with Mr. Earle as to the difficulty of managing the schools. He had ever been an advocate during life for the public education of the people. He thought it would be better not to give the children of the workmen a gratuitous education, because they would feel a happiness in paying a small sum for the purpose; but, at the same time, in the present state of public feeling, which he was sorry to see abroad, it would not be very easy to introduce a system that would be agreeable to all parties; and he had come to the meeting that day from a distance, prepared to say, if he found the school question brought forward, and an exclusive system of education proposed to be introduced, that the contract should be in a great part appropriated in making the opinion of the Court of Queen's Bench as to whether such a course was right. (Hear.)

The CHAIRMAN said, in reply to the first question, that the Directors had not adopted any measures as to the disposal of a larger sum than 1,000*l.*, should it be required. They wished to see whether the proprietors would do anything in the matter in the first instance. When they had received a power to erect, it would then be their duty to apply for a further sum, should it happen to be required. With regard to the second question, he begged to say, that there were several charitable funds in the undertaking; and he had no doubt that, from this source, as well as from the pew-rents of the church, a sufficient sum would be obtained for the endowment. With respect to the clause, he hoped gentlemen would see the difficulty the Directors would have if they were to put a vote in favour of the measure, and take instructions at that meeting as to the manner in which the schools were to be arranged. In such a case, they would have the discussion on the corporation schools over again. (Hear, hear, and a laugh.) Such a discussion as this they had far better avoid, trusting that when the schools should have been built it would be liberally and properly managed. At the Wolverton school, which was in connexion with the London and Birmingham Railway, everything was going on favourably, and every one was satisfied; and, though the Bible was constantly read by the children, the clergyman had no difficulty in conducting the establishment in an amicable manner. He hoped a similar result would take place in the present instance; but, in the meantime, he feared the meeting would not enter into discussions as to the mode of instruction which ought to be imparted.

Mr. E. EARLE said, he was decidedly favourable to the building of a church at Crewe, and expressed a hope that no gentleman present would suppose him to entertain a sentiment to be adverse to it in consequence of what had fallen from him a short time before. (Hear, hear.)

The motion was then put and carried unanimously.

Mr. L. HEYWORTH said, he observed by one of the items of the Report that the prospect the shareholders once had of receiving quarterly instalments was no longer held out—at least for the present. He almost regretted that this should be the case, and he could not see the cogency of the reasons or arguments why it should not be held out as before. It was said it would cause expense; but no statement had been made of the expense.

The CHAIRMAN said, it would not be of a very large amount. He had no opposition to the payment of the instalments quarterly if it were the wish of the meeting.

Mr. L. HEYWORTH then moved, that the quarterly instalments of the half-yearly dividend be paid to the shareholders at the termination of three months from the time of making up the present accounts.

The CHAIRMAN said, that the payments of the instalments quarterly would occasion a loss of interest.

Mr. L. HEYWORTH said, he did not perfectly comprehend how the Chairman accounted for the loss of interest. Was it a loss of interest to the Company at large?

The CHAIRMAN said, it would occasion a loss by being paid to the proprietors instead of being in the bank.

A VOICE.—It would not appear as an asset.

Mr. L. HEYWORTH then moved, that quarterly payments be made at the discretion of the Directors from the period of three months hence.

This motion having been seconded,

The CHAIRMAN was about to put the question, when

Mr. ROBINSON moved, as an amendment, that the half-yearly instalments be paid as heretofore.

Mr. ALSTON seconded the amendment, and, in doing so, said it was the duty of the meeting to support the Directors firmly. (Hear, hear.) If ever there was a time when they should approve of their conduct, the present was that period, because every man of moral or good feeling must have been delighted with the result of their deliberations. (Loud cheers.)

Mr. L. HEYWORTH said, he cordially joined in the expression of this compliment to the Directors. Being a proprietor in many railways, he hoped to see the system of quarterly payments introduced into all of them. He had, with this view, submitted his motion, believing that the system would prove a salutary one. (Hear, hear.) He concluded by expressing his thankfulness for the courteous manner in which he had been treated by the Directors.

The CHAIRMAN said, the Directors entertained no very strong feeling on the point.

Mr. MOZLEY said, the subject had been repeatedly under discussion before the Board, who had never shown any objection to carry out the wishes of the proprietors. (Hear.) It was requisite, however, to look at the present question in two views—first, as to its application to the value of the property, and next in reference to finance. The Act of Parliament required that they should pay the dividend out of the clear profits of the concern. Correctly speaking, therefore, they had a right to make up the accounts before they made a dividend. Under these circumstances, one difficulty would arise; but there was another, because, though the advantage of the trifling amount of interest was hardly of any moment, to the concern itself it would make a considerable item. The expenses of paying the quarterly dividend would amount nearly to a loss of 2,000*l.* per annum. He should go heart and hand with the proprietors in making a quarterly dividend if he could see a certainty of any advantage accruing. On the score of finance also it could not be conveniently done. (Hear.)

Mr. MOSS said, that having recommended it at the last meeting, he should have been glad if it met the views of the Directors to carry it out, but the meeting was bound, whatever the views of the Directors might be, to support them. (Hear.) He did not quite see the force of Mr. Mozley's arguments, because he thought people could employ their own money to advantage without leaving it in any banker's hands. In his opinion it would be advisable to have the motion withdrawn, thereby leaving it open to the Directors to reconsider the question as to how far the proposition could be carried out. As unanimity was desirable, he would recommend Mr. Heyworth to support the present views of the Directors, and, if he were so inclined, to get up a requisition to them in the course of six weeks to entertain the proposition. (Hear, hear.)

Mr. L. HEYWORTH said that, after the very courteous manner in which he had been just addressed, he felt he could not do otherwise than cheerfully and willingly withdraw his motion. (Hear, hear.)

On the motion of Mr. SWIFT the Report was adopted, and it was ordered that the dividend be paid on the 15th of this month.

The CHAIRMAN, at the request of Mr. Earle, here read a letter he had received from Wolverton, in reference to the school belonging to the London and Birmingham Railway Company. It was written by the Rev. Mr. White, and stated that all parties, including Chartists, were receiving education there, and that there was no opposition on the part of any, although the Bible was constantly read.

Mr. J. E. TAYLOR asked how the receipts of the Grand Junction line were getting on this year as compared with the last.

The CHAIRMAN said, that during the last month the receipts had been some 400*l.* or 500*l.* short of the corresponding month last year. A good deal, however, depended on the time Parliament assembled, because there was then a good traffic, which would probably have covered the 500*l.* short; but everybody was aware that the season had been a bad one for travelling. (Hear, hear.)

Mr. L. HEYWORTH said, he had a motion to make with reference to a small balance of 55*l* 13*s.* which belonged to quarter shares due principally to poor females; and he hoped the meeting would justify the appropriation of this sum to the parties to whom it belonged.

Mr. MOSS said, he remembered that it had occurred at the time of his Chairmanship.

It was then understood that the shareholders authorised the Directors to pay up any small sums which might be due; and the meeting separated.

CHELTENHAM AND GREAT WESTERN UNION RAILWAY COMPANY—SPECIAL MEETING.—On Wednesday, 26th of January, a special general meeting of this Company was held at the Cirencester station, which was attended by most of the great shareholders, to consider and approve the Bill for further powers intended to be applied for in the ensuing session of Parliament, and to confirm the forfeiture of 164 shares for non-payment of calls. Resolutions to this effect were passed with the greatest unanimity, after a discussion of the several points in the most amicable and agreeable manner, and the meeting concluded with a very hearty vote of thanks to the excellent Chairman and Directors of the Company. It was stated that the attention of the Board of Trade had been called to the state of the Swindon embankment, in consequence of which General Pasley had inspected it with care, and had expressed his pleasure at finding it in so good a state, with every probability of its remaining so.—*Gloucestershire Chronicle.*

LEEDS AND SELBY RAILWAY COMPANY—GENERAL MEETING.—Yesterday (Friday) the half-yearly meeting of the shareholders in this Company was held at Scarborough's Hotel, in Leeds; John Gott, Esq., the Chairman of the Company, presiding. The Directors having presented their Report, which stated that the agreement with the York and Midland Railway Company, for leasing the Leeds and Selby line, had been perfected, and was in full operation, it was ordered that a dividend of 2½ per cent. on the shares for the past half-year should be declared, and be payable on the 19th of February.—*Leeds Intelligencer*, Jan. 29.

GREAT WESTERN RAILWAY.—We understand that the Great Western Railway Company have recently had whistles of considerably augmented power attached to their engines, in addition to those at present in use, and we mention the fact in order to show the anxiety of the Directors to make travelling by this line as safe as possible.—*Berkshire Chronicle.*

A RAILWAY RUN.—The other day a woman with a basket full of eggs was favoured with a drive in one of the open empty carriages on the Newtyle line. By some mistake the carriage in which the poor female was, got separated from the others, and proceeding at great speed down the inclined plane to the terminus, came slap against a carriage amongst a parcel of soft goods, which was fortunately lying there for the purpose of being transmitted to a neigbouring town. A number of persons immediately crowded about her to see whether she was hurt. To repeated inquiries she exclaimed, "Odsake no, lads, there's naething wrang—dinna ye aye whummle us out this way?"—*Glasgow Courier.*

MANCHESTER, BOLTON, AND BURY CANAL NAVIGATION AND RAILWAY COMPANY—GENERAL MEETING.

THE seventh half-yearly meeting of this Company took place yesterday, at the Clarendon Rooms, for the purpose of receiving the Report of the Committee, and a statement of the receipts and disbursements for the six months ending 31st December last. The attendance was pretty numerous, there being from sixty to seventy gentlemen present.

Mr. JAMES BRANCKER, Chairman of the Committee, was called to preside; and after the advertisement calling the meeting was read by the Secretary, opened the proceedings in a brief address. He stated that this was the half-yearly meeting, and as each gentleman present had received a copy of the Report, no lengthened discussion would be required. The Directors were in a condition to say that as to traffic they had quite held their ground since the last meeting, which was the more gratifying, inasmuch as with them, all depended on the state of trade, which had recently been greatly depressed. Even under such circumstances they had done more business than last year, which was as much as any reasonable man could expect. With regard to the smallness of the dividend recommended by the Committee, several circumstances had arisen that had tended materially to reduce it. A person who had long been in the employ of the Company, and whose services had been deemed valuable six years ago, retired in ill health, and afterwards died, leaving a widow unprovided for. An allowance had been made to her, and a young man (Samuel Haywood) succeeded to the vacant situation, who had been brought up in the Company, and in whom they had every reason to repose confidence. That young man had, however, commenced and carried on a system of fraud, and had afterwards absconded, and taken from their funds a sum of 1,500*l.* This defalcation had reduced the dividend by about 5s. per share. The increase of the poor rates, caused by the depression of trade in the districts through which their lines ran, also conduced to the reduction of the dividend; but it was considered that their property was overrated, and steps had been taken to obtain a more equitable assessment of these and other rates and taxes. He concluded by proposing that the brief Report, already submitted by circular to the proprietors, should be read.

The SECRETARY then read the Report, introducing the statement of accounts, of which the following is a copy:—

REPORT.

In examining the statement of accounts herewith, it will be perceived that the receipts on the canal and railway are somewhat larger than in the preceding half year: that there is no greater increase is not perhaps to be wondered at, considering that both means of conveyance are strictly dependant upon trade for their support; and of the depressed state of it in this district none now scarcely need be informed.

The disbursements for parochial rates and taxes alone are 800*l.* more than during the previous half-year, which goes to reduce the net profits. The Committee regret to state that the disposable proceeds have had to be still further reduced in consequence of the defalcations of the canal agent Samuel Haywood, which have extended over a period of nearly six years.

With regard to the parochial assessments, it is considered that the Company's property is over-rated, and in several cases notice of appeal has been given, in the hope of obtaining a more just and equitable assessment.

On the 8th of September last the Committee entered into an agreement with the Lancaster and Preston Junction Railway Company, to supply the locomotive power on the Lancaster line. This agreement came into operation on the first day of this month, since which period this Company's engines have been running between Lancaster and Preston. The facilities arising out of this arrangement will not be felt until by the completion of the Bolton and Preston Railway there shall be a continuous traffic over your line to Lancaster.

Salford, 13th January, 1842.

Receipts and Disbursements on the Railway and the Canal, for the Half-Year ending 31st December, 1841.

RAILWAY RECEIPTS.

Coaching department, (151,981 passengers)		£11,196	0 7
Carrying department, (21,967 tons)		3,825	16 9½
Coal department, 24,615 tons		1,682	3 6

Canal bad debts from 1831 to this date	145 17 11½		
		1,645 17 11½	
Disposable net proceeds		£6,309 12 5	
A dividend of 20s. per share amounts to		6,201 0 0	
Total		£108 12 5	

A dividend of 20s. per share amounts to 6,201*l.*, leaving on hand, including the dividend on the 120 shares held by the Company, a surplus of 228*l.* 12s. 5d.

Your Committee, in reference to the preceding statement of accounts, have directed a dividend of 20s per share to be paid to the proprietors on the 1st of February next.

JAMES BRANKER, Chairman.

Mr. RIGG moved that the Report be adopted by the meeting. This was seconded and agreed to *nem. con.*

Mr. FISHER inquired why Haywood's deficiency was all included in the present half year?

The CHAIRMAN explained that it was not discovered until recently, Haywood's accounts having previously appeared to be quite correct. He called on Mr. Hoare to explain the circumstances of the defalcation.

Mr. HOARE entered into an explanation. From his statement, and that of the Chairman and others it appeared, that after the death of Mr. Cunliffe who had charge of the canal books, Haywood, who had previously been long in the office, and who was considered faithful and competent, was appointed to succeed him. He kept the books, and was also collector, and though he had commenced a system of fraud from the beginning he was not suspected as the books appeared to balance by the outstanding debts, as falsely stated therein by him. Mr. Hawkshaw, however, suggested an improved mode of keeping the accounts, by which all of them should pass through his hands, and the accountant's and collector's offices be kept distinct. The account current were also to be sent by him through the Post-office monthly. Notice was given that this system was to be acted upon (as it now was), and Haywood, finding that he could no longer effect a concealment, absconded, and got on board of a vessel at Liverpool, from which, however, he was taken into custody, and committed for trial. He was sentenced to ten years' transportation. The party he had succeeded (Cunliffe) was also, it appeared, a defaulter at the time he resigned, and recommended Haywood as his successor—and these defalcations had been concealed from the Company through Haywood's agency in raising some money by a bill to meet them, which he was to repay at 1*l.* a week. The sum given to Mrs. Cunliffe, in consideration of her husband's official services, was 40*l.* and they found the loss by Haywood to be 1,500*l.*

Mr. LEYLAND said that security ought to have been required from Haywood.

The CHAIRMAN had the original appointment read, by which it appeared that that was the intention; but that from various circumstances which he explained, and the confidence unhappily reposed in the young man, who had been long with the Company, it was overlooked.

Mr. HAWKSHAW explained more fully the manner in which the accounts were kept, and the money received, by which similar defalcations could not again arise. Security had also been taken from the present collector.

In reply to questions,

The CHAIRMAN said, that 42,000*l.* of the bonded debt had been paid off, and that in the last twelve months 1,000*l.* of interest had in consequence of its reduction been saved. Their railway dependence at present entirely on trade and manufactures; but when the line was entirely opened to Lancaster they would have some accession of funds from "pleasure" traffic.

Mr. HOARE moved, and Mr. BRITTAIN seconded, thanks to the Chairman and Committee which was carried, and the meeting then separated.—*Liverpool Standard, Feb.* 1.

THE SNOW AND RAILWAYS.—The railway between Stockton and Darlington was completely choaked with snow on Tuesday morning. A large number of men were employed clearing the rail for the trains. The first train from Darlington was two hours in reaching Stockton (12 miles), having to travel first on the down line and then to cross to the up line frequently during its passage. The north mail (from Edinburgh) was 13 hours behind its time into Darlington on Tuesday, and about eight hours late on Wednesday, the bags having to be conveyed part of the way on horseback.

NEWCASTLE AND NORTH SHIELDS RAILWAY COMPANY—GENERAL MEETING.

THE anniversary meeting of the Newcastle and North Shields Railway Company was held yesterday (Friday, January 28,) at the Company's offices in Pilgrim-street, Newcastle; MATTHEW BELL, Esq., M.P., Chairman of the Board of Directors, in the chair; when the Report and accounts for the past year were read, the Directors recommending a dividend of 4 per cent. to be paid on and after the 1st of March, which, on the motion of Mr. C. Rayne, was unanimously carried.

It must be very satisfactory to the shareholders, as no doubt it will be for the public, to know that as the railway progresses in prosperity, it also continues without accident—having, from its opening in June, 1839, carried upwards of two millions of passengers, without the slightest injury to any one of them. Various questions were asked by Mr. C. Rayne, Mr. R. W. Swan, Mr. Johnson, Mr. John Jobling, and others, the answers to which appeared to give satisfaction. It appeared that the passengers had increased since the owners of Seghill colliery had put carriages on their line of railway; that the coal depots at the Red Barns had answered the full expectations of the Directors; and that the depots in course of erection at the Manors would increase the traffic in coals. It was also stated that the mail, after the 5th of May, would be conveyed by this railway. We give a copy of the entire Report; it was as follows:—

The Directors, at this the third annual meeting since the opening of the railway, have now to submit to the proprietary the accompanying statement of the receipts and expenses during the year ending the 31st December last; and to congratulate them upon the success in the general working of the line during that period, as well as upon the pleasing fact of there having been now nearly two millions of passengers conveyed along it since the opening, without any accident having occurred.

At the last annual meeting, the Directors anticipated that they should now have been able to recommend to the shareholders a larger dividend than they are prepared to do; but the profits arising from the undertaking were materially affected throughout the spring and summer of the year, by the railway being obliged to meet a severe and determined struggle then made by the river conveyances; during which time the steam-boats ran every half hour, and in addition reduced their fares one-half. To meet this opposition, the Directors, after mature deliberation, resolved upon reducing the fares of the railway likewise; which, for the time being, unavoidably produced a falling off in the profits; and this was felt the more, as the duty then amounted to nearly 25 per cent. of the gross receipts arising from third-class passengers, who were the *great majority of* those conveyed—a circumstance which forcibly illustrates the oppressive tendency of the tax, in its present shape, upon those lines of railway whose fares are extremely low. The Directors, on looking back upon their proceedings on the occasion, feel satisfied, that although the shareholders necessarily suffered a temporary loss, the course adopted was the best for the permanent prosperity of the railway; and they trust, before they can be called upon again to put down a similar opposition, such an alteration will be made in the principle of levying the passenger tax, as will enable them to meet it on more advantageous terms.

The depressed state of trade throughout the past year, which has been so universally experienced by every mercantile business, as well as by every undertaking similar to our own, tended to reduce the proper natural traffic of this railway very materially. The Directors think they have grounds for expecting that trade will now improve, and that they shall participate in its advantages during the present and future years, the more so as the present receipts show a considerable increase over the corresponding weeks of the former year.

The Directors revised and modified the fares upon the line at the commencement of the winter running, and they have pleasure in believing that the present arrangement gives general satisfaction. The system of double tickets, which they introduced for the intermediate stations, has increased the number of passengers from them considerably, and will be found to benefit the Company.

In the goods and merchandise department there has been a gradual increase; and the Directors feel confident, that on the completion of arrangements which are now in progress, a considerable further improvement will take place.

There has yet been no opportunity of developing the coal traffic for the supply of Newcastle. The whole of the summer elapsed before possession could be obtained of any part of the property in the manors necessary for the erection of the depots, or the enlargement of the station; and notwithstanding every exertion has since been made in completing them, owing to the prevalence of frost and weather unfavourable for masonry, they are as yet not quite sufficiently advanced for use. The Red Barns depot, intended for the supply of the Ouseburn district, is found to fully answer the expectation.

The intended approach to the new quay and steam ferry to the Shields terminus, which has been some time in contemplation, is still uncommenced, in consequence of a legal disability on the part of one of the proprietors of property. The Directors expect shortly to be able to overcome the obstacle, and to proceed in the execution of the works next summer. This approach will bring into profitable play an extensive district of building-ground which the Company possesses, and which is now of comparatively small value; and it will, in addition, afford an opportunity of communicating with the river by a branch railway, if desirable, at any future period.

The Investigation Committee, which was sitting at the last annual meeting, reported shortly afterwards, and several reductions in the establishment of working the line were made in consequence. Since that period the attention of the Managing Directors has continually been turned to the same object, and they have continued, from time to time, to recommend and make such further savings as in your Directors' opinion were practicable and consistent with the sufficient working of the railway, and due attention to the safety of the passengers.

The passenger duty, as heretofore, forms a heavy item in the year's expenditure; but it is confidently expected that such alteration will be made, in the ensuing session, as will materially relieve this and all other railways carrying at very low fares. The Chairman and Vice-Chairman of this Company have kindly offered their valuable assistance in securing this desirable object; yet it behoves every proprietor, in addition, to exert his individual influence. The Directors recommend that the Company again petition Parliament during the ensuing session for an alteration in the duty.

In conclusion, the Directors recommend to the proprietary, that a dividend be paid at the rate of 2*l.* per share, (being 4*l.* per cent. on the subscribed capital,) out of the 6,379*l.* 1s. 7d., the profit made during the year; and that the sums of 664*l.* and 379*l.* 1s. 7d., making together 1,043*l.* 1s. 7d., be carried to the guarantee fund; the dividend to be paid on Tuesday, the 1st day of March next.

—*Gateshead Observer.*

FACTS FOR THE SABBATARIANS.

So far back as the beginning of the month of December, a circular was sent to the superintendents of police, for several of the great towns in England, *in name of the Commissioners of Police of this city*, the object of which is sufficiently indicated in the subjoining *queries*. Whether this was truly a proceeding by the Board, or why the result was not communicated to the public, may be matter for consideration of the Board itself. In the mean time we subjoin the queries, and the answers, in the case of Manchester; and are given to understand, that the answers were similar from Newcastle and Carlisle. Facts like these are worth a million of speculations. Let the men who sit quietly at home on the Sunday, in the luxuriant enjoyment of their hot joints and well-plenished decanters, and yet denounce the poor man's excursion to the country as Sabbath desecration—who loll in their horse-drawn carriages, yet anathematise the railway train—answer this document, if they can. Be it remembered, that the queries were propounded, and the answers obtained, not by the Sunday travellers, but by the most rigid Sabbatarian querists.

"Manchester, December 18, 1841.

"Sir,—In answer to your letter of the 16th instant, I have to state, for the information of the Commissioners of Police of the city of Edinburgh, to their first query,—'Whether there has been any increase in Manchester and its neighbourhood, of drunkenness, rioting, or other offences on Sundays, in consequence of railway trains running on that day?'—Most decidedly, No.

"In reply to your second query,—'If the country parishes on the lines of railway make any complaints in consequence of such trains being run on Sundays; and if they have experienced inconvenience by parties and others visiting those parishes, who have been conveyed by railways, and getting drunk, riotous, or committing other offences on that day, and thus tending to demoralise the rural parishes?'—I beg to say, I have had my attention constantly turned to the travelling per railway on every day of the week, as well as on the Sunday; and, from my experience here, I do not believe that any inconvenience arose by parties and others visiting the adjoining parishes, who had been conveyed by railway on Sunday, getting drunk, riotous, or any other offences on that day.

"In answer to your third query, 'Whether running of railway trains on the Sundays affords facilities for the escape of depredators, and of the properties or goods which they may have stolen on Saturday nights or Sunday mornings, and thus being enabled to get the start of a day and escape?'—I admit railway trains facilitate the escape of depredators every day of the week, but not so much on the Sundays as on other days. I consider there has been a complete revolution in police matters since the establishment of railways, owing to there being, upon an average, 9,000 passengers daily arriving in Manchester.

"In reply to your fourth query—'It will be obliging if you will furnish me with any statistical or other information, or facts bearing on the subject of railway travelling on the Sunday?'—I have to state that the Railway Directors in Manchester are men of the highest moral and religious character, and would not permit any desecration of the Sabbath which they could possibly prevent; and I know their orders are most strict to their servants to permit no drunken or riotous person to travel by the trains.

"In conclusion, I beg leave to add, that, the queries put as a matter of police, I am decidedly of opinion, in which I am supported by the very oldest officers of the force, that the more facilities there are offered to the labouring classes for innocent recreation, the fewer cases of crime are brought before the police.

"(Signed) CHARLES SHAW.

"J. Thomson, Esq., &c. &c., Police-office, Edinburgh."

EASTERN COUNTIES' RAILWAY.

WE may fairly anticipate, now that the appearances of winter are passing away, that the whole of the line in course of completion will, in a week or two, present its wonted activity. Preparations are making for the spring campaign, and if the same skill and exertions continued to be displayed as distinguished last season, there can be no doubt that the Company will fulfil their pledge of having the whole line completed to Colchester in a much shorter period than was originally fixed. The circumstance, however, of most interest at this moment, is, the meeting that is called for the 8th instant. At the last annual meeting we had the satisfaction of congratulating the shareholders on the improved feeling among them, and on their improved prospects. From what we have been able to collect, and from our own observation, we feel perfectly justified in anticipating an augmentation of this good feeling at the forthcoming meeting—a feeling not altogether founded on the confidence reposed in the integrity and activity of the Managers and Directors, but equally based on the more profitable and encouraging situation in which the undertaking has been placed. So much have the prospects of the shareholders recently improved, that we hear it is not unlikely a dividend will be declared of somewhere about 5 per cent. upon the market value of the shares. This, in so young a Company, is a novel feature, and augurs well for the present good management, and for the future prosperity of this most important railway.—*Essex Mercury.*

In the House of Commons last night petitions for new Bills were presented from the Liverpool and Manchester, Grand Junction, and London and Greenwich Railway Companies.

—o—

EXTRAORDINARY RAILWAY ACCIDENT IN AMERICA.—On Tuesday last as the morning train of cars from Philadelphia was rushing down the grade near Warren, Pa., with great velocity, the end of the broom before the engine struck a turn out, and threw the engine off the track with a tremendous shock. As the ground was frozen, it proceeded nearly one hundred yards into an adjoining common, drawing the passenger trains along with it. Here the engine in running up a steep bank upset, and with it one of the long cars attached, filled with passengers, and a glowing red-hot stove. Singular, indeed to relate, not a passenger was injured, which may be considered a most extraordinary and unparalleled event. One of the men on the engine had his leg badly cut. Carelessness or recklessness was the cause of this fearful accident.—*United States Gazettee.*

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAYS.

To the Editor of the Railway Times.

SIR,—I deeply regret the turbulence of the late general meeting of the Manchester and Liverpool Railway Company, the feverish excitement of its Directors, and their violence against Captain Laws, who at least kept his temper as he had kept his integrity. The front of his offending was, that he had stated facts from which the public opinion drew most unfavourable inferences to the disinterestedness of the Liverpool Directors; he had presumed to state that the interests of the Liverpool Railway were sacrificed to those of the Grand Junction under the arrangement (which the Liverpool Chairman admits must be seriously considered and probably altered at the expiration of its term), and Mr. Lawrence insists that the words have a different meaning, an ulterior construction, "that the funds of the Liverpool Railway actually increase the dividends of the Grand Junction." The worthy Chairman may have read this, I will not say in his own prospect or memory, but in his own mind; he may have been confused with his reading and re-reading, for he is probably a more patient student than orator; but I cannot collect any such meaning from the Leeds circular. Captain Laws conveys this:—"I see how closely your interests are united with those of the Grand Junction Railway and the Bridgewater Canal, that your influence predominates over any undertaking which would consult *solely* the advantage of the *Liverpool Railway*, and that you will in consequence abandon or evade your engagement with the Manchester and Leeds Company, *upon the faith of which* your Act was granted by the late Parliament." The reply of the Liverpool Directors is angry and abrupt. They say:—"You condemn the contract, and *therefore* you condemn as corrupt those who made it. We challenge you to prove the dishonesty of the agent; but be cautious, Sir, how you touch the transaction; there is not an unbiassed mind but must perceive the unfortunate tendency of our covenant; but put our *motives* to trial, if you dare, before our general meeting."!! Now, Sir, a few words upon this case, upon their own showing. I omit all reference to the Bridgewater interest; it is my full persuasion that the Duke of Sutherland, one of the wealthiest noblemen of this country, and Lord Francis Egerton, inheriting with his brother the sentiments and principles which give a distinction surpassing that of the ermine, or the coronet, will *not permit* a shadow of reproach to rest upon their unsullied name and titles; and that in vain they will be told they must not *be dragged* into the performance of an engagement ratified by the solemnities of the legislature: they will point to the clause in the Liverpool Act, *in consequence of which alone* that Act has been obtained; they will say:—"You required no sanction of the State to carry into effect measures which you have never contemplated. If you could not have obtained your Act *without* this *seeming* concession,—if you could not have surmounted opposition *without this very condition*,—if you represented the evasion upon which you now rely, only as an extreme contingency in the event of *the failure of other Companies* to fulfil their part, and upon the credit of *your integrity* and has been purchased and expenses incurred to the amount of 100,000*l.*; then *we must abide by the spirit of your* Act of Parliament: we cannot descend to the narrow stream of a miserable evasion; we must be dragged; we cannot resist *the attraction of fair dealing* and honourable principle. For all that sea or river ever gave to man, *we will not be unjust.*"

I go upon the broad principle—either the junction with the Leeds Railway was essential to that of Liverpool, or it was not. *If it was not*, why draw the suspicion of Parliament upon all future propositions of this nature, by soliciting *a power* to be used or to be unemployed at the *discretion* of the petitioners? The thing was a mockery. If it were proposed to exercise the power, why did it so languish, except in the hope that, *like other disused faculties*, it would be lost—irreparably lost? Never was clause so unfortunate if it were not intended to deceive—to lull opposition—to keep the promise to the public ear only; it was an error of judgment, which gathered the fruits that are supposed to grow wild for such infirmity. The objections opposed by the speakers of the Liverpool Company rest upon two grand particulars: First, that in *twenty-five years time* the neighbourhood of Store-street* will be far more magnificent, flourishing, and suitable for a junction, than the proposed union at Hunt's Bank; that by that period Hunt's Bank will have become a corner remote from all great central localities, even of *miscellaneous resort.*† Poor Hunt's Bank! that all Nature, and Manchester, and population, are to flourish *so near*; and yet there will be no miscellaneous resort—no Liverpool, no Manchester and Leeds, miscellany around thee! Gentlemen historians, never say one word more about the ruins of Palmyra, I entreat of you. Poets, you have heard of an oasis in a desert, but we are taught to expect a desert at Hunt's Bank, from the probable increase of Manchester! Here is to be a railway desert, and Mr. Lawrence declares there shall be around it oasises "plenty as blackberries." To be serious; do these gentlemen perceive the gist of their own arguments? Do they believe that the people of Manchester will prefer railway stations, smoke, din, and now and then a Manchester and Liverpool general meeting, to the advantage of every commercial benefit, without injury to the property, or destruction to the harmony and beauty, of their town! This Store-street proposal is but an invidious bit of sarcasm from the sister-city; and well might Liverpool exult over her rival, if she could behold the effects of this Store-street central (everything is central now) junction railway, upon the squares and principal streets of Manchester, which Mr. Lawrence and Mr. Moss design to confer upon it in the gentle series of five-and-twenty years.

But I forgot the chief *defect!* of this Hunt's Bank junction.‡ "By means of money, a wharf or quay may be constructed, and thus the means be afforded of transferring goods to the boats of the Old Quay Company." Here is the mischief; *hinc illæ lacrymæ! Mersey profundo pulchrior evenit.* What business have these Manchester and Leeds Directors to court the Irwell or the Mersey?

Population is to recede and flow south-eastward, ebb away entirely from the Irwell wharf or quay, the improvement of which is considered so important at this juncture; and all to meet the representations and predictions of the Liverpool Directory. Now, Sir, when I remember the jealousy with which the inhabitants of London have looked ever upon the Blackwall Railway, and the decisive prohibition which they have offered to the approach of any of the great lines to disturb the quiet of the west, or the business habits of the east of the metropolis, I am convinced that the Manchester people will not allow a Liverpool Company to come into *the heart of their town*, with their curves and sections—that they will not support an Act of Parliament by which the most valuable property in Manchester may be divided into shreds, at the price *usually fixed by juries*, who think little of localities; they will prefer Hunt's Bank, with all its *disadvantages*, its wharf, and its union with the Manchester and Leeds Railway, and the River Irwell, just *because* it affords every facility for mercantile accommodation and enterprise, and *does not destroy* the quiet or injure the beauty of the principal squares and streets of a noble city.

Honour to the Manchester and Birmingham Company! It is because they are disposed "to adopt prompt and efficient measures" to join the Leeds Railway that the Liverpool Directors awaken from their slumbers. "It became evident upon this recent but startling intelligence (they tell us in their Report) that something definitive must be settled;"—and what?—A visionary union of several lines not only without the consent, but actually against the wish of several of these Companies, and against the feeling of the town of Manchester. Sir, do the Directors *believe* for a moment that they will obtain their Bill? They must say to Parliament:—"We received the power which we prayed from the legislature only to render it useless and keep it from others; we resign it, after having induced the Leeds Company to expend 100,000*l.* upon the faith that Parliament would protect and insist upon the junction which it had sanctioned; and we apply for a new Act, including a junction with the Manchester and Birmingham, the Sheffield and Manchester, &c. &c., that we may do *to them as we have done to* the shareholders of the Manchester and Leeds Railway. We apply to Parliament for an option—'reserving to ourselves the decision whether we shall proceed with the undertaking or not,' and reserving the right to throw every other interest overboard, if it shall *in our judgment* interfere with our *own.*"*

The House of Commons will laugh the application to scorn. They will not sanction scheme after scheme, mock alliances meditated and then abandoned for *more comprehensive views.* Who shall say but that another year the Bury and Bolton may be received into favour again, and another Bill be required, or perhaps a few additional lines included in the arrangement; the more numerous these partnerships the greater the dowry. The Liverpool Directors, I see, quite take into account that the Leeds Company will join them in their universal branch and through Manchester project. Now of a certainty not only will they withhold both money and support, but they will render every opposition which can be legally suggested to the passing of the Bill, so that the benefit to one, and that a principal railway, to be effected by this new line of junction, cannot be pleaded on the application to the legislature.

The Leeds shareholders have been deceived too deeply already; whatever the Liverpool Directors purposed, we gave them credit for intentions which are yet unfulfilled. The grossest misrepresentations of our line have been made by correspondents in newspapers, and too many persons have, I fear, been induced to sell and sacrifice their shares by the scandalous errors and assertions of those kind people who wished to *inform the public*, that is, mislead the public to benefit themselves. No language can sufficiently condemn these Cornish lights intended to make wrecks. The only real difficulty under which we have really suffered has been the refusal of the Liverpool Company to complete their branch and meet their engagement; but now they have taken their part and avowed that refusal, we have no more hesitation; our works are proceeding with vigour to Hunt's Bank, and every arrangement is rapidly progressing which will secure us, by communication with the water carriage of the Irwell, an ample return for the present outlay and the past anxiety. With a receipt of 4,000*l.* a-week in the depth of winter, amid the embarrassments of commerce, and upon a line only opened ten months, I am not surprised that our shares have risen 25*l.* each in three months, and that they are rising daily.

The only explanation which the Directors could give as to the difference of *the estimate of traffic* between the two Companies is comprised in the remark of the Chairman, "that it is very difficult to give proof of the amount of traffic passing in a particular direction." Sufficient, however, was permitted to escape to show that the Liverpool Directors have altered their judgment and their tone very much upon this particular. The traffic allowed is much greater than would have been even mentioned as possible a few months ago.

And now to the personal deportment of these gentlemen who are so indignant with Captain Laws. What answer have we from Mr. Councillor Hodgson:—"I hold the assertions of Captain Laws not worth a rush." Truly a most gentlemanly and *argumentative* explanation! Nay more, the worthy councillor declares, that "it was debated whether the pamphlet should not be treated as a libel."

* See the Report of their last Meeting.

Digitized by Google

ıy, Sir, if the Directors were to proceed against those whose opinions blame and condemn them the failure of their engagement in not completthis branch, upon the evasion of their option l they would have to proceed against every third on they meet in the town of Manchester. It my own sentiment, that Captain Laws should e taken very different ground to that which he adopted. Supposing the Liverpool Directory have favoured the Grand Junction, and the idgewater Canal, somewhat, perhaps much, to the advantage of their own interest in the Liverpool ıay, I can see no charge of dishonour or corıion in their so doing. If I have property by d and by water, what is it to the public *from ich source* I shall choose to derive my principal ome? which I shall advance, which neglect? so g as I do not hold out that I am about to imve one part of my property, adjoining that of neighbour, if he will improve his, and *then* n round upon him, when he has completed his erations, and say that my views are now *much re comprehensive*, and that I only meant it would *at my option* to meet his improvement; and that e has trusted my compact was a *sincere one*, he fool for his pains. I cannot see why the Direcs should be so tender and sensitive of reproach, rely for being charged with a bias towards an- Company; but the fact of having obtained an of Parliament, *upon the faith of which* they e drawn into great expense the proprietors of a ghbouring railway, and the fact of having abanıed it without showing one sound argument or d circumstance against its application; and the of substituting, for the exercise of the powers ch they possess, an abortive attempt at *other* rers which they know cannot be obtained from liament—I say *these facts* account for the impaıce of mind and temper of those whose better feels reproach every unjust transaction. I am not ıved by the mere circumstance, that the general ting re-elected the Directors; that one of them e boldly forward to court an investigation, when ther considered this *too great a compromise of dignity* and character—too great a compromise of dignity forsooth, for a Railway Director to exin the reason of the default of the Company ich he represents. The Bridgewater interest which the attention of all parties was so usedly diverted is a secondary consideration; the ity of the performance or non-performance of engagement with the Leeds proprietors and the blic was the subject of primary moment. If it ot to be annulled through personal differences and ong prejudices, or conflicting interests, those who ndon it should have showed at least some cause its violation. The mere abuse of Captain Laws not relieve that violation of its obloquy. We e now a plain duty: we shall make no more apl to the justice of a public body of men who, in language used at their general meeting, would bably treat such an application "with the conpt which it deserves." To prove the temper of general meeting, let me only advert to the words orted as spoken by Mr. Saunders. "Before the phlet (Captain Laws's statement) I was an adate for the Hunt's Bank line, but now I think it uld be an act of deliberate suicide, and I never give my consent to it." Now the pamphlet, tainly an *ex parte* statement, goes wholly to show *immense profit and benefit* of the Hunt's Bank to *the Liverpool* as well as to the Leeds Comıy, so that he cannot mean that Captain Laws demonstrated any injurious or destructive tenıcy in the measure, much less to such a degree to change the sentiments which once were in its our. Does he then imply that he is of so irritaa temperament as to withhold his consent to at he so lately felt was just, *because he is dis*ured with some reflection in a statement pubed by the Superintendent of the Leeds Railway; does he wish to inform us, that because the ter of that statement is high in the confidence h of the Leeds Directors and shareholders, the nch line shall never be made to meet them? If there must be no small share of bitterness in the disposition of this gentleman, whom it is libellous to question and suicide to offend.

I am, Sir, your obedient servant,
A HOLDER OF MANY SHARES.

LIVERPOOL AND MANCHESTER AND MANCHESTER AND LEEDS RAILWAY.

To the Editor of the Railway Times.

SIR,—As a shareholder in the Leeds Railway, I have read with much interest your report of the recent half-yearly meeting of the Liverpool and Manchester Railway Company, in which the project of a junction line in Manchester forms so very prominent a part. In the outset, I *protest* for myself against the proceedings of Captain Laws being in accordance with my views and feelings. As his conduct on this occasion, and the publication of his mischievous pamphlet, will no doubt be taken up in the proper quarter, viz., at the forthcoming half-yearly meeting of the Leeds Company, I shall say no more but that I would implore the Directors and shareholders of the Liverpool Company not to sacrifice the interests of both railways, and the public convenience, in the present and future generations, merely for the folly or caprice of one individual. Leaving this painful subject, I will now proceed, by your permission, with a few remarks which it appears to me naturally arise from the very lengthy Report of the Liverpool Directors respecting the proposed junction line.

First, then, it is evident, *according to their own Report*, that if the Leeds and Birmingham Companies had not moved in the business it would have still remained in abeyance. Hear what they say—"Such was the position of this question at the general meeting of proprietors in July last. Nor was its aspect materially changed till a few weeks back, when the Manchester and Leeds Company announced their intention of proceeding with the execution of their projected line from St. George's-road to Hunt's Bank. And it was only at a still more recent period that your Directors were first informed that the Manchester and Birmingham Board were now disposed to adopt prompt and efficient measures for making a junction between their station in *Store* (not Stone) Street and the Manchester and Leeds Railway at Hunt's Bank." *Your Directors lost no time in deciding on the course which at this juncture it was expedient to pursue.*" And further on, they repeat nearly the same sentiments, so that I hope I have proved my first assertion. Then I must remark on the *omissions* which they thought it convenient to make in the speech of our respected and talented Chairman (Mr. Houldsworth) at the late special meeting, in noticing the distance between Hunt's Bank and Store-street from the Liverpool station—that the former is about 1,000 years nearer than the latter; that it would have to cross seven of the principal streets in Manchester and from Hunt's Bank only through vacant land or comparatively poor buildings in Salford.

It is a libel on the shrewd gentlemen in Manchester to say that they have placed their bazaar of commerce in one corner of their town, as the Liverpool Directors would make it out, for the Exchange is one-half the distance from Hunt's Bank, compared with Store-street. It is not true that the latter station is so much nearer the offices and warehouses of the merchants and shopkeepers than Hunt's Bank; as for instance, look at *Market-street*, which was and is the centre of all the coach offices. Look at Cannon-street, both new and old; Marsden-square, St. Ann's-square; and in fact, all the places of business leading out of Deans Gate, Market-street, &c., which *are all nearer* to Hunt's Bank than Store-street. Then as to the long yarn which has been so often spun over that it is now thread bare, viz., that the estimate of traffic coming from the Leeds to the Liverpool line is much overrated. They here forget to state that the Leeds Company have offered to guarantee the Liverpool Company from loss in making the junction line, and not only so, but it seems have offered to lease the Liverpool and Junction line when made, and allow the proprietors 10 per cent. interest on both. So all their wordy Report on this point is good for nothing. Then as to their estimate of *cotton* traffic on the Leeds line; they forget that the branch to Oldham is on the eve of being opened, which will materially increase the traffic in that article, as well as others. Then through all these calculations they never take into account that if there was *one continuous* line of railway the traffic on this and all other merchandise, as well as passengers, would be prodigiously increased, when the *trans-shipment and cartage* from one *detached* railway to the other was done away with.

After all, Mr. Editor, I strongly suspect that there is something all-important behind the scene, which the Liverpool Company studiously keep out of sight, viz., that they are afraid if the junction is made through Salford, it might be carried out by the Manchester and Bolton and Preston Railway, nearly half-way to Liverpool, and then it would be very easy to make a *northern and rival line* down to the docks at the north end of Liverpool, where *nearly all the cotton is landed*, and at least two-thirds of the manufactured goods exported to foreign parts. Then, again, consider that if the *west* coast line to Scotland is made, this new northern line to Liverpool would *intercept* all the Scotch traffic going east and west, and thus avoid the present Liverpool line altogether, excepting the small portion in which they would be interested in the junction line.

I hope I have proved that a good deal may be said against the reasons assigned at the Liverpool meeting in preferring Store-street to Hunt's Bank for the junction station, and still more that the public will be indebted to other Companies and not to the Liverpool, for promoting such a desirable object as a connecting line of rails, which I am now happy to see the latter Company will be bound to make *somewhere* to protect their own interest, being actuated thereto by the zeal of *other* Companies. That this line connecting the east and west seas, (a consummation, according to the admission of our highly respected townsman, Mr. Moss, so desirable), will now be carried out either with or without the concurrence of the Liverpool Company, I have no doubt. The Leeds proprietary, perhaps the most wealthy in the kingdom, are not to be easily driven from their purpose, and whatever is the result, the interest of the Leeds Railway can suffer but little, if anything, in the decision. Suppose the latter persist in carrying out their line to Hunt's Bank, that will always be a prime station for merchandise going by the rivers Irwell and Mersey; or whether they should see it better to retrace their steps and run a branch from their present station in Oldham-road to the station in Store-street, for which the Liverpool Directors seem desirous to take out a patent, *that* can have little effect in the value of the Leeds concern, because it is notorious, that in a town like Manchester property is continually on the advance, and the purchases which the latter Company have made, may be either now, or in a short time, resold without much if any loss; not to say that it might be desirable to keep Hunt's Bank for goods, and Oldham-road to Store-street for passengers. I now leave this subject to the impartial judgment of the public, and remain,

Sir, yours respectfully,
A LEEDS SHAREHOLDER.

Liverpool, February 1, 1842.

P.S.—Can you tell me, Mr. Editor, what is the reason that in every railway where military and naval officers are concerned, we have them continually playing their pranks? Is it the force of habit, that, having been so used to cutting their capers on the quarter-deck, and ruling over their subordinates, they think both Railway Directors and shareholders should submit to their dictum? Whatever they may think, I am of opinion, from their exploits at the different meetings, and the amusing articles which from time to time appear in your publication from them, that R. N. appended to their names, and which they are so proud of, may mean Real Nonsense as well as anything else.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—The discussion upon four-wheeled and six-wheeled engines, having apparently deviated from its original character, into personal invective, it is not without some reluctance that I reply to the letter published in your paper of the 15th instant. I much regret that a discussion which might have been productive of considerable benefit, had it been conducted in a proper spirit, should fail of its object, not from want of materials for its continuance, but from the want of temper, and I must add, the want of candour, in some of the parties who have taken part in it. The advantages to be expected from discussing such a question as this in a calm and temperate manner, by comparing the results of observation and practical experience with the deductions of the exact sciences, must be obvious. For while on the one hand the practical experimentalist in the particular branch of art, may not be deeply versed in tracing effects up to their causes, by deductions from mathematical and physical laws; so those who may have made the latter subjects their study, would no doubt receive advantage from the facts which present themselves to the observation of the experimentalist, and mutual advantage would result from the friendly collision of the opposite opinions of these two classes of persons.

In the letter of Mr. Gray, I regret to find throughout, the clearest proof of the want of the necessary temper and candour for such a discussion. In no one instance has he given the true meaning of any passage on which he has made his remarks, and he has thereby destroyed all the force which might otherwise attach to his observations. Mr. Gray seems fully impressed with the belief that the mantle of Watt has descended upon his shoulders; and that he is the depositary of all the railway knowledge and science which at present exists. On which of his works he founds his claims, I know not; but I presume it must be something of a very recent date, and not upon any of the results which he arrived at during his employment on the Liverpool and Manchester Railway. I would not, however, deny to him the utmost merit which is his due; and were it not for the unjustifiable tone which he assumes throughout his letters, I should be the last to allude to his, or indeed to any man's, failures.

The tone which this discussion has assumed for some time past, has prevented several persons from joining in it, who would otherwise have taken a part, and as there are principally parties who take opposite views to mine, I regret to have been deprived of the benefit of their arguments, clothed as I am sure they would have been, in language of moderation. *Male cuncta ministrat impetus;* and I believe it is from the dislike to be in the least identified with others who have shown so great a want of moderation, that the parties I have alluded to have abstained from the discussion.

A considerable portion of Mr. Gray's letter, I am wholly unable to understand; his peculiar mode of expressing himself by quotations which have no reference to the subject, rendering his meaning quite unintelligible. Such parts of his letter as are capable of being understood, I will now reply to.

As respects my statements about the early locomotives on the Liverpool and Manchester Railway, I have nothing to alter and but little to add. The remarks of Mr. Gray respecting the first introduction of crank axles, does not at all alter my statement, which was that the *Liverpool* was the first engine used *with horizontal cylinders and a crank axle.* The cylinders of this engine were not inclined upwards as Mr. Gray states, they being placed as nearly horizontal as possible, the angle being merely sufficient to allow the piston rod to clear the fore axle, and was therefore very different to the engines constructed on the principle of the *Rocket*, the cylinders of which were placed at an angle of about 45°. The statement about the large fire box to the *Liverpool* having rendered the engine too heavy behind, is also incorrect, as that fire box was precisely the same size as those now used by Mr. Bury for similar sized engines. The assertion that I have at one time quoted this engine as an example of efficiency, and at another time of inefficiency, is not even worth the trouble of contradiction.

The three following paragraphs of Mr. Gray's letter are ambiguous, but they appear to me to relate to the rocking motion of the engines. Mr. Gray appears to admit having misquoted a paragraph of my former letter, because he considered what he stated better expressed my meaning. This was very considerate. But as regards my observation, that "the outside bearings of six-wheeled engines would undoubtedly, when considered simply by themselves and without reference to other causes, give greater steadiness"—this remark was made in answer to an observation that it was an established fact, that "the greater the distance between the bearings or points of support the greater the steadiness of a shaft, be it driven in any manner whatever." This observation would of course be true, if this increased length of shaft were accompanied by a corresponding increase of dimensions of the base on which the shaft rests; but it is not so, when as in the case of a locomotive engine, the width of the base remains the same, and the length of the axles only is increased. This is precisely analogous to a beam supported on a centre fulcrum, of which the length of the arc described by the gyration of the beam, is directly as the length of the arms—the arc being double when the length of the arm is double. This circumstance should be particularly noted; for the greater steadiness of the outside framings and bearings has been so often insisted upon, that the writers now seem really to believe their oft-repeated assertions. The length of the arc of gyration, however, being directly proportional to the length of the moving body, it follows that, if the springs, axle, and frame extend in width 3 feet 6 inches from the centre line, in an engine with outside bearings, while with inside bearings this width is only 2 feet 4 four inches from the centre line, the lateral or rocking motion will be relatively in the proportion of 3 to 2—that is, whatever be the deviation from the true horizontal line, by the rocking of the engine, with inside bearings, it will be one-half more under the same circumstances with outside bearings. Indeed, it must be obvious, that the nearer the point of support of the incumbent weight is to the centre line, the smaller will be the length of the arc of its vibration, the less its disturbance, and the sooner will it return to a state of repose—facts which entirely disprove the advantage of increased steadiness claimed for outside bearings.

The remarks respecting the effects resulting from slight sinkings of the rails, and unevenness at the joints, have been so obviously perverted from their legitimate meaning by Mr. Gray, that the contradiction of them is not worth the space they would require; as any one can ascertain the point for himself, by referring to the passages quoted. The remarks about engines running off the rails on the inside of the curves, are wholly unintelligible; or rather, if they are to be understood as stated by Mr. Gray, they are an absolute contradiction.

As regards the breakage of crank axles to six-wheeled engines, Mr. Gray appears to me to assert that they break only when made of an insufficient strength. If this be the case, then every Engineer to the present time is in error as to the proper strength; for to the present day the axles of six-wheeled engines with *outside bearings* are continually breaking, several having occurred since the date of my former letters.

The next statement which appears to require any notice, is one which I am sorry to find has been brought forward—because I consider it to be the worst taste possible to encumber with personalities a discussion of this description. I consider all such matters deserving only of silent contempt, and it generally argues considerable doubt in the stability of one's own rectitude, and a very low estimate of one's own character, when a man holding a responsible trust feels himself called upon to justify his conduct against anonymous charges, or undefined slanders. *Conscia mens recti famæ mendacia ridet.* In the present instance, however, I will depart from what I hold to be almost an invariable rule, and in reply to the statement of Mr. Gray, that the accident he alludes to was *not* caused by a man who had been recommended by me; that only one man was in any way blameable on the occasion in question; that both the man and his relations were wholly unknown to me, except from my seeing the former acting in the discharge of his duty on the line; and that he owed neither his appointment nor his restoration to place to my favour, nor to that of any other Director of the Company; the former he obtained by high testimonials from persons who were strangers to the Company, and the latter he owed to his uniform attention and good conduct on every previous occasion, during a period of about four years. And if further denial than this be desired, I can only give it by stating, that the whole of the paragraph upon this subject does not contain one single word of truth.

As regards the statement of further accidents mentioned in Mr. Gray's letter, I have no means of knowing its correctness. Had the late lamentable accident on the Great Western Railway, and the more recent one on the North Midland occurred to four-wheeled engines instead of six-wheeled, I have no doubt we should have found them duly set forth in the list: if they be there I have not recognised them. The accident, No. 66, is a good illustration of the mode of straining a description to answer the purpose of a favourite theory. Two six-wheeled engines coming into collision with a short four-wheeled tender between them, the tender reared, and "the engines from the greater length between the axles were prevented doing so." Of course the relative weights of the rearing and non-rearing portion of the bodies coming into collision, are supposed to have nothing to do with this result. The fallacy of such reasons cannot but be known to Mr. Gray.

But I observe some other omissions in the list of accidents which has been given. The present list extends as far as No. 70; I will add one or two more.

No. 71. The *Samson* (or the *Goliath*) Liverpool and Manchester four-wheeled engine, after being refitted with the whole of Mr. Gray's *improvements*, at an expense equal to that of a new engine, ran off the line into an old iron shop, from whence it was deemed inexpedient to remove her. Prudence, engineman.

No. 72. The *Liver*, four-wheeled, Liverpool and Manchester engine, refitted with Mr. Gray's patent fire-box and other improvements at an expense of one-half the cost of a new engine, burst in the fire-box a few days after completion, near the Crown-street Tunnel; the engineman blown over the tender, with both his legs broken. The wreck of the engine was afterwards sold. William Woods, engineman.

These examples alone would be sufficient to prove the inefficiency and danger of four-wheeled engines.

In concluding these remarks, I would observe, that Mr. Gray's letters should be written in a different temper, if he expects to continue the discussion; though probably the alternative this suggests would not be a disagreeable one to him. Although I have not the remotest personal interest in this question, still as a matter of science, I am very desirous of investigating it in all its bearings; and I shall be happy to discuss the question with any who are disposed to do so with temper and moderation. *Hanc veniam petimus damusque vicissim.* This is the only way in which truth can be elicited; and unless that object be kept in view, the further discussion must be useless and unprofitable.

I am, Sir, your obedient servant,

CHARLES HOOD.

FOUR-WHEELED AND SIX-WHEELED ENGINES.

To the Editor of the Railway Times.

SIR,—Perceiving in the *Railway Times* of January 16th, 1842, a hint on the subject of brevity to your numerous correspondents who wish to solve the difficult problem of whether four or six wheels to each carriage would be most likely to prevent accidents on railways, I shall endeavour to comply with your request as much as possible. Your correspondents dwell at great length on inside and outside bearings, defects in springs, cranks and axletrees, supposed by them to be the causes of engines and carriages running off the rails. I have no doubt that these are all designed and constructed in the best and truest manner for carrying the burthen destined for them, and therefore it is my opinion that no alteration in them would be productive of good, but if your large family of four and six wheelers had been less high minded and condescended to regard the section of the rail itself and also that of the wheel which has to travel on it, they would I think have discovered the real cause of so many accidents of the description above named occuring. They will then find that the inside of the rail shows a section of a small circle, and the flange or rim of the wheel a section of the inside of a circle, and as the wheel rolls along on some parts (particularly at curves, where the rails are new, or where the wheels have to make a slip) the friction on the side of the rail is quite sufficient to cause the wheel to rise off the top of the rail, until the weight of the carriage overcomes the friction, and then the latter falling on the rail, creates an extra surge on the spring, which gives rise to the pitching and oscillating motion so much complained of, and also eventually to the train running off the rail. I am borne out in this supposition by many facts, one or two of which I will enumerate concisely.

An accident of this kind is rare on the Great Western Railway, where the rail is flatter, the wheel of a different construction; and the carriages being heavier, the usual rise off the rail is prevented; and moreover fewer accidents happen on those roads (where the rail is of the ordinary form), after friction has reduced or smoothed the top of the rail.

I cannot in conclusion refrain from calling to your notice the false prophecies of many of your correspondents, who about two or three years ago inundated your pages with letters concerning the railway I have just mentioned (the Great Western), and who in the plenitude of their wisdom imagined, and wished others to imagine likewise, that in the present year (1842) few vestiges of that road would be left, and in fact, at the part near Maidenhead Bridge a passer-by, who knew that a railroad once had been there, would cry "Chaos is come again." Time has, however, shown the falsity of these assertions (all emanating from the same quarter), and time will yet show, that, when the rails and wheels have become smoother on those parts I have mentioned, we shall rarely hear of engines and carriages running off the rails, and causing that destruction to life and property which has, to the present time proved (in the opinion of some) railways to be a curse instead of a blessing.

I am, Sir, your obedient servant,
ONE OF THE OLD SCHOOL.

Bromley, January 25, 1842.

MANCHESTER AND BIRMINGHAM AND CHESTER AND BIRKENHEAD RAILWAYS.

To the Editor of the Railway Times.

SIR,—Will you permit me, through the medium of your journal, to call the attention of the proprietors of the Manchester and Birmingham and the Chester and Birkenhead Railways to the following suggestions:—

The approaching spring will no doubt witness the opening of the first-named line between Manchester and Crewe, when I sincerely trust that the patience and perseverance of the shareholders will be rewarded with success; but the fact of the immense outlay is so notorious, that it behoves the Directors to avail themselves of every possible means whereby their revenue may be increased. It is with a view to this end that I now trespass on your valuable columns, hoping that my lucubrations may attract the attention of the Board, and induce them to deliberate on the hints I now venture to throw out.

It is a well-known fact that the line from Chester to Crewe is probably the most level 20 consecutive miles of railway in the north of England; and I should conceive that a powerful engine could convey a good average train from the Chester station of the Birkenhead line to the Crewe station of the Birmingham Company, *without stopping*, paying, of course, the legal toll to the Grand Junction Company. I need hardly state, that the carriages and passengers would proceed to Birmingham with the train from Manchester.

The Grand Junction Company would of course leave no stone unturned to defeat a combination of this kind, and it is probable that the nature of their agreement with the Manchester and Birmingham Company might enable them to throw many difficulties in the way, but I am still inclined to believe that the facility offered by a *friendly* station at Crewe, where they might obtain supplies of coke, &c. &c., would enable the Birkenhead Company to work the traffic in defiance of Grand Junction opposition, and I have no doubt whatever that a large portion of the public (particularly the numerous travellers between London and Dublin) would gladly avail themselves of the arrangement. During frequent journeys to Liverpool, I have witnessed many instances of disappointment, approaching to distress, occurring to parties who have left London by the night train, intending to proceed to Dublin by the morning mail boat, and have on their arrival in Liverpool been astounded at finding themselves half an hour too late.

At the meeting of the Manchester and Birmingham Company, held in March last, their agreement with the Grand Junction Company was made public, and is formally advertised in No. 167 of the *Railway Times*. It seems that "one thousand pounds per mile per annum, beyond which no further payment is to be made," is the maximum toll which can be exacted. The distance between Crewe and Birmingham being 55 miles, the amount would rather exceed 1,000*l.* per week.

It appears to me that there are worse speculations afloat at this moment than keeping the Grand Junction people to their bond. I am disposed to think that for eight months in the year one half of the Liverpool traffic might be diverted from its present channel to the route I point out, whilst the public would be benefited by the destruction of the existing monopoly, and the revenue of the younger Companies materially increased.

When the Birkenhead rails touch the waters of the Mersey, which I am informed will shortly be the case, I should think that a fair portion of goods' traffic might be calculated on.

Wishing that some of your numerous and able contributors may take up the subject I have treated upon, I beg to subscribe myself,

Most respectfully yours,
A MANCHESTER MAN.

January 22nd, 1842.

SPEED ON RAILWAYS.

To the Editor of the Railway Times.

SIR,—In your very useful publication, from the many melancholy accidents that have recently occurred, you have several communications suggesting improvements in working railways, with a view to lessen the occurrence of similar future disasters. There is one matter, however, to which I do not think sufficient attention has been paid, and that is *a defined regulation of speed* for the particular line. There are on railways certain parts which are more liable to interruption than others, such as deep cuttings, where the banks being lofty, are liable to slips and matter rolling down on the rails, also high embankments, viaducts, &c., where, should any accident occur to cause the engine to run off the rails when travelling at a great velocity, the loss of life and damage to property could not fail to be very great. Such parts generally constitute but a small distance on the line, and should always be passed over at such a diminished speed as in the event of any unforeseen interruption on the rails, would not be sufficient to upset or throw off the engine, and the loss of time might be easily compensated by increased speed on the other parts that would admit of a great velocity without danger.

What I would propose for this purpose is, that there should be an index placed on the engine in front of the driver, which would constantly indicate the rate of travelling, and might easily be accomplished by different means; but the most simple would be to connect with one of the engine-wheels a centrifugal apparatus (similar to the governor used on a steam-engine); this would work an index which would always show the number of miles per hour travelling. The driver should hold a list specifying the distances by miles for the different rates of speed to be used, and on the line also, where a change of speed is to take place, there should be a board set up with number of the rate painted in large figures, and the engine-man would thus conform his speed in the different parts to a rule laid down by the Directors, and thus avoid the danger to life and property which has in many of the late catastrophes been caused by the caprice or negligence of these men.

I am, Sir, your most obedient servant,
R. C.

Edinburgh, January 20, 1842.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—Conceiving your journal to be one of those, the conductors of which would wish to maintain an impartial character, it was with some surprise that I read your exceedingly partial, prejudiced, and one-sided strictures in your paper of the 22nd instant, on the late special meeting of the Sheffield and Manchester Railway Company.

Believing that this "best abused" line has every prospect of ultimate success, if it were a private affair of my own, all I should ask for it would be a a clear stage and no favour.

With this view, let us see how your strictures will stand the test of a dispassionate criticism.

You charge the Directors with having recourse "to the fallacious expedient of allowing interest out of capital on paid up calls." It is undoubtedly true as a general rule of public companies that the reverse of this is acted upon; but are not railways an exception to such a strict rule? Are there not good precedents for the course taken; nay, do not you yourself admit that "the South-Eastern Company have adopted the scheme of paying interest;" but you triumphantly ask, "are the shares of that Company at par?" Why, if you turn to the "Fluctuations of Prices of Railway Shares," page 92 of the same number of your paper, and place your finger on the "South-Eastern Railway," you will find that its shares in October, 1839 (upon which 15*l.* per share was paid up) were unsaleable at any price, and were quoted *nil.*, but are now (January, 1842), upon 43*l.* paid, quoted 23½*l.*; in other words, from being worth nothing, they have risen to something better than 50 per cent. discount. You go on to state, that by the process of weeding, the calls on that railway are now promptly paid up, and after having been, as you admit, "almost overwhelmed with difficulties, the share register is now one of the soundest in the empire." May not this be the ultimate result of the decisive measures now taken by the Directors of the Sheffield and Manchester Railway? I, for one, see no reason to doubt it. Why, I recollect being told by a gentleman, a very large and firm holder in the now flourishing South-Western line, that after expending millions, their undertaking was so plunged into difficulties and

* This letter is noticed in our leading columns.—[ED. R. T.]

Digitized by Google

steeped in depression that it was found necessary to raise another million at least, by new shares or otherwise; but he, for one, had never any doubt of ultimate success. Again, I ask, may not this result be ultimately achieved for the Sheffield and Manchester line?

The tenor of your remarks betrays a jealousy, and unfair advocacy of the Leeds and Manchester line, to the injury of this line. Without professing any extensive knowledge of railways in general, I happen to know something of the localities of each of these, and there are some facts in favour of this which are too striking to be omitted here.

It is a fact, then, that the Sheffield and Manchester Railway will have a tunnel of three miles through the most favourable strata possible, *i. e.*, solid rock. *Contra*, the Leeds and Manchester has tunnelling altogether of about seven miles! through strata requiring constant upholding.

It is a fact, and a very important one, that this line is ten miles nearer to Manchester from Leeds than the Leeds and Manchester line is.

It is a fact, that the cost per mile of the latter line was near 60,000*l.*, and is, notwithstanding, now paying six per cent., whilst the cost of this will only be 25,000*l.* per mile, or less than one-half the Leeds and Manchester.

It is a fact, that this line can have no canal competition, and that it will be the only direct communication between the western and eastern coasts, uniting such towns as Liverpool and Manchester with Sheffield, Leeds, and Hull; and as to its great drawback, the tunnel, it is well known by practical men that it is easier to go through three miles of rock than one mile of quicksand, because the former is not liable to accidents, but once made is constructed for ever.

From these facts, is it not evident to every one (whose natural vision is not either damaged or wilfully obscured) that this line will stand in a better position for all traffic from east to west, and *vice versa*, than any other line existing or that can exist.

Finally, let the line to Glossop be reached in eight or ten months hence, and its completion will follow. Let its completion be achieved and ultimate success is certain. Then will arrive the time when the state of the market (as is the case with the South-Western) will be reversed; and I hope to live and cross yonder mountains by this railway, and to see the day when its Directors (than whom, as a body, a more honourable business-like set of men cannot be found) and shareholders will be remunerated for their pains and expenditure, and when, instead of, as now, there being many sellers and few and timorous buyers, all will be buyers and few sellers. I am, Sir, your very obedient servant,

NO SHAREHOLDER, BUT A RESIDENT OBSERVER.

Sheffield, January 31, 1842.

RAILWAY BETWEEN PARIS AND LONDON.

THE following letter has been addressed to the Editor of this journal. We shall probably notice hereafter the "Report" to which the worthy Mayor refers:—

MONSIUER LE REDACTEUR.—Permittez moi d'appeler votre attention sur la mémoire ci joint qui traite de la direction à donner, en France, au chemin de fer international qui doit unir Londres et Paris.

L'interêt évident qu'ont les deux nations à ce que la communication entre ces capitales soit assurée pár la voie la plus courte, la plus facile et la plus régulière, ne me laisse aucun doute qu' aprés avoir lû notre travail vous ne reconnaissiez les avantages qu' offre le port de Boulogne sous tous les rapports. Les admirables travaux qui ont rendu son entree et sa sortie si faciles et ont procuré à son chenal une profondeur d'aau qu'on ne trouve dans aucun port voisin, ont eu pour résultat de lui assurer pres des trois quarts des voyageurs entre la France et l'Angleterre: et cela malgré l'immense avantage que procure àCalais la présence des paquebots de malle quì font un service obligatoire. On peut donc dire que, sans ce privilége, presque tout le passage aurait lieu par Boulogne où s'embarquent déja la malle de l'Inde et presque tous les courriers de commerce.

Ces résultats étant encore peu connus, puis qu'ils ne datent que de cinq à six ans au plus, il est de mon devoir d'en répandre la connaissance, afin que l'opinion publique puisse se prononcer en connaissance de cause sur la direction que réclament, *pour la ligne de Londres à Paris*, les intérêts des deux nations. Il ne vous échappera pas que notre système aura en outre, quand il sera exécuté dans son ensemble, l'avantage d'ouvrir a tous les ports Anglais une communication avec le réseau de chemin de fer du Nord, par tous les ports Français de Dunkerque au Hâvre.

Notre désir étant d'éclairer le public, en portant tous les faits avec leurs preuves a l'appui a la connaissance des principaux organes de l'opinion publique, j'ai pensé, Monsieur le Rédacteur, que vous seriez assez bon pour insérer dans votre feuille un extrait de notre travail, et vous associer ainsi à toutes les mesures qui peuvent resserrer l'union de deux grandes nations.

J'ai l'honnour d'être, Monsieur le Rédacteur, votre dévoué serviteur,

LE MAIRE DE BOULOGNE,
[AL. ADAM.]

Département du Pas-de-Calais,
Boulogne-sur-Mer, January 29, 1842.

TRANSLATION.

SIR,—Allow me to call your attention to the accompanying Report on the line to be adopted in France for the international railway uniting London and Paris.

The evident interest which the two nations have that the communication between the capitals should be by the shortest, easiest, and most regular route, assures me, that on reading our Report, you will recognise the advantages that the port of Boulogne possesses. The admirable works which have given it such a depth of water, found in no neighbouring port, and rendering the passage in and out so easy, have made it selected by three-fourths of the travellers between France and England; and this in spite of the great advantage accruing to Calais from the packet-boats—compelled to go there. Without this privilege (attaching to Calais), we may safely assert that Boulogne would always be the chosen port for passing from and to France and England. It is already that of the Indian mail, and of nearly all the commercial travellers. I feel it my duty to make these circumstances better known than they are, they having only existed five, or at the most six, years, that public opinion may decide from accurate information, on the *line from London to Paris* best for the interests of both nations.

It will not escape your notice that our plan, when fully executed, will possess the additional advantage of opening to all the English ports a communication with the railways of the north, by all the French ports from Dunkirk to Havre.

Our desire being to inform the public, by bringing facts and proofs before the principal organs of public opinion, I have thought, Mr. Editor, that you would be good enough to insert, in your publication, an extract from our work, and so associate yourself with the measures so calculated to strengthen the union between two great nations.

I have the honour to be, Mr. Editor, your obedient servant,

THE MAYOR OF BOULOGNE.
[AL. ADAM.]

Boulogne, 29th January, 1842.

NORTHERN UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—I desire to make some observations in reply to the letter of your correspondent, "Arbitrator," upon the above undertaking, but shall claim permission first to make a few remarks upon the late exposé touching myself.

Although I did not prefix the words "private and confidential" to my last letter, I thought you would have discovered at a glance, that it was not intended for publication, else I would have done so. Not that I doubt for an instant the result upon mind of every candid and impartial reader; but simply because discussions upon the *private affai* of individuals do not come within the jurisdiction your journal, and cannot excite an interest on t part of the public. My purpose was to put *you* possession of the facts of the case, so as to enal you (backed as they are by the evidence of h fictitious, but tangible, names) to append a no generally and gracefully implying, that the pro adduced, carried with them a complete exonerati from the implied charge, and that it was both a du and a pleasure to report accordingly.

Your correspondent, "Spectator," who has sayed to establish his claim to be considered "respectable individual," by stabbing in the da invites me to undertake a "cruize" in my o locality, in search of an honest man, enlighten by the glimmer of something in the shape of a hc lanthorn (it might have been talc, it could hav have been glass), said to have been carried once a day, for that purpose, by limping Æsop. To th erudite suggestion, I rejoin, that some twenty ye ago, when unsuspicious and confiding all arou me appeared *couleur de rose*, I joyously set sail this very mission (cheered by the appearance of smooth sea and a prosperous gale) with "a flowi sheet," and I can honestly say, that my experien authorises the belief, that had I been aided in r search, by having one of those appliances of mode art—the Solar microscope—attached to each mas head, and appended to every yard-arm, they wou only have served to show the exceeding predom nance of fraud and treachery in all their revoltin deformity. The cruize was indeed a disastro one. Those with whom I colleagued, and who h embarked with me in the same enterprise, not co tent with plundering and dissipating my stores a provisions, to the tune of 6,000*l.* to 8,000*l.*, ende voured to find their way to the very "ground tier, and when at first I remonstrated, and finally d nounced their ungenerous and unworthy conduc they made the bold and for a time successful a tempt to paralyze my revelations, by swamping m reputation. The result was, the abandonment my cruize, the resignation of my commission, and retreat into port. In defence of my rights, I hav again ventured out of harbour, and my first recep tion is marked by the renewal of an obsolete a atrocious calumny, which the propagators by co struing the formal silence of contempt into an a mission of guilt, never perhaps imagined *would could* be met by a prompt and decisive confutatio As what is written cannot be recalled, you hav done the next best thing in giving notice, that a further comments must be *authenticated by th name and address of the writer*—an admonitio equivalent to an *absolute interdict*. Trust m when I say, you will have no further trouble on th score. The moral courage exhibited, by instantan eously bearding my traducers, and pealing the not of scorn and defiance, will operate as a sedative t their ardour in the unholy trade of vilification, an what that may fail to accomplish, your caveat wi complete.

This is, perhaps, a tedious digression, but bein imposed on me by the force of circumstances, yo cannot fail to excuse it. You have coupled m name with principle in your pages. I would fai hope we have never been mere sleeping partners- but should there have been a slight estrangemen between us, even in an infinitesimal degree, I wi endeavour henceforth, by God's Grace, witho which, as a restraining and a motive power, th most perfect are liable to fall—that "Captai Watts and principle" *shall* be inseparable.

And, now to business. Your correspondent "Arbitrator," while honouring me with the distinc tion of leader of the dissentients to the project o the Northern Union Railway, seems to imagin that the question is argued by me as one of pecu niary risk merely. Although that enters as an in gredient, yet I wish it to be distinctly understoo that I have based my opposition to the schem chiefly as being a dangerous precedent, and *prece dent*, my experience powerfully and painfully assure me, is liable to be too often quoted in terms of tri umph and of confidence, as a sanction to wild

Digitized by Google

visionary, and it may be nefarious, acts. "Arbitrator" says, whether the attempt to coerce the dissentients by a mere majority in this case be legal or not he cannot tell. Why who can doubt it? The merest pettifogger in every hamlet will tell him it is illegal. But then it is fraught with such immense advantages, as to have obtained the support of very many "clear-headed men," whose dicta it would be heresy to doubt. If ever I do pen an essay for the amusement and edification of mankind, I shall not fail to profit by the suggestion, by taking as its title—an "Essay on Clear-headedness," or a "History of Clear-headed Men," from the days of Rehoboam, or of Jeroboam the son of Nebat, who made Israel to sin, down to that mass of matter and of mind in the United States of America, whose avidity for gain, superinduced by *maturity of intellect*, has involved a nation in almost universal bankruptcy, and consequently entailed ruin upon the actors, and disgrace upon their country. Yes; it is this propensity to *high-pressure speed* in the walks of Mammon, instead of trusting to the steady and gradual evolvement of natural causes, that has produced this, and which, so long as there shall exist an unbroken link between cause and effect, ever will produce it. And thus it is, that the supporters of this Northern Union scheme, are rushing forward as if they cared not how, and knew not whither, allured by the specious reasoning of certain self-interested projectors, who, provided they can benefit themselves, care no more about whom they may dupe than they would about a deputation from the moon, which might arrive to solicit their sympathy, because, perchance, a comet had in its erratic course, by a sweep of its tail, destroyed the cornfields and vineyards, and reduced its population to the extremity of famine. As I formerly stated, with the measure *per se* I do not pretend to interfere. It is the attempt made to drag me and others against our will to support it to which I object. As free-born subjects, they have an undoubted right to the exercise of a free agency in the disposition of their funds, and they ought not, and must not, be displeased if I lay claim to the like privilege, by desiring to keep aloof from a scheme in which I cannot discover one inducement to embark, worthy of the consideration of any person who has any respect for consistency or principle.

Determined, however, as my stand against the project may have been, and decided as I still am in my determination to withhold my assent, I nevertheless at all times prefer peace to war, and accordingly am ready to meet the proposition for a compromise half-way. The offer, or rather the suggestion, made by "Arbitrator," amounts in my mind to a virtual recognition of my principle, which is so far satisfactory; but the plan and mode may be improved. My proposition then is, that those who have the management of the Bill to be submitted to Parliament shall introduce a clause, exempting such dissentients as may give in their names by a given day, from all risk and liability; and another to the effect that they shall not participate in any of the profits or emoluments derivable from it. This done, I think I may venture to say, that their wishes will be satisfied, and their opposition at an end.

I remain, Sir, your obedient servant,

G. E. WATTS.

Langton Grange, Darlington, January 22, 1842.

THE MANCHESTER AND LEEDS AND SHEFFIELD AND MANCHESTER RAILWAYS.

To the Editor of the Railway Times.

Sir,—The Sheffield line has of late been repeatedly brought before the railway public in your columns as an opposition line to the Leeds and Manchester. This has been done by shareholders in the Sheffield, anxious to bring their undertaking into public favour, and also by parties interested in the Liverpool and Manchester line, who have been driven to this shift, amongst others, in order to excuse the very extraordinary course the Liverpool Board has followed with regard to the junction at Hunt's Bank.

Now, Sir, I at once grant, that were the Sheffield line opened to Penistone, *and another railway* formed from that place to near Barnesley, on the North Midland line, of some 10 or 12 miles in length, it might compete with the Leeds line to a certain extent for the Hull traffic, and it might be also for the through traffic to Leeds. But *it can neither do the one nor the other*, even were the whole line opened from Manchester to Sheffield, until another railway is formed from Penistone to Barnesley, as the distance from Manchester to Leeds *via* Sheffield would be 18 or 20 miles further than by the Leeds and Manchester line.

That the Sheffield line may one day be completed is very possible, but the shareholders in the Manchester and Leeds need give themselves no uneasiness on the subject, as it will be long—very long—(probably not till 1850) before the Sheffield line, and the Penistone and Barnesley lines will be completed, if at all; and even if they were completed, the probability is that the traffic on the Leeds and Manchester would only be diminished to the same trifling extent as has that of the Grand Junction by the competition of the North Midland and Chester and Birkenhead lines.

In these remarks, Mr. Editor, my object is not to depreciate the Sheffield line; it is to defend the interests of the Leeds shareholders from the attacks of parties who, for their own ends, would damage them. I feel for the shareholders in the Sheffield line; it has been a disastrous business for them hitherto, and in public estimation it has long been considered a ruinous speculation, as is evident from their shares (82*l.* paid) now selling at 31*l.* i.e. 51*l.* discount. Whether the result may justify the low opinion the railway world entertains regarding the merits of this line remains to be seen. But I confess I have little hope of its proving a good speculation. The line *may* one day be completed, but through such a country, and with a three mile tunnel, to talk of its costing only 25,000*l.* per mile, as was done by the Chairman at the meeting on the 12th January, is ridiculous. The tunnel alone will probably cost 400,000*l.* or 450,000*l.* which is 10,000*l.* per mile for the whole length of the line, 40 miles. The ultimate cost of the Sheffield will, I have little doubt, equal that of its neighbour, the Leeds and Manchester, viz. 60,000*l.* per mile; and as the population from the east end of the tunnel is but thin all the way to Sheffield, it cannot yield a fair dividend costing so much per mile. My advice therefore to the shareholders is, to complete the first 15 miles out of Manchester, which, from the dense population, cannot fail to pay well, and then wait for better times, when labour and materials may be reduced in price, and money more abundant. Let them bear in mind that the Kilsby tunnel, though only two miles in length, cost the London and Birmingham Company 350,000*l.*

While I at once grant, that were a railway constructed from Penistone to Barnesley, the Sheffield line might compete with the Leeds line for the *through traffic*, yet, I assert that to speak of the Sheffield line seriously injuring the Leeds is *an utter absurdity*, and for the following reasons:

1st. The Leeds is less dependent on the through traffic than any other line, or than most at least, and on no other line has the traffic existing between the termini previous to the opening of the railway been increased by that opening to so trifling an extent as has that between Manchester and Leeds. This has been caused no doubt by the circuitous nature of the line. But should the proposed branch line from Hebden Bridge on the Leeds and Manchester to the town of Leeds, *via* Bradford be formed, which is not unlikely, it would shorten the distance between Manchester and Leeds by railway some 10 or 15 miles, and thus produce an enormous additional through traffic. Should this like be made, it would benefit very much the Leeds line, but in that case what becomes of the vaunted opposition of the Sheffield Company? Why, they would not carry a single passenger to Leeds. In my opinion it is fully as likely that the Hebden Bridge and Bradford branch line to Leeds will be made, as that the Sheffield and the Penistone lines will be completed. Let then the shareholders in the Sheffield beware of incurring an enormous cost with the expectation of sharing in the traffic to Leeds.

2nd. The Leeds line has an immense amount of local traffic, of which no other line can deprive it. It has towns spread along the entire distance every four or five miles. The average length travelled by each passenger is only 15 miles, as was stated by Captain Laws at the late meeting, which proves the extent of local travelling, as a vast proportion of passengers must travel only five or ten miles to reduce the average so low. The Leeds line must ever monopolise the entire traffic of the towns stated below, many of which it intersects, viz:—

Oldham	65,000
Rochdale (Borough)	78,000
Heywood	15,000
Halifax (parish)	109,000
Huddersfield	35,000
Bradford	80,000
Dewsbury	20,000
Wakefield	25,000
Todmordon and other small towns, say	30,000
Total	457,000

For these reasons, Sir, I fearlessly assert, that to talk of the Sheffield line seriously damaging the traffic of the Leeds and Manchester, is utterly absurd.

I am, Sir, yours respectfully,

A HOLDER OF 200 LEEDS SHARES (£8,000 *paid up*).

January 25, 1842.

MANCHESTER, BOLTON, AND BURY CANAL AND RAILWAY.

To the Editor of the Railway Times.

Sir,—Not having an opportunity of attending the meetings of the proprietors of the above concern, I should take it as a favour if you would allow me to ask a few questions of some of your readers or correspondents as to the management of the affairs of the Bolton and Bury Company. In the first place, how does it happen that there is a charge of upwards of 200*l.* for banker's commission and interest? Was not the last call for the special purpose of paying off the banker's balance? and if the Company has again got on the wrong side, pray what has become of the cash, and from what source is our dividend to come? Should it be replied that the principal part of the 200*l.* is for commission, I think that cannot be the case, as according to that there must have been transactions to the amount of 80,000*l.*, which I regret to say is utterly impossible.

Next, I would inquire how it happens that Mr. Haywood has been going back in his accounts for the last six years, and thus taken the Company in for no less a sum than 1,500*l.*? I suppose no one knew anything about the accruing deficiency. Does not this betray a want of attention on the part of some one or other?

Ought not an agent receiving upwards of 200*l.* a-year to have given security? How does it happen that almost every item of expenditure is so much more this than the preceding half year? Had not the Liverpool gentlemen once again better take the matter up? What has become of the profits of working the Bolton line to Chorley? How is it that our engines are to do the work for the Lancaster line, and yet we are to derive no benefit for some time to come? All these things are to me passing strange; but perhaps some of your correspondents may be able and willing to explain them. If so, I shall feel much obliged.

I am, Sir, yours, &c.,

T, a Shareholder.

27th January, 1842.

Opening of the Philadelphia and Pottsville Railway.—The president, managers, and officers of the Philadelphia, Reading and Potraville Railway Company, passed over that road from Reading to Pottsville on Saturday.—*New York Express*, Jan. 4.

2. Mileage toll to London and Birmingham 125*l.* 13s. 11d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c. The dividend is from the time of opening.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,338*l.* The receipts include those derived from the use of the L. and M. and C. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134½ (83½+21+31.)

13. The 5,231,527*l.* 9s 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 160½ (118½+18+33.)

15. The 37*l.* 2s. 1d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

the rate of 42½ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25 The 3,876*l.* 0s. 0d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

13s. 0d.; horses, 42*l.* 9s. 0d.; dogs, 0*l.* 14s. 6d.; parcels, 175*l.* 15s. 4½d.; cattle, 29*l.* 15s. 6d.; corn, 27*l.* 5s. 10d; heavy goods, 506*l.* 11s. 2d.; coal, 88*l.* 11s. 5d.—Total, 902*l.* 15s. 9½d. The dividend is from the time of opening.

29. The details of the receipts are as follows:—Passengers, 1,975*l.* 2s. 7¾d.; parcels, carriages, horses, and mails, 272*l.* 15s. 6d.; merchandise, 1,202*l.* 11s. 0d.; minerals, 237*l.* 19s. 3d.; cattle, 89*l.* 2s. 7¾d.—Total, 3,727*l.* 11s. 0½d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 111*l.* 9s. 4½d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

30. The receipts are after deduction of L. and M. toll.

31. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

32. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

33. The returns are inclusive of Man. and Bir. toll.

TO CORRESPONDENTS.

A Purchaser of North Midland Shares.—*The alteration as to the amount of dividend in our traffic tables was made upon the authority of Mr. Frost, the Secretary of the Company. We are therefore to presume that as it now stands, the dividend is correct.*

A Director *(London.)*—*Most cheerfully. We hope to hear from our correspondent again.*

A Novice in Railway Matters.—*The new shares were issued at a considerable discount, being somewhat under the then market price. Of course, upon no other terms would they have been taken up. Since that time the undertaking has been looked upon more favourably, but of course to an original holder, who took up his due proportion of new shares, the dividend will in reality be considerably larger than the nominal amount.*

H. H.—*It was certainly fully understood that the 5l. would never be called for. It was to be remitted as a set off against the expenses incurred by the several Companies (now united) in their preliminary measures.*

R. P.—*We know that our explanation was accurate, as we read the particulars from an official source.*

We beg of our correspondents to excuse us at this busy season from acknowledging the receipt of every communication with which we are favoured. We cannot undertake to return rejected articles. When a letter is not inserted (or noticed) within two or three weeks after it is sent, the writer may conclude that it is unsuitable. We wish to state, however, that communications do not necessarily fail of effect because they are not at once inserted, for we are proud to acknowledge that we receive from papers, which, on the whole, it would not be desirable to insert, hints which subsequently are made to tell.

Censor *is utterly mistaken as to the nature of the office held by the gentleman whom he names. He is a Director of the Company and nothing more.*

P. W.—*The distance between the stations is only 2¼ miles.*

Fumus.—*It would be premature to notice the subject at present, but it shall not be lost sight of.*

Liverpool and Manchester and Manchester and Leeds Railways.—*We have during the week received upwards of twenty letters on the matter in dispute between these Companies. Of course we cannot print one half of them, but in addition to those which appear to-day, there are two or three in type, which shall be given next week. They are all of the same character as those which we print to-day. Why does not some one step forth on the other side? He shall have every facility, as our sole object is to elicit truth, and to promote the best line that can be devised.*

Vlacit Veritas.—*We have transmitted our correspondent's letter to the gentleman named, and shall, if necessary, notice his reply.*

A Lover of Justice.—*The letter has been forwarded.*

Birmingham and Gloucester Railway.—*A correspondent who subscribes himself* A Proprietor, *says his views are so much in accordance with those of the writer in our last number under the signature of* A Well-Wisher and Original Shareholder, *that being unable himself to attend the general meeting, he should be glad to entrust his proxy to* A Well-Wisher, *if he will communicate his address. A line addressed by* A Well-Wisher *to* R. P. R., *Post-office, Taunton, on or before the 11th instant, will be duly received.*

London and Birmingham Railway.—*A Manchester correspondent hopes it will be stated at the approaching meeting when the remaining 10l. will be called for on the quarter shares, and also the 10l. on the original shares.*

G. P.—*The meeting has not yet been convened, but it will doubtless be held towards the close of the present month. Of course we shall report the proceedings.*

Sheffield and Manchester Railway—A Poor Sufferer.—*We have made room to-day for a letter impugning our views; our correspondent in support of them shall appear next week.*

Among the letters reserved for next week are those of Another Bristolian, *and* C. W., *(on the Birmingham and Gloucester Railway,) and* An English and Irish Landlord

TRAFFIC OMITTED LAST WEEK.

Arbroath and Forfar Railway.—*Week ending January 22, receipt from passengers* (1,151) *47l. 12s. 4d.; goods, 54l. 4s. 11d.; total, 101l. 17s. 3d.*

The meetings of the ensuing week promise to be so important—including the Eastern Counties', Northern and Eastern, London and Birmingham, &c.—that at the request of a large number of our subscribers we have determined upon issuing two sheets next Saturday. The price for the two will be 1s. We are quite sure that *all* our subscribers will prefer this course to the postponement or abridgement of proceedings and official documents, which have not merely a temporary, but an enduring interest.

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 5, 1842.

THE half-yearly meeting of the Grand Junction Railway Company was held on Wednesday, and as might be expected, on an occasion when a dividend at the rate of 12 per cent. per annum was declared, passed off most harmoniously. For a notice of the proceedings we refer to another part of our present number.

The principal topic brought before the meeting was the grant, to which we referred last week, of 1,000*l.* towards the erection of a church at Crewe, for the benefit of those of the Company's servants who are about to be removed thither. The suggestion which we threw out of rendering the grant optional, by at once offering to all who disapproved of this mode of expending the Company's funds an opportunity of withdrawing their quota of the amount, was, we are happy to find, adopted; and the consequence was, that no opposition was made to the proposition of the Directors. It appears that the sum per share of the 1,000*l.* appropriation is about 10¾d., and although we are aware that it is not the amount of the grant which renders it objectionable in the eyes of the dissentients, we daresay very few of them will feel disposed to avail themselves of the option offered. The Directors have done themselves great credit in thus following the example of the Birmingham Board. Upon the broad principle referred to by Mr. MOZLEY at the meeting, that whatever tends to elevate the moral character of the parties employed on a line must prove, directly and indirectly, to the advantage of the establishment, we conceive such grants to be at once legitimate and judicious.

Almost the only other subject touched upon at the meeting was a proposition for the payment of dividends quarterly. The matter was ultimately left open for the re-consideration of the Directors. We should be glad to hear one objection to the course recommended, except that it would entail some additional trouble upon the Secretary and clerks of the several Companies, and even *that* would not practically be to any great extent.

In connection with the conversation which took place on this question, the cuckoo-cry of "confidence in the Directors" was raised by Mr. ALSTON very needlessly. Mr. HEYWORTH having moved that quarterly payments be made, an amendment was brought forward that the old system be continued, and in seconding this amendment Mr. ALSTON coupled it with the support and approval of the general policy of the Board, as if any interference with a small matter like this, upon which the Directors admit that they hold no strong opinion either way, were to be construed into a condemnation of their official conduct, or an expression of distrust and dissatisfaction! Really, if proprietors—practical men, too, who may be supposed to be quite as well-informed upon financial questions as any set of Directors, however intelligent, can be—if proprietors, we say, may not venture to differ with their representatives upon such points, without risk of being thought to censure the mode adopted in managing their affairs, the sooner the farce of holding half-yearly meetings is at an end the better. We are quite sure that, in this instance, the Directors would not have tortured the passing of Mr. HEYWORTH'S motion into the construction put upon it by their over-zealous champion. From the part taken by Mr. ALSTON at the last North Midland meeting, we had not anticipated such an unnecessary deprecation of offence.

When the accounts of the Company are fully before our readers, and we have had an opportunity of comparing them with those of the other great lines, we shall probably have something to say in reference to them, if not anticipated by any of our able correspondents.

A CORRESPONDENT, whose letter we print in another column, rates us for certain remarks which recently appeared in this part of our journal on the proposed payment of interest on calls by the Directors of the Sheffield and Manchester Railway Company. Our correspondent charges us with partiality and prejudice, but does not condescend to adduce proofs in support of this grave accusation, and under these circumstances we might very safely leave his assertions to pass for what they are worth, without troubling ourselves to notice or contradict them; but as the opportunity is a good one for a further illustration of our views upon a not unimportant matter, we shall take our correspondent's communication as the text for a very few observations.

We characterised the payment of interest out of capital as "a fallacious expedient," and proved, by the experience of one or two Companies who had adopted it, that the scheme had not answered the expectations at one time entertained of keeping up the market value of their stock. One of the instances selected was the South-Eastern Company — an instance which our correspondent would turn against us by pointing to the selling price of the shares some two years since, when the line was scarcely begun (and when, we venture to say, few imagined that it would ever be completed), as compared with their market price at the present moment, now that a large section of the undertaking is on the very eve of being brought into beneficial operation. The Company's stock was *then* unsaleable, it is *now* at about 50 per cent. discount; *ergo*, reasons our correspondent, the payment of interest upon calls has effected this pleasing improvement; and *ergo* again, the same change for the better is likely to result from the adoption of a similar plan on the Sheffield and Manchester line. Now, we thought we had given a very sufficient reason for the marked improvement which has for some time been observable in the selling price of South-Eastern shares, when we alluded to the notorious fact of the purification of the Company's share register; and if other reasons were wanting, they might be found in the improved condition of the money market—the more general investment of fixed capital in railway speculations—and above all, in the circumstance already hinted at, namely, that in a

Digitized by Google

very few months a most important part of the line will be opened for traffic, and consequently the payment of a dividend be not very distant. Our correspondent, however, seems disposed to admit of no other operating cause than the payment of interest; for although he alludes to the weeding of the South-Eastern share-list, and compares that highly-judicious step with the "decisive measures now taken by the Directors of the Sheffield and Manchester Railway," he does not state what *other* measure, save the allowance of interest, the Sheffield Directors have adopted, or we have condemned. Let us even take the South-Eastern case as stated by our correspondent. He says the shares of that Company are now at about 50 per cent. discount, and yet interest at the rate of 4 per cent. upon the amount paid up is regularly allowed! Does not our correspondent perceive, from a comparison of these two facts, how inoperative is the payment-of-interest scheme? To purchasers at the present market price there is the certainty of 8 per cent. on the money embarked in South-Eastern shares; and is not *that* a sufficiently high rate to induce speculation? We doubt not that nine-tenths of original railway proprietors throughout the kingdom would feel but too happy to give up their prospective dividends for so considerable a per centage adequately guaranteed. Why, then, are not the South-Eastern shares more sought after? Simply because purchasers are perfectly aware that the fund whence the interest is paid is their own pocket—part of the produce of the calls which are from time to time made upon them; because they know that until the whole capital is paid up, and the undertaking returning a surplus above the current expenditure, neither can the capabilities of the line as a source of permanent income be tested, nor themselves relieved from future liability. Such a case as the South-Eastern or the Sheffield, where the proprietors are paying money into the coffers of the Company one month, and receiving back a portion of it the next, is clearly very different from that of the subscribers to the proposed Northern Union line, who are to receive a certain guaranteed interest for a fixed period *out of the funds of other Companies*. If the Directors of the Sheffield and Manchester line could guarantee interest from such a source as this, they would stand a much better chance than we fear they now do of securing new proprietors, and encouraging the original holders to go forward.

Our correspondent refers to the once depressed condition of the South-Western Company, although what bearing the past or present state of that undertaking can have on the interest question we do not discover. If our correspondent merely means to say that an intrinsically valuable speculation may at times be nearly overwhelmed by difficulties, we quite agree with him, and trust the Sheffield line will ultimately rival the South-Western in a triumphant extrication from all its troubles.

And here let us take occasion most distinctly and positively to disclaim every feeling of hostility towards the Sheffield and Manchester Railway or its present Managers, as so charitably charged upon us by our present correspondent. Because we have spoken freely of what we deem injurious or injudicious measures, does it follow that we should deny whatever merit may be fairly ascribed to either their intended objects, or their authors as individuals? If every Railway Board, whose official acts we are called upon to censure, were to deem us their enemies, we should be in a pitiable plight indeed. Fortunately, however, for us, and for the true interests of the railway system, a very different course is pursued. When we are right in our arguments and representations, we have the gratification of knowing that they have due weight with those to whom they are addressed; when we are wrong, our mistakes are imputed not to "partiality, and "prejudice," and "one-sided" views, but to errors of judgment, not of intention. We have dwelt upon this point more than is our wont, because we have reason to know that, in official quarters, an impression similar to that entertained by our present correspondent prevails with reference to the Sheffield and Manchester Railway Company and ourselves.

While we say thus much, however—and we say it in all sincerity—we cannot admit the force of the comparison, or rather contrast, instituted by our correspondent between the Sheffield and Manchester and Manchester and Leeds Railways. There is no necessity to depreciate the one undertaking for the purpose of elevating the other. Let each stand or fall by its own merits. As one of our correspondents to-day observes, there is not, and cannot be, any real rivalry between them. The statements made by our correspondent with respect to the two undertakings, may or may not be "facts," but we cannot see that they affect so materially as he would make out, their relative position. It is true that the Leeds line has cost about 60,000*l.* per mile, and that the Sheffield and Manchester is estimated not to exceed 25,000*l.*; but will our correspondent affirm, that the 25,000*l.* may not be doubled before the Sheffield line is in the same condition as its neighbour, or admitting that the comparative cost will be as our correspondent would have us believe, does it necessarily follow that the traffic upon the two routes will furnish a proportionate dividend upon the respective outlays?

We echo our correspondent's hope, that he (and we) may live to travel through the entire length of the Sheffield Railway, and to see the day when (as he says) "instead of, as now, there being many sellers and few and timorous buyers, all will be buyers and few sellers." By the way, is it not somewhat remarkable that our correspondent should subscribe himself "*No* Shareholder," when he entertains so high an opinion of the merits of the work—is apparently so enamoured of the "decisive measures" adopted by the Directors—and, above all, can secure a large number of shares at a very small cost?

It is known to most of our readers that, in the Session of 1840, an Act of Parliament compelling the Greenwich Railway Company to widen their line, and add to their station at the London end, passed the legislature, and that the Company are bound by that Act, under penalties of 50*l.* per day, to complete the station part of the works by the 7th of February, (Monday next), and in 100*l.* per day to finish the new line by the 7th of August following. These penalties were to be recoverable by the Croydon Company, in case the Greenwich Company failed to complete their engagements by the times named. Since the passing of the Act referred to, the Brighton and South-Eastern Companies have coalesced, and become, by purchase of the present Croydon station from the Croydon Company, one-third owners of the fee-simple of that, and the whole of the works now in the course of construction by them, which, with the Greenwich portion, will form the future permanent station of the three (for this purpose) united Companies, and which will be called the "Brighton, Croydon, and Dover Joint Station."

The works of the Greenwich Company have been carried on with extreme spirit and energy, under the superintendence of their Engineer (Col. Landmann), but the late severe weather having interrupted their progress, it became apparent that the Company could not complete them by the time specified. Under these circumtances, the Directors deemed it prudent to apply to the Joint Station Board on the subject, and we have much pleasure in informing the proprietors of the Greenwich Railway that these gentlemen have consented to give up their right to recover the penalties, until such reasonable time shall have elapsed (six weeks, we believe, has been named) as will enable the Greenwich Company to thoroughly complete what they have to do. This concession is highly to the credit of the Joint Committee, and we trust will not be forgotten by the Greenwich Board in their future intercourse with parties so closely connected with them.

If any justification were required of the strictures recently put forth by us on the apathetic conduct of the leading men of the county of Cornwall, with reference to the formation of a railway in that district, it would be abundantly supplied in a paragraph of three lines which appeared in the *Falmouth Packet* of last Saturday. If ever there was a pre-eminently notable example of the mountain in labour, it is here:—"*The Committee* [announces our contemporary] *met at Truro, on Wednesday, and decided upon printing and circulating the Report adopted by the late county meeting!*"

This is, without doubt, proceeding at a railway pace! How many hours it took the "Committee" to "decide" upon printing what we had printed two weeks previously [and of which we had given the substance two weeks [*that*] is not stated; but we dare say their deliberations were conducted with characteristic cautiousness. We rather wonder that the "Committee" ventured to "decide" upon a matter of so much moment without calling *another* county meeting. Numbering among them some of the most influential noblemen and gentlemen in the district, they cannot, it seems, raise about 500*l.* to pay off their debts without a formal appeal to Cornishmen in the mass; how then did they screw their courage to the printing point, which we dare say will entail some ten or twelve pounds of further expense?

We daresay there are parties in Cornwall who would be very sorry to see a railway constructed—for there is no spot in which the progress of improvement will not produce annoyance, or it may be real injury, to *some*. Such parties then may thank their stars that the project has fallen into the hands of the existing "Committee." More efficient coadjutors in the work of obstruction they could not well have! If, instead of the "three score and ten years," which on high authority and from daily experience we find bounding the life of man, we of the present day could boast of antediluvian vigour, one might hope to witness the fruits of this Cornish "Committee's" labours, if it were only in the organization of a Company and an application for legislative sanction. As it is, we may bequeath the treat to our grand-children.

We are grieved—we are ashamed—at the want of energy displayed by individuals so capable in every respect of achieving a great public benefit, and at the same time of contri-

Digitized by Google

bating to their own private advantage. Much better were it that the project of a Cornish railway were not taken up at all, than that it should be thus deformed and delayed. What opinion can distant capitalists entertain of the capabilities of a Cornish railway, when they see so much indifference displayed by parties who ought to have other objects in view than the merely speculative productiveness of such a work? How can *they* be expected to subscribe towards the formation of an undertaking which they find so tardily supported by others who have an immediate and direct interest in its success?

THE half-yearly meeting of the Manchester and Bolton Railway Company was held in Liverpool on Monday last, and a sketch of the proceedings will be found in another page.

We regret that the dividend accruing to the proprietors is so small, although from circumstances adverted to in the Report, it is perhaps matter of surprise that it was not even less than it is. This Company is now, like many others, suffering from the effects of a lavish expenditure on their works—an expenditure, however, which it is but justice to the present highly-competent Engineer of the undertaking to say did not occur under his management.

We are sorry to find that the Company have suffered to so serious an extent as a diminution of *one-fourth* in the amount of dividend through the misconduct of one of their confidential clerks. Surely recent occurrences in this and other Companies should lead Railway Boards to insist upon ample security from every one of their officers, from the highest to the lowest of those through whose hands the funds of the Company have to pass. Were this plan generally followed by Railway Companies—as is the case, we believe, with most other joint-stock bodies—there could be nothing invidious in firmly enforcing it, whether upon new officers or old. With respect to this Bolton case, we cannot help thinking, notwithstanding the explanations given at the meeting, and the exculpatory particulars which transpired on the trial and conviction of the offender—we cannot, we say, divest ourselves of the impression that there must have been extreme laxity in the mode of supervising the accounts intrusted to subordinate officers, when we find a system of fraud carried on *for years* without detection. A moderate degree of vigilance must, we think, have developed the nefarious practices of the man HAYWOOD at a much earlier period. Of course, the financial affairs of this Company will *now* be more carefully looked to; our hope is, that other Companies may profit by their loss.

In opening the business of the day, the CHAIRMAN observed that "as each gentleman present had received a copy of the Report, *no lengthened discussion would be required*," and truly the result was as he anticipated. We believe this is the natural effect of prior publication of Reports. Calm reflection and careful comparison reconcile many apparent discrepancies, and account for not a few seeming imperfections which, in the heat and hurry of a public meeting, might lead, and generally do lead, to a vast deal of unprofitable discussion, too frequently passing into personal wrangling to the neglect of far more important business, and to the fostering of discord among those whose prosperity depends so much upon concord and co-operation.

IT will be seen from notices in another column that the proceedings of the Coroners' juries in the cases arising out of the late accident on the Great Western Railway, are in a fair way of being quashed in consequence of technical informalities. Our opinion in reference to this matter has been too frequently and too unequivocally expressed to render it necessary that we shall recur to it at present. One desirable result which we anticipate from this inquiry is a step towards an alteration in the whole system of deodands. Can anything be more absurd—can there be a greater mockery of substantial justice—than that a jury of honest and unsophisticated Englishmen should pronounce a judgment, which judgment is to be afterwards set aside, because it has not been recorded in the senseless jargon of byegone days!

THOSE who entertain any doubts as to the impolicy of the present mode of levying the tax upon railway passenger traffic, would do well to read the Report of the Directors of the Newcastle and North Shields Railway, which we give in another part of our present number. It will be seen that the Company having been compelled from local competition to reduce their charges, the Government duty amounted to *not less than* 25 *per cent.* of the gross receipts arising from the great majority of those conveyed—"a circumstance which (as the Directors observe) forcibly illustrates the oppressive tendency of the tax in its present shape, upon those lines of railway where fares are extremely low." We trust, that in the session just commenced, a determined and combined effort will be made by the Companies to effect a reform in this matter. We have no doubt that a modification of the existing impost, while it would relieve the low-fare Companies from a most unequal burden, would materially benefit *all* lines, and be not less productive to Government.

In referring to the Newcastle and North Shields meeting, we would ask what occasion there is that a dividend declared upon the 28th of January should not be paid before the 1st of March? The Shields proprietary cannot be so numerous, nor so dispersed, as to require so extended an interval. The London and Birmingham half-yearly meeting takes place on Friday next, and we venture to predict that the dividend then declared will be payable in four or five days at the furthest from that date. If this can be accomplished in so extensive an undertaking, surely all minor establishments should adopt an arrangement so convenient, and so just, to those whose means of subsistence may, in a great measure, depend upon these periodical payments.

THE new Administration seem determined to lose no time in attempting railway legislation. On the very first day of the re-assembling of Parliament (Thursday last) Mr. GLADSTONE, Vice-President of the Board of Trade, gave notice in the House of Commons, that on Tuesday next he would introduce a Bill "for the better regulation of railways." The Bill will, as a matter of course, be read a first time without opposition, and previous to the second reading we hope to have an opportunity of considering its principles and details.

WE have recently had occasion to notice various changes in railway Secretaryships, and to-day we have to add to the list. J. S. YEATS, Esq., who has filled this office in the South-Eastern Company so ably and indefatigably since the commencement of the undertaking, has received the appointment of Superintendent of that line (a portion of which will shortly be opened), and is to be succeeded by JOHN WHITEHEAD, Esq., at present Secretary to the Brighton and Dover Joint Station Committee. Mr. WHITEHEAD'S new appointment speaks volumes as to the mode in which he must have conducted the business of the Joint Committee during the comparatively short period since his late office was established.

HER MAJESTY'S intended visit to Brighton cannot fail, at this dull season, to be highly beneficial to the railway. Preparations for Her MAJESTY'S reception at the Pavilion are in active progress, several tons of furniture, &c., having been conveyed by the line within the last two days. It is expected that Her MAJESTY will leave town on Tuesday, and remain at Brighton for three weeks or a month. A special train is ordered for Monday by Sir WILLOUGHBY GORDON, the Quartermaster-General, to convey from two to three hundred soldiers of the Foot-Guards.

THE Directors of the Ulster Railway have determined to make the experiment of reduced fares. At the last meeting of the Board it was resolved to make a reduction in the fares of the second and third-class carriages to and from Lisburn; the second class, which has been 9d., to be lowered to 6d., and the third class from 6d. to 4d.

—o—

AT a recent inquest, at Broadwell, John G. Ball, Esq., one of the Coroners for Gloucestershire, remarked, that "many more persons were annually killed by waggons and carts than by *railway* carriages."

—o—

THE Gosport branch of the South-Western Railway is again to be opened for passenger traffic on Monday next. It will be recollected that a few months ago it was in operation for a day or two, until the state of the weather having seriously affected the works, it was deemed prudent to shut it up for a time, as far as the conveyance of passengers was concerned. Goods have continued to be sent in the interval.

—o—

NOT long since we noticed the strange verdict of a coroner's jury in apparently conveying a censure upon the Management of the Bristol and Gloucester Railway Company, in consequence of the death of several men, occasioned solely by their own recklessness in the use of gunpowder employed in the formation of a tunnel upon that line. Another of the injured parties has since died, and the following is the verdict recorded in his case. We are glad to find that at last the blame is thrown upon the actual and only offenders:—

"We find the deaths of the unfortunate men to have been occasioned by the accidental explosion of a large quantity of gunpowder thoughtlessly placed in the blacksmith's shop; and, although we consider from the evidence brought before us, that the explosion was purely accidental, yet it is our unanimous opinion that great blame attaches to the persons having charge of the gunpowder used in the blasting, for allowing so large a quantity as 100 lbs. weight to be given out at one time; and the more so as it appears by the evidence of John Stevens, an experienced miner, that not more than from 12 to 16 lbs. was required during 12 hours for the use of the particular work when the accident occurred. We, therefore, most emphatically urge upon all who may have the keeping and delivering gunpowder, the necessity of giving out at one time no more than may be required for the 12 hours' consumption; and *that* we strongly recommend to be kept in tin canisters not capable of containing more than from 10 to 16 lbs. each. We have further to observe,

Digitized by Google

that great blame attaches to John Stevens, for ordering the gunpowder to be put in so dangerous a place as the smith's shop; but more particularly so to James Jones, for neglecting to inform the blacksmith that he had done so, and for not being at the works upon the morning of the accident in time to remove the powder before the smith began his work, according to his instructions; as through that neglect on his part, we consider the accident to have occurred, which deprived himself and several other unfortunate men of their lives. We do not consider the neglect on the part of Jones wilful, or we should have felt it our duty (however painful to our feelings), to have returned a verdict of manslaughter. We hope and consider that this awful accident, so fatal in its result, can require no comment from us to stimulate the more influential persons engaged on the works to exert their authority to prevent, as far as possible, future accidents."

—o—

It will be seen from an advertisement in another column that the *direct* line from Birmingham to Derby is to be opened on Thursday next.

RAILWAY OFFENCES AND OFFENDERS.

A week or two ago we noticed the murderous attack made by Robert Jobson, an engine-driver employed on the London and Croydon Railway, upon one of his fellow-servants named Archer. The injured man is, we are glad to state, rapidly recovering. On Saturday last Jobson was brought before the Croydon Bench, and held to bail, himself in 100*l.*, and two sureties in 50*l.* each, to meet any charge that might be preferred against him at the sessions.

In our previous notice of this case, we stated, that both men had been discharged from the Company's service, in consequence of the want of self-controul which they had displayed in this business. We have since learned that this is not correct. Jobson is still employed by the Company—the injuries inflicted upon Archer of course incapacitating that person for the present. Not knowing the circumstances of the case fully, we cannot say how far this retention of Jobson is defensible, but as it has been represented to us, he certainly is not of a temper which renders his connection with a railway establishment very desirable.

A friend of ours maintains that all engine-drivers are bad-tempered men. Can any of our correspondents account for the fact, *if* fact it be?

One day last week [says the *Northern Times*] as a lady of Sunderland "was taking her ticket at the Gateshead station of the Brandling Junction Railway, a man dressed like a countryman pushed by her, and contrived to extract her purse, containing nearly 3*l.* We hope [adds our contemporary] this will be a caution to the railway superintendents, and that they will be on the look-out for such offenders."

Last week an accident occurred near Bridge of Elliot, on the Dundee and Arbroath Railway, which, fortunately, was attended with no serious consequences. A young lad of the name of Urquhart, a carter, was driving his cart, laden with sand, over the railway, at a crossing near Elliot, when his cart stuck fast between the line of rails on which the train goes. His endeavours to get the cart either backwards or forwards were unavailing, so as the train was momentarily expected he unyoked his horse. He had no sooner done this, than the train that starts from Arbroath at half-past five came up, and dashed the cart into a thousand pieces. As it was very dark at the time, it was impossible that the engine-driver could have seen the cart. Urquhart was apprehended, and is now in jail, to await his trial for contravention of that part of the Railway Statute relative to obstructions on the line.

EDINBURGH AND DALKEITH RAILWAY.

In reference to an inquiry recently made by a correspondent with respect to the cost of horse power on railways, the following notice of the Edinburgh and Dalkeith Railway, where that power is in use, may not be uninteresting:—

This railway, constructed under sanction of Acts passed in 1826, 1829, and 1834, extends from Edinburgh to the South Esk river, a distance of 8¼ miles. It has branches to Leith, Dalkeith, and Musselburgh, making an extent of about 14 miles. It is all a double line, except the Musselburgh branch, and about one mile at the south extremity. The rails are fish-bellied, and for the most part 28lbs. per yard; their gauge is four feet six inches. The main line was opened in 1831. It intersects or receives branches from the principal coal fields of Mid-Lothian, the produce of which is stored at the Edinburgh terminus, in a depot, about eight acres in extent, and is also stored and shipped at Leith and Fisherrow, by means of the branches to those ports.

From St. Leonard's depot, at the Edinburgh terminus, the main line descends 116 feet, by an inclined plane of 1 in 30, worked by a double fixed engine of 50 horse power. From the bottom of the plane the line runs level for three miles; after which it has a regular ascent to the south extremity, at the rate of 1 in 234. The Leith branch descends from the main line to the level of Portobello, at the rate of 1 in 70; and the Musselburgh branch from the main line to the level of Musselburgh, at the rate of 1 in 52. Owing to causes which could not be avoided, there are many curves—so many as eleven between Edinburgh and Dalkeith, a distance of scarcely 7¼ miles, and several of them about 500 feet in radius. The whole railway (except the Edinburgh inclined plane) is worked by horses, which make tolerable performance, notwithstanding the bad gradients, and the levels being disturbed by coal wastes. In the goods traffic, one horse draws from fifteen to twenty tons gross from the country inwards, at from three to four miles an hour. In the coach traffic an ordinary stage coach-horse draws a coach with from 30 to 40 passengers, weighing in gross five tons, at the rate of eight miles an hour, including stoppages; the delays in taking on and off passengers, and in passing the slow traffic, being made up for by a speed of 10 to 14 miles an hour on the level and less difficult gradients.

The annual traffic has been about 120,000 tons and from 250,000 to 300,000 passengers, and on holidays, there have been from five to seven thousand in one day. The railway and branches cross or pass along so many as 17 highways or streets on a level; yet, during all the ten years it has been in operation, not one serious accident from collision has taken place; nor has any serious accident ever happened to a passenger in the coaches. The contrivances and provisions for safety cannot be explained within the limits of this notice, but it may be observed that their efficacy is attributable to their depending less upon the attention and memory of servants, than upon self-acting machinery; and that long experience has now proved, that neither the breaking of tackle on the engine plane, nor any accident which can occur on this railway, is attended with any danger to passengers in the coaches. Since the year 1834, when the Company first obtained an Act empowering them to carry passengers, they have built their own coaches, and themselves conveyed all the passengers. The goods are for the most part carried by the owners, or by free carriers—and the strangers are under the same subordination as the servants employed by the Company. The coach fares are alike to all, and average about a penny per passenger per mile; while the coaches are superior in accommodation to those of the second class on other railways. The cost of haulage on this railway is 26-100ths of a penny per passenger per mile, which appears, from the returns made to the Board of Trade, to be cheaper than on any other railway, except the London and Birmingham, on which it is stated as being 25-100ths of a penny per passenger per mile, owing no doubt to the traffic on the latter being so great as to afford full loads for steam power. Hence, horse-power is evidently the most suitable in the circumstances of this railway—to give frequent communication with a moderate traffic—to connect towns and villages at short distances from each other, where great speed cannot save much time—to cross highways and streets on a level—and to give frequent stoppages in a populous locality.

The works of this railway chiefly worthy of notice, are:—1st. A tunnel on the Edinburgh inclined plane, 1,716 feet long, 20 feet wide, and 15 feet high, arched throughout with freestone. 2nd. A handsome viaduct 60 feet high, over the North Esk river, at the valley of Murderdean, from which are seen, on one side, the beautiful grounds of Melville Castle, bounded by the Pentland Hills; on the other, the town of Dalkeith, the elegant church and spire built lately by the Duke of Buccleugh; and, lastly, the palace of His Grace, all apparently overhanging the richly wooded banks of the valley. 3rd. A sea wall on the Leith branch, 2,000 feet long, faced with freestone, and hearted with concrete, which supports and protects an embankment of sand along the beach. 4th. A viaduct, 1,011 feet long, over a valley of the South Esk, on the Marquis of Lothian's branch, where it joins the main line; its roadway is 72 feet above the bed of the river, and the view over wood and water stretching southward to the Roman Camp, and northward to the Pentland Hills, is truly magnificent. 5th. A viaduct on the Duke of Buccleugh's private branch, over another valley of the South Esk; it consists of six arches, each 120 feet span, and is of the most splendid and elegant appearance; its roadway is 80 feet above the bed of the river, and commands an extensive view of the romantic scenery between Dalkeith Park and Newbattle Abbey.

Among the works, it may not be out of place to mention the signal used for the engine-man to *set on*. It consists of a three-fourths inch cast iron air tube, running from a shed at the bottom of the plane to the engine-house (a distance of 1200 yards) having, in the latter, a light piston communicating with an alarm bell, and in the former a large pair of bellows, one blast of which, given by a man stepping upon them, passes a force in seven seconds which rings a bell, heard nearly a quarter of a mile off, from 10 to 12 times. This signal cost little at first, and in the course of 11 years has needed no repair but a new pair of bellows and a new alarm apparatus.

Another object of interest is, a lamp on a great

Digitized by Google

scale, near the engine-house, made to concentrate light over an area about 30 feet diameter, so as to give the engineman a clear view of the play of the ropes during darkness; it has a hyperbolic reflector of 16 inches diameter, and when persons pass through its cone of light, they look almost as if passing through the rays of the sun. There is another fine lamp at the bottom of the plane, made by Messrs. Cay and Johnstone, which gives a good specimen of clock lighting; its reflector is parabolic, and it is placed to light a clock which regulates the signal man. Although the dial of the clock is only 14 inches in diameter, the time can be read from 200 to 300 feet off, being as far as in daylight.

We understand that the Paisley and Renfrew Railway is about to be worked by horse power. It is three miles in length, and from the absence of gradients steeper than 1 in 600, a light blood-horse of little value will be able easily to draw 40 passengers at the rate of 12 miles an hour. At present the line is worked by steam power, and is barely paying its expenses.

THE TAFF VALE RAILWAY.

[From the Second or unpublished Volume of "The Railways of Great Britain and Ireland." By FRANCIS WHISHAW, Esq., Civil Engineer, M. Inst. C. E.]

THE iron-works in the neighbourhood of Merthyr constitute a most important section of the mineral basin of South Wales. The produce of upwards of 50 blast furnaces passes down the valley of the Taff to the port of Cardiff, and of late years Cardiff has become a coal port of considerable consequence. The whole produce of the district has hitherto been carried upon the Glamorganshire Canal; and much inconvenience being experienced from the supply of water to feed the canal, which was inadequate for passing the boats, a tramroad was formed by the proprietors of some of the iron-works, from Merthyr to a point in the canal where the supply of water was more abundant.

In the year 1834, the freighters met the Canal Company upon the subject of the inconvenience arising from the increasing trade; and from the crowded state of the canal, and the scarcity of water during the summer months, it became evident that the canal could not accommodate the existing traffic.

The proprietors of the tramroad, in consequence of the above obstructions, determined on forming a railway communication between Merthyr and Cardiff, and accordingly a survey was made in the same year. So great were considered the advantages of the proposed railway, that a Company was formed in the following year; and although they had to contend with great opposition and a variety of impediments, the work has at length been satisfactorily accomplished, and there can be no doubt, from the present flourishing state of the traffic, that this railway will shortly be numbered among the successful speculations of the kingdom.

ACTS OF PARLIAMENT.

The Act for the incorporation of this Company received the Royal Assent on the 21st June, 1836. The Company was empowered to raise a capital of 300,000*l.*, in 3,000 shares of 100*l.* each, and by loan an additional sum of 100,000*l.* A second Act was obtained in 1837, which received the Royal Assent on the 30th June, empowering the Company to make additional branch railways to several iron-works. A third Act was obtained in 1840, authorising the Company to raise an additional capital of 165,000*l.* in shares, and by loan the sum of 55,000*l.*, making altogether a total capital of 620,000*l.*

The works were commenced at the close of the year 1836, but they did not proceed with any activity until the summer of the following year. The line was partially opened to the extent of 16 miles in October, 1840, and the main line was opened throughout on the 21st of April, 1841. The Dinas branch was opened throughout in the following July.

COURSE OF THE LINE.

The line commences near the extremity of the Bute Dock and the Sea Lock Pond of the Glamorganshire Canal, and passing to the east of the town of Cardiff, proceeds in a northerly direction towards the valley of the Taff, which it enters about four miles distant at Merlin-Griffith. It thence proceeds northward in a curvilinear direction, passing through Newbridge to the foot of the inclined plane at the basin, where it diverges for a short distance from the valley of the Taff, but re-enters it near Quakers' Yard, and follows its course to the termination of the railway in the town of Merthyr-Tidvil.

The entire distance from Cardiff to Merthyr is 24¼ miles. Besides the main line, there are several branches; the first is 6¼ miles in length, and leads from the main line to the mouth of the river Ely, where it is proposed to ship coal.

The second branch is from Newbridge to the collieries at Dinas, and is two miles in length.

The third branch leads from the main line at the basin to the coal district of Gelly Gare. Its length is 4¼ miles. The remaining branches, amounting altogether to 4 miles 32 chains, lead from the terminus of the main line at Merthyr to the several iron-works of Cyfarthfa, Plymouth, Penydarren, and Dowlais. Thus the aggregate length of the main line and branches, amounts to 41 miles 8 chains.*

INCLINATIONS.—*Commencing at the Cardiff Terminus the Inclinations and Lengths of Planes are as follows:—*

No. of Planes.	Distance from Cardiff Terminus.	Length of Planes.	Gradients.	Inclination in feet per mile.	Fall in each Plane.	Rise from Cardiff Terminus.	Remarks.

In point of gradients, the railway is peculiarly favourable, considering that the great bulk of traffic is downwards towards the port, and which circumstance renders the descent in the direction of the load an advantage. This especially applies to the coal to be carried on this railway.

By the adoption of the fixed engine incline at Quakers' Yard, worked by a fifty-horse engine, good locomotive gradients are maintained throughout the rest of the line. Upon the Gelly Gare branch there is a self-acting inclined plane of 600 yards in length, and upon the branches to the iron-works of Dowlais there are two inclined planes of 560 and 1,430 yards in length, to be worked by stationary engines.

The other branches are upon the same gradient as the main line, falling towards the main line at the rate of about 20 feet per mile.

CURVES.

There are several curves upon this railway, almost throughout the whole length of that part where it skirts the precipitous sides of the valley. Considering the mountainous country through which this railway

	Miles.	Chains
*Length of Main line	24	16
Ditto Ely branch	6	23
Ditto Rhondda branch	1	78
Ditto Llancaiach branch	4	19
Ditto Dowlais branch from junction with main line to the Dowlais gates	1	64

Ditto Branch to the limestone quarry at Morlais, from junction with Dowlais branch	1	43
Ditto Branch to the Plymouth works from junction with Dowlais branch	0	21
Total length	41	8

Digitized by Google

has been carried, an immense outlay would necessarily have been incurred to improve them to any extent. With one or two exceptions, the minimum curvature upon the main line is a quarter of a mile. The total distance of straight line is 11 miles 42 chains, and the remainder, 12 miles 54 chains, is made up of curves from a quarter of a mile radius upwards.

EARTHWORK.

There is no earthwork of importance upon this railway. The aggregate quantity of earthwork upon the main line is 1,200,000 yards, or at the rate of about 50,000 yards per mile.

The cuttings are chiefly through gravel and rock.

The slopes of embankments are generally formed at 1½ to 1.

The width of cuttings is 24 feet 6 inches, and of embankments 15 feet in width at the top level of rails.

TUNNELS.

There are two tunnels amounting to 377 yards in length. The first is about 7 miles from Cardiff, the second is near Quakers' Yard, 8 miles from Merthyr. The whole of the lower tunnel is lined with brickwork and masonry, and a portion of the one at Quakers' Yard is also lined with masonry. The width of the tunnel is 12 feet 6 inches, and the height is 16 feet from the rail's top surface.

VIADUCTS AND BRIDGES.

The whole number of bridges upon the main line, including viaducts carrying the railway over roads, rivers, and canal, is forty-one, and of bridges over the railway, thirteen.

The number of level road crossings is four, and of field crossings on a level with the rails, eleven.

The bridges built over the railway are all constructed for a double line, and are 21 feet 6 inches in width.

All the road bridges have a clear headway of 16 feet.

Among the bridges, the first which claims notice is the viaduct at Quakers' Yard, carrying the railway across the valley, at an elevation of upwards of 100 feet above the river. It consists of six arches of 50 feet span each, built upon octagonal columns of masonry, 14 feet in diameter. The whole is constructed of masonry, and presents a singularly pleasing appearance when viewed from the banks of the river.

The skew viaduct across the Rhondda consists of four arches of masonry; the large one crossing the river is 104 feet span. The height of this viaduct is 60 feet above the river. There are several river bridges in addition to these—one at Melin Griffith, over the Taff, of five stone arches, each of 35 feet span, besides two timber bridges across the same river of seven arches each; added to which, several skew bridges span the rivers Cynon, Clydach, and the canal.

There are some very heavy works in the shape of retaining walls, carrying the railway along the sides of the valley, amounting altogether to several miles in extent; the most important are near Melin-Griffith and beyond Quakers' Yard.

GAUGE, RAILS, &c.

The gauge of this railway is 4 feet 8½ inches. The rails are of the parallel form, weighing 55 lbs. to the yard, and fixed in chairs by compressed wooden keys of pitch pine timber. The length of the joint keys is six inches, and of the intermediate keys four inches. The weight of the joint chair is 24 lbs., and of the intermediate chair, 21 lbs.

The rails were supplied by the Pentwyn Iron Company, of Pontypool, and the Dowlais Company and the Plymouth Company, of Merthyr Tidvil. The cost of the rails was about 8*l.* 10*s.* per ton.

Transverse sleepers of old ship timber and of larch are used throughout the line; the cost of these sleepers averages about 4*s.* 6*d.* each. The sleepers are 8 feet in length, 8 inches in width, and not less than 4 inches in thickness.

The mode of fixing the chairs to these sleepers is of a novel description, and has thus far entirely succeeded in its objects. The chairs are securely bolted to the sleepers by ¾ inch screw bolts and nuts passed through the sleepers. The head of the bolt is underneath the sleepers, and the nut is upon the chair. Large washers are inserted upon the head of the bolt, and the nut being uppermost the bolts can be tightened when necessary.

The fastening of the chairs was effected previous to the sleepers being sent upon the line, and the accuracy of the gauge was therefore insured, instead of the usual mode of spiking down the chair whilst the rails are being laid; and frequently by this mode not only is the guage imperfectly maintained, but the rails not quite straight are twisted into a straight line by the spiking of the chairs. The late Mr. Bush, under whose efficient superintendence this railway was executed, considered the advantages of this mode to be, first, a more secure fastening than can be obtained by spikes, which are of course liable to draw when the way sinks, or when the timber about the spikes decays. Secondly, that the gauge of way is thus accurately established. Thirdly, that it obliges the platelayers to straighten or curve every rail as the case may be, as they have no opportunity of twisting the rails by the spiking of the chairs. The bearing of the rail at the joints is 2 feet 8 inches, and 3 feet 2 inches at the intermediate chairs.

The ballast is chiefly of gravel, 1 foot 9 inches in thickness. Cinders from the ironworks are used near the Merthyr end of the line.

Open side drains are used throughout the line, and dwarf retaining walls are generally built along the foot of the slopes in cuttings.

The fencing consists either of stone walls well coped in mortar, or of substantial post and rail oak fencing with quick hedge.

STATIONS AND DEPOTS.

The terminus of the railway at Cardiff is well situated between the Bute dock and the dock belonging to the Glamorganshire Canal Company. There are numerous lines of way for the convenience of waggons shipping produce or waiting to be loaded with goods, wharehouse, engine-house, weigh bridges, and the usual conveniences. The Company are gradually increasing this station as the various freighters in the district avail themselves of the railway.

The passenger station is one mile from the terminus close adjoining the town of Cardiff.

The intermediate stations are at Llandaff, Pentyrch, Taff's Well, Newbridge, and Navigation House.

These stations are executed in an economical style, but are sufficiently convenient for the present amount of traffic. The terminal station at Merthyr is close to the town, and is well arranged with the usual convenience of passenger shed, carriage and goods' sheds, and warehouse. There are also workshops, engine house for four engines, coke sheds, weighing machines, &c. &c.

This station is the principal depot for goods for the supply of the populous district of Merthyr and the ironworks.

CARRIAGES AND ENGINES.

The carriages belonging to the Company are three first-class, fourteen second-class, and eight third-class, two horse-boxes, forty goods trucks and waggons, and two timber carriages.

The freighters find their own waggons upon this line.

The regulations for all waggons are, that they shall be upon wrought-iron wheels, of 3 feet diameter, and upon springs. The coal waggons are made to carry 5 tons each, and the waggons carrying the iron, a proportional quantity.

The advantages resulting from this arrangement are very great, as it enables the engines to take down a load of 150 tons of coal in 30 waggons, and which is not found to form an inconvenient train in point of length.

The gradients of the line enable the engines to take this load with facility.

The Company's carriages and waggons are upon the best construction.

The engines are eight in number, each of which is mounted on six wheels. The two passenger train engines have 5 feet 6 inches driving wheels, 15 inch cylinders, 18 inch stroke. All the other engines have 4 feet 6 inches driving wheels, coupled, with 14 inch cylinders, and 18 inch stroke. These engines were built by two eminent firms, viz., Sharp, Roberts, and Co., of Manchester; and R. and W. Hawthorn, of Newcastle-on-Tyne. Coke is the fuel consumed in all the engines, from the cheap rate at which it is obtained from the neighbouring iron-works.

TRAINS, &c.

There are four passenger trains daily in each direction, three coal trains and two iron trains. It is however to be expected that the traffic must very shortly be more than double the present amount, as some of the largest freighters are building waggons to use on this railway.

THE PROPOSED LEAMINGTON RAILWAY.

To the Editor of the Railway Times.

SIR,—It has often struck me that this railway ought to form a junction with the London and Birmingham at Rugby, instead of Coventry, for several reasons.

1. So many of the visitors who go to Leamington being from the north of England, they would then come down the Midland Counties', and pass direct on to Leamington without going up to Coventry first of all.

2. The Rugby station is so much nearer London.

3. Though there would be about two miles more of railway to make, yet it would not receive the opposition from the landed proprietors that the line from Coventry will.

If we only examine the map, we observe that the river runs direct from Warwick to Rugby, through *Stoneleigh Park*. There are some persons who oppose the making of particular lines of railway, because they are not brought sufficiently near to them. I do not know if this is the case with my Lord Leigh, but perhaps his Lordship will consider the great source of amusement that it will be to his young people to see a train whizing along through the park (I will answer for it they will all have their heads out of the window whenever a train passes), and also that the public will then have the advantage of seeing his magnificent timber, of which any man might be proud, for there is no doubt it is the finest in the kingdom. But joking apart; the line this railway ought to go is from

Digitized by Google

Warwick to Leamington, then continue on through the country about a mile to the south of Princethorpe, and cross the old Birmingham road about two miles to the west of Dunchurch, and run into the Rugby station on the Coventry side. I do not think this line will be so likely to receive opposition from the landed proprietors as the one they are now going to bring before Parliament.

I conclude, a single line of rails would be sufficient for all purposes (the same as the one to Aylesbury).

I am, Sir, your obedient servant,
INVESTIGATOR.

Leicestershire, February 1st, 1842.

CHELTENHAM AND GREAT WESTERN RAILWAY.

To the Editor of the Railway Times.

SIR,—Allow me to present to your readers a statement of the present condition of the Cheltenham and Great Western Union Railway, which, although not perhaps critically correct, may be considered an approximation to the truth. The portion of the railway already completed is 17 miles. The number of shares held by good shareholders is 6,000; these already forfeited about 1,450, and 50 more are expected to be added to that number. The amount already received upon the last call of 10*l.* a share is about 48,000*l.* The debt of the Company previous to the last call was 186,000*l.* The Birmingham and Gloucester Railway, however, have acknowledged a debt of 15,000*l.*, which will be paid soon, thus diminishing the 186,000*l.* to 171,000*l.* The last call will produce 60,000*l.*, thus leaving 111,000*l.* still to be provided, which may be done by a call of 20*l.* a share (120,000*l.*), or by borrowing to the same amount, leaving a surplus of 9,000*l.* for further contingencies. Therefore, 92*l.* 10s. per share will pay for the line already opened (17 miles.)

The rent received from the Great Western Railway being 17,000*l.*, will give a dividend of 2*l.* 10s. a share upon 6,000 shares (15,000*l.*), leaving a surplus of 2,000*l.* a year, provided the debt due from the Company be raised by calls; but if borrowed, of course a portion of the rent (17,000*l.*) must be reserved to pay interest for such borrowed money.

The works now appear to be strong and efficient, the only misfortune having been the slips, which, together with a few other accidental expenses, will cost, in repairing and renewing, nearly 30,000*l.*, equivalent to 5*l.* a share.

I am not aware whether this be included in the foregoing estimate, or is to be added to the before-mentioned debt.

The slips appear to have arisen from the earth having been put together in a wet state; and the cause of the banks having been thus put together in such a condition was, that the proprietors requested the Directors not to make calls during the season when the earth was in a fit state, and urged the completion of the line during an unfavourable portion of the year; the Direction, therefore, could not have guarded against this casualty.

I am, Sir, your very obedient servant,
T. R. S.

BRISTOL AND EXETER RAILWAY.

To the Editor of the Railway Times.

SIR,—Still being anxious for the completion of the Bristol and Exeter Railway to Exeter, I am sorry to perceive that the Directors now intend to carry out the line as at first suggested, without any alteration, to the *irreparable injury* of *Tiverton*, being (as before stated) in direct connection with Bideford and Barnstaple, and many other places in the north of Devon; but previous to the said plan being carried out, I beg to suggest that the branch railway, direct to *Tiverton*, be first completed, in order to afford accommodations to the various places above mentioned, and make up for the loss sustained by the main line being carried into the opposite direction.

I am, Sir, [illegible]

DURHAM AND SUNDERLAND RAILWAY —NEWALL'S PATENT WIRE ROPE.

To the Editor of the Railway Times.

SIR,—The capabilities of this new rope, and its fitness for the various purposes to which it may be applied, are now in a fair course of practical demonstration upon the Sunderland and Durham Railway. This line is worked, not by locomotive, but by stationary, engines; the stations being from one mile to four miles apart. Hitherto the trains, whether for passengers or for merchandise, have been dragged along the line by ropes attached to the engines, and wound up by them upon a roller or wheel at the station, the length of each rope according to the distance of the station. Six months ago the Directors, on the recommendation of their Engineer, Mr. John Blenkinsopp, applied "Newall's Patent Wire Rope" upon a side station of a mile in length; and after four months' experience of its operation, have now applied another of the same ropes upon their main station from Sunderland Moor to Ryhope—a distance of three miles—which, during the four weeks that it has been in operation, has given every satisfaction to the Directors, to the Engineer, to the public, and to other scientific gentlemen who have examined it. The design of the patentee was, that the wire rope should be applied to the raising of coals or other minerals from the bottom of the shafts; but the responsibility of the suspension of so many human beings, in descending and ascending by the same conveyance, stood in the way of the experiment being extensively made. The Engineer of the Durham line properly conceived, that while the wire rope should be equally applicable to longitudinal draught as to perpendicular, there would be no risk of life in its application; and, the rope being constantly exposed, the fullest opportunity would be afforded of observation, and detection in case of fallacy or failure. The Directors of this railway are entitled to praise for the public spirit displayed in thus embarking heartily in this experiment; because the general introduction of the wire rope instead of the hempen, wherever length and great strength are required, may be expected speedily to follow.

The *bulk* of the patent wire rope (Newall's) does not exceed one-eight that of the hempen rope formerly, or at present, in use: its gross weight is less than one-half; its flexibility is at least equal; and in respect of durability, I have no doubt that the wire rope will far exceed the hempen, as hitherto, there is not the smallest appearance of chafing or wear, which would have been quite apparent in the hempen rope. Connected with the quality of superior durability will be that of inferior expense in proportion to the time which the wire rope continues effective. There is another point of comparison in which the wire rope claims the decided preference, namely, that it is entirely the production of our own country; and while its general adoption will give vigour to an important branch of our home manufacture, our country will cease to be dependant on foreigners for supply of the raw material. Mr. Blenkinsopp purposes to have the whole line worked by the patent wire rope, as those in use are worked out, and I have no doubt that the liberal and public-spirited Directors will further the design.

I am, Sir, yours, &c.,
J.

RAILWAY ACCOUNTS—THE MANCHESTER AND LEEDS LINE.

To the Editor of the Railway Times.

SIR,—I feel much gratified, as will most of your readers, to find that this season you have again taken up the important subject of railway accounts. I trust, Sir, you will again and again recur to this subject, of which it is quite impossible to overestimate the importance. Sixty millions of money are now sunk in railways, and it is of the utmost consequence that the parties most deeply interested, viz., the shareholders, should know if their affairs are *properly* managed.

It seems to me that the chief defect in the present system is, that the Reports and accounts do not enter sufficiently *into the details*. Why should not the most ample information on *every point* be given to the shareholders? The extra expense and trouble incurred would be so trifling, that it is unworthy of notice. In March, 1840, the Manchester and Leeds Directors set an excellent example in this respect, which they have since discontinued, but which I trust they will resume at their next meeting. They at that time furnished us with the most ample details regarding the numbers carried by first, second, and third-class carriages, the average sum received from each passenger, &c. &c.

The North Midland Company have acted in a most praiseworthy manner in publishing the details of the weekly traffic in the notes at foot of your Traffic Return list,—an example which I beg to recommend to other Companies. As an instance of the value of such details to shareholders, I may state, that on reading the late Report of the Sheffield and Manchester Company, in which they attempted to convey an impression that their line would compete with the Leeds for the *thorough traffic*, I, in order to ascertain what might be the amount of said *thorough* traffic, referred to the North Midland Company's traffic returns. From these I ascertained that the toll paid by the Leeds Company to the North Midland for the use of the ten miles into Leeds, only amounted to the small sum of about 100*l.* per week; plainly proving that the Leeds Company's traffic is chiefly of that local description (called by the Chairman *omnibus traffic*) of which *no* other railway can deprive it; which, from the dense population resident on each side of the entire length of the Leeds line, is what might have been expected.

The trifling amount of toll paid by the Leeds line to the North Midland Company is a very remarkable fact. One of your correspondents, last year ("A North Midland Shareholder"), estimated it at 2,000*l.* per week, I remember. Yet the Chairman of the Leeds Company stated at one of the meetings, that they paid 2s. 6d. to the North Midland for each first-class passenger to Leeds, which is 3d. per mile, to cover, I presume, the use of the North Midland station as well. As a very large number of passengers from Wakefield to Leeds are included in the 100*l.* toll, I infer that the gross amount for through passengers from Manchester to Leeds, only amounts to some 500*l.* or 600*l.* per week, being only about *one-eighth part* of the whole!

It is only proper that the fullest information should be given to the shareholders regarding all agreements entered into with other Companies, and, in fact, regarding every circumstance affecting their interests. What for instance can be more absurd than the profound mystery that has so long been made of the terms entered into between the Grand Junction and Manchester and Birmingham Companies? Directors look wise, and talk of its being against their constituents' interests to divulge the terms agreed upon. But what is more injurious than such an uncertainty regarding the actual state of affairs? May I hope, Sir, that you will assist us by your able advocacy to introduce a better order of things. The hood-winking system is a bad one, unworthy of any respectable Board of Directors.

I am, Sir, your obedient servant,
A LEEDS SHAREHOLDER.

February 1st, 1842.

LONDON AND GREENWICH RAILWAY.

To the Editor of the Railway Times.

SIR,—I am a large shareholder in the Greenwich Railway Company. Through being very unwell, I am not able to attend the general meeting, and you can confer an additional favour on me by affording me the very powerful assistance which you have rendered to almost every share proprietor in the kingdom. By your advice and castigation very many have been saved from ruin. The Greenwich Directors, I perceive, are at law with a Mr. Slee, (who, I am informed, is a lawyer), about some

Digitized by Google

ground they agreed to purchase of him, but which purchase they object to complete. Now, Sir, let me, as well as a great many other share proprietors, advise them, at the next meeting, to give up the law suit, settle it by arbitration, as Counsellor Gazelee said to the Directors of the Blackwall Company at one of their meetings lately, and not waste the share proprietors' money in the manner they do. The Greenwich Company is not in a situation to spare money for law or unnecessary Acts of Parliament; by the advice of lawyers. The Directors would be rendering a much greater service to the shareholders if they could carry on the railway to Canterbury, as we were led on to believe six years ago, when a great many of us purchased our shares at the very high price of 28*l.* per share, now at 6*l.* and 7*l.*, on the faith and promise of the then Directors, that this would be carried on. I, for one, would never have purchased but from this promise and assurance from the Directors at that time. If this line were to be so carried through Rochester on to Canterbury, it would be one of the most useful to the Government and profitable to the Company.

A SHARE PROPRIETOR.

February 1st, 1842.

LONDON AND BRIGHTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Permit me to address a few words to you on the subject of this important undertaking. Being a shareholder from its commencement, I have naturally read with interest the proceedings of each meeting, and although the estimates kept gradually creeping on, I expected, if there was any dependence to be placed on the pledged words of the Engineer, the sum last-mentioned would be amply sufficient. At the last general meeting but one it was stated, that the total outlay for completing and opening the line throughout, with a suitable establishment, would be 2,289,081*l.* Although this sum was nearly double to the original estimate, and far too extravagant for making a railway over a country, where, as the Engineer-in-Chief reported, the material was more favourable than in any other, yet the shareholders sanctioned this enormous outlay, being well satisfied, from the united testimonies of Sir F. Smith and Professor Barlow, as to the admirable construction of the line, as well as the opinions of those well versed in the minutiæ of railway traffic, that the most brilliant success awaited it. I shall not dwell upon the disastrous accident which occurred so soon after the opening, resulting from the unsettled state of the line, and the inequality of the speed, the journey being advertised to be performed at a speed twice as great as was attempted at the openings of the Liverpool and Manchester and London and Birmingham Railways.

I now proceed to the question which agitated the last meeting, as to the best way of raising the 400,000*l.*, of which the Report says they had immediate use. *Proh deûm hominumque fidem!* and, by-the-bye, the shareholders ought to have been informed of the intended method of raising so large a sum in the circular convening the meeting, and they might have been prepared accordingly. Instead of that it was decided amidst much strife and confusion, that 300,000*l.* was to be raised immediately, by debentures of 10*l.* each, 5*l.* per cent. being guaranteed for three years. Well might Sir Lyon Goldsmid resign his directorship. That able financier saw clearly the rapid depreciation that must ensue from a scheme attended with so much injustice to the original shareholders. Why should not those who have held their shares through evil report and good report be entitled to *more advantages* than the public, for, from the present aspect of affairs, it hardly seems sufficiently remunerating to take them up? If the Brighton Directors had possessed the acumen of their Manchester and Leeds brethren, who lately issued quarter shares at 10*l.* per cent. for a term of years, the shares would have advanced considerably in value, instead of which the market for them is very gloomy, and a further decline in price is inevitable.

A YORK SHAREHOLDER.

York, February 1, 1842.

RAILWAY ADJUDICATIONS.

THE QUEEN *v.* THE GREAT WESTERN RAILWAY COMPANY.

Bail Court, January 29.—Mr. TALBOT said he was instructed to apply to his Lordship for a rule to show cause why a writ of *certiorari* should not issue, commanding the Coroner of Reading to bring the inquisition lately held on the body of Charles Williams into that Court, in order that it might be quashed. The learned counsel thought it would be unnecessary to read the affidavits at length, as the technical informalities in the wording of the inquisition, he considered, were so apparent, that the Court could not, for a moment, hesitate in granting a rule *nisi*. The deceased Charles Williams was one of the unfortunate individuals who lost his life by the late dreadful accident on the Great Western Railway, at Sunning, near Reading. On the Coroner's inquest all the circumstances connected with that melancholy event were investigated, and the jury returned a verdict of "Accidental Death," but accompanied that verdict with a deodand on the engine and tender of 1,000*l.* Now he had to contend that the verdict could not be carried into execution, as, in the first place, it did not appear, on the wording of the inquisition, that the Coroner before whom the inquest was held had a competent jurisdiction to inquire into accidents occurring where the late melancholy one did. Independent of this, however, there was one objection which must prove fatal to the legality of the inquisition. The deodand of 1,000*l.* was against the Directors and Company of the Great Western Railway, without specifying any party by name, consequently the Sheriff never could make a levy.

Mr. Justice WILLIAMS—I think the last objection is sufficient to entitle you to a rule.

Rule *nisi* granted.

THE QUEEN *v.* THE GREAT WESTERN RAILWAY COMPANY.

Court of Queen's Bench, January 31.—Mr. TALBOT renewed the application he made to Mr. Justice Williams on Saturday, for a rule to show cause why a writ of *certiorari* should not issue to bring up the inquisition on the body of Richard Woolley, who was accidentally killed on the Great Western Railway, and a deodand of 100*l.* levied, in order that it might be quashed.

Lord DENMAN (after their Lordships had consulted together for a short time) said the Court was of opinion that a writ of *certiorari* ought to issue in the first instance, and that there ought not to be a rule *nisi*, as in the return of the inquisition, the whole facts of the case might be fully argued.

Certiorari granted.

THE SAME *v.* THE SAME.

On Saturday, Mr. TALBOT obtained in the Bail Court a rule *nisi* for a writ *certiorari* to bring up the inquisition on the bodies of Charles Williams and others, in which the deodand of 1,000*l.* was levied. After their Lordships' decision in the above case,

The learned counsel moved that instead of a rule *nisi*, the writ of *certiorari* might issue in the first instance.

Lord DENMAN thought as the first application had been made to Mr. Justice Williams in the Bail Court, the present motion ought to be made to his learned brother who would properly decide it.

THE QUEEN *v.* THE EASTERN COUNTIES' RAILWAY COMPANY.

Court of Queen's Bench, Jan. 22.—This was a mandamus issued at the instance of the Commissioners for paving the parish of Christ Church, Spitalfields, calling upon the defendants to build a bridge in conformity with their Act of Parliament, the 6th and 7th Wm. IV, one of the sections of which required that a space of 16 feet should intervene between the key-stone of the arch and the level of the ground. The Railway Company had built a bridge in Brick-lane, the height of which was only 15 feet 1 inch, and they were desirous of lowering the street in order to gain the required depth. The power they claimed under the 9th section of their Act, but it was denied by the Paving Commissioners on the strength of a local Act, 12th Geo. III, c. 38 (which forbade any alterations in the roads or pavements of the parish without their prior consent), conjointly with the 120th section of the Railway Act, which reserved the privileges of parishes possessing local Acts. The Commissioners called upon the Company to substitute an iron bridge for the stone bridge they had erected, and their return to the mandamus was a claim of the power to lower the road, and thus gain the necessary height.

The COURT took time to consider the question, which entirely turned on the construction of the various sections of the Acts of Parliament above mentioned.

Feb. 2.—Mr. Justice COLERIDGE gave the judgment of the Court in this case. The Court was of opinion that the alteration proposed to be made by the Railway Company was not of such a nature as to come within the meaning of prohibition of the Pavement Act—that the return to the mandamus was good—and therefore judgment must be given for the defendants.

THE ATTORNEY GENERAL *v.* THE EASTERN COUNTIES' AND NORTHERN AND EASTERN RAILWAY COMPANIES.

Court of Exchequer, January 26.—This was a special case sent to this Court for its opinion from the Court of Chancery, the object of which was to ascertain the power of the defendants to proceed with certain works at their joint station at the London terminus, against which an injunction had been obtained at the instance of the Paving Commissioners of a certain district, wherein the works in question had been commenced. From the argument of the Attorney-General on one side, and the Solicitor-General on the part of the defendants, it appeared that by a clause in the Railway Act of the Eastern Counties' Company, it was provided that the powers of the Paving Commissioners should be and remain in the same condition as though that Act had never passed. They now accordingly objected to the two Companies, that the works in question, which consisted in the covering over of about 500 feet of a public highway was an encroachment upon the rights of the public which were reposed in their (the Commissioners') keeping; that the exclusion of light and ventilation for so large a space of a thoroughfare was nothing more or less than a public nuisance, which they (the Commissioners) were bound to check. On the other hand, the defendants urged, that the works were justified, not only as being necessary for their line, but by the express terms of their Act; and it was contended that the Court would take judicial notice of the fact that the railways were an advantageous accommodation to the public, and as such they ought to be invested with power to carry out their works in the manner objected to, by which alone a proper station could be provided for the resort of passengers and general traffic, the level of the line being at a great height above that of the road in question.

The Court, at the close of the argument, which occupied some time, and turned in a great measure upon the language of several Acts, intimated that they would make a point of returning the certificate of their opinion at an early day to the Court of Chancery.

January 31.—Judgment was given for the defendants.

THE QUEEN *v.* THE BIRMINGHAM AND GLOUCESTER RAILWAY COMPANY.

Court of Queen's Bench, Jan. 26.—This was a demur to an indictment which had been found at the Worcester Assizes, against the Birmingham and Gloucester Railway Company, in their corporate name.

Mr. WHATELEY contended that the indictment was bad in its present form, as there were no means of pleading to it at common law.

Mr. Serjeant TALFOURD, in support of the indictment, said the difficulty might be surmounted

Digitized by Google

by the Company's appointing an attorney, under the corporate seal, to appear and plead for them.

The COURT said, they would look into the authorities.

DOUGLAS *v.* TAFF VALE RAILWAY COMPANY.—This cause at the last Carmarthenshire Assizes was referred, and on the 21st instant, Mr. Russel Gurney, the arbitrator, made his award in favour of the plaintiff upon all matters in difference submitted to him, and ordered the defendants to pay all the costs, both of the action and the reference.—Attorneys for the plaintiff, Messrs. Brown and Grove, Llanelly; for the defendants, Messrs. Swain, Stevens and Co., London.—*Cambrian*, January 29.

EDINBURGH AND GLASGOW RAILWAY.

[From the *Glasgow Courier*, Feb. 1]

YESTERDAY the Directors of this splendid undertaking made the first complete trip along the line from end to end, with the view of inspecting the state of the works previously to the public opening. Shortly after nine o'clock in the morning a train left this city, and after proceeding up the inclined plane and spending some time in the inspection of the work-shops and other works at the Cowlairs station, the party made a fair start for Edinburgh about ten o'clock, which city they reached in about two hours and a quarter, it being deemed necessary to proceed at a moderate rate in consequence of the state of the weather. The length of the line is 46 miles. On their arrival at the Edinburgh terminus, the Glasgow party joined the portion of the Directors belonging to that locality, and the whole set out westwards on their trip of inspection of the stations and other works on their way, and reached Glasgow after a pleasant run of about three hours duration. We understand that the whole works connected with this undertaking are so near completion, that the line will be formally opened for public traffic in about three weeks from this date. We take occasion to observe, in conclusion, that a rumour had obtained that an accident had occurred during the trip, of a serious character; on inquiry, however, we find that it is without foundation. The report in question had its origin, as we are informed, in the circumstance of one of the contractor's engines coming in contact with a tender standing on the line. The Directors dined together yesterday evening in Cotton's Wellington Hotel, George-square.

[From the *Glasgow Argus*, Jan. 31.]

We are happy to learn that there is now a certainty of this great national undertaking being opened on the 18th of February. On that day, the Directors from Glasgow, the shareholders, &c., will proceed along the line to Edinburgh, where an additional train will be in attendance for the accommodation of the Directors and their friends. The two trains, containing, in all probability, 800 or 1,000 persons, will then perform the journey to Glasgow, where a splendid entertainment will be given, under the main shed at the depot, which is to be fitted up with great splendour for the auspicious occasion. In the evening, a train will proceed to Edinburgh, with our friends from that quarter; and on Monday, the 21st, the entire line will be opened to the public. On the 22nd, the general meeting, for the discussion of the Sunday trains, takes place. The preparations for the grand opening are going forward with great spirit, so that there is scarcely a doubt of its taking place at the time specified. We had, on Saturday, an opportunity of examining the state of the works at the terminus, and were gratified to find them all in a state of great forwardness. The immense rope, extending through the tunnel, and to the extremity of the inclined plane at Cowlairs, for drawing the trains from the depot to that station, has now been placed; and, on Friday, a trial was made of it, by sending a carriage up and down this portion of the line. This large "tow," which was spun in Newcastle, is no less than three miles in length; its weight is 13 tons, and it cost a sum of 538*l*. It is what is termed an "endless rope," being a continuous line, extending up the one line of rails and down the other. At the entrance to the tunnel, it passes round an immense horizontal wheel, placed below ground, and, rising to the surface by a gradual inclination on each side, passes along the lines over small wheels or pulleys placed at the requisite distances—the same apparatus being in operation at Cowlairs. The rope is made of the best materials, and the most perfect dependence may be placed upon its strength; but even if it should, on any occasion, give way, no bad consequences would follow, as matters will be so arranged as to keep the trains under the easy management of the officers in attendance. The offices for the clerks, the sale of tickets, &c., are fast drawing to completion, and will be found exceedingly commodious, and well fitted for their respective purposes.

ACCIDENT ON THE WORKS OF THE EDINBURGH AND GLASGOW RAILWAY.

ON Tuesday last, a somewhat singular accident occurred at the Cowlairs station of the Edinburgh and Glasgow Railway.

At the south end of the workshops belonging to the Company, which are situated a little to the west of the railway, is the tank for the purpose of supplying the locomotive engines with water. The building on which it is placed is on two stories, the under story being arched, and supported on stone buttresses, each enclosing a cast-iron pillar. Above these arches strong cast-iron pillars are placed; between which, and from the pillars to the walls, cast-iron beams extend to support the tank. These beams cross each other, and are about 12 feet in length and 12 inches in depth, flanked at top and bottom. The tank itself is of cast-iron plates, joined by flanges and screws; it is about 60 feet in length by 40 in breadth, and 4 feet deep, being calculated to contain about 150 tons of water, but at the time of the accident there was little more than 2½ feet of water in it, or about 95 or 100 tuns. Though the engineers were quite satisfied with the security of the fabric, and of the supports on which the tank rested, it was considered advisable, in pursuance of the determination of all connected with the works, and in order to make "assurance double sure," to strengthen the supports below by additional arches, and a number of builders had been engaged in their erection for some days past, and they were to have been completed yesterday. About half-past 10, however, in the forenoon, a portion of the bottom of the tank yielded, it is conjectured by the snapping of a beam, and in an instant the whole force of the water rushed on the arched floor beneath, bringing with it about two-thirds of the bottom of the tank, oversetting the pillars, and sending down the supports below. At this moment five men were employed in finishing the last portion of the last arch, and might have been buried in the ruins, or killed by the falling masses of metal, but fortunately they were borne along by the impetuosity of water for some distance from the spot where the mass of the rubbish concentrated. One was carried completely out from under the building, and thrown into a ditch, escaping with a few slight bruises; two others were carried to near the edge of the falling materials, and were not very severely hurt, while only two were completely covered. Of these one had his leg broken a little above the ankle; the other is very much bruised, but is expected to be again able to work in a few weeks. Mr. Buchanan, the contractor for the building; Mr. Hunter, the Superintendent Engineer at the station; Mr. Paton, Locomotive Superintendent, and others, being on the spot, not a moment was lost in rescuing the sufferers from the rubbish, which, from the number of men at command, was very speedily accomplished; and surgeons were sent for to alleviate, as far as possible, their sufferings. Although it was not known that any but the five men were under the building at the time of the accident, the workmen were kept at work till the very last of the rubbish had been removed, in case of any stranger having suffered. At length the whole casualties turned out to be the following:—

David Coen, mason, from Aberdeen, unmarried; leg broken above the ankle; sent to the infirmary.

David Ferguson, mason, unmarried; severely, but not dangerously bruised; sent to his own house.

John Roy, mason, from Ireland, married, but no family; slightly bruised, but walked home with assistance.

James Spearman, from Ireland, unmarried; escaped with one or two slight bruises.

Surgeons were sent off as soon as information of the accident reached the Queen-street station. They were followed by a number of the Directors, who hastened to the spot immediately on hearing of the accident, along with Mr. Johnson, Resident Engineer.

The building on which the tank is placed is perfectly uninjured, the sides of the tank being still entire, except in one spot, where a small portion was broken and carried inwards by one of the stays. The damage will not take much time to repair, and in the meantime no delay will arise in reference to the opening of the railway, as the water to the engines can be easily supplied otherwise.

LONDON AND BIRMINGHAM "RAILWAY FRIENDLY SOCIETY."

WE have already noticed the success of the "Railway Friendly Society," in connection with the London and Birmingham line. We have now before us the Report of the Committee, submitted to, and adopted by, a meeting of the parties interested, held at the Euston station, on the 10th instant. It is as follows:—

"The Committee have now to lay before the members of the Society, the accounts of the year ending 31st December, 1841.

"It will be seen that the receipts have amounted to 1,068*l*. 16*s*. 7*d*., and the expenditure to 1,054*l*. 10*s*. 1*d*., leaving a balance only of 14*l*. 6*s*. 6*d*. in favour of the fund on the year's receipts.

"This result so much more unfavourable than the calculations based on the monthly average of outlay in the previous year had led the Committee to expect, renders some measures for the recruiting of the funds necessary, since it is obvious that the drains on the resources of the Society will increase with the age of the members. *It may be hoped, therefore, that the proprietors of the London and Birmingham Railway taking into consideration the advantage to the Company of a Society calculated to afford relief to their servants under the various casualties to which life is at all times exposed, and especially on railway duty, will feel that it is their interest to give their effectual support to the Society, either by donations or annual subscriptions.*

"In some months of the past year the sick allowance exceeded by one-third the monthly average of the previous year. The Committee having had reason to think, that this increase was in part owing to defective arrangements as regarded the visiting of the sick, were at pains to apply a remedy, and have been so far successful that, whereas, in July, the sick allowances amounted to 61*l*. 18*s*. 10*d*., in December, they did not exceed 44*l*.

"To discourage as much as possible attempts at imposition, the Committee recommend that a resolution be passed prohibiting for the future the members of other societies from becoming members of the Railway Friendly Society, and declaring that no person whose weekly earnings do not exceed 18*s*., shall be allowed to insure in the first class, but may contribute for one half the usual allowances, or 9*s*. per week in sickness, and 5*l*. at death.

"There are four vacancies in the Committee in consequence of the resignation of Mr. Mills, Mr. Paton, John Booth, and William Valentine, which the members are required to fill up."

The recommendation contained in the last paragraph but one of the Report was adopted. Mr. Barker, Mr. Stafford, William Bickley, and John Young, were appointed members of the Committee, in the room of those mentioned in the Report as having resigned.

We earnestly recommend to the attention of the Birmingham Railway proprietors the sentence of the Report which we have printed in Italics. Every scheme calculated to foster habits of prudence and self-reliance, among railway servants, ought to be strongly encouraged.

Mr. Glyn, Mr. Tooke, and Mr. Young, Directors of the Railway Company, are the Trustees of the Friendly Society; and Mr. Creed the Treasurer.

THE PROPOSED GRAVESEND AND ROCHESTER RAILWAY.

The intended railway through the canal between Rochester and Gravesend will soon be commenced, as the shares are being rapidly taken up. The works are expected to be complete in a twelve-month. We know of no speculation likely to answer better, and the advantages to the inhabitants of the three towns, from the consequent increased number of visitors, are truly promising. No place in England affords more varied means of enjoyment to the lover of "the picturesque," than this neighbourhood, whether he takes his stand on Chatham Lines—Fort Pit-hill—Borstal-fields—Boley Hill—the castle—the bridge, or even extends his trip to Blue Bell-hill—he will find ample beauties for contemplation. The views from every eminence round the city are of great extent and variety, combining almost every object of art and nature. The diversities of hill and dale—of arable, pasture, wood and marsh land—a beautiful river, winding through various reaches towards Maidstone and Tonbridge, bearing on its bosom every description of vessels, from the smallest boat to a first-rate man of war—towns and villages—churches—the venerable cathedral of Rochester—its ancient castle and bridge—one of the most extensive naval arsenals in the empire—barracks of unequalled beauty—and almost every description of military works, forts, and fortifications—combine to render the scenery in the neighbourhood of Rochester, in point of beauty and variety, superior, probably, to any other prospect of the same extent in the universe.—*Maidstone Journal.*

EDINBURGH AND DUNBAR RAILWAY.

A general meeting of proprietors, called on requisition by the Convener of the county, was held on Monday in the County Buildings, Haddington, with reference to the proposed railway from Edinburgh to Dunbar. Amongst those who were present, were the Most Noble the Marquis of Tweeddale, the Right Hon. Sir George Warrender, Bart., Sir F. Walker Drummond, Bart., Sir Robert Houston, of Clerkington, Wm. Aitchison, Esq., of Drummore, Patrick Dudgeon, Esq., of Tyneholm, Hon. Captain Keith, of Monkrigg, George Park, Esq., of Shedsbush, James Hunter, Esq., of Thurston, Simon Sawyers, Esq., of Newhouse, Robert Brown, Esq., of Gilston, George Sligo, Esq., of Seacliff, David Anderson, Esq., of St. Germains, Mr. Sheriff Riddell, Provost Lee, of Haddington, William Dodds, Esq., John Haldane, Esq., &c.

On the motion of Sir Francis Walker Drummond, the Marquis of Tweeddale was called to the chair. Resolutions were passed in favour of the project.

A correspondent from the frontiers of Poland announces that the preparatory works for the railway between Warsaw and the Austrian frontiers were in rapid progress, the government having advanced 4,000,000 Polish florins for that purpose. It appeared also by letters from Stuttgard, that the works for a series of railways in Wertemberg were about to be shortly put in hand.

Consumption of Smoke. — It appears that a saving of several thousand pounds a year—as much, we hear, as 5,000*l.* or 6,000*l.*—will accrue to the North Midland Railway Company, if the experiment now making to use coal instead of coke in their steam-engine furnaces, by the application of Hall's smoke-consuming apparatus, should succeed. Of this there is the most confident expectation, from the experiments that have already been made at Leeds within the last ten days.—*Leeds Mercury.*

CRANES, ROPE BLOCKS AND SCREW JACKS, Manufactured by Ellis and Noton, Salford, Manchester.—Fixed and Travelling Cranes, for Railways, Wharfs and Warehouses, to lift from 5 cwt. to 20 tons and upwards, either by hand or steam power; Patent Signal Switches for Railways; Travelling and Fixed Crabs for builders, and Hoisting Tackle of every description on the most improved principle.

Drawings of the above may be seen and particulars obtained at the Works in Manchester, and at the office of C. P. Cheffins, 9, Southampton-buildings, Holborn, London.

YORK AND NORTH MIDLAND RAILWAY.—February 1, 1842.

Bills are printed on the 1st of every Month, and those of a previous date are not always to be depended on.

HOURS OF DEPARTURE FROM YORK.

To London, Derby, Leicester, Nottingham, Sheffield, Birmingham, Gloucester, and the West of England.	To Manchester, Halifax, Huddersfield, and Wakefield.	To Leeds and Road Stations.	To Selby and Hull.	To Darlington, Stockton, Newcastle, &c.

N.B.—Passengers are only booked from York to the Castleford Station by the London Trains.

* This Train only stops at Bolton Percy, Burton Salmon, and Castleford Stations. The other Trains to Leeds stop at all the Stations.

The Twelve o'Clock Train is in connection with Coaches to Lincoln, Grantham, Stamford, Sleaford, Boston, Lynn, Norwich, &c., from the Eckington Station, on the North Midland line.

NORTH MIDLAND RAILWAY.—Notice is hereby given, That the Books of this Company, which are kept at this office for the Registration of Shares in the Company, will be Closed, in pursuance of the Act of Incorporation, from Wednesday, the 16th day of February next, until Saturday the 26th day of February next, both days exclusive.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

NORTH MIDLAND RAILWAY.—THIRD SHARES.—FOURTH and LAST CALL of £6 13s. 4d. per SHARE.—Notice is hereby given, That in pursuance of a resolution of the Board of Directors, the Proprietors of Shares in this Company are hereby required to Pay the Fourth and Last Instalment of £6 13s. 4d. on each of their respective Third Shares, on or before the 4th day of March now next ensuing, to any of the undermentioned Bankers. Interest at 5 per cent. per annum will be charged upon all such sums as remain unpaid after the day above appointed.

London—Messrs. Glyn and Co.
Leeds—Beckett and Co.
Derby—Crompton, Newton, and Co.
Liverpool—The Bank of Liverpool.
Manchester—The Union Bank of Manchester.

By order of the Board,
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

NORTH MIDLAND RAILWAY.—Notice is hereby given, That the Eleventh Half-Yearly General Meeting of the Proprietors of the North Midland Railway will be held at Leeds, in pursuance of the Act of Incorporation, at the Railway Station at that place, on Saturday, the 26th day of February.

The Chair to be taken at One o'Clock precisely.

WILLIAM LEAPER NEWTON, Chairman.
ROBERT FROST, Secretary.

Railway Station, Derby, February 1, 1842.

TO THE SHAREHOLDERS IN THE BIRMINGHAM AND GLOUCESTER RAILWAY.

Waterloo-street, Birmingham, 31st January, 1842.

Gentlemen,—

MR. HUMPHREY BROWN having published our names as having "*strongly*" recommended him, "by special letter and testimonial," for the appointment of Manager or Superintendent of the Birmingham and Gloucester Railway, we think it right to inform you that we expressly refused to do so; and that fully concurring in the opinion of the Directors, we consider him an improper person for that appointment,

We have the honour to be, Gentlemen,
Your obedient servants,
J. W. and G. WHATELEY,
Solicitors to the Birmingham and Gloucester Railway Company.

RAILWAY WHEELS of all Descriptions, made of the best Materials and Workmanship, at very moderate Prices, by JOHN HAGUE, Engineer, Thames Iron Works, Rotherhithe, London.

YORK AND NORTH MIDLAND RAILWAY.

Notice is hereby given, That the Half-yearly General Meeting of Proprietors of Shares in the York and North Midland Railway Company, will be held, in pursuance of the provisions of the Act of Incorporation, in the offices of the said Company, Tanner Row, in the city of York, on Tuesday, the 8th day of February next, at Twelve o'Clock at noon precisely.

The Report of the Directors, and a Statement of the Accounts, will be ready for the inspection of the Shareholders at Nine o'Clock, a.m., on Tuesday, the 8th of February.

GEORGE HUDSON,
Chairman of the Board of Directors.
GEORGE BAKER,
Clerk to the Company.

Railway Office, York, January 22, 1842.

MIDLAND COUNTIES' RAILWAY.—Notice is hereby given, That a General Meeting of the Proprietors of the Midland Counties' Railway Company, convened by the Directors of the said Company, in pursuance of the provisions of their Act of Incorporation, will be held at the station in Derby, on Friday, the 18th day of February instant, at One o'Clock, for the purpose of proceeding in the execution of the said Act.

The Books which are kept at this office for the Registration of the Transfer of Shares in this Company, will be closed from Friday, the 11th, to Friday, the 18th of February instant, both days inclusive.

By order of the Directors,
J. F. BELL, Secretary.

Dated Leicester, 2nd February, 1842.

GREENWICH RAILWAY COMPANY.—Notice is hereby given, That a Half-yearly Meeting of the Proprietors of this Company, will be held at the London Tavern, Bishopsgate-street, on Monday, the 14th day of February next, at Twelve for One o'Clock precisely.

*** The following gentlemen will retire from the Direction agreeably to the Act of Parliament, viz., William Shadbolt, Esq.; B. Jeffery, Esq.; and Henry Wheeler, Esq.; but being eligible for re-election offer themselves accordingly.

By order of the Board,
J. Y. AKERMAN, Secretary.

Offices, 37, Canterbury Square, Southwark,
31st January, 1842.

GRAND JUNCTION RAILWAY.—The Directors are prepared to receive TENDERS for supplying the Company with Coke for six months, commencing on the 1st of April, deliverable at Liverpool, Birmingham, Warrington, Preston Brook or Crewe. Tenders to include all charges, and indorsed, "Tenders for Coke," to be sent to the Secretary, on or before the 15th February; and parties offering, will forward, as soon as convenient, samples of five tons each of the Coke to one of the above Stations, giving timely notice to the Secretary of the station at which the Coke will be deposited, and the day on which it is intended to be laid down. By Order,

Liverpool, February 3, 1842. MARK HUISH.

ON SALE, 700 Prime Railway Sleepers—370 Larch Timber, 330 Mountain Pine ditto.
Apply (post paid) to W. B. Guest, Chester.

LEVEN VALLEY RAILWAY — CAPITAL £85,000; in 2,600 Shares, of £25 each.

INTERIM COMMITTEE.

P. M. Stewart, Esq., M. P.
Captain Darroch, Yr. of Gourock and Drums.
A. D. Campbell, Esq., of Asheraig.
Christopher Saltmarshe, Esq., of Grovepark.
Charles C. Scott, Esq., of Hawkhill.
William Dixon, Esq., of Govanhill.
Archibald Falconer, Esq.
Roger Aytoun, Esq., Banker in Greenock.
James Tasker, Esq., Merchant, Greenock.
Robert Ewing, Esq., Merchant, Greenock.

ENGINEERS.

Joseph Locke, Esq., and J. E. Errington, Esq.

The Vale of Leven, from the abundant supply of pure water afforded by Loch Lomond, has now become the principal seat of Calico printing in Scotland. It is closely studded with printfields and dyeworks, and is crowded with a manufacturing and rapidly increasing population. The whole of the cloth printed, bleached, or dyed at these works is brought from Glasgow. The whole dyestuffs used, and the whole coal consumed, is also brought from Glasgow, and the whole of the goods either manufactured or finished at these works are carried back to Glasgow for sale. The business traffic, therefore, in goods and passengers, between Glasgow and the Vale of Leven, is very large, and during summer, the number of tourists to Loch Lomond, and thence to Loch Katrine and the Trosachs, is so great as to give employment to two steam boats on Loch Lomond, and the several coaches and omnibuses through the Vale of Leven from Dumbarton to Balloch.

The present means of communication through the Valley are,—

I. By the turnpike road, which is heavily burdened with tolls, and

II. By the River Leven, which is a rapid circuitous stream. The navigation is performed by small boats, dragged by horses, it is at all times tedious and expensive, and is often interrupted, in winter from floods, and in summer from want of water.

In 1816, the ingenious Henry Bell proposed to effect a junction between the Clyde and Loch Lomond, by deepening the river Leven. And in 1824 a Committee of the principal land-owners of the county of Dumbarton employed Mr. Baird, Civil Engineer, to examine and report on the state of the River, and the benefit likely to result from its improvement; when Mr. Baird, after a careful investigation, found the traffic so great, that he recommended the River to be deepened, by a series of locks, at an expense of 50,000*l.*, from which outlay he estimated a revenue of above 5,000*l.* per annum. Insuperable objections, however, were found to exist to the proposed alteration on the levels of the river, and the scheme was abandoned.

Since the date of Mr. Baird's report, the population of the Valley has nearly doubled, and its trade and manufactures have increased in a still greater ratio. The want of an improved communication is therefore felt with daily increasing force, and, as all hope of deepening the River is now abandoned, the promoters of the present undertaking have associated themselves for the purpose of making a Railway through the Valley, commencing at Dumbarton Ferry, and ending at Loch Lomond.

The Glasgow, Paisley, and Greenock Railway Company, are about to establish a station on the opposite side of the Clyde from Dumbarton, and about half a mile distant from the proposed terminus of the Leven Railway. A large steam ferry-boat is also to be maintained by the Greenock Railway Company, for the transmission of passengers, and of goods and minerals in their waggons from the one Railway to the other. And it is intended that the same waggons, which leave Glasgow filled with manufactured goods, dye stuffs, &c., shall return from the Vale of Leven filled with dyed and printed goods; and that the waggons, which leave Glasgow with coals, shall return with the mineral and agricultural produce of the country surrounding Loch Lomond.

The Glasgow, Paisley, and Greenock Railway, the Glasgow, Paisley, Kilmarnock, and Ayr Railway, and the Leven Valley Railway, will therefore be little different from one continuous line, and the numerous works and manufactories in the Vale of Leven, and the picturesque scenery of Loch Lomond, will be brought within one hour's distance of Glasgow, Paisley, Port-Glasgow, and Greenock, and within three hours' distance of Edinburgh, Leith, Linlithgow, Falkirk, Airdrie, Kilmarnock, Ayr, and numerous smaller towns. In short, so many large cities and towns will be linked together by Railways, that a population of nearly a million will be brought within three hours' distance of the Leven Valley and Loch Lomond.

The country to be traversed by the proposed Railway is nearly level, so that the works will be light and the gradients unusually good. The line has been selected by Joseph Locke, Esq., which is a sufficient guarantee for its being well chosen, and the plans and sections have been already deposited, and the requisite Parliamentary notices given.

Mr. Errington states, in his Report, that "There are few bridges, the stations will not be expensive, and, after allowing a liberal price for the land, I think it safe to state 60,000*l.* as the capital necessary for making this Railway. It is proposed, in the first instance, to lay a single line of rails, with sidings communicating with the stations, and also with the various branches to the works. The distance is under 5½ miles, and, both for economy and safety, I think the line should be worked with one locomotive engine The total expense of working the line would thus not exceed 3,000*l.* per annum, including every expense."

According to the tables of traffic, which have been carefully prepared from accurate data, it appears that at fair railway prices, and in every case, at less than the existing prices, a revenue of upwards of £8000 per annum is to be calculated on; and deducting from this sum the working expenses as before shown, of £3000, there would remain £5000 of nett revenue, which is equal to about 8 per cent on the proposed capital.

Applications for Shares will be received by Messrs. M'Clelland & M'Kenzie, Glasgow; Messrs. Forsyth & Pritchard, Liverpool; and C. & J. H. Mac Rae, 57, Moorgate-street, London.

RAILWAY TO GOSPORT AND PORTSMOUTH.—LONDON AND SOUTH-WESTERN RAILWAY.

In consequence of the re-opening of the Gosport Branch, on and after February 7, 1842, the times of departure will be as follows:—

DOWN TRAINS FROM VAUXHALL.

	H. M.

By order of the Directors,
A. MORGAN, Secretary.

UNITED KINGDOM LIFE ASSURANCE COMPANY, 8, Waterloo Place, Pall Mall, London.—Division of Profits among the Assured.

Surgeon—Frederick Hale Thomson, Esq., 48, Berners-street.

Secretary—Patrick Macintyre, Esq.

This Joint-Stock Company, established by Act of Parliament, without limited responsibility, affords the most perfect security in an ample paid-up capital, and in the great success which has attended it, since its commencement in 1834, and the large accumulation of premiums which has taken place.

On the 1st of July, 1841, the Company, at their General Meeting, declared an addition of one-half to the sums paid by the Stockholders, and appropriated to those holding Assurances at the participating rate, £2 per cent. per annum, from the dates of their policies, so that the addition to a policy for £1,000, in force for the previous five years, has been £100, making it in all £1,100. The Premiums are nevertheless very moderate, and only one half of them, when the Insurance is for life, need be paid for the first five years after the date of the policy.

Insurances may be effected on lives however far advanced; and the credit for five years is found particularly convenient on such Insurances, and for the security of Temporary Loans.

Annuities are granted on very liberal terms.

The facilities afforded by this Company to the Public in these and other respects are so great, that it is obviously a moral duty in every parent, not possessed of a fortune, but in the enjoyment of an income however moderate, to insure his life for a sum which may yield a provision to his family.

RATES OF PREMIUMS.

Age.	Without profits.	With Profits.
25 ..	£1 18s. 5d. ..	£2 2s. 11d. per cent.
30 ..	2 3 10 ..	2 8 2 do.

LONDON AND BRIGHTON RAILWAY COMPANY.—TENDERS FOR LOANS. The Directors of this Company are prepared to receive Tenders for Loans, pursuant to a Resolution passed at a General and Special Meeting of Proprietors, held at the London Tavern, the 20th day of January, instant, empowering them to raise £300,000 on Loan Notes, under the Seal of the Company, payable at the end of five years, bearing interest in the meantime at 5 per cent. per annum, payable half-yearly, with an option to the holders of such notes to convert them at the expiration of three years into Quarter Shares of the Company, at £10 per Quarter Share, under the powers of an Act to be obtained for that purpose, for which application will be made to Parliament at the earliest possible period, and in the allotment of which notes, the Proprietors are to have the preference. The Tenders are to express the sums proposed to be lent, to be addressed to the Board of Directors, at the Company's Office, No. 10, Angel-court, Throgmorton-street, and are to be sent in on or before the 10th day of February next.

One-half of the amount is to be paid on the allotment, one quarter on the 15th day of April next, and the remainder on the 15th day of July next, and interest is to commence from the time of the respective payments.

By order of the Board of Directors,

SWEET, SUTTON, EWANS, and OMMANNEY, Solicitors.

London, January 21, 1842.

EASTERN COUNTIES RAILWAY COMPANY.—ELEVENTH GENERAL MEETING.

Notice is hereby given, that in pursuance of the Act of Incorporation, the Half-yearly General Meeting of the Shareholders of this Company will be held at the Company's Station, High-street, Shoreditch, London, on Wednesday, the 9th day of February next, at One o'clock precisely, for the purpose of receiving a Report from the Directors of the progress of the Undertaking, and of Electing Four Directors in the place of Samuel Anderson, Esq., Robert Crosbie, Esq., Robert Mather, Esq., and Theodore Woolman Rathbone, Esq., who then go out of office; and for the transaction of other business. The Directors retiring are re-eligible under the provisions of the act. The transfer books of the Company will be closed on Saturday, the 29th instant, and will not be opened until Thursday, the 10th of February next.

By section 137 of the Act it is provided that "no Proprietor of any share on which any call shall have been made shall, after the day appointed for the payment of the same, be allowed to vote at any meeting of the Proprietors of the said Company, until the money called for in respect of such share shall have been fully paid"

HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE, Deputy Chairman.

Offices, High-street, Shoreditch, Jan. 18, 1842.

GREAT WESTERN RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held, pursuant to the Act of Parliament, at the Company's Office, Princes-street, in the city of London, on Thursday, the 24th of February next, at Twelve o'Clock, for the Election of Four Directors, in the place of the same number who will retire in rotation, and for other purposes of business.

The Chair will be taken at One o'Clock precisely.

CHARLES RUSSELL, Chairman.
ROBERT BRIGAT, Deputy-Chairman.

The Directors retiring are re-eligible, under the provisions of the Act.

The Transfer Books will be closed on and from Monday, the 14th February, and will not be re-opened until after the said Half-yearly General Meeting on the 24th of February; and the dividend for the half-year ending 31st December last will be paid to the Proprietors who may be registered on the Company's books when closed.

(By Order) C. A. SAUNDERS, THOMAS OSLER, } Secretaries.

26th January, 1842.

THAMES HAVEN DOCK AND RAILWAY COMPANY.—NOTICE is hereby given, That the Half-yearly General Meeting of the Proprietors will be held on Wednesday, the 23rd instant, at the offices of the Company, at Twelve for One precisely, to receive the Report of the affairs and prospects of the Company; the forfeiture of certain shares upon which the calls have not been paid; to take into consideration the propriety of paying 5 per cent. interest per annum on all future calls and advances on calls as they are paid in, until six months after the works are completed; and for such other general purposes as may seem beneficial to the interests of the Company.

By order of the Court of Directors,
HENRY ANSINCK, Lieut. R.N., Secretary.

Three Directors go out by rotation, but are eligible for re-election.

LEEDS AND SELBY RAILWAY.—NOTICE is hereby given, That, at the Annual General Meeting of the Shareholders in this Company, held at Scarborough's Hotel, in Leeds, on Friday, the 28th of January instant, a DIVIDEND of Two Pounds Ten Shillings per Share was ordered to be paid to the Shareholders, for the half-year ending 31st of December, 1841.

The Dividend will be paid on the 19th of February next, and the Books for Transfer of Shares will be closed for fourteen days previous to that time, agreeably to the directions of the Act of Parliament.

JOHN GOTT, Chairman.

Leeds, January 28, 1842.

LONDON AND SOUTH-WESTERN RAILWAY.—NOTICE is hereby given, That the next Half-yearly General Meeting of the Proprietors of this Company will be held at the Offices of the Company, at Nine Elms, Vauxhall, on Saturday, the 26th instant, at One o'Clock in the afternoon precisely.

The Directors who go out by rotation, are James Aikin, Esq.; Lieut. Col. Henderson; and Thomas Smith, Esq.; and these gentlemen, being eligible, the Directors recommend for re-election.

And Notice is also hereby given, That the Books of the Company for the Transfer of Shares will be closed on Monday, the 21st, and remain closed until Saturday, the 26th instant, both days inclusive.

By order of the Court of Directors,
ALFRED MORGAN, Secretary.

Nine Elms, Vauxhall, February 4, 1842.

BIRMINGHAM AND DERBY JUNCTION RAILWAY.—OPENING OF THE DIRECT LINE FROM BIRMINGHAM TO DERBY.—The Directors give NOTICE, That the Main Line of Railway between Birmingham and Derby will be Opened to the Public for the Conveyance of Passengers, on Thursday, the 10th February instant, on and after which day the Trains will start from and arrive at the New Station in Lawley-street, Birmingham.

HOURS OF DEPARTURE.

From Birmingham.	From Derby.
*12 40 a.m. Mail.	8 20 a.m.
7 0 a.m.	11 45 a.m.
10 30 a.m.	1 30 p.m.
1 15 p.m.	4 30 p.m.
3 45 p.m.	*11 0 p.m. Mail.
6 45 p.m.	

SUNDAY TRAINS.

*12 40 a.m. Mail.	8 20 a.m.
7 0 a.m.	5 30 p.m.
5 30 p.m.	*11 0 p.m. Mail.

For the present the Trains marked *, being the Mail Trains, will continue to run to and from the London and Birmingham Station in Birmingham.

The Train leaving Derby at 1 30 p.m. arrives at Birmingham at 3 15 p.m., in time for the Trains thence to Liverpool and Manchester at 3 30 p.m., to Gloucester at 3 30 p.m., and to London at 4 0 p.m.

BETWEEN LONDON AND DERBY.

The Trains run *via* Hampton as heretofore.

Leaving London.	Arriving at Derby.
†6 0 a.m.	12 15 p.m.
8 0 a.m.	3 15 p.m.
8 45 a.m.	5 30 p.m.
11 0 a.m.	8 50 p.m.
†2 0 p.m.	

Leaving Derby.	Arriving in London.
†8 20 a.m.	3 15 p.m.

Passengers can only be booked through between London and Derby by the Trains marked thus †.

The Train leaving London at 6 o'Clock, a.m., is the only Day Train through from London to Darlington, by which Passengers can reach Newcastle in one day; and Passengers by it can be booked through to Derby and the North *only* by the Train of the *Birmingham and Derby Junction Railway*. A Coach leaves Darlington immediately on the arrival of this Train at 5 15 p.m., arriving in Newcastle within four hours

By order,
THOMAS KELL, Secretary.

Birmingham, February 1, 1842.

RAILWAY MANAGER.—Birmingham and Derby Junction Railway.—The Directors of the Birmingham and Derby Junction Railway are desirous of engaging the services of a Gentleman who, in addition to the duties of a Traffic Manager (as formerly advertised), is qualified to undertake the General Superintendance of the Concern, including such of the official duties usually undertaken by the secretary as may attach to that department.

With other necessary qualifications, the possession of experience in the practical working of railways will be deemed most important.

The salary will be £500 per annum.

Applications, with testimonials, must be addressed to the Chairman of the Board of Directors, at Birmingham, on or before the 7th of February next.

Birmingham, January 25, 1842.

UNIVERSITY COLLEGE.—PROFESSOR VIGNOLES' LECTURES ON RAILWAYS.—On Wednesday, 9th instant, at Two o'Clock, Professor Vignoles will deliver his INTRODUCTORY LECTURE to his Second Course, embracing the subjects of CIVIL ENGINEERING in connection with the internal communications generally, and with Railways in particular: to be followed by about fifteen other Lectures, developing the principles and practice in the Designs and Constructions of Railways.

Persons not being Students of the College are admissible to the Lectures.

The subsequent Lectures will be delivered on Wednesdays, from 7 to 8 p.m.

Further particulars may be obtained at the Office of the College.

R. G. LATHAM, A.M.,
Dean of the Faculty of Arts.
CHAS. C. ATKINSON, Secretary.

February 3, 1842.

TAFF VALE RAILWAY—TENDERS FOR LOANS.—The Directors are ready to receive Tenders for Loans of Money, in sums of not less than £200, upon the security of Loan Notes under the Company's Seal, bearing interest at the rate of 6 per cent. per annum, payable half-yearly, entitling the Holder to receive Mortgage Debentures of the Company in the month of February, 1844, bearing interest at the rate of 5 per cent. per annum.

Tenders may be addressed to the Secretary, at the Company's Office, Cardiff; to Messrs. Glyn and Co., Bankers, London; or to Mr. W. Mallard, 27, Small-street, Bristol.

By order,
WILLIAM BURGESS, Secretary.

Railway Office, Cardiff, Feb. 1, 1842.

NEWCASTLE AND NORTH SHIELDS RAILWAY.—At the Annual Meeting of the Proprietors of the Newcastle and North Shields Railway, held at the Company's Office, Pilgrim-street, on Friday, the 28th day of January, 1842,

MATTHEW BELL, Esq., M.P., in the Chair,

The Report of the Directors of the Company, with a Statement of the Accounts, having been read,

It was Resolved,

On the motion of Charles Rayne, Esq., seconded by Richard Lambert, Esq.,

That the same is approved of and adopted, and that they be printed, and a copy sent to each Shareholder.

On the motion of F. D. Johnson, Esq., of Aykley Heads, seconded by R. W. Swan, Esq.,

That the following Shareholders be re-elected Directors for the ensuing year, viz., Matthew Bell, Esq., M.P., John Hodgson Hinde, Esq., M.P., Nathaniel Grace, John Potts, Richard Spoor, Thomas Barnes, George Cruddas, Christian Allhusen, Thomas Hodgson, Mark Lambert, Matthew Hudson, John Jobling, James Lowndes, John Gibson, and Thomas Atkinson, Esquires.

On the motion of R. Lambert, Esq., seconded by Edward Grace, Esq.,

That the best thanks of the Company be given to the Chairman, Vice-Chairman, and Board of Directors, for the unremitting zeal and attention shown by them in forwarding the interests of the Shareholders during the past year.

On the motion of Matthew Bell, Esq., M.P., seconded by John Hodgson Hinde, Esq., M.P.,

That the most cordial thanks of the Company be given to Richard Spoor, George Cruddas, and Thomas Hodgson, Esquires, the Managing Directors, for their devoted attention to the interests of the Company.

On the motion of F. D. Johnson, Esq., seconded by John Jobling, Esq.,

That the thanks of the Meeting be given to the Chairman for his able conduct in the Chair.

NEW EDITIONS of the following useful Works are just published at the *Railway Times* Office, 122, Fleet-street:

ROBINSON'S RAILWAY TIME AND FARE TABLES, containing correct Time and Fare Tables of all the principal Railways in Great Britain, derived from original sources, with Map, and an official List of Coach and Cab Fares to all the Metropolitan Railways. Price 1s., in cloth.

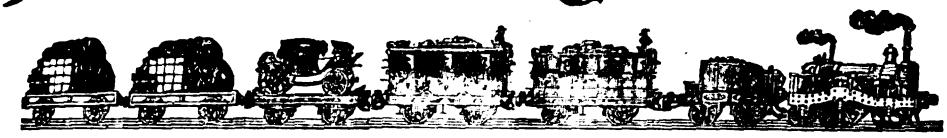
ROBINSON'S RAILWAY DIRECTORY FOR 1842, containing the Names of the Directors and principal Officers of the Railways in Great Britain, derived from authentic sources, price 1s.

TUCK'S MAP OF THE RAILWAYS for 1842 throughout ENGLAND and WALES to the Capital of Scotland, beautifully coloured, distinguishing the Lines open from those in progress, and showing the nearest route by Railway to the Continent, the north and south of Ireland, and the Lakes of Westmoreland and Cumberland. The cheapest Map ever published.

Bound in cloth, 1s. 6d.; in paper covers, 1s.; mounted on canvass, in cloth case, 2s. 6d.; on rollers, 3s. 6d.

MAPS OF ALL THE LINES OF RAILWAY through ENGLAND and WALES, showing the country in their immediate vicinity on a larger scale than was ever before displayed in a sheet pocket map, with a compendium of Railway information. In paper cover 1s., in cloth 1s. 6d.; on canvass, 2s. 6d.

TABLES OF HACKNEY CARRIAGE FARES from the BIRMINGHAM RAILWAY to all parts of the METROPOLIS, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.



TABLES OF HACKNEY CARRIAGE FARES from the GREAT WESTERN RAILWAY to all parts of the Metropolis, by WM. HILL, of the Stamp and Tax Office, formerly of the Hackney Coach Office, Essex-street, Strand; with a Map of London. Price 6d.

TO RAILROAD CONTRACTORS, and Others having HORSES to dispose of, Mr. DIXON begs to state, that there is at the present time a very great demand and quick sale for Cart Horses, which are fetching high prices at the City Repository, Barbican, London.

LONDON: Printed by JOHN THOMAS NORRIS, 137 and 138, Aldersgate-street, in the Parish of St. Botolph Without, Aldersgate, in the City of London, and published by him at the *Railway Times* Office, No. 122, Fleet-street, (facing Saint Bride's Church), in the Parish of Saint Bride's, Fleet-street, Middlesex.—Saturday, February 5, 1842.

THE ELECTRIC TELEGRAPH ON RAILWAYS.
In Royal Octavo, 3s. 6d. cloth, lettered, with four Engravings.

TELEGRAPHIC RAILWAYS; OR, THE SINGLE WAY, recommended by Safety, Economy, and Efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By WILLIAM FOTHERGILL COOKE, Esq.

Contents: Objects of the Treatise—Distinguishing Characteristics of present Railways—Evidence before Select Committee—Advantages of Telegraphic Communication—Mode of working the Blackwall Railway, by the Electric Telegraph—Description of the Electric Telegraph—Plan for a "Telegraphic" Railway—Course of an Express Train—Ballast Waggons—Permanent Obstruction—Crossing of Two Trains—Description of Signals—Concluding Remarks on Single Way—Mixed Lines—Scottish Junction Line—Irish Railways—Advantages common to Single, Mixed, and Double Lines—Public Confidence—Reduction of Stock—Income from Telegraph—Alertness—Adaptation to Wants of Country—Conclusion.

London: Simpkin, Marshall, and Co.

THE ELECTRIC TELEGRAPH.—COOKE AND WHEATSTONE, PATENTEES.—The attention of Railway Companies, Engineers, and other Parties requiring a certain and instantaneous mode of communicating intelligence between distant points, is invited to Messrs. Cooke and Wheatstone's Electric Telegraph. This invention, besides its superiority for general telegraphic purposes, in point of expedition, secrecy, night action, and preliminary warning, is peculiarly adapted to the use of Railways, as a portable Telegraph to be carried with every train, and as a self-acting Telegraph for giving notice of the approach of trains to tunnels, level crossings, stations, and inclined planes, whether worked by stationary or assistant engines. It affords means of working a single line of rails, with perfect safety, in both directions at the same time. It is also well adapted for mines, coal-pits, docks, &c.

Mr. Cooke is willing to superintend the laying down of the Telegraph for parties taking Licenses, or he will undertake the completion of the work in any part of the United Kingdom.

For further Information, and for Drawings and Descriptions of the Apparatus, apply to W. F. Cooke, Esq.; or Robert Wilson, Esq., Solicitor, No. 1, Copthall Buildings, London.

Just published,

TUCK'S ROLLER CALENDAR FOR 1842.—This is a mode of affixing the Calendar for the whole year on two revolving cylinders, within an elegant case, so as to exhibit each day's information in a bold and novel manner, presenting Daily Memoranda indispensible to every housekeeper and man of business. It possesses the advantage of a Date Box and Almanac, and is adapted for the Library, Board Room, Counting House, Warehouse, or Parlour; and is the best application of the Calendar ever yet devised. In Mahogany Box, price 5s. 6d; in Ornamented Box, 6s. 6d. In addition to much useful information relating to business, &c., the Calendar contains the time of High Water at London, Liverpool, Dublin, Glasgow, Leith, Bristol, and Hull, for every day in the year.

Railway Times Office, Fleet-street; Letts, Cornhill; and Ackerman, Strand.

BRISTOL AND EXETER RAILWAY COMPANY.—TENDERS FOR LOANS ON DEBENTURE.—The Directors of this Company are ready to receive Tenders of Loans of Money, on Debentures to be issued in conformity with the Act of Parliament, secured on their undertaking, and on the rents, rates, and tolls arising therefrom, in sums of not less than £200, for terms of three, five, seven, or ten years, on interest at the rate of Five per cent. per annum, payable half-yearly at the Bank of Messrs. Glyn, Halifax, Mills, & Co., London.

The Tenders must express the sums and terms of years, and be addressed to the Secretary, at the Company's offices, in Prince's street, London, or Broad-street, Bristol.

By order of the Board of Directors,
J. B. BADHAM, Secretary.

Office, 30, Broad-street, Bristol.

RAILWAYS.—Parties contemplating purchases in Railways at the present low prices may obtain detailed information as to their existing condition and future probable results, upon application at the Offices of THOS. ALLSOP, 34, Cornhill, and 280, Regent-street. T. Allsop will also furnish persons seeking permanent investment with data which, by judicious comparison, may avert the loss and even ruin which have frequently attended purchases made upon slight information, or upon the erroneous anticipation both as to cost and charges made at the outset of these undertakings.

The prices of many of the great lines of Railroad are certainly below their real value; price, however, alone is not a sound criterion of value, which must be sought, as regards permanent investment, on far different grounds. The purchases made at present may be referred chiefly to local or personal feeling, and to the general importance or estimation of the particular undertaking, not to its real worth as compared to its price; and to these points, as constituting the best tests of value, T. Allsop has directed particular attention.

In one handsome quarto volume, with 17 splendidly-executed Engravings, including a Railway Map of the United Kingdom; price £1 11s. 6d.

THE RAILWAYS OF GREAT BRITAIN AND IRELAND practically described and illustrated. By FRANCIS WHISHAW, Civil Engineer, M. INST., C.E.

"No railway capitalist who studies his own interest will remain long without it; it is a work of immense labour and research, rich in original and authentic information, and embellished to profusion with splendid engravings."—*Railway Times.*

"This is one of the most striking and valuable works that have lately issued from the press; the author handles his subject in that masterly style which proves his perfect acquaintance with the matters upon which he treats."—*Bath Chronicle.*

"Mr. Whishaw is a discriminating statician, and has a thorough acquaintance with his subject."—*Athenæum.*

"A faithful record of the rise and progress of the greatest modern result of the genius of man."—*Polytechnic Journal.*

"The completest view of railway statistics yet produced."—*Morning Chronicle.*

"A complete history of all the railways in the United Kingdom."—*Liverpool Mercury.*

"Full of sound practical information, derived from the fountain head itself."—*Observer.*

"A more complete and satisfactory account of the railway system of Great Britain could scarcely be devised."—*Courier.*

"Here the practised engineering skill of the author manifests itself."—*Manchester Courier.*

"It may be looked upon as a rare and precious acquisition to the practically scientific literature of the country."—*Manchester Times.*

"It is not the mere opinion of a theoretic man, but the result of a practical and talented engineer."—*Plymouth Herald.*

"Such a work, the product of a practical man, is clearly entitled to the distinctive term 'national.'"—*Hereford Journal.*

"A text-book on railways for the next half century."—*Maidstone Gazette.*

"We know of no work which ought to be so favourably received in Scotland at present."—*Perth Courier.*

"Developing a depth of principle, and a breadth and variety of details of well-digested facts, which nothing in the history of railways at home or abroad can possibly rival, far less surpass."—*Dumfries Times.*

London: Simpkin, Marshall, and Co.

RAILWAY DIRECTORS, OR ANY GENERAL CONVEYANCE COMPANY requiring an experienced and confidential Manager or Assistant, have now an opportunity of securing the services of one who for nearly 20 years has been connected with one of the largest and best conducted carrying concerns in the kingdom. Mr. P. Mitchell, Publisher, Red Lion-court, Fleet-street, with confidence adds his approval of the general capabilities of the Advertiser to that of the firm he has for many years served; and will receive letters, prepaid, addressed M. W., or answer any personal inquiry.

EASTERN COUNTIES' RAILWAY COMPANY—GENERAL MEETING.

The half-yearly general meeting of the proprietors of the Eastern Counties' Railway Company was held on Thursday, at the Company's offices, High-street, Shoreditch; Henry Bosanquet, Esq., in the chair.

The attendance was very large.

The advertisement calling the meeting having been read, it was unanimously resolved, that the common seal of the Company be affixed to the register of proprietors, which was accordingly done in presence of the meeting.

The Chairman then said, the present was the eleventh occasion on which the Directors had had the pleasure of meeting their constituents, and a most important occasion it was, for it became their duty to-day to look their financial affairs boldly in the face, and to settle some definitive plan whereby to raise funds to carry out the undertaking to the haven of their hopes—the town of Colchester. The Directors had given much consideration to a plan of raising the required amount equitably and easily, and that plan would be found fully developed in the Report of the Directors, which would at once be submitted to the meeting. He would not delay the proprietors by any lengthened remarks, for he was sure that by brevity he would best consult their interests and their inclination; but he craved permission to say one word upon a subject which had worked some annoyance to himself personally, and considerable injury to the undertaking—he meant the extreme ignorance which prevailed with respect to the amount of traffic upon the great eastern line of road. He was more and more satisfied every day, that favourable as their prospects were now, when only 17½ miles of their line were open, they would prove greatly more satisfactory when they had reached the extent of 51 miles. (Hear, hear.) It was not the extension of the line as regarded distance merely that was to be considered in estimating the future prospects of the railway, but the fact that they would thus secure the traffic of the intermediate towns and villages, and attract to the line the coaches that now passed by the common road. There was an old saying that, concerning things non-apparent and things non-existent the general opinion was the same. People were apt to prejudge and to predicate that which they did not see had no actual being, and this was to some extent the case with respect to the resources of the Eastern Counties' Railway—resources which, as yet, had scarcely begun to be evolved. When he saw, however, that in the course of the last year they had earned an income of about 40,000*l.*, he thought he might safely venture to predict that when the line had once reached Colchester the traffic would be immense. (Hear, hear, hear.) He would not longer detain the meeting from the Reports of the Directors and of the Engineer, and he trusted that when these documents had been read, the proprietors would admit that their representatives had done their duty. The Directors had exerted themselves in devising the financial scheme to which he had already alluded; the Manager had done his best to economise the funds of the Company in the matters of fuel, police arrangements, and in various other ways, and he had no doubt that when the meeting had heard the Report of the Engineer they would cheerfully acknowledge that he too had honourably and amply discharged his duty, by devoting his most laborious energies to the welfare and progress of the undertaking. (Hear, hear, hear.) With these few remarks he would now, with the permission of the meeting, request their worthy Manager to read the Report of the Directors.

The honourable gentleman sat down amid great applause.

The Manager (Richard Hall, Esq.) then read as follows:—

DIRECTORS' REPORT.

In their last Report, the Directors informed the proprietors that the contracts for the whole of the works had been let (with the exception of some of the stations), for the completion of the line to Colchester; and that the opening of the railway for traffic to that important town, was confidently anticipated by the Engineer in the autumn of the present year. Notwithstanding the peculiarly unfavourable weather for every description of field operations, which has been experienced for some months past, considerable progress has been made with the works; and the Engineer continues to report with great confidence that the completion of this part of the railway by the time stated may be fully relied upon. This conclusion, the Directors, from their periodical inspection of the works, see no reason to doubt; provided only that ordinarily fine weather should ensue, and that the requisite funds be promptly supplied. The most strenuous exertions of the Directors and their Engineer will be directed to push forward the remainder of the unexecuted work during the approaching season; and the Directors trust that the proprietors are about to realise those advantages which have always been anticipated, on reaching so important a point as Colchester in the line of railway communication between the metropolis and the eastern counties.

The excellent condition and the small cost for maintenance of way of that portion of the line already finished and opened to the public affords much satisfaction to the Directors. At a period when, from the unprecedented wetness of the season, so many other lines have severely suffered, the works on this railway have been maintained in the most efficient state, without any extra cost whatever; with the exception of a portion of the Gubbings embankment between Romford and Brentwood, which, from the peculiar nature of the soil and the circumstances that attended its construction, has, from the first, caused much trouble and inconvenience. To those unacquainted with the nature of railway works, this portion of the line has often appeared in a rough and unsatisfactory state, arising from the operations necessary to remedy the land slips which have occurred. At no time, however, has the Engineer ever entertained the slightest apprehensions of any impediment to the traffic, or experienced any difficulty in maintaining the rails at their proper level, allowing the transit of the trains to be made with perfect security; and had not the continued rains of the autumn and early part of the winter greatly retarded the engineering operations necessary to remedy the land slips and overcome the defects arising from the nature of the soil at this point, this part of the railway would long since have been perfected. The Engineer has shown more fully the present state of the various works in his Report, to which the Directors refer the proprietors for further information.

From the traffic accounts for the last six months, which are annexed, it will be observed that a steady and very considerable increase in the receipts, above the corresponding periods for the last year, has been maintained. The total receipts for the half-year ending the 4th of January amount to 22,551*l.*, while in the corresponding period of last year they amounted to 15,535*l.* only, showing an increase of 7,016*l.* or very nearly 50 per cent. The last sixteen weeks of these respective periods being more exactly similar in their circumstances than the entire half-year, and affording an unexceptionable comparison, show an average increase of 234*l.* per week for the present year. In addition to an increase in the passenger traffic, there has been a considerable augmentation in the carriage of parcels, cattle, and merchandise, and the latter in particular would have been very greatly increased, had not various circumstances prevented the Directors availing themselves of this branch of revenue, but which impediments will be shortly removed, when this description of traffic may be expected to assume considerable importance.

It will be satisfactory also to the proprietors to find that with a considerably increased revenue and traffic, the ordinary disbursements have scarcely exceeded their former amount; and there appears good reason to believe, that from the capabilities of the working stock, and the nature of the upper works of this line, an increased traffic will by no means require a corresponding increase in the expenditure. In some departments, a considerable reduction has been effected; more particularly in the consumption and cost of coke, arising from various improvements which the executive of this Company has adopted; and this department of expenditure (one of the most important in the working of railways) will, there is every reason to suppose, undergo considerable further reduction, when some of the numerous experiments now making on this and various other railways, in the mechanical alterations of locomotive engines, shall be sufficiently tested to warrant their more general adoption. It is right also to state, that the regularity with which the trains have performed their journeys reflects much credit on the officers of the Company. The average variation in the arrival of the trains for the half-year, amounts to four minutes and eight seconds per train, only, including the loss of time which necessarily occurs in starting the trains from the stations.

The whole of the engine and carriage stock of this Company has been carefully valued, in conformity with the plan proposed by the Directors at the last half-yearly meeting and now generally adopted by well-regulated Railway Companies; and it is a satisfactory proof of the continued efficient state of this stock, and of the moderate degree of wear and tear it has yet sustained, that the depreciation, calculated upon these grounds, amounts to 352*l.* only during the last half year. This amount, as part of the expense by means of which the net profit of the half year has been obtained, is of course charged against the receipts, and carried to the Depreciation Fund Account; out of which any heavy outlay for *new* stock will be met, whenever it is required, without the risk of interference with the regularity of the dividends at any time. And this fund will at all times ensure the original capital of the Company in all its various branches continuing untouched by unwarranted dividends, and possessing, either in the shape of stock, or of this reserved fund for future expenditure on stock, a full and adequate representative of its original value. This small amount of depreciation, the whole of the current expenses for the repair of the stock, the maintenance of the way, and every other item incident to the working of the line, being charged in the traffic account, as shown in the annexed statements, there appears a balance of 11,207*l.* clear net profit for the past half-year; and this sum, with the net profit on the 4th July last, gives exactly 9*s.* per share dividend on each registered share in the undertaking, nearly equal to 5 per cent. on the present price of the shares;—a result the less to have been anticipated when it it recollected that not 18 miles of the whole line are yet opened for traffic, and that *no profit whatever* has been realised by any of the other partial openings of this kind. This dividend of 9*s.* per share the Directors propose now to declare payable, to those proprietors of shares who have duly paid up all calls, on the 5th of April next.

The accounts of the general receipts and disbursements on capital account for the last half-year, are likewise annexed, and shew the detailed expenditure of the Company to the present time.

The Directors have no reason whatever to suppose, that the revised estimates of Mr. Braithwaite and Mr. Locke, in the hands of the proprietors, will be at all exceeded in the completion of the line; or, as already stated, that the period of opening to Colchester will be delayed beyond the time fixed, if the requisite funds continue to be at all times at their disposal, as required for the works. But they must request the proprietors to bear in mind that whilst 56,000 of the Company's shares, and 56,000 of their debentures, yielding jointly (at 33*l.* 6*s.* 8*d.* for each share and debenture) a capital of 1,866,666*l.* are at length in the hands of responsible solvent proprietors, there are 8,000 shares and 8,000 debentures *forfeited and unissued*, in the hands of the Company, mostly with but small sums paid upon them; and that the capital required for the entire completion of the railway, the stations, and the whole of the working stock, is, as already stated, 2,300,000*l.* Owing to the unexampled pressure on the money market the Directors continue unwilling to dispose of the forfeited shares on terms which they could with any due regard to the interests of their proprietors think of entertaining; and they have not succeeded in raising money on loan so freely and promptly as they had hoped, and hence, looking to the earliest possible completion of the line to Colchester, and the strict fulfilment of their engagements to the Engineer and his contractors, as their first and paramount duty to the proprietors, they have most attentively considered what plan to adopt for raising promptly and with certainty such portion of the remaining capital for which powers are granted to them by the Company's Acts, and is absolutely required by the works, and other expenditure for the final completion of the undertaking.

To admit new shareholders by disposing in the market of any of the forfeited and unissued shares on such terms as could be obtained at present, would, the Directors conceive, be to sacrifice most unwarrantably the interests of the present proprietors; and as the remaining call of 2*l.* per share would be quite insufficient for the object of providing funds for the completion of the undertaking, they consider that the simplest and most expedient course will be to raise these funds in shares, by means of the 300,000*l.* authorised to be raised by the last Act. The plan which the Directors propose to pursue in this issue of new shares, and which, if approved by this meeting, will be immediately submitted to a special general meeting of the proprietors for legal sanction, is to issue them rateably to all the shareholders and debenture holders, at the price of 8*l.* 6*s.* 8*d.* each for a similar share to those already existing; such sum to be paid by instalments of 2*l.* 6*s.* 8*d.* on the 5th of April, 2*l.* on the 4th of June, 2*l.* on the 5th of August, and 2*l.* on the 5th of October. This issue, rateably distributed, will yield in the proportion of about one new share to every holder of three shares or three debentures, or jointly three shares and debentures; and the Directors propose to receive tenders from the present proprietors of shares and registered holders of debentures, for their rateable proportions, and for such further proportions of any new shares as may not be accepted on the day appointed. These favourable terms will decide all the shareholders who can, to accept the new shares, and enable those who unfortunately cannot, to realise whatever premium the state of the market and prospects of the undertaking may command. These arrangements the Directors believe will fully provide for all the wants of the undertaking, and they therefore pledge themselves not to issue any portion of the 16,000 shares and debentures in the Company's hands without the sanction of a general meeting of the proprietors. These shares will at all times constitute an available capital of great importance in case of need, without the necessity of further application to Parliament.

Owing to the unfavourable state of the money market for several months past, the Directors are unable at present to report any decisive progress respecting the formation of the branch lines which they anticipated; but as all the preparatory steps for securing the interests of this Company have been taken, the Directors hope the traffic of this railway will

Digitized by Google

ultimately receive a considerable increase from these sources. The Thames Haven Railway is the only line at present reported by its managers to be in a position to hold out any immediate prospect of completion; and the Directors hope that this railway may, at no distant period, become a useful tributary to the Eastern Counties' line.

At the present meeting four vacancies occur in the Direction by the retirement of Samuel Anderson, Esq., Robert Crosbie, Esq., Robert Mather, Esq., and Theodore W. Rathbone, Esq., who are however all re-eligible under the Act of Parliament.

Signed, by order, and on behalf of the Board of Directors,
HENRY BOSANQUET, Chairman.
THEODORE W. RATHBONE, Deputy-Chairman.
High-street, Shoreditch, Feb. 9, 1842.

The ENGINEER-IN-CHIEF (John Braithwaite, Esq.), at the request of the Chairman, next read the following Report:—

ENGINEERS' REPORT.

Gentlemen,—It is a source of great gratification to me to report to you, that notwithstanding the unfortunate weather to which our works, in common with all other railways, have been subject, I am left with a perfect conviction that I shall realize what I have before had the honour of stating, that the completion of the line to Colchester *in the autumn of the present year will not be deferred.*

The condition of 17 of the 18 miles of the line opened have left you reason to be satisfied with the stability of your works, not having cost you one shilling in repairs beyond the contract maintenance. The complete saturation, by the incessant wet weather, of the Gubbings embankment, left much to be apprehended; and I had hoped a fair average of weather would have enabled me to controul the difficulties to which we were subject in August last. I have, however, in this been somewhat disappointed. But notwithstanding those difficulties, I am happy to say, that your traffic has never been impeded, neither has there been the *least cause of alarm.*

The means I have adopted to secure the permanent stability of this embankment, will, I am certain, meet with your concurrence, particularly when you consider the paramount importance of consolidating it, preparatory to receiving the traffic of the Eastern Counties, about to be brought upon the line. With the aid of moderately fine weather, we shall be able to render this part of the line quite equal to the rest.

Your contractors, with few exceptions, have done all that could have been expected; in some cases more, considering the weather. Our most important works have progressed thus much, that I entertain *not the slightest doubt*, with sufficient funds at your disposal, of completing the contracts *within the time specified.*

The Brentwood-hill cutting, apprehended by some likely to be greatly protracted, I am happy to say has been so diligently pursued by the contractors, Messrs. Hills, that 5-9ths of the quantity contained in their contract has been already executed, leaving only 180,000 cubic yards to complete it.

The remaining contracts have so far progressed, that the extreme quantity of earthwork to be carried on any one contract and in any one direction, either into embankment or to spoil, does not exceed 220,000 cubic yards—the whole of the excavations being of a favourable character.

The only doubt I had ever entertained (anticipating the ill effects of the late unfortunate weather upon brick-making) was the probable scarcity of bricks, 60,000,000 being required for the works between Brentwood and Colchester. This apprehension has been removed in the precaution you have been pleased to take, by the contracts into which you have entered, securing the making of millions of bricks. This will enable us to prosecute the necessary and early operations of such works, which would otherwise have seriously retarded our earthwork.

Digitized by Google

Your engine house, so far as the weather would permit, has progressed, though slowly; but I am confident, by the 1st May next, it will be ready to receive the engines. Nearly all the requisite tools and machinery have been ordered, the greater part of which are completed, and ready for erection, which will be done when the building is roofed in.

The vexatious impediment to the completion of a portion of the London terminus, created by the parish authorities of Spitalfields, I am happy to say is entirely removed by the decision of the courts to whom the questions were referred. I have given instructions that no time shall be lost in completing so important a part of the undertaking to render it in a fit state to receive the daily increasing traffic, as well as for the accommodation of the public.

For the detail of the works, I beg to refer you to the subjoined Appendix.

And I have the honour to be, Gentlemen,
Your obedient servant,
JOHN BRAITHWAITE.

Engineer's Office, Hare Hall, Feb. 7, 1842.

APPENDIX.

Contract 22.—Brentwood Hill.—262,833 cubic yards of earth have been run to spoil, leaving only 180,000 cubic yards to complete the same. The Warley Bridge Pit will be commenced the latter end of the present month.

Contract 12.—From the hill at Shenfield Common 120,000 cubic yards have been run to spoil, leaving only 160,000 yards to carry to embankment. Also 80,000 yards from the Mountnessing hill, leaving only 95,000 to complete. The chain river bridge is carried up springing high, and the materials are on the ground for the Hutton-road bridge.

Contract 12 A.—From the east end of Shenfield 190,000 cubic yards have been excavated, leaving only 107,000 yards to carry to embankment. The arch of the Hutton turnpike road bridge which was removed, has been rebuilt, the centres struck, and the roadway completed and opened to the public. The Hutton parish road and Scholey's occupation bridges, with Offins culvert, are all complete, except the parapets.

Contract 13.—At Mountnessing 50,000 cubic yards have been run into embankment. Burnt-house lane bridge, as also culverts B and I, are complete.

Contract 13 A.—At Margaretting 40,000 cubic yards have been run into embankment. Culvert E is complete. The Slough-house double culvert and Justice's bridge with its approaches nearly so.

Contract 14.—The excavation from the Widford hill remains the same, the river bridge, with the exception of the parapets, being now complete. The contractors will immediately resume active operations; but little progress has been made at the east of Margaretting hill. About a quarter of a mile of the road is ready for ballasting. Killigrew's bridge will be completed by the time the embankment reaches it.

Contract 11.—The piers and abutments of the Widford turnpike-road bridge are up to the springing line. All the stonework for the imposts and voussoirs are on the ground, and the greater part dressed ready for fixing. The line is ballasted, and the contractors are preparing to lay the permanent way. This will enable them to carry on the remaining earthwork early to completion.

Contract 15.—The foundations for the Cann viaduct have been sadly impeded by the floods; but active operations are now resuming. The foundations of the Duke-street bridge, with thirteen piers of the viaduct, are carried up to the Plynth. The Chelmer embankment has been carried over Bishop's Hall bridge, and the road nearly ballasted to receive the permanent rail. The Broomfield-road bridge being also built, locomotive engines will now be employed to complete the embankment. The arches of the Chelmer river bridge will be turned and completed in about a fortnight. At Pinsint's-lane bridge the centres are fixed and the arch will be immediately turned.

Contract 23.—At Boreham the Mill Head bridge is carried up to the springing, the centres are being fixed preparatory to turning the arches. The earthwork is sufficiently forward to ensure an early completion of this contract.

Contract 24.—At Hatfield Peverell 68,000 cubic yards have been excavated from the Topping hoe Hall cutting, and 58,000 from Jub's Wood cutting have been carried into embankment. Topplughoe Hall Bridge is complete. Lovibond's occupation arch and culvert nearly so, and the Mill Head bridge is carried up ready for the centering. The excavations for the Terling-road bridge have been commenced.

Contract 25.—40,000 cubic yards have been carried into the Witham embankment, leaving 180,000 yards to complete. The piers and abutments of the Mill-stream bridge are up springing high, also at the bridge at Blunt's Hall. The diversion road at Chipping Hill is complete, and a temporary bridge erected to enable the earthwork to be continued during the building of the permanent bridge.

Contract 26.—In consequence of the refusal of Messrs. Ritsons to execute this contract, it has been re-let to Mr. George Wythes, who is in possession of several parts of the properties, and who is preparing for active operations.

Contract 27.—At Kelvedon the Blackwater river bridge has been a source of much trouble; the whole of the foundations requiring sheet piling, the operations for which having been constantly impeded by the floods. The arch which the contractor persisted in turning contrary to repeated instructions without a proper abutment, which fell down, has been removed, and the centres refixtated; when the weather permits the arches will be turned to enable the earthwork to proceed. Roller-lane bridge with the exception of the parapet is complete. The west cutting has not been forwarded, it being nearly all ballast.

Contract 28.—The contractor is leading on materials preparatory to commencing operations which will be carried on vigorously.

Contract 29.—At Stanway 64,000 cubic yards have been carried into embankment over the Stanway bridge, which is complete, and materials are on the ground, waiting only the weather.

Contract 30.—At Lexden 53,000 cubic yards have been excavated from the east hill and carried westward into the Colne embankment, leaving about 121,000 yards to complete.

Contract 30 A.—At Lexden 65,000 cubic yards have been carried eastward from the iwest hill to the Colne embankment, leaving 200,000 yards to complete. One abutment with five piers of the Colne viaduct have been carried up to the springing, the remaining pier and abutment have been commenced. The earthwork at the eastern extremity of the hill near Colchester is also carrying into embankment.

The necessary fencing throughout the whole of these works has been erected. Several miles of the line are now being ballasted, (abundance of the best ballast having been obtained) preparatory to receiving the permanent rails, which are now being delivered upon the several contracts.

JOHN BRAITHWAITE.

The reading of both Reports was frequently interrupted by the plaudits of the meeting, which were repeated at the conclusion.

The CHAIRMAN then intimated that his colleagues and himself would feel great pleasure in answering, to the best of their ability, any questions, or in giving further information that might be deemed necessary.

Mr. DENNY (who alone, during the reading of Mr. Braithwaite's Report, had offered an interruption, for which he was called to order by the Chairman and the meeting) asked, how it happened that Mr. Braithwaite had condemned a large quantity of bricks intended by the contractors to be used on the works, and had nevertheless suffered them to be used at last. He (Mr. Denny) considered that the use of such materials would be a disgrace to any private individual, much more so to a powerful and wealthy corporation like the Eastern Counties' Railway Company. Mr. Braithwaite himself had stated, that he would not make use of such bricks on a pigstie, if it were four feet in height; and yet he had permitted them to be employed in the construction of an important bridge on the railway. As connected with that district, he (Mr. Denny) had written several letters to Mr. Braithwaite on the subject, and had received answers to them, but still the improper materials were employed.

Mr. BRAITHWAITE said, he had had occasion, in an early stage of the undertaking, to condemn a vast number of bricks; and he had then, as ever, performed this duty without for one moment considering or caring who the parties were by whom they had been supplied. (Hear, hear, hear.) He had felt obliged to the gentleman who had just spoken, for the intimation he had given him in reference to this matter, and having personally visited the spot, he had condemned a large number of bricks, and positively interdicted the use of them. The consequence was, that a great quantity of the condemned bricks had for a time been left on the ground, many of which the contractor had ultimately been compelled to dispose of at 15s. per thousand; but to prevent the possibility of their being used upon the railway works, he (Mr. Braithwaite) had given directions to "put the hammer" through them. He was sorry that contractors had recourse to such practices. It was his constant endeavour to detect and prevent them, but with all his vigilance this could not be wholly accomplished. He regretted that differences should have arisen between the contractor, Mr. Wythes, and Mr. Denny, the gentleman who had just addressed the meeting—differences originating in the refusal of Mr. Wythes to take bricks from Mr. Denny. (Loud cries of "Hear, hear," Mr. Denny exclaiming, "I deny it; I never spoke to him.") He would repeat that in matters of this kind he was perfectly regardless of parties. When down in the counties he knew nobody. (Hear, hear.) He never bound down, nor desired, the contractors to purchase their materials of certain parties. (Applause, during which Mr. Denny again interrupted, but was called to order, and told that he would by-and-by have an opportunity of replying.) He had objected to many hundred thousand bricks, and had not suffered them to be used. He would say again, that he was sorry that such things should be attempted by contractors, and he was moreover sorry, on investigating this particular instance, that Mr. Denny and Mr. Wythes should, from the cause to which he had already alluded, have had any misunderstanding. (Great applause.)

Mr. DENNY denied that the refusal of Mr. Wythes to purchase bricks of him had led to this complaint. He (Mr. Denny) was a brick maker but not a brick seller. Mr. Wythes had only applied to him once, and then he had declined to sell bricks to that gentleman. He was convinced that not a thousand of the condemned bricks had been removed. In fact, this was so notorious in the neighbourhood, that the workmen were laying bets as to how long the bricks would remain in the water before they were washed away. He was upon this part of the works daily, and he would repeat that the unsound bricks were being used now.

Mr. PERRY said, he himself had supplied to one of the contractors materials for ballasting—which materials had in their then condition been condemned by the Engineer, but he (Mr. Perry) did not complain of such a proceeding. He was convinced that if Mr. Braithwaite's own brother were to supply materials which the Engineer-in-Chief did not consider sound, they would at once be condemned. (Hear, hear, hear.) He had said at the last meeting, and he would now repeat, that their Engineer and Manager were gentlemen of honour and integrity, in whom the proprietors had, and ought to have, the fullest confidence; and when it should appear that they were not amply entitled to such character and such confidence, he for one should not for a moment hesitate to vote for their dismissal. (Applause.)

After a few remarks by the CHAIRMAN,

Mr. ARTHUR THOMPSON moved, that the Reports and balance-sheet just read, be received and adopted, and printed for circulation among the proprietors.

Mr. VALPY seconded the motion.

Mr. J. C. COBBOLD (of Ipswich,) was sorry to intrude upon the time of the meeting, but before the question was put, he should be glad to have an opportunity of making a very few observations upon one most important part of the Report. It was known to the Directors, and many other gentlemen present, that he had taken a great interest in the progress of the undertaking, and it was for that reason that he was now anxious to obtain some further information. The Directors, in their Report, had not adverted to any intention of carrying the line beyond Colchester. Might he ask, as they were now about to declare a dividend, whether it was proposed to extend the line beyond that place? He was aware that they had given notice of a branch line, or rather a deviation from the original Parliamentary line; but he wished to know if it was meant to prosecute the original line beyond Colchester. When money was last raised by debentures—he would not say that it had not been judiciously raised—it had been stated that it was for the express purpose of completing the line to Colchester; but nothing had then been said, and nothing was said now, of any intention to proceed further. Now, many friends of his residing beyond Colchester, had purchased shares in the undertaking, not from any speculative feeling, but from an anxiety that the district should receive the advantage of railway communication, and he trusted, therefore, he was not asking too much, when he expressed an anxiety to know the intentions of the Management on this point.

The Deputy Chairman (T. W. RATHBONE, Esq.), would put it to the honourable proprietor, whether they had not better discuss this question when they had received sufficient funds to reach Colchester. (Hear, hear, hear.) He would assure the honourable proprietor that it was the earnest wish and most anxious endeavour of his colleagues and himself to extend the benefits of the railway to the whole of the eastern counties, but as they were now compelled again to issue shares to reach Colchester—and he was extremely sorry that they should have had occasion to press so hardly upon the proprietors—it would, in his opinion, be wholly out of the question to think at present of devising means to proceed further. (Hear, hear, hear.) Let them first complete the railway to Colchester, and give an opportunity for their stock to acquire something like its legitimate value, and then it would be for

Digitized by Google

them to consider what further was to be done. (Much applause.)

Mr. Cobbold was perfectly aware that he had to expect little sympathy from the meeting, but he trusted he might be permitted to express his sentiments. (Hear, hear, from the Chairman.) He perhaps was not entitled to an answer, and he should not have asked the question, if it had not been reported, and generally believed, in his neighbourhood, that the Directors had abandoned all intention of prosecuting the works beyond Colchester.

The Deputy Chairman had no hesitation in stating most positively that the Directors had not by any means abandoned the intention, or the hope of getting beyond Colchester, when once they had reached that place. (Hear, hear, hear.)

Mr. Cobbold said, the answer was so far satisfactory. He did not wish to excite any dissension in the meeting—in fact, he hoped the Report would be adopted unanimously; but he had one other point to which to refer. A legal question had been mooted, whether the Directors could divide the profits of the undertaking until the line were carried out to the extent specified in the Act of Parliament; and yet they were now about to declare a dividend, although even from the answer which had just been given, it was doubtful whether they meant to go beyond Colchester. The declaration of a dividend upon the present occasion would probably bring that question to an issue, and he mentioned this circumstance now, because he would never willingly be a party to any obnoxious measure without giving the parties affected due notice of it. Several gentlemen on the other side of the table were aware that when this project was first broached in his immediate county, he and his friends had embarked in it, not for speculative profit, but as likely to confer a benefit upon the locality—as he was sure would be the case in every locality through which it passed. It was this consideration which had led them to support the railway, for they were not railway speculators, nor railway adventurers. He appealed to the Directors whether he and his friends had not said that they had no objection to subscribe a thousand pounds or two—to give a thousand pounds or two—so as to bring the work to their own neighbourhood, not that even as a pecuniary investment they had any occasion to distrust the judgment or calculations of the Directors. He was ready to admit that the amount subscribed in his district was small, unfortunately small perhaps for themselves and their objects, but he thought that if the Directors intended abandoning the line beyond Colchester, for the sake of which the parties referred to had contributed their means, they ought at least to put them in the same position as they were in before. For himself perhaps he had incurred some odium from having been mixed up with other parties. (Hear, hear, hear.) Many of the proceedings of these parties he repudiated—(hear, hear, hear)—but whatever he might think, or whatever he might do, he would never be a party to underhand proceedings—to proceedings, the character and probable consequences of which, he had not previously announced. He had made these observations solely for the purpose of setting himself right with the proprietors, not for the purpose of offering any opposition, for it was quite accidentally that being in town he had heard of the present meeting. He would repeat, that the Directors were bound to place the parties who had taken shares on the supposition that the line would be extended beyond Colchester in the same position as before, by taking their shares off their hands. (Loud and long continued laughter, amid which Mr. Cobbold with great good humour remarked, that he was glad he had contributed to the amusement of the meeting.)

A Shareholder—Will Mr. Cobbold allow me to ask him, if he is not the proprietor of some land through which the line would pass if it proceeded beyond Colchester?

Mr. Cobbold replied in the affirmative. (Laughter continued.)

The Chairman said, that as an appeal had been made to the originators of this important enterprise, he could state that he, as one of them, had an interview on the subject of the line with Mr. Cobbold and his friends some six or seven years ago. It would be impossible for him to recount one-half the difficulties, legal and other, which since that time the Managers of the railway had had to encounter. These difficulties they had endeavoured, as men of honour and character, to overcome; and it was no small matter, under the circumstances, that they had been enabled to effect so much. (Hear, hear, hear.) They, however, could not accomplish impossibilities; they could not make a railway without money. (Hear, hear, hear.) They might have a mandamus from the Queen's Bench to make a railway to the moon, but it did not follow that they could therefore do it. (Applause.) He hoped they had had law enough. (Hear, hear, hear.) They had day after day been in the newspapers as concerned in law cases. (Hear, hear, hear.) Every lawyer throughout the district had pecked at them—(great applause)—he was bound to say, with the exception of Mr. Cobbold, who had always acted towards the Company as might have been expected from a gentleman, and one holding a high rank in the aristocracy of his district. (Hear, hear.) He trusted the Report of the Directors would be unanimously adopted. (Applause.) They should think of the difficulties which the present condition of the Company had entailed on the Lancashire proprietors, from whose pockets a sum of 1,800,000*l.* had been advanced, to carry forward a work towards which, benefitting as it would the commerce of the eastern counties, the parties immediately interested had, on the showing of the honourable gentleman himself, subscribed not more than 1,000*l.* (Hear, hear, hear.) He appealed to the honourable proprietors not to throw impediments in the way of raising funds to complete the line to Colchester. As a man of honour he (the Chairman) would say, that the Directors would carry out, as far as possible, the undertaking in its integrity. (Applause.)

Mr. Cobbold had no intention of exciting unpleasant feelings. The amount invested in the undertaking by his friends and himself was comparatively nothing. It was but fair to state that although they had been told that certain proceedings taken by them would have the effect of depreciating the Company's stock, neither he nor his friends had ever sold a single share. Even if the shares had been doubly depreciated—though *that* they could scarcely have been—but if they had been depreciated to zero, they would have taken precisely the same steps, they themselves having regularly and promptly paid up every call. A friend of his, now in the room, had, previously to the issuing of the debentures, stated that they would come out at a premium. He himself had been of a different opinion, but even if the premium had been 100*l.*, he and his friends would not have given their consent to a scheme which they believed to be inconsistent with the principle of the Company's Act. He sincerely regretted the difficulties which had been caused by the position of the Company, and in making these remarks he did so, not with any idea of offering opposition, but simply, as he had already said, to set himself right. (Hear, hear).

The Deputy-Chairman begged to say one word as to the declaration of a dividend on the present occasion. The honourable proprietor's position in a district where railways were not much known, might probably account for his want of information on the subject, else he would not for one moment have doubted the power of the Company to declare a dividend. He could instance several railways which had declared dividends during the progress of the undertaking. (Hear, hear, hear.) He was sure the good sense of the honourable proprietor would lead him to investigate this matter before again involving the Company in law proceedings, which had already proved so harrassing to the Directors and so prejudicial to the undertaking—proceedings which had tended more than any thing else to postpone the extension of the railway beyond Colchester. These attempts on the part of the hon. proprietor and his friends had invariably proved unsuccessful, nay, had been contemptuously scouted out of Parliament, and rejected from every court—(hear, hear, hear)—and he was sure that none of them had been more unsuccessful than this, with reference to the dividend, would be. (Hear, hear, hear.)

After some further conversation, the motion for the adoption of the Report was carried unanimously.

Mr. Hamilton then moved the re-election of the four gentlemen named in the Report.

Mr. Marks seconded the motion, and being put, it was carried unanimously.

Mr. Catchpole inquired whether the site for the station at Colchester was finally determined on.

Mr. Braithwaite said it was. There was no intention to cross the north river.

Mr. Catchpole said, a requisition had been presented on the subject to the Mayor of Colchester, and a public meeting would shortly be held, at which it was intended to request the presence of the Company's Engineer, or a deputation from the Directors. Was it likely that such deputation would attend?

Mr. Braithwaite said, the question of crossing the river had often been mooted, but it appeared that the scheme was impracticable. It had been found impossible to raise 2,000*l.* for the purpose of repairing the bridge; and as it was estimated that the cost of extending the railway across the river would be at least 230,000*l.*, he thought it would be a long time before this latter sum could be raised. (Hear, hear, hear.) There could be no question that ultimately the line would be extended to Harwich, which would thus become the terminus.

Mr. Catchpole presumed, therefore, that a deputation would not attend the Colchester meeting?

Mr. Braithwaite would, with the permission of the Directors, feel great pleasure in attending, and in giving every information in his power. (Hear, hear.)

Mr. Stokes complained that on two of the contracts near Colchester the truck system—the system of paying the labourers by tickets—was adopted. Mr. Braithwaite had ordered the practice to be discontinued, but he (Mr. Stokes) had been informed, from the best authority, that the same plan had been adopted no later than last week. The workmen were thus deprived of at least a fifth part of their wages, and good workmen became disgusted. While the works were partially suspended during winter, it was not worth noticing, but now that they were again in full operation, the matter was deserving the best consideration of the Board. He believed the practice to be illegal, but at any rate he should be glad to know the opinion and intentions of the Directors on the subject.

Mr. Braithwaite greatly regretted the practice complained of. He had done all in his power to suppress it, but although he had taken some of the offenders before the magistrates, he had not been successful. He believed it was the insufficiency of the law that was in fault. A correspondence on this subject had taken place between the Home Department and the Secretary of the Railway Company, and also with the local magistrates, and the result was, that they found the law not sufficient to reach the offence. He had taken a great deal of trouble, but in vain, to obtain convictions against the offenders.

Mr. Stokes thought these attempted convictions did not apply to Colchester.

Mr. Braithwaite said, they had done everything in their power to suppress the practice. They had inserted prohibitory clauses in the contracts, and had dismissed parties guilty of the practice.

Mr. Stokes wished to know why, as they had such prohibitory clauses in the contracts, the offences could not be reached.

Mr. Braithwaite said, the parties had been brought before the magistrates, but the law was insufficient. Parties, he would repeat, had been dismissed from the works.

Mr. Stokes asked if a contractor would, under the circumstanes, be dismissed.

Digitized by Google

Mr. BRAITHWAITE said, he would, if the offence could be brought home to him.

Mr. HODGSON (Director) said, the Board would feel obliged if the honourable proprietor could trace out any case, and the Directors would afford him every facility to prosecute it before the magistrates.

After some further conversation, it was arranged that Mr. Stokes should privately communicate with the Directors on the subject.

Mr. PERRY made an inquiry as to the payment of the tithes in the parishes of Shenfield and Springfield.

Mr. COPLAND (local Solicitor to the Company) said, nothing had been paid for tithes, because nothing was due.

The CHAIRMAN having announced that the business of the day was at an end,

Mr. ESDAILE, in a few complimentary words, moved the cordial thanks of the meeting to the Chairman and Directors.

Mr. SQUIRE seconded the motion, which was carried by acclamation.

The CHAIRMAN, in returning thanks, said, the Directors now saw their way pretty clearly, and expressed a hope that in August next he should see as numerous and as unanimous an assemblage as on the present occasion.

The meeting then separated.

NORTHERN AND EASTERN RAILWAY COMPANY—GENERAL MEETING.

THE half-yearly general meeting of the proprietors of the Northern and Eastern Railway Company was held on Thursday, at the London Tavern, Bishopsgate-street; WILLIAM CRAWSHAY, Esq., in the chair.

The attendance was numerous.

The SECRETARY (Wm. Bourne, Esq.) having read the advertisement calling the meeting, the common seal of the Company was affixed to the register of proprietors.

The CHAIRMAN then read the Report of the Directors, as follows:—

REPORT.

Your Directors have to report the further completion and opening of the Northern and Eastern Railway to Spelbrook, since the last half-yearly meeting of the proprietors, and which you were then led to expect would take place in the month of October. Owing to the extreme wetness of the season, it was unavoidably delayed until November. The absence, however, of any injury or expense from slips, or other casualty, will be more a subject of satisfaction to the proprietors than the trifling earlier opening could have been, had any consequent difficulty or cost ensued.

The entire completion of the railway, so far as permitted under the present Acts of Parliament, namely, to Hockerill, was held out as not likely to be proceeded with until the spring of this year, unless your Directors were provided with additional financial means to those which the powers of the Act authorised them to exact from yourselves by way of calls; they have, however, endeavoured to secure the opening of Hockerill in April next, and they trust that this earlier completion of the railway, without your own immediate assistance, will prove to the proprietors, that no want of exertion has existed in their executive, under the very limited proprietary which this Railway has consisted of.

The actual cost of the railway will be finally determined against the next half-yearly meeting of the proprietors; and it is confidently expected that the traffic will then be so far developed, as to render an increase of the proprietary an object of no difficulty, and thereby repay the loans which have been contracted for the completion of the railway.

It must necessarily occur, that the interest paid upon all loans prior to the completion of the railway will form an additional charge upon the capital, or cost of the line; and with this exception, and the cost of the abandoned line, it is hoped that the railway will be completed for a moderate excess upon the original estimate.

The gross traffic, which for the preceding six months, ending 30th June last, amounted to 14,036*l.*, or 529*l.* 17*s.* per week, has, in the consecutive six months ending 31st of December last, amounted to 23,944*l.* 6*s.* 7*d.*, or an average of 920*l.* 18*s.* 8*d.* per week, and there is every reason to hope a corresponding increase in the six months now passing, as there are many sources from which an increase of revenue may be expected, and which have hitherto been in no way enjoyed; nor has the railway yet been in a position for the conveyance of goods of any description, or sheep or cattle, of which the Northern and Eastern Railway may expect a due proportion with all other railways.

Negotiations are on foot, though not completed, with the Eastern Counties' Company, for the necessary conveniences for the goods traffic at Shoreditch; and as this point of increase for the revenue of the Northern and Eastern line cannot but be conductive to a proportionate increase of advantage to the Eastern Counties' line, it is hoped that the treaty will speedily be brought to a satisfactory conclusion. Should, however, your Directors be disappointed in this hope, they will not fail to adopt the best means in their power of otherwise accommodating the goods and cattle traffic.

The expenses charged against the traffic account, as will be seen, amount to 18,008*l.* 18*s.* 8*d.*, leaving a balance in favour of the Company for the half-year of 5,935*l.* 7*s.* 11*d.*, which, together with the sum of 6,046*l.* 9*s.* 10*d.* therein charged for toll and rent to the Eastern Counties' Company, shows a profit upon the actual traffic account only of 11,981*l.* 17*s.* 9*d.*, because the toll and rent payable to the Eastern Counties' Company must be looked upon as so much dividend paid to the parties having made the latter 3¼ miles of the railway, and the London terminus. In this view of the case, which is the right way of looking at it, in regard to the expense at which the traffic has been conducted, it will be found that the expenses have been at the rate of 50 per cent. upon the gross receipts, including Government duty, though under the disadvantage of an unfinished line, and consequent increased expense of working it.

It will here be proper to draw the attention of the shareholders to the fact, that the increase of traffic upon the last further opening of the railway has only been enjoyed for five weeks of the six months' account, and that even this was of necessity under circumstances of considerable disadvantage.

As in the case of the last dividend, your Directors pointed out to you the balance of profit in favour of the traffic account of the preceding six months, and took your own decision upon the manner in which such balance should be dealt with, so, in the present instance, they leave the decision as to the disposal of the present balance of 5,935*l.* 7*s.* 11*d.* and the 1,016*l.* 8*s.* 9*d.* remaining to the credit of the traffic account of the last six months, to your discretion, reserving only to themselves, in common with you, the right of giving their individual opinions as to the equitable disposal of the same; and they trust that this mode of declaration of dividend will be more agreeable to their shareholders than any recommendation from themselves.

The general conduct of the business of the railway is carried on by the Directors, who exercise their best endeavours for the welfare of the Company gratuitously. The management of the servants of the Company along the line has been deputed to Captain Dolphin, at a complimentary consideration, at the rate of 200*l.* per annum, until the meeting of the Proprietors after the 30th of June next, when the entire railway will have been completed.

Your Directors have not proceeded, under the present limited proprietary, to commence the Hertford and Ware branch, more especially as there is so large an expense to be incurred before they could reach Hertford, which was not in any way contemplated in the original estimate for this branch, and they trust that some modification of this very severe impost upon the enterprise of a Railway Company may yet be effected, as railway communication becomes daily more necessary for all places not hitherto enjoying its benefits. The extension of the proprietary of the Northern and Eastern Railway, and a modification of the very heavy impost placed upon the Company by the Commissioners of the Turnpike Trust, will be desirable before this branch is executed.

Nor have your Directors found it expedient to apply to Parliament in the present session for the extension of the railway to Cambridge; but they have in no way altered their opinion of the great importance and benefit of such extension; and whether it may ultimately be effected by this Company, or by any other Company in connection with this, so that the Northern and Eastern line of railway be extended to ensure the north-eastern traffic of the country through Cambridge and 'Stortford, it must be equally beneficial to the present line; and upon this point your Directors will only repeat their desire to consult and promote the interest of their shareholders, as in all others entrusted to their discretion; and when the period for decision shall arrive, whether the application to Parliament shall be made, they will not fail to take the sense of their shareholders upon a subject of so much importance to their interests.

WILLIAM CRAWSHAY, Chairman.

Statement of Receipts and Expenditure for the Half Year ending 31st December, 1841.

RECEIPTS.

Balance in hand, 30th June, 1841		£ 2,293 13 7
Cash received on account of calls		99,324 0 0
Interest on arrears of calls		476 8 3
Cash received in anticipation of calls and debentures		64,450 0 0
Cash received on debentures		52,500 0 0
Rent of land		10 10 0
		£219,054 11 10
Balance in the Bankers' hands		£7,203 5 10

EXPENDITURE.

Law and conveyancing expenses		£124 11 0
Engineering, surveying, and valuing land		2,199 19 11
Land and compensation		12,956 17 6
Works of road and station	£104,500 14 9	
Debenture stamps	334 6 6	
Interest on loans	5,115 16 3	
Committee of Management	£600 0 0	
Less charged to traffic	300 0 0	
	300 0 0	
		110,250 17 6
Engines, machinery, carriages, &c.		8,105 14 2
Miscellaneous expenses, including office charges, rates, salaries, stationery, printing, office furniture, and petty cash		1,067 0
Loans repaid		70,235 7 6
Repayment to traffic of loan of last half-year		4,410 18 9
Rent to Eastern Counties' Railway Company	£4,945 4 0	
Less charged to traffic account	2,445 4 0	
		2,500 0 0
Balance in Bankers' hands		7,203 5 10
		£219,054 11 10

General Statement of Receipts and Expenditure, ending 31st December, 1841.

RECEIPTS.

Loan from traffic		£4,410 18 9
Amount received from calls		373,680 18 2
Interest on arrears of calls, and profit on Exchequer bills		2,042 13 4
Amount received in anticipation of calls, &c.		252,525 7 0
Amount received for debentures		52,500 0 0
Rent of land		10 10 0
		£685,120 7 3
Balance in the Bankers' hands		£7,203 5 10

EXPENDITURE.

Parliamentary and other expenses in obtaining Acts of Parliament, conveyance, and law charges		65,623 7 7
Engineering, surveying, and valuing land		16,663 1 2
Compensation and charges incurred upon the abandoned line		43,656 12 9
Land and compensation		162,367 16 2
Works of road and stations	£244,418 6 2	
Interest on loans	17,855 18 5	
Debenture stamps	334 6 6

Miscellaneous and office expenses		11,918 13 7
Loans repaid		70,235 7 0
Repayment to traffic of loan of last half-year		4,410 18 9
Rent to Eastern Counties' Railway Company		2,500 0 0
Balance in Bankers' hands		7,203 5 10
		£685,120 7 3

Traffic Account, ending 31st December, 1841.

RECEIPTS.

Amount received from capital, in repayment of loan of last half-year		£4,410 18 9
Amount received from passengers, and for conveyance of horses, carriages, &c.	£23,725 9 6	
Amount received for parcels	218 17 1	
		23,944 6 7
		£28,323 5 4
Balance in the Bankers' hands		£6,951 16 8

EXPENDITURE.

Amount of dividend for half-year ending 30th June, 1841		3,394 10 0
Locomotive expenses—		
Coke, oil, tallow, grease, &c.	£3,077 17 1	
Materials for repairs of engines	503 11 6	
Salaries of superintendent and clerk, and wages of drivers, fitters, and other servants of locomotive department	1,841 9 10	
		5,422 18 5
Wages and clothing to conductors and guards, porters, gatekeepers, &c.		1,675 3 10
Stations' expenses:—		
Salaries, stationery, printing, &c.	£1,067 3 9	
Stores consumed at stations	289 12 0	
Lighting stations and gas	155 1 3	
		1,511 17 0
Toll to Eastern Counties Railway Company	£3,601 5 10	
Rent to ditto	2,445 4 0	
	£6,046 9 10	
Mileage duty to Government	1,447 1 5	
Rates and Taxes	250 14 6	
		7,744 5 9
Committee of Management		300 0 0
Incidental expenses, consisting of repairs of carriages, insurance, water, and petty disbursements		549 3 8
Maintenance of way to Broxbourne, 15½ miles, at 180*l.* per mile, per annum		806 10 0
Balance		6,951 16 8
		£28,355 5 4

The CHAIRMAN then remarked that, as the Report and accounts had been before the proprietors during the last two days, they had had time to mature whatever questions they had to propose, and the Directors would be happy to answer them to the best of their ability. (After a long pause.) If no observations were offered, he should at once move

Digitized by Google

that the Report of the Directors be received and printed for the use of the proprietors.

Mr. HARVEY seconded the motion.

Mr. MERCIER begged to call attention to the fourth paragraph in the Directors' Report, which was as follows :—

"It must necessarily occur, that the interest paid upon all loans prior to the completion of the railway will form an additional charge upon the capital, or cost of the line; and with this exception, and the cost of the abandoned line, it is hoped that the railway will be completed for a moderate excess upon the original estimate."

Now it appeared from the accounts, that the compensation and charges incurred upon the abandoned line amounted to 43,656*l.*, and the interest already accruing on loans to 17,855*l.* If 7,000*l.* more were allowed for future interest, the total amount under these two heads would be about 69,000*l.* A "moderate excess" upon the estimates would, he supposed, be about 30,000*l.*, so that the whole excess over the original estimates was about 100,000*l.*

The CHAIRMAN was glad the subject had been mooted, although he was grieved and disappointed that there should have been any excess at all in the estimates. The Directors, however, had been led into the error—for error he must designate it—by their Engineer, through whose eyes alone they could in matters of this kind see. That gentleman was now present, and could answer for himself, If his answers were not satisfactory, he (the Chairman) felt satisfied that they would at least be true.

Mr. MERCIER had not the smallest intention of casting any reflection upon the Directors. It had, however, been stated at the last meeting, that the estimate of 720,000*l.* would be so far reduced, that the branch line to Hertford and Ware, estimated to cost 50,000*l.*, would be constructed out of the surplus. He recollected this, because a gentleman named Vizard had protested against the application of the assumed saving to the construction of a branch line.

Mr. BIDDER (the Engineer) would say a few words in explanation. At the last meeting, the Chairman had put the question to him, whether the estimates of 720,000*l.* might not be reduced by 5,000*l.*, and he had answered "yes;" but at the moment he had entirely forgotten the expenses incurred on the abandoned line, and the item for interest on loans. In the engineering department the excess would not be more than 5,000*l.* or 6,000*l.* (Hear, hear.)

Mr. ROWE thought it was very satisfactory to find that, if some excess had arisen, it was upon these items. Those who were acquainted, as he was, with the early history of the undertaking, must greatly deplore much that had then occurred, but this was not attributable to the present Board. A series of circumstances, into which he need not now enter, had led to the abandonment of the terminus at Islington, originally proposed, and to their present connection with the Eastern Counties' Company—a connection which might or might not prove disastrous to this Company. He was glad to find that the Directors had not abandoned the hope of seeing the line extended to Cambridge. He trusted that it would not merely reach Cambridge, but be carried forward to York, as originally proposed by Mr. Walker. He had reason to believe that the parties contemplating a York and Cambridge line, had it in view to construct a line from Tottenham to the west end of the metropolis. This Company were not the parties to undertake such a branch—indeed he believed they were by the terms of their arrangement with the Eastern Counties', precluded from such a work—but he threw out the hint as an additional argument in effecting arrangements with the Eastern Counties' Company. He believed the two great obstacles they had to encounter were, the amount of the toll paid to that Company, and the want of accommodation at their terminal station. [The CHAIRMAN—Just so.] The Directors of this Company had given much attention to the subject, and he was sorry that so far their efforts had not been crowned with success. It certainly was not attributable to any want of zeal on their part. Perhaps the circumstances to which he had alluded, of a probable west-end terminus, would expedite the negotiations. He had no doubt that that project would be put before the public in the course of the next twelve months. He believed that the Parliamentary plans had already been deposited.

The CHAIRMAN begged to state that the negotiations with the Eastern Counties' Company were only impeded by a little matter of feeling as to the construction of a clause in the agreement between the two Companies. The Northern and Eastern Company had not contempleted having to pay the Government duty upon those of their passengers carried over the Eastern Counties' line. The Act of Parliament required that each Company should make a return of the persons travelling upon its own line, and as the three miles nearest London did not belong to them, but to the Eastern Counties' Company, the Directors of the Northern and Eastern Company had not thought themselves bound to make any return, nor to pay any duty in respect of them. The Eastern Counties' Company thought the Northern and Eastern ought to pay this duty, whereas his colleagues and himself were of a different opinion, conceiving that the toll of 4d. per passenger and the annual rent of 7,000*l.* was ample remuneration to the Eastern Counties' Company for all charges incurred. If that point were settled, there would be no material cause of dispute between the two Boards. The questions at issue were now in the hands of himself on the part of the Northern and Eastern Company, and of Mr. Rathbone on the part of the Eastern Counties' Company, and no later than last night they had discussed the subject. The only matter, exclusive of the Government tax, which was at all at issue was the trifling question of the giving up of two rooms. With respect to the Government duty, his colleagues and himself wished that it should be looked upon as an isolated question, to be determined by a court of law. It was too important to be otherwise settled. If it were so settled, everything else would be easy; indeed he believed that in that case, they could carry goods upon their line by that day week.

Mr. ROWE thought this question of the payment of duty a vital one. Everything else seemed to be proceeding smoothly. The traffic was increasing; the Directors were vigilant and assiduous, and all promised well but for this millstone hanging round their necks. So long as they were under the control of another Company, they were to a certain extent fettered—they were like a man who had lost the use of one of his arms. He had thought, and still continued to think, that although as a Company they could not take any part in the construction of a west-end branch, the mere fact of its being undertaken by others would show such a prospect of competition as would bring the Eastern Counties' Company to reasonable terms.

The CHAIRMAN was happy to say, that a very good feeling was just beginning to exist between the two Companies. If any one would take the trouble to look at the Report laid before the proprietors of the Eastern Counties' Company yesterday, and examine how much of the net profit from which they declared a dividend had been derived from the Northern and Eastern Company, they would see how much it was to the advantage of the Eastern Counties' Company to cultivate a good understanding with them. (Hear, hear.) He should feel extremely sorry to encourage any but a friendly feeling towards the Eastern Counties' Directors. As he said before, everything would be easily settled, except this question of the duty, which he thought ought to be determined by a court of law. When he (the Chairman) joined the Direction, the agreement between the Companies had been settled. They had to pay the Eastern Counties' 7,000*l.* per annum for *something*, and in that something he conceived that the Government duty was included. He should never agree to submit this matter to reference without the consent of the proprietors, as he believed that nothing but the decision of a law court would be satisfactory. (Hear, hear.)

In answer to a question from Mr. Downes,

Mr. BIDDER explained that the Government duty upon the traffic of the Northern and Eastern line, at present passing over the Eastern Counties', was about 1,000*l.*

The CHAIRMAN remarked, that as the traffic increased, so also of course would the Government duty. Negociations were in progress with respect to a modification of the toll of 4d. now paid to the Eastern Counties' Company for every passenger passing over their line. The principle had been assented to, that a toll of 4d. upon passengers coming from short distances, such as Lee Bridge, &c., was excessive, and such as to prevent this Company from having recourse to low fares. The Eastern Counties' Directors admitted this, and he had no hesitation in saying that a modification of the terms had been agreed to. (Hear, hear, hear.)

Mr. MERCIER would be glad to know what was the probable estimate of goods' traffic upon the Northern and Eastern line.

The CHAIRMAN did not put much confidence in estimates of any kind, but there could be no doubt that the goods' traffic would be very considerable. Capt. Dolphin, their Superintendent, had already had an offer from a miller to send about 50 tons of oil-cake per week—in fact the party was anxious to have a short branch line made to his mill. If they had had an independent terminus of their own, they would already have been in a position to carry goods.

Mr. MERCIER inquired if the Directors had had any offers for the conveyance of malt or coals.

The CHAIRMAN said, there had been a good deal of talk respecting the carriage of coals, and there was no doubt that ultimately this branch of traffic would be very considerable: but until the line was opened to Bishop Stortford they could not enter into any extensive arrangements for the goods' traffic.

Mr. DOWNES inquired if any legal opinion had been taken as to the proper construction of the agreement with the Eastern Counties' Company.

Mr. MAYNARD (Solicitor to the Company) stated that the opinion of counsel had not been taken, but the matter had been placed before him, and he was very positive that by the terms of the agreement the Northern and Eastern Company were not bound to pay the Government duty.

Mr. DOWNES would be glad to know what the obstacle was to the construction of the branch to Hertford.

The CHAIRMAN said, this matter had not been smoothed over in the Directors' Report, as was the practice in some Companies; so that probably the meeting might think the difficulties much greater than they really were. The Directors wished to cross a certain turnpike-road on a level, but to this the trustees of the road objected, and insisted upon the Company carrying the turnpike-road over the railway by a viaduct. This would involve an additional cost of about 10,000*l.* The Directors had offered to stop every train before crossing the road, and this they thought a sufficient precaution against accident, but the trustees would not assent. The Company's Act ordered that no tolls should be taken on the branch line, until the turnpike-road was carried above the railway.

Mr. ROWE inquired why the line could not at least be made as far as Ware.

Mr. MAYNARD said, the line could undoubtedly be made, but they were expressly prevented from levying toll upon any part of the branch until the whole was completed to Hertford.

Mr. BELL said, the Chairman had at the last meeting drawn a distinction between "toll" and "fare." Had any opinion been taken on that point?

Mr. MAYNARD had no hesitation in stating, that in the Company's Act, the terms were synonymous. They could draw no *profit* from the branch, whether by toll, fare, or rent, till the whole was made. The Act could not be evaded.

The CHAIRMAN said, it had been suggested to him by his friend Mr. Roskell, that the nature and extent of the commutation of toll agreed to by the Eastern Counties' Company should be stated to the meeting. It was to this effect, that whereas at pre-

Digitized by Google

sent they had to pay 4d. per passenger of whatever class, they were henceforth on all the traffic between Ponder's End and London to pay 3d. per first-class passenger, 2½d. for the second-class, and 2d. for the third-class. (Hear, hear, hear.) With this modification the Directors hoped to be able so to arrange their fares on these short distances as to compete successfully with the horse-coaches and omnibuses. The population of the district was very large, and nearly the whole of the traffic was now lost to both Companies. (Hear, hear, hear.)

Mr. DOWNES inquired if the railway fares exceeded those of the omnibuses and coaches.

The CHAIRMAN said, they were much about the same, but parties had to walk some distance to get to the railway. The Directors contemplated reducing the charges about 2d. below those of the common-road vehicles, so as to hold out an inducement to the public to use the line.

After some further conversation, the motion for the adoption of the Report was carried unanimously.

The CHAIRMAN said, with respect to the subject of a dividend, which the Report left open, he was quite ready to state his own individual sentiments. He thought, then, that the 1,000*l.* left undivided at the last meeting was unjustly left. (Hear, hear.) If it were *bona fide* profit from the working of the line it ought to have been divided among the then proprietors. (Hear, hear, hear.) He would say the same with respect to the amount now in hand. (Hear, hear, hear.) That amount would give a dividend of about twice the amount previously declared, and if the question came to the vote he for one should give his voice for the distribution. The present proprietors were forming conveniences and incurring expense for the benefit of future holders, and it was but fair that they should reap whatever profit had been fairly earned. (Hear, hear.) Thus for example, they had been obliged to pay a considerable sum to coach proprietors to induce them to bring their vehicles on the railway, and they had been doing this for the benefit of their successors, for when the line came to be fully opened and the arrangements matured, this item of payment would fall to the ground. As to the establishment of a depreciation fund, he would appeal to Mr. Bidder, if their engines were not now in a better condition than they had ever before been. [Mr. BIDDER—Yes.] They had an ample staff to keep them and the carriages in good order, and instead of allowing anything for depreciation this half-year, they might fairly make a charge against capital for improvements. (Hear, hear.) His own opinion was, that a dividend of 15s. per 50*l.* share ought to be declared, which upon 9,052 shares would leave a small balance of 186*l.* (Applause.)

Mr. DOWNES fully concurred in what had fallen from the Chairman. He could not see why the present proprietors should be kept out of that which had been really earned. (Hear, hear.) Moreover, it would be to the advantage of the Company that this dividend should be declared, for when the public, who could not be supposed to be acquainted with all the details of the case, saw, that during the year, they had paid a dividend of about 22s. 6d. per share, they would think better of the undertaking. The dividend certainly was not large, but under all the circumstances it was perhaps as large as could be expected. He would move that a dividend of 15s. per share be paid. (Hear, hear.)

Captain FORD seconded the motion.

Some laughter was excited by the Chairman reading the motion for the payment of the dividend "to-morrow." Ultimately it was, for convenience sake, made payable on Monday next, the Chairman stating, that as the money was already in the hands of the bankers, there was no need for delay. In a railway, where he held a considerable number of shares, he certainly had not much liked receiving a bill at two months for the amount of his dividend.

The motion was then carried unanimously.

A discussion of extreme prolixity then followed with reference to certain shares held by Mr. John Williams. As this matter has been so repeatedly adverted to in our columns, we shall content ourselves with a brief notice of its principal features.

Mr. PRANCE, in a very eloquent speech, craved an extension of the indulgence granted at previous meetings to Mr. Williams, upon whom, as a friend of many years' standing, he passed a high eulogium for zeal, integrity and honour—a compliment which was reiterated by other gentlemen who addressed the meeting. The history of Mr. Williams's connection with the Northern and Eastern Company, as detailed by Mr. Prance, avowedly on representations made by Mr. Williams himself, was this: In the year 1836 the then Directors of the Company, for the purpose of raising their undertaking in public estimation, and securing an Act of Parliament, had deemed it politic to keep the shares at a respectable premium in the market. This course Mr. Prance condemned, but having determined upon it, Mr. Williams, as a wealthy and highly respected member of the Stock Exchange, was well qualified to give it effect. Mr. Williams in an evil hour for himself, and probably for the Company also, undertook the duty, under an assurance from the then Secretary (Mr. Charles Rowcroft), as if on the part of the Directors, that he should be held harmless. Mr. Williams soon found that he had accumulated 1,895 shares, when at 3 o'clock in the afternoon of the last day upon which the application to Parliament for an Act could be entertained, the Secretary urged him to sign the deed for 200 additional shares, to make up the number required by the Standing Orders of the House of Commons. Mr. Williams did so, and gave a cheque for the deposit, being thus in possession of about 2,000 shares of 100*l.* each, or 4,000 of the present 50*l.* shares. When the scrip was called in Mr. Williams declined to register so large a number, and thus render himself responsible for all future calls. He therefore registered no more than 562, giving up to the Directors the remaining 1,500, for which he now held the receipt of the Secretary. Then came Mr. Williams's misfortunes. He held a very large number of shares in the British Iron Company, and the decision of the Court of Chancery in the memorable case of Small *v.* Attwood so crippled his means, that he had not been able to pay the calls upon these 562 shares, and but for the indulgence granted at former meetings they would long since have been forfeited. Mr Prance then read a letter, dated Jan. 6th, 1842, from Mr. Rowcroft, late Secretary to the Company, in reply to an application from Mr. Williams, that he would state what he knew of his transactions with the Company. In that letter Mr. Rowcroft stated distinctly that Mr. Williams had been "encouraged and incited" by the Directors to get up and keep up the shares at a premium, on a pledge that no further scrip should be issued—that scrip had nevertheless been issued, and that when Mr. Williams complained of this breach of faith, he was told that he should oe protected from loss—and that in the writer's opinion, the Company were bound in honour and justice to reimburse Mr. Williams. Mr. Prance went on to urge that Mr. Williams, so far from craving a boon, might have advanced a strong moral claim upon the Company, and he (Mr. Prance) really anticipated no opposition to the granting of an indulgence which would cost the Company nothing. The transactions out of which Mr. Williams's claim arose might be open to censure, although he had no doubt the then Directors acted to the best of their judgment; but he thought their successors, and the successors of the then proprietors, were bound by their acts, however they might commend or blame the course that had been pursued, just as on a change of administration, the treaties entered into by a former ministry were enforced by the succeeding one, however much they might dissent from their principles or details. All that Mr. Williams asked, was, that having surrendered his 1,500 scrip shares, which had cost him about 14,000*l.*, he might be allowed to resume the 562 at any time previous to the first general meeting in 1843, not gratuitously, but on paying up the whole of the calls, with interest at the rate of 5 per cent. The honourable proprietor concluded with a motion to that effect.

Mr. MARTEN seconded the motion.

The CHAIRMAN, before addressing the meeting, would call upon his colleague Mr. Bagshaw, to notice the statements of Mr. Williams, as he (Mr. B.) was a Director at the time referred to.

Mr. BAGSHAW thereupon entered into an explanation, in the course of which he stated that six members of the present Board were members also of the old Board, and could with himself most distinctly deny the imputations which had been cast upon them in the letter which had just been read. The hon. Director having in very feeling terms disclaimed all animosity or hostility towards Mr. Williams, to whose request when urged as a matter of courtesy and conciliation he always had been, and always should be, ready to lend a favourable ear, said an inspection of the Parliamentary deed would refute all the assertions which had been made. That deed had been signed by many names of first note, and Mr. Williams was not the only individual who had lent the undertaking assistance. He saw in the room Mr. G. Downes, Mr. Fletcher, and others whose cases were precisely analogous to that of Mr. Williams, they having signed the deed with the option of thereafter taking shares, but *they* did not complain. At that time the Company's stock was at a high premium, and Mr. Williams might have disposed of his interest had he chosen to do so. (Hear, hear, hear.) If Mr. Williams had so sold his shares, did any one think that he would have paid the profit into the coffers of the Company? The gentlemen to whom he had referred, thinking the Northern and Eastern Railway to be one of the most promising in the kingdom, had, like Mr. Williams, taken a large number of shares, but were the Directors to be blamed for what might be imprudent speculation? Were they to be censured because the Secretary had unauthorised, or authod rised only by individual members of the Board, le Mr. Williams into the purchase of shares? He did not know even that individual Directors had encouraged Mr. Williams, but he would state most distinctly and unequivocally that no act or resolution of the Board could be construed into such support or incitement. (Hear, hear.) Let the minute book be consulted, in which it was the duty of the Secretary to make a record of the decisions of the Board, and his assertions would be corroborated. (Hear, hear.) The honourable Director proceeded to say, that while Mr. Williams urged his alleged claims temperately and courteously, he had always had his (Mr. Bagshaw's) support, but this letter of Rowcroft's was most offensive. He (Mr. B.) should not, under the peculiar circumstances of the case, vote at all on the question, and but for the hostility displayed in the letter just read, and in the address of Mr. Williams's friend, he should be glad to see the indulgence that was prayed for granted. The honourable Director then good-humouredly alluded to his own collision with Mr. Attwood, remarking that if Mr. Williams had reason socially to lament the decision of the Court of Chancery in Mr. Attwood's favour, he (Mr. B.) had good cause to regret it politically, as but for that decision it was possible that Mr. Attwood would never have disputed successfully his (Mr. B.'s) right to a seat in the House of Commons. He concluded by again most emphatically repudiating every word in Mr. Rowcroft's letter, and repeating that no discussion respecting Mr. Williams's transactions had ever taken place at the Board.

Mr. PRANCE disclaimed all offence towards the members of the old Board, and again urged that although the course pursued might have been questionable, the Directors ought to consider themselves bound by what had been done on the representation of individual members of the Board.

The CHAIRMAN said, no body of men could be held responsible for the conduct of individual members, when such conduct was illegal and unjust.

Mr. MASTERMAN, jun. (a Director), corroborated the statement of Mr. Bagshaw, as to the old Board, of which he was a member, never having been

Digitized by Google

a party to any such transactions as had been described. They would sooner have submitted to the loss of their own property, than have consented to victimise Mr. Williams. The honourable Director expressed himself in favour of the indulgence being granted to Mr. Williams, as a matter not of right but of kindness and courtesy.

Mr. KINNARD (a Director) reiterated the same statements, and characterised the letter of Mr. Rowcroft as most insulting and improper. He stated that he himself had not been aware of the existence of Mr. Williams until after that gentleman had fallen into difficulties and become unable to pay up his calls. He (Mr. K.) regularly attended the meetings of the Board, and must have been cognizant of any discussion of the transactions now alleged. He would state distinctly, that nothing of the kind had occurred. (Hear, hear, hear.) Mr. Williams, on being unable to pay his calls, had requested the Directors to take a bill for the amount, representing that his difficulties would have passed over before the bill became due. That bill had been dishonoured, as had also another, and after exhausting plea after plea for indulgence, Mr. Williams was now raking up the dirt from such a person as Rowcroft. Mr. Williams *knew* that the Board had nothing to do with these transactions—for he had often admitted as much. One member of the Board might have been concerned, but he would repeat that Mr. Williams knew that the Directors generally were not at all implicated.

Mr. WILLIAMS would state most distinctly, that Mr. Rowcroft had said to him, after he (Mr. Williams) had had communications with the Board, "We are determined to go on with the thing, and you must keep up the shares." At that time Mr. Rowcroft had in his hand the key of the Company's strong box, and pointing to it, he (Rowcroft) pledged his honour that no more scrip should be issued. However, when the shares had reached 1¼ths premium, further scrip was issued, and on complaining of it loudly at the office, he had again been assured by Mr. Rowcroft, that he should not be a sufferer, and that the Company would protect him. This he was ready to state upon oath. Mr. Williams then mentioned, that he had been called out of the Stock Exchange to sign the Parliamentary deed for the 200 shares already referred to, upon which he had subsequently paid the deposit. Then, and more recently, he had greatly exerted himself for the good of the railway. (Hear, hear.)

Mr. MARTEN thought Mr. Williams ought not to suffer for the sins of an over-zealous Secretary, whom he could not but look upon as acting in his official capacity. The honourable proprietor made a strong appeal to the forbearance of the meeting, remarking that even if the course taken by Mr. Williams were offensive and improper, every allowance ought to be made for a man in his circumstances.

The CHAIRMAN, after referring to the indulgence which on two previous occasions had been granted to Mr. Williams, explained that of the 562 shares Mr. Williams had paid 3*l.* on 200 of them, and 6*l.* on 362, making a total payment of 2,772*l.* which was the whole extent to which the Company had been benefitted by Mr. Williams's money. The total amount of calls upon these shares was 56,270*l.*, of which only 2,772*l.* had been paid, and he thought it extremely unfair that Mr. Williams should be allowed to retain this large balance at 5 per cent. interest, when the Company were making their line with money borrowed at 6 per cent. The shares had within the last few days been at a discount of only 3*l.* 10s., and would probably soon be at a premium, and under these circumstances it was unreasonable he should seek the indulgence of twelve months, he paying 5 and the Company 6 per cent. He would rather that he should have shares at par paid up in full to the amount of the 2,772*l.*

It was subsequently stated that this would be equivalent to fifty-five 50*l.* shares.

Mr. WILLIAMS spoke of his having given up scrip to the extent of 1,500 shares, and said, as he had bought them in the market, the money paid did not appear in the Company's books.

Mr. MASTERMAN, jun., distinctly recollected that Mr. Williams had declined, for his own convenience, to register more than 562 of the scrip, and had given up the remainder without stipulation. The honourable Director thought Mr. Williams would do well to accept the suggestion of paying 6 per cent. (Hear, hear.)

Mr. WILLIAMS expressed his readiness to do so.

The CHAIRMAN said, Mr. Williams's surrender of the scrip was to be regarded as a favour to that gentleman. The Directors had had many urgent requests from parties to be allowed to give up scrip, in one case to the extent of 1,000 shares, and in another of 6,392. This application of Mr. Williams was not a solitary one. Had not Mr. Williams made a similar application to the South-Eastern Company, with reference to a still larger number of shares? (Hear, hear, hear.)

Mr. BELL (interrupting) thought that *that* had nothing to do with the matter before the meeting. ("Hear, hear," and "Yes, yes," and "No, no.")

The CHAIRMAN said, it proved that Mr. Williams had been a general trafficker in shares, and as such he ought to abide the issue of his speculations. It showed that he must have been a willing agent, for even if deceived by the late Secretary of this Company, it was scarcely to be supposed that he should have been deceived by all. (Hear, hear.)

Mr. BELL, after stating that till that day Mr. Williams and the circumstances of this case had been wholly unknown to him, and expressing an opinion that that gentleman had no claim, legal or moral, on the Company, appealed to the generosity and good feeling of the meeting on his behalf, urging that Mr. Williams might easily be deceived, from thinking that the transactions referred to were such as would be carried on covertly and without any formal sanction of the Board. Mr. Williams, it was clear, had been misled by some one.

Mr. WM. ROUTH, to show that Mr. Williams's surrender of his scrip was a favour to that party himself, stated that he (Mr. Routh) had been one of the trustees under the will of the late Captain Temple, and they had felt glad to be allowed to give up to the Directors 700 scrip shares held by his deceased friend, and upon which 6*l.* per share had been paid.

Mr. PRANCE, on behalf of Mr. Williams, expressed his readiness to accept the suggestion of the Chair, and receive 55 shares paid in full.

It was found, however, that there was a legal difficulty in the way, the Solicitor stating, that they could not treat Mr. Williams's shares otherwise than as shares upon which certain instalments only had been paid up.

At last, after much further discussion, a resolution was unanimously carried, to the effect that the indulgence granted to Mr. Williams, in respect of the 562 shares, should be renewed till the 31st of July next, he agreeing by that time to pay up the whole of the arrears, with 6 per cent. interest from this date, and with an understanding that if in the meantime the shares should reach 5*l.* premium, Mr. Williams was liable to be called upon at any time to make good the payment, or failing this that the shares should be sold by auction, and the surplus handed over to Mr. Williams.

The CHAIRMAN and others appeared to think that the time was too much extended. It was clearly understood that the question would never again be entertained; in fact the 31st July was made the limit of the indulgence, to prevent discussion at the next meeting.

Mr. PRANCE for Mr. Williams, and Mr. WILLIAMS for himself, returned thanks, the latter gentleman stating that he would not have written to Mr. Rowcroft, if he had not been advised to obtain a corroboration of certain facts.

The CHAIRMAN thought the letter was in bad taste, but it was as well to say nothing more on the matter.

A vote of thanks to the Chairman for his conduct in the chair, and to the Board generally for their zealous services, was then, on the motion of Mr. Prance, carried unanimously, and the meeting broke up.

LLANELLY RAILWAY AND DOCK COMPANY—SPECIAL MEETING.

A SPECIAL general meeting of the proprietors of the Llanelly Railway and Dock Company, was held on Thursday, at the London Tavern, Bishopsgate-street; ROBERT BIDDULPH, Esq., in the chair.

The SECRETARY read the advertisement convening the meeting, and

The CHAIRMAN observed, that it had been convened pursuant to the Standing Orders of the House of Lords, which enacted that three-fifths of the proprietors, present at a general meeting, should give their consent before any application could be made to Parliament, either to renew, amend, or in any way alter any of the clases of the existing Act. In accordance with such provisions, it was the intention of the Directors to submit to the proprietors a Bill to be applied for to Parliament, for certain extensions and alterations in the Llanelly line of railway. As much discussion would probably arise on the subject, he hoped that it would not be desultory, but that every gentleman would be permitted to offer his opinions openly and fairly. (Hear.)

Mr. D. HILL wished to know the mode in which the Chairman intended to take the sense of the proprietors as to whether it was proper for them to apply to Parliament for the proposed Bill or not.

The CHAIRMAN said, the words of the Act were so very ambiguous, that a definite construction could not be put upon them. As however he considered it to be the most fair course, himself and colleagues had decided that as well as the votes of those present, proxies should be admitted.

Mr. HILL—Has there been any legal opinion given upon the point, as I believe the circumstances are not peculiar to this Company?

Mr. CROWDER (the Solicitor of the Company) It is my opinion that proxies ought to be admitted; as, although it states specifically in the Standing Orders, that the voting shall be confined to those present, looking to the general practice of the House of Lords, and finding in one such case they decided that proxies should be admitted, I think the latter course ought to be pursued.

Captain PROBYN observed that the Committee of Directors had passed a resolution on the subject, and he would move that that minute he read.

A SHAREHOLDER having seconded the motion, it was carried, and the resolution read. It was to the effect that proxies be not admitted to vote, according to the Standing Orders of the House of Lords.

Colonel PROBYN contended, if this motion were to be carried out, great injustice would be done to the proprietors at large, and cast a slur upon the professional opinion of Mr. Crowder, who declared that proxies were admissible.

It was suggested by a SHAREHOLDER, that such a proposition be withdrawn from the minutes, but which was overruled, as it was a minute of the Directors only, and not of the proprietors.

Mr. BLOUNT (a Director) said, he now rose for the purpose of making the proprietors acquainted with the objects of the intended Bill. With regard to it, the only step which the Directors had taken prior to obtaining the opinions of the proprietors, was to give the proper notice pursuant to the Standing Orders. All the powers of the Company with regard to the uncompleted portions of their line expired in August next, and therefore before even a petition had been presented to the House of Commons, the Directors had thought proper that the proprietors should deliberate and decide for themselves, whether the application to Parliament for a renewal of such powers was right or wrong. Very extraordinary changes had taken place in the circumstances of the Company since its first incorporation in 1828, under the Act 9 Geo 4. Locomotive steam was not then in existence, and under the provisions of that Act the Company held but very small powers; merely to erect a Dock at an expense of 14,000*l.* The second Act obtained was

Digitized by Google

the 3 and 4 Wm. 4, extending the powers of the Company to carry their works as far as St. David's Pit. Subsequently a third Act, the 2 and 5 Wm. 4, giving them power to carry out a railway which had been completed to Chain Spitthy, to the extent of 45 miles and 5 chains, and as far as Duffryn Lodge, a distance of 66 miles and 6 chains. Of the latter, six miles were not done as was originally contemplated, carrying the line to its original destination, Llandilo. On the other hand, however, several branch lines had been completed to various coal mines, and which had been a source of great and immediate profit. An Act of Parliament was necessary to complete this line, and also to give the Company power to allot wharfage for the various trades on their dock, which, under the present Acts they did not possess. They also required provisions for increasing the amount of locomotive engines, machinery, implements, and the payment of wages, &c., which they now had not. Many obsolete clauses in the old Act would be repealed, and amongst others one that would arrange the matter between the Company and Lord Cawdor. To continue the line into the heart of Carmarthenshire would add to the advantage of the traders and the Company. It was to be done without any attempt to raise any more money, as the Solicitor had very cleverly introduced two clauses into the Bill which would enable the Company to contract for new shares.

A SHAREHOLDER—yes, and depreciate the present shares. (Hear, hear.)

Mr. BLOUNT continued—Another point the Bill contemplated was to buy up the Carmarthenshire tram-road, which the proprietors would no doubt be exceedingly glad to sell, and which would complete the line to Llandilo, without much difficulty, as the declination, being 1 in 106, would enable locomotives to travel easily over it. Nor ought passenger traffic in that direction to be neglected, for the population was greatly increasing. Even in the vale of Comb Avon, 102 houses had recently been erected. The continuation of the line to Llandilo, when there was a deficiency in the sale of coal out at sea, would enable coal-owners to bring them inland to Cardiganshire, for which district to obtain a supply the traders had to come forty miles. He believed that no Bill would be passed at so little cost as the intended Bill, and he would move that the draft be now read.

Sir ROBERT PRICE seconded the motion.

Mr. GARLAND said, although the original estimate for the completing the line was 180,000*l.*, still that sum was greatly exceeded and the line not completed. He would move as an amendment, that the Bill be considered that day six months.

Captain HERRINGHAM seconded the motion; but it was subsequently withdrawn.

Mr. DAVID HILL said, he had an amendment to propose. He contended at great length, that the Directors had not kept faith with the proprietors: for, instead of completing the line, as originally intended, to Llandilo, they had only got to Duffryn Lodge, short of that place by six miles and a half. Instead of carrying out the objects for which the Company had originally associated themselves together, they had carried out branch railways not contemplated at the outset, and a steam-boat to the port of Llanelly. It was stated the expenses of carrying out the entire line would be no more than 195,000*l.*, whereas it had already cost 210,000*l.*, exceeding by 10,000*l.* the entire capital of the Company. With regard to the new Bill, no estimate whatever had been given of the probable cost of obtaining it, nor had anything like proper information or proper reasons been afforded the proprietors to induce them to a belief that such a measure was necessary. They had been told at every meeting, that the concern was not like the bubbles of the present day, but one that was substantial, and from which the proprietors might expect a good return for their capital. These promises, however, never had been realised. (Hear, hear.) He thought under such circumstances, it was not proper for the Directors to come and ask them to go to Parliament for extended powers. Now, to go from Duffryn Lodge to Llandilo, would cost, he understood, upwards of 40,000*l.*, and to complete all works contemplated by the new Bill, upwards of 70,000*l.*, and this money was proposed to be raised by a species of hocus pocus. (Laughter.) By new shares! It was clear that such a proceeding would depreciate the present shares, and injure the present proprietors. Advantages had been alluded to, which that railway was said to possess over others. They were enabled to charge 1½d. per ton per mile tollage, whilst other lines could only charge one halfpenny. If they went to Parliament, that advantage might be destroyed, and thus injury instead of benefit inflicted on the proprietors. Mr. Hill further argued that it was the duty of the Directors to rest satisfied with the works already completed, or if they were determined to go for a Bill, to absolve those proprietors who had associated in the first instance for another object, from any responsibility connected therewith. He concluded by moving, as an amendment—"That although the main line of the railway has been carried only as far as Duffryn Lodge, yet, as funds exceeding the full amount of our own capital have been already expended on such parts of our undertaking as were deemed most conducive to the Company's interests, and, as confident expectations continue to be held out that the works already executed will in a short time yield a large return of profit, it is not advisable to apply to Parliament for an extension of the period allowed for completing the railway to its terminus at Llandilo, or for power to execute any new works until the prosperity of the Company's affairs shall afford the best guarantee for the prudence and success of ulterior measures, and shall enable the Company without loss or difficulty to raise the fund necessary for the execution.."

The Hon. Capt. HOTHAM seconded the amendment. There was only one point which he considered it was necessary for him to refer to, to show the impolicy of going to Parliament for a new Bill. This was the only railway in the kingdom that Parliament had permitted to take so high a toll as 1½d. per ton per mile, and did they expect if they again got there, that all the coalowners would not rise in opposition and resistance to that monopoly, and endeavonr to get the toll reduced? He therefore called upon the proprietors not to risk by going to Parliament the loss of their present advantage.

Capt. PROBYN (a Director) said, although he stood single-handed in the Committee that day, still he was opposed to their going at all to Parliament. The object at first was to go from Llanelly to Llandilo, and although the Directors had swerved from that path, and carried out branch railways to the mines of the various coalowners, still he thought that such a course had been adopted for the benefit of the proprietary, and he had no doubt when in full operation they would have a good return for their capital. He however saw no good in their going on to Llandilo at an expense from of 48,000*l.* to 50,000*l.* without any such prospect. Although he stood there alone that day, amongst the Directors, in opposition to this Bill, the late Mr. Sims and Sir Courtney Boyle, whose proxy he held, were with him, and the amount of their shares exceeded all the remainder of the Directors put together. (Hear.) Mr. Lewis (a landholder) had also admitted, in a letter he held in his hand, that the Bill was such a one as the landowners could not permit to pass without opposition, and this from a shareholder he thought a pretty good hint. (Hear, hear,) The Engineer's estimate for completing the line to Llandilo was 41,500*l.*, but there was the alteration in the dock, the purchase of the Carmarthensihre tramroad and other matters, which would make the new works contemplated by the Bill, instead of 70,000*l.* exceed 80,000*l.* It was clear that raising new shares would prejudice the old, as was instanced in the case of the Blackwall Railway Company, when they raised new shares to extend their line from the Minories to Fenchurch-street. The result in that case was that the 25*l.* shares which were previously at a premium, fell to one-third discount, 8*l.* 6*s.* 8*d.* value. Such would be the case with the Llanelly Company, if they went for the new Bill, and he therefore supported the amendment.

Mr. BARNES (another Director) took a different view of the question, and argued that Parliamen would not break faith with a Company that had already expended 200,000*l.* upon an undertaking. As regarded lowering the amount of their tolls, it would be very bad grace on the part of the coalowners to offer any opposition, seeing that it was first established by a Company of gentlemen, upon their requisition.

Mr. FENNELL said, he believed Parliament had done so in the case of the Croydon, but he was certain they had reduced the tolls on the Hartlepool Railway last session. (Hear, hear.)

Sir ROBERT PRICE (a Director) regretted that it appeared the great body of the proprietors had come there that day to oppose going to Parliament for a Bill. (Hear, hear.) It was his conviction that many years would not elapse before they deeply regretted their decision. (Oh, oh.) They had taken this course, one of the grounds being want of information, which information they had refused to hear. Captain Probyn had taken extraordinary means to bring the proprietors to his views. (Cries of "We are much obliged to him.") They had a right to be, if they considered his views of the question right. (Hear.) If they did not get the Bill now, they would not have half the money to get it at another period. (Cries of "More shame.") Those cries showed the *animus* of the meeting against the Directors. They could get this Bill now, giving them additional powers for seven years, he believed for as little as 500*l.* It was not a new Bill, but merely went to carry out the original intentions of the Company, and the question was, should they have it, or let all their powers expire in August next. The only grounds upon which he believed there was such a general feeling against this Bill was, a want of confidence in the Directors—(hear, hear,)—and in this they were led by the hon. Director, Captain Probyn. (No, no; common sense.) Sir R. Price concluded by declaring that, if the Bill were obtained, its provisions would not be carried out without the consent of the proprietors.

The CHAIRMAN had a few observations to offer. The proprietors had been led away with erroneous impressions, simply because they would not permit the breviate of the Bill to be read, which he felt convinced would not otherwise have been the case. With regard to the tolls, he did not think that Parliament would interfere to reduce them, or that there would be any opposition in that respect on the part of the coalowners. All that had been expended by the Company had been 202,000*l.*, 48,000*l.* less than they were empowered to raise, and therefore they could not have exceeded their capital. The only fault they had committed was, in not at once going on to Llandilo, instead of carrying out branches to the depots of the various coal owners, which the Directors had been induced to do for the benefit of the Company, for the purpose of bringing an immediate instead of a deferred return.

Mr. LONG WREY (a coalowner) observed, that there was no doubt of the prospect of a fair return from the various collieries; and with regard to the tolls, he was not aware that the coalowners would offer any factious opposition, but they might depend on it that the toll of 1½d. per mile was such an exorbitant sum, that the traders could not bear it. With other dues, the article of coals would be subject to 2½d. per mile per ton, and he would ask how could such a charge be borne, when they had to be sent 15 or 20 miles, and delivered at the rate of 5*s.* per ton. He believed that no advantage would result from their going to Llandilo, and as a tradesman and a shareholder, he advised them to remain where they were.

Mr. BLOUNT suggested that, as the meeting had not had proper information with respect to the Bill, that it be printed, a copy sent to each proprietor, and the meeting adjourned.

Colonel OWEN objected to such a course. It was the Directors' own fault that proper information had not been given.

Mr. BLOUNT said, then he thought if there was time, he should avail himself of the privilege of demanding a ballot.

The question was then put, and the amendment

Digitized by Google

adopted almost unanimously, amidst considerable applause.

Mr. BLOUNT was about to demand a ballot, but finding only two days could intervene before it must take place, he withdrew his demand.

The CHAIRMAN said, the only other business before the meeting, was to agree to certain bye-laws, without which being adopted at a general meeting, the Directors had great difficulty in getting the magistrates to exercise any power over persons who commited themselves on the line. They were merely those adopted on all other railways.

The SECRETARY read the bye-laws, which having been unanimously agreed to,

On the motion of Mr. FENNELL, thanks were voted to the Chairman, and the meeting separated.

THE PROPOSED LEAMINGTON RAILWAY.

To the Editor of the Railway Times.

SIR,—Having a great interest in the improvement of Leamington, will you allow me to make a few observations on a letter which appeared in the last number of your journal, in reference to the above railway.

Your correspondent, "Investigator," appears to think that this line ought to join the London and Birmingham at Rugby, instead of at Coventry, as at present proposed, and gives three reasons *why it should do so*, but has omitted at least six others *why it should not*.

No doubt a great number of Leamington visitors come from the North of England, but certainly a very small proportion of the whole by the route of which "Investigator" speaks. It is a well-known fact that Leamington is principally supported by the Irish nobility, and if the proposed line joined the London and Birmingham at Rugby, it would be of little or no use to them.

Instead of there being only two miles more of railway to make, there would be at least five, the distance from Leamington to Coventry being about 9 miles, and from Leamington to Rugby 14 miles. Besides, it is not likely that Lord Leigh, the most violent opponent of the Leamington and Coventry, would consent to a line going through more than a mile of his park, for although the passing and repassing of trains might probably (as your correspondent says) amuse his children for a time, and the public be gratified by the sight of some splendid timber, yet I rather think his Lordship would consider this very insufficient to compensate for the cutting up of his splendid park, and the incessant noise of railway trains.

There cannot be a doubt that the line now going before Parliament, of which I believe Mr. Woodhouse is the engineer, is better calculated to accommodate all parties, and return a fair per centage for the money to be expended in making it, than either the proposed one of "Investigator's" or the Hampton and Warwick, for which I believe plans have been deposited with the Clerks of the Peace some time. In the first place, there will be five miles less of railway to make; secondly, it will be in the direct line of present communication with Leamington, and therefore more likely to receive all the traffic; whereas, "Investigator's" would certainly lose the Coventry, which is very considerable, and most probably all the western, as I presume that portion of the public would not be disposed to pay 6s., and go round a distance of 25 miles, when they could go by coach for 2s. 6d. to the same place, in a distance of 9 miles, and in less time.

I quite agree with "Investigator" in thinking that a single line of rails would be sufficient, and would also add, that the line should be continued, as far as a due regard to economy will admit, into the town of Leamington. If not, the distance being so short, the coaches will be able to compete successfully with the railway, on account of the much greater accommodation they can afford to passengers (particularly females) who have much luggage, in taking them up and setting them down in any part of the town they may want to go to.

I am, Sir, your most obedient servant,

INVESTIGATION.

SHEFFIELD AND MANCHESTER RAILWAY.

To the Editor of the Railway Times.

SIR,—A correspondent in your last week's paper, under the signature of "No Shareholder but a Resident Observer," (quere? Resident Engineer,) makes some bold statements, which he mis-calls "facts," respecting the comparative merits of the Sheffield and Manchester and Manchester and Leeds Railways.

The logical attainments of the writer do not appear, as yet, to have reached that point which will enable him to distinguish between an assumption and a "fact."

Your correspondent states, "it is a 'fact,' and a very important one, that this line (*i. e.* the Sheffield) is 10 miles nearer to Manchester from Leeds, than the Leeds and Manchester line is." Now, Sir, I take the liberty of pronouncing this statement to be totally incorrect, and I challenge the writer of it to the proof. I make the distance between Manchester and Leeds, by the Sheffield line, to be as follows:—

	Miles.
Manchester to Sheffield	41
Sheffield and Rotherham line to Masbro'	5
Masbro' to Leeds by *the North Midland*	32
	78
Manchester and Leeds line to Leeds	60
Miles in favour of Manchester and Leeds	18

It must also be observed, that no Act has yet been obtained for a junction through the town of Sheffield, between the Manchester and Rotherham stations.

Your correspondent will probably reply, by saying, "Oh! but it is *intended* to make a branch from Penistone to the North Midland, and by that means shorten the distance." If this should be the only grounds he had for making his statement, I really think it is "too bad" to mislead the public in this way. I will merely ask, has an Act to make this branch been as yet even applied for? And even if it were obtained, who will find money to make it? The present stock is only worth 34*l.* per share, with 82*l.* 10s. per share paid upon them; and I should infer from their proceedings that the Company are at this moment writhing in all the agonies of dissolution.

Has your correspondent ever heard of a projected railway from Hebden-bridge *via* Bradford to Leeds, which would reduce the distance from Manchester to Leeds, to about 40 miles? This line, he will find, is quite as near maturity as his talked-of Penistone branch. Most of the other statements in his letter are quite as correct as the above extract, but this specimen will, perhaps, be sufficient to enable the public to set a true value upon the writer's very important "facts."

I am, Sir, your obedient servant,

A LEEDS SHAREHOLDER.

February 10, 1842.

P.S. Can you inform your readers, why the Sheffield Company do not publish their traffic *exclusive* of all payments to the Birmingham Company? I am credibly informed, that these payments amount to about one-half their total receipts.

NORTH UNION RAILWAY.

To the Editor of the Railway Times.

SIR,—In your paper (page 105) of the 29th January, there is an article copied from the *Lancaster Guardian*. By desire of the Directors of this Company I have sent to the Editor of that paper the accompanying official contradiction, which I shall feel obliged by your allowing space for in your paper of Saturday next, the 12th inst.

I am, Sir, your obedient servant,

J. CHAPMAN, Secretary.

Preston, February 10, 1842.

To the Editor of the Lancaster Guardian.

SIR,—I am desired by the Directors of the North Union Railway to send you an official contradiction to an article which appeared in your respectable paper of the 22nd of January last, headed "North Union and Lancaster Railways," and to express their regret, that you should give to an anonymous communication the appearance, and consequently the weight, of Editorial remark.

The statement contained in your paper contains three alleged grounds of complaint against this Company:—

1st. Unnecessary detention on the arrival of the trains at Preston.

2nd. Slowness on delivering the train to the Lancaster Company.

3rd. On the charge of 6d. for passengers going from the Company's Preston station to Dock-street.

In answer to the first and second of these charges, I beg to say that both are wholly destitute of foundation. The superintendent and porters have strict injunctions to use every practicable dispatch in forwarding the trains, and by all means to avoid unnecessary delay; with their endeavours to comply with these instructions, there is every reason to be satisfied. I may add, that the time-book shows that the average detention of the trains at our station (going northwards) has not, since the 1st of January last, exceeded six minutes and a-half, and when it is borne in mind, that at least two-thirds of the passengers travelling by the North Union Railway, join or leave the train at Preston, I think it will be admitted that no unnecessary delay takes place *now*, especially as the time-books show that formerly the time taken up at this station averaged rather better than ten minutes. That passengers may have been materially delayed in several instances, when the Lancaster train has arrived too late at Preston, I quite believe; but that is no fault of the North Union Railway Company.

As to the third ground of complaint, the answer is, that for the purpose of effecting a communication with the Lancaster Railway, this Company expended upwards of 15,000*l.* in making the line from their Preston station to Dock-street. For this large outlay the Directors felt it to be due to the proprietors to obtain a remuneration; and therefore it was that, on the termination of the arrangement with the Lancaster Company, which embraced a remuneration for the use of that length of railway, the charge of 6d. was made; and I submit that no one (in candour) will doubt that it was fully warranted by the amount expended.

Requesting the favour of your giving insertion to this letter (on the 12th inst.), which the Directors have thought due to themselves and their proprietors.

I am, Sir, your obedient servant,

(Signed) J. CHAPMAN, Secretary.

Preston, February 9, 1842.

LONDON AND GREENWICH RAILWAY—THE TOLL QUESTION.

To the Proprietors of the London and Greenwich Railway.

GENTLEMEN,—Your Directors, with their usual good judgment, have lowered the fares on your railway, and the wisdom of that act is daily proved by the *increased* receipts; they have demonstrated that two sixpences give a better result than one eightpence.

Gentlemen, let your Directors have fair play and they will soon still further *increase* the receipts, by inducing lower fares to Sydenham, Norwood, Croydon, &c., and they will demonstrate to you, quite as satisfactory, that two twopences give a better result than one threepence, or no fourpence halfpenny.

Your object *must be to secure the best result for yourselves*; refer that problem to your Directors, or to some few of your own body, who have a large pecuniary stake in the welfare of your undertaking, and the "toll question" will be speedily and satisfactorily settled.

Your well-wisher,

MENTOR.

London, January 8, 1842.

2. *Minus* toll to London and Birmingham 116*l.* 14s. 10d.

3. Main line, 53 miles; Tewkesbury branch, 2.—Total length, 55 miles.

4. The total length of line and branches is 25 miles:—15 miles of passenger and general traffic, and 10 miles of coal traffic alone.

8. Receipts include the Northern and Eastern toll, &c.

11. Capital of 1,957,800*l.* is exclusive of the Chester and Crewe line, which cost 458,333*l.* The receipts include those derived from the use of the L. and M. and C. lines, 31 miles. The divisor employed to ascertain the daily receipts per mile is therefore 134⅔ (83⅔+21+31.)

13. The 5,231,527*l.* 9s. 10d. is the amount actually raised according to latest balance-sheet. The receipts include those derived from the Cheltenham and Exeter branches; the former opened for 18 miles, and the latter for 33. The divisor employed to ascertain the daily receipts per mile is therefore 169½ (118½+18+33.)

15. The 68*l.* 17s. 5d. from goods, &c. is for toll only.

16. Ten per cent. is the maximum dividend allowed by the Company's Act.

17. Deduct from receipts 48*l.* 1s. 6d. for weekly rent of Aylesbury line. On the quarter shares the dividend is at the rate of 42⅜ per cent. In calculating the receipts per mile, the seven miles of the Aylesbury line are included.

19. The length stated includes the Shoreham branch. The Croydon and Greenwich tolls are not deducted from the amount stated in the Table.

20. The capital of 741,000*l.* includes the new capital for London and Brighton station. The amount in the Table does not include the Toll from the Brighton Company.

21. Capital of 993,300*l.* includes new capital for widening the line, &c. The dividend mentioned does not refer to the preference shares on which 5 per cent. is guaranteed. The amount in the Table is exclusive of Brighton and Croydon toll.

22. Capital includes that provided for the Gosport branch, out of which 5 per cent. is paid to the Gosport shareholders, but the dividend is on the capital invested in the main line only, and is calculated on the money actually paid up, a portion of the shares having been issued at 50 per cent. discount.

23. Including Toll, &c., from Sheffield Company.

24. Canal cost, 100,000*l.*; railway, 672,165*l.* 16s. 1d. The receipts given are however those from the railway only.

25 The 3,832*l.* 7s. 3d. are the receipts after deducting omnibus charges, and payments to other Companies. The dividend is from the time of opening.

26. The receipts for goods, &c. include, carriages, 89*l.* 6s. 0d.; horses, 44*l.* 0s. 0d.; dogs, 1*l.* 16s. 0d.; parcels, 128*l.* 12s. 9½d.; cattle, 30*l.* 0s. 0d.; corn, 22*l.* 7s. 4d.; heavy goods, 511*l.* 2s. 8d.; coal, 133*l.* 2s. 0d.—Total, 960*l.* 6s. 9½d. The dividend is from the time of opening.

29. The details of the receipts are as follows:—Passengers, 1,973*l.* 9s. 9½d.; parcels, carriages, horses, and mails, 343*l.* 3s. 2d.; merchandise, 1,144*l.* 6s. 4d.; minerals, 234*l.* 17s. 3d.; cattle, 35*l.* 15s. 11⅔d.—Total, 3,731*l.* 12s. 6¾d.; including North Midland proportion of Manchester and Leeds traffic, amounting to 98*l.* 3s. 2d. The dividend includes a sum of 31,786*l.* earned previous to the last half-year.

30. The receipts are after deduction of L. and M. toll.

31. The returns are subject to the deduction of rent to the Eastern Counties' Company (about 100*l.* weekly), and to a toll of 4d. on such portion of the passengers as pass over their railway. The 30½ miles stated as being open for traffic, include the portion of the Eastern Counties' line passed over by this Company.

32. The capital of 533,000*l.* includes that provided for harbour and works as well as railway. The dividend is for a year (since opening of line).

33. The returns are inclusive of Man. and Bir. toll.

35. The traffic stated does not include the Leeds and Selby.

TO CORRESPONDENTS.

Vincit Veritas.—*We referred our correspondent's note of last week to Mr. Whishaw, and that gentleman informs us in reply, that the information contained in his work as to the Almond Viaduct on the Edinburgh and Glasgow Railway, was supplied to him by Mr. Grainger, one of the Company's Engineers. As Mr. W. has not the MS. at hand, he cannot be sure that there may not be a misprint, but he will inquire into the matter, and in the next edition rectify the error, if error it should prove. We may add, that our correspondent, on referring to the introduction of Mr. Whishaw's work, will find that the Edinburgh and Glasgow Railway is mentioned as one of those lines, respecting which the details are not complete, the requisite information not having been supplied by the officers of the Company.*

A New Shareholder *will find the exact amount of dividend stated in another column.*

Julius.—*There certainly is some difficulty in estimating accurately the merits of such a building. We think our correspondent* under-rates *it as much as some injudicious friends over-rate it.*

Our correspondents whose communications are not inserted, must this week dispense with individual notices. Several letters are in type, and others are marked for insertion, and shall appear as soon as possible. We cannot promise insertion to long letters till the meetings are over.

TRAFFIC OMITTED LAST WEEK.

Birmingham and Derby Junction Railway.—*Week ending January 28, receipt from passengers, 773l. 7s. 11d.; merchandise, 277l. 4s. 6d.; total, 1,050l. 12s. 5d. less toll to the London and Birmingham Company, 118l. 15s. 4d.*

Dublin and Kingstown Railway.—*Week ending January 30, receipt from passengers, 506l. 7s. 3d.*

THE RAILWAY TIMES.

SATURDAY, FEBRUARY 12, 1842.

THE London and Birmingham Railway Company held their half-yearly meeting yesterday, at Birmingham, and, as usual, the proceedings (which will be found fully reported in another part of our journal) were of a most gratifying character. The Company's receipts are steadily increasing, not only without a corresponding increase of expenditure, but with a diminution. The dividend for the last half-year accordingly shows an improvement upon any that has preceded it, being nominally at the rate of 9*l.* 10*s.* per cent. per annum.

We say *nominally* at that rate, for it will be borne in mind that, from some misunderstanding in the early stages of the undertaking, the dividend has hitherto been paid upon the full amount of the original share of 100*l.*, and upon the 25*l* quarter share; although up to the 31st December last, when the accounts now submitted were made up, not more than 90*l.* and 5*l.* had been paid upon these two classes of shares respectively. Let us suppose that a proprietor originally held one share in the Company, and that he has since taken up in respect of such share one new share, as the different classes have been from time to time created; then, reckoning the 10*l.* premium which he would have paid upon the last issued 32*l.* shares (of which he would have received *two*), he would have paid upon his whole holding as follows:—

Upon his Original share	£90
,, Quarter share.....	5
,, £32 share, 1st issue	32
,, £32 New share, 2nd issue	14
Total	£141

The dividend now declared would give him—

On the Original share	£4	15	0
,, Quarter share	1	3	9
,, £32 share, 1st issue ..	1	10	4
,, £32 New shares 2nd issue	1	10	9
Total	£8	19	10

being at the rate of 12¾ per cent. per annum on the money actually advanced. A dividend of such an amount is highly satisfactory, and although Mr. GLYN very properly warned his fellow proprietors not to be oversanguine as to the future, we think it may safely be presumed, as Mr. GLYN himself afterwards hinted, that this amount of dividend is by no means to be regarded as the maximum of the Company's prosperity.

For the various details touched upon in the course of the proceedings, we must refer to the Report. The large number of passengers carried without accident, speaks most favourably for the travelling arrangements of the Directors, while the present position of the new colony at Wolverton, as alluded to by the Chairman, testifies to the excellence of their plans of *domestic* management.

The agreement entered into for the lease of the proposed Leamington and Coventry Railway, will no doubt at once bring that project formally before the public. It cannot fail to prove a great convenience to a populous and most respectable district.

We would earnestly recommend to other Companies to follow the example of the Birmingham, and give their accounts in detail. We would especially suggest this to the Directors of the Great Western Company, who, it is rumoured, intend at their approaching meeting to declare a dividend, at the rate of 6 per cent. per annum. We can assure them that nothing will contribute more to the *permanent* benefit of the important undertaking in which they are embarked, than a statement, copious and clear, of *all* the circumstances under which this dividend is to be declared. We do not impute to them an intention or a desire to keep back or conceal any part of their expenditure, but they may depend upon it, that should their accounts turn out to be meagre, or in the smallest degree mystified, it will generally be ascribed to some such motive as this.

IN glancing at a map of Great Britain, on which the present lines of railway are distinctly exhibited, it strikes one with surprise that so large an area of country should still be without the important advantage of railway communication. Indeed, had we not thoroughly considered the subject, we should have been quite at a loss to conceive it possible that there are still not fewer than *two thousand miles* of railway required to complete this new system of internal communication.

Among the principal causes which have operated so powerfully in checking the progress of these "national veins and arteries," may be particularly mentioned, the reckless expenditure which has characterised most of the main lines—constructed, one might imagine, with no other view than that of aggrandising a few individuals, who have hitherto thought fit to usurp all power and authority, and to resist, in the most determined manner, any attempt to interfere with what they call their prerogative. These days of quiet submission are, however, quickly passing away, railway engineers must in future rather consult the interests of their employers than endeavour to further their own professional views.

We have thus alluded to this principal cause of the non-extension of the railway system, because we are desirous of impressing upon railway capitalists generally the necessity of looking more into their own affairs—of judging more for themselves of the practicability of extending the railway system, by adopting some one or other of the economical plans described in our volume of last year, by which at least one-half of the present average original outlay would be entirely saved. Such schemes surely deserve the attentive consideration of proprietors generally, and particularly of those persons who are now anxiously endeavouring to unite by railway the capitals of England and Scotland. Nor, till some such simple methods be adopted, can the railway system of Great Britain be carried much beyond its present comparatively limited extent. The total length of turnpike roads in Great Britain is very nearly 20,000 miles, while the whole of the British railways at present in operation, and in course of construction, do not amount in length to more than 1,900 miles; and yet, what has been the aggregate cost of these works? Why, something like fifty-seven millions of money, which, if properly husbanded, and economically laid out, would have extended the railway system into every part of the kingdom! As it is, there still remain 2,000 miles to effect this desirable object, and which will require—supposing any of the economical systems above alluded to, to be adopted—thirty millions additional; whereas, if taken at the present ruinous cost per mile, the sum total cannot be put down at less than sixty millions sterling!

Of the whole extent of additional railway communication which, upon an attentive consideration of the subject, would seem necessary to complete the system, 340 miles would be required for Scotland, 308 miles for the principality of Wales, and the remainder, of course, for England.

The mode of effecting this grand object is next to be noticed. We are of opinion that the simplest way of proceeding with so extensive a scheme, would be for the Railway Department of the Board of Trade in the first instance to have a map of Great Britain prepared on a sufficiently large scale to delineate accurately thereon all the existing lines of railway, whether opened wholly or partially, as well as those in the course of execution; secondly, to cause an accurate survey to be made of the lines still required to render the railway communication of Great Britain complete; and, thirdly, to get a general Act of Parliament passed for the purpose of allowing private Companies to undertake, on certain conditions, the lines authorised by the Government railway authorities—thus avoiding the enormous expenses attendant on Parliamentary contests. This Act should contain a special clause to enable *bona fide* Companies to make the requi-

Digitized by Google

site Parliamentary surveys, and in order to afford every facility to capitalists and others willing to embark in these national undertakings, they should be authorised to complete sections of from ten to twenty miles at a time, according to the nature of the country, the length of any particular line, and the importance of the district, through which it is to be carried, in point of population, manufactures, &c., always commencing a new line at the terminus contiguous to an existing railway. Thus a return for the first portion of the outlay would be much more quickly made than at present—the time for purchasing lands and tenements would of course be considerably extended—and the necessary outlay for furnishing the railway, instead of being required all at once, would be called for at somewhat distant intervals.

Another important consideration, and one which has already been strongly urged in the case of the proposed western line to Scotland, is that of dividing the capital into shares of smaller amount than usual, so that tradesmen, farmers, and others on the line might be enabled, by holding a few shares, to take an interest in the line intersecting their own particular locality. On these and other points we shall hereafter enlarge.

If these suggestions were fully and promptly carried out, we doubt not that in the course of the next twenty years the railway system of England and Scotland would be rendered complete, and thus present an additional monument of the enterprise of the British nation.

We give in another part of our paper a summary of the Bill introduced on Monday last into the French Chamber for the establishment of the system of railways which it has been decided to undertake. The plan by which this extensive project is to be carried into effect appears complicated, according to our English notions of such matters, but by those who have experienced the difficulties which attend the progress of such undertakings in France, when left entirely as private speculations, the advantages of the mode now propounded by the Ministry will be duly appreciated. The great works which have hitherto been conceded to private enterprise have, in many instances, resolved themselves into mere matters of share speculations for the benefit of a few bankers and capitalists, who alone were able to satisfy the Government of their means of executing the works. This system it has been a main object with the present Ministry as far as possible to break through, and as, according to the present plan, the Government undertakes to provide the land, and execute all the earthwork, bridges, tunnels, &c., the part which private enterprise has to do, involves little or no risk, it being, in fact, merely the laying on of the ballast and formation of the permanent way, with the supply of locomotive power, carriages, and *materiel* for working the traffic. The most important improvement of all in the old system, is that which is contained in Article 7 of the Bill, which declares, that "for the regulation of compensation for lands and buildings, the formalities prescribed by Arts. 23 to 28 of the Law of 3rd May, 1841, shall be dispensed with, and the estimation of the lands required shall be immediately referred to a jury; and that immediately after the decision of the jury, the Government shall be put in possession of the lands required, on payment of one-third of the amount of compensation to be borne by the State"—the remaining two-thirds being to be paid by the counties and parishes through which the line will pass. The delays and law expenses (infinitely more harassing in France, under the existing law, than even in England), and the atrocious system of landowners' exaction to which railways have hitherto been compelled to submit, are thus, by one bold stroke, entirely demolished. What our SIBTHORPS and PETRES, and others *ejusdem generis*, might think of such an enactment, as applicable to England, we leave it to our readers to surmise, but sure we are, that our legislators could not do a greater act of justice than to follow the spirit of the French Ministers' "*Compensation Reform Bill.*" So far as the interests of England are concerned, all we look to is, that these works should be accomplished. Whether they be done by the Government of France, or by private Companies, or partly by both, is a matter of indifference here, provided that they *be done*, and done quickly; but, having seen the difficulties which attend the raising of large capitals in France, by private means, even for the most promising undertakings, we rejoice to find, that in this instance, the great weight is to be on the French Exchequer. We augur from this that the work is sure to be done; that it will not depend on the fluctuations of the money-market, or the ability of shareholders to pay up their calls in time of pressure; but that it will advance steadily and unchecked, and that a few years will see the Rhine, the British Channel, and the Mediterranean, brought within a few hours of each other. What a boon would it be to English interests at this critical period of our Indian affairs, to have Marseilles within 30 hours of London!

In our first publication for the present year, we called attention to the subject of "TELEGRAPHIC RAILWAYS," as very ably expounded by WILLIAM FOTHERGILL COOKE, ESQ., whose name is indissolubly associated with the valuable invention which it is now proposed to render still more extensively useful. A re-perusal of Mr. COOKE'S excellent pamphlet* has strongly strengthened our previous impressions, and we should be wanting in our duty to those who are at present labouring, with very doubtful prospects of success, to open up new streams of railway communication, if we did not bring this matter frequently and prominently before the public.

We have elsewhere, in our paper of to-day, expressed our conviction that, unless some more economical mode of constructing railways than has heretofore been in use be adopted in bringing future projects to maturity, very little more is to be hoped for in the improvement of our means of internal communication than has already been achieved. The expensive—nay, extravagant—schemes of Engineers, and other interested parties, must be cast aside, if railways are to penetrate much further into the recesses of the land. The leading routes are already pre-occupied, and it had been well, as many months since we took occasion to suggest, if the promoters of comparatively minor schemes had been content to adapt the means to the end—leaving the great Companies, without imitation, to expend their funds in magnificent works, and costly appurtenances. A system which (as Mr. COOKE very justly remarks) makes all roads of the same width, without reference to the quantity of traffic upon them, seems to resemble the unwieldy magnificence of a Roman aqueduct, as compared with the cheaply-distributed supplies of a modern Water Company.

It is not perhaps going too far to assert that upon most, if not all, of the railways which are likely to be constructed for some years to come, one track of rails must be regarded as sufficient. Mr. COOKE has shown that with more than the average amount of traffic, one line, if properly provided with the telegraphic apparatus, would be perfectly safe, and that if under such circumstances a double line of railway were used, "it would be either because the traffic was too large for a single way (as a broad street is necessary in Cheapside), or else to enable meeting trains to pass each other more conveniently." Mr. COOKE is far from condemning the double way as a broad street where a broad street is required, although he protests most strenuously against the ruinous policy of making country lanes as wide as metropolitan thoroughfares. "The indiscriminate use (he says) of the double way (and he says so most truly) is as if an architect should build a bridge of twice the requisite breadth to save the expense of protecting its edges by a parapet—an illustration, by the way, very closely apposite, for *the expense of constructing and maintaining the Electric Telegraph in duplicate would be less* (LITERALLY LESS) *than of erecting and repairing the temporary fences along the side of a railway.*" Whatever opinion, however, may be entertained as to the necessity or non-necessity of a double line of rails, it is very clear that in respect of many of the schemes now in embryo there is no choice; there must either be single lines of rails or no railway at all. It behoves, then, the promoters of these schemes very carefully and considerately to inquire into the merits of the Telegraphic system, as referred to in our number of the 1st ult., and more fully explained in the pamphlet already adverted to. We would once again impress upon all concerned the propriety of *keeping down the* FIRST COST *of a railway*. It is not enough to assert, nor even to prove, that after some 40,000*l.* or 60,000*l.* a mile has been expended, the traffic is adequate to the payment of a respectable dividend on the outlay. It should ever be borne in mind—for self-evident as the proposition is, it is too frequently overlooked in practice, more especially before the final cost comes to be reckoned up—it should never be forgotten, we say, that lines which at present pay no dividend, or next to no dividend at all, would, had they been constructed at one-half their actual cost, have proved moderately remunerative, and that of lines now returning a very tolerable per-centage, some might, with due attention to economy in construction, have been rendered among the best commercial investments of the age. If past events do not speak loudly and convincingly to the promoters of future railway undertakings, it is useless for us to dilate on the matter. The most we can say to all who are directly or indirectly concerned is, "Look around and take warning!"

Mr. COOKE particularly recommends the Telegraphic system to the attention of those interested in the carrying out of the general system of Irish railways, and in the construction of a line (by whichever route) to the great seats of population and commercial enterprise in Scotland. We most cordially echo the recommendation. Ireland and Scotland (and England also) are deeply interested in the result, and if by means of Telegraphic Railways, or in any other mode, the "expense of the

* Telegraphic Railways; or, the Single Way, recommended by safety, economy, and efficiency, under the safeguard and control of the Electric Telegraph; with particular reference to Railway Communication with Scotland, and to Irish Railways. By William Fothergill Cooke, Esq. London: Simpkin, Marshall, and Co., Stationers' Hall Court. 1842.

Digitized by Google

works can be reduced nearly one-half by contracting their scale," the "main obstacle to these undertakings is removed," and every part of the United Kingdom will reap the benefit.

In concluding for the present, we again most earnestly recommend Mr. COOKE'S pamphlet to the notice of those engaged in incipient railway undertakings, as for example, the Devon and Cornwall—the Norwich and Yarmouth—the Warwick and Leamington—the Gravesend and Rochester—the Leven Valley—the Redcar and Middlesborough—the lines to Scotland, and the various projects in Ireland, and generally to those railway proprietors, who are desirous of seeing their several undertakings rendered more prosperous by the construction of cheap, yet thoroughly effective, branch lines. We shall take another opportunity of adverting to the advantages which would be secured to existing double-line railways, by the introduction of a means of communication so instantaneous, and so practically successful, as the ELECTRIC TELEGRAPH.

THE new "Railways' Regulation Bill" was introduced into the House of Commons and read a first time on Tuesday night. It will be read a second time on Monday week. We give at considerable length the conversation (for it can scarcely be called discussion) which took place on the occasion, as supplying, in the absence of the Bill itself, which we hope soon to be able to lay in full before our readers, some interesting particulars relative to the provisions of the new measure, and as indicating the tone and temper of the House.

It would seem that the Bill of Mr. GLADSTONE is in many respects similar to that introduced by Mr. LABOUCHERE in the course of last session, although with some important modifications. The principle upon which it would appear to be based is to interfere as little as possible with the general travelling arrangements of the Companies, it being very properly admitted, that to remove the responsibility at present resting upon the several Managements, or materially to weaken its force, would be most mischievous. The opening speech of Mr. GLADSTONE, and the few words that fell from the right honourable Premier, must, we think, satisfy the Companies that no undue interference with their rights and privileges is in contemplation. It is fortunate that they have fallen into the hands of reasonable and sensible men; for if we may judge by the ridiculous ravings of a SIBTHORP, or the more dangerous denunciations of a WAKLEY, there is reason to believe that a much more stringent measure would find favour with a considerable section of the legislature.

One of the clauses of the former Bill which it is now proposed to omit, had reference to the licensing of engine-drivers. Mr. GLADSTONE states, that the experience of last year had shown a great improvement in the conduct of this useful class of servants, and that a Report, which would speedily be laid on the table of the House, would prove that among the recent accidents a very small number could fairly be attributable to any misconduct on the part of these men. Perhaps it would have been as well had other matters embraced in the old Bill and the new, been left in like manner to the test of time.

Among the new provisions are clauses empowering the Board of Trade to call for returns of all accidents, whether of fatal or formidable consequences or not—to insist upon due precautions at level crossings, and to refer certain disputed points to arbitration, both in reference to these crossings and to junction lines. Another of the new propositions will, if passed into a law, enable Companies to effect improvements in their works—improvements which are not unfrequently much retarded under existing circumstances by the perversity or avarice of the owners of adjoining land. Mr. GLADSTONE explained that it was proposed, when Companies found cuttings too steep, or embankments too narrow, to enable them to gain possession of the contiguous property—we should suppose under the valuation of a jury. This is by no means an unimportant provision, as we daresay the Directors of the Croydon Company could testify from their experience with their recent slips.

We understand that there is one clause with respect to level crossings, which, although not adverted to in Mr. GLADSTONE'S address, is likely to excite the most determined opposition of the Companies. It is proposed, we are told, to empower parish authorities through whose district a railway may pass, to call upon the Directors to carry under or over the line, all common roads now crossed on a level, whenever *they*, the parish authorities, shall conceive the existing mode to be attended with danger. We are greatly opposed to level crossings when they can be avoided, but there are cases in which it is impossible to avoid them without a most unwarrantable waste of the Companies' means, and to place such Companies at at the mercy of provincial vestries, whose wisdom is anything but proverbial, we cannot but regard as most oppressive, even if the proposal did not involve the principle of retrospective legislation when applied to the Companies whose lines are already in operation. Let Parliament be as strict as it pleases (the stricter the better) with regard to future crossings, but it is unfair *thus* to interfere with existing interests. We trust the Companies will strenuously resist any and every such attempt.

We must defer entering into a more minute notice of the new measure until we have it fully before us. In the meantime we recommend the proceedings of Tuesday night to the notice of our readers. They will be amused by the eccentricities of their old friend Colonel SIBTHORP, and may derive instruction from hints thrown out by other speakers. It will be seen that an allusion, by Mr. WAKLEY, to the late accident on the Great Western Railway, called forth some remarks from the Chairman of that Company. We regret to be compelled to differ from the conclusions of so intelligent a gentleman as Mr. RUSSELL; but if we thought as Mr. RUSSELL thinks, that the occurrence in question "was as much a visitation of God's providence as if the blow had been inflicted by a stroke of thunder," we should indeed despair of railway travelling, and become advocates for measures of a stringency which should almost content the honourable member for Lincoln.

THE further particulars which we furnish today of the proceedings in Ireland, do not say much for the success of the scheme propounded by the Directors of the Kilkenny Company, of resuscitating their own project, by attaching to it an extension of their line to Cork. The people of that city do perhaps as much as can be looked for in the present state of the question, when they petition the legislature that *they* may not be overlooked amid the conflicting plans now in agitation; but it is very clear that they place little reliance on the fine promises of the Kilkenny agent who addressed them the other week—trusting rather to the execution of some comprehensive scheme "undertaken as a national work." In fact, the representations made on the part of the Kilkenny Company (if Company it can be called, where there is but the skeleton of a share register, with parliamentary powers greatly impaired) proved, as we previously observed, too much. If the scheme of a railway from Dublin to Kilkenny were of so promising a character as was held out, why was it not carried out by the original projectors? If it were through fear of an inadequate return that the undertaking was allowed to languish, how could its prospects be improved, or its completion hastened, by the adjunct of a confessedly less feasible and less profitable speculation? Questions such as these very naturally suggested themselves to the people of Cork, as represented by the committees nominated at the late meeting; and hence we can readily account for the ominous silence which they observe relative to the Kilkenny extension. As far as Cork is concerned, we cannot deny the prudence of their resolution, as shown in a determination to stand aloof from a measure which we fear had its origin in anything rather than pure disinterestedness to the denizens of that place; but it does not follow that although a railway from Dublin to Cork might turn out to be unremunerative, the original plan of stopping short at Kilkenny must necessarily prove so likewise. We say not a word in disparagement of the Dublin and Kilkenny scheme considered *per se*; on the contrary, we repeat our belief that it would prove, if carried out energetically and economically, a very satisfactory investment.

There are indications in the proceedings and petition of the Cork Committee of a jealousy in respect of other districts of the island, which we fear will work no good either towards their own city or to the introduction into Ireland of a general system of railways. It would be a decent excuse for an Administration not particularly zealous in the cause to say, that it was impracticable to embrace every district of the country at once, and that as the partisans of each were squabbling among themselves, it would be well to wait until something like a general understanding were come to respecting the best plan, and the best means of bringing that plan into operation. It is very natural, and withal most proper, that the good folks of Cork should look after their own interests—should press upon Parliament their peculiar claims—should endeavour to show that any plan of railways which leaves *them* unprovided cannot be deemed general or comprehensive; but we trust they will not set about depreciating other projects merely because Cork has not been *first* looked to. There are good and sufficient reasons, we daresay, why the route from Dublin to Limerick should be selected in preference to that from Dublin to Cork as the *premier pas* in a general scheme of Irish railways; and surely it is much better that Cork should await the gradual development of the system, than risk the chance of strangling it in the birth.

We gather from what was said at the meeting, that Government intend doing *something* in the matter. What the particular plan proposed may be, we do not, we say again, very much care. If one route only can be undertaken at first, we think it would be a very proper mode of determining which of the principal lines should be at once commenced, to award the preference to that district which within a given time should tender the greatest amount of assistance to the formation of a railway—not such assistance merely, or show

Digitized by Google

of assistance, as the passing of resolutions at public meetings, and the appointment of Committees, comprehend, but the tangible assistance of the purse—the facility which one of the principal speakers at the late Cork meeting handsomely volunteered, namely, the gratuitous grant of whatever portion of his land might be required for the construction of a railway.

The project which the Cork Committee seem to regard with the greatest degree of apprehension is the line from Dublin to Limerick, proposed to be undertaken by Sir I. L. GOLDSMID, and the gentlemen with whom he is associated, under terms which we recently explained in detail. With reference to the Bill for effecting this object, there has been forwarded to us a printed paper of "suggestions," which we understand has been extensively circulated among the members of both Houses of the Legislature, and which suggestions, one of our correspondents assures us, have "received the favourable consideration of the Irish Government." The parties from whom the hints referred to, emanate, admit the great importance of the measure, but represent that as the Bill contains some clauses deeply affecting the interests of the landed proprietors of the several counties through which the intended line would pass, and to which they entertain strong objections, there seems little probability that in its present form it will obtain the sanction of the legislature. "Though the success of the scheme (they say) is likely to render the security nominal, still, it certainly does appear unfair that the whole liability for a loan of 1,300,000*l.* principal, with interest at 4 per cent. should devolve on a particular class, and which would constitute, in point of fact, a mortgage on their estates, in case the speculation proved a failure, when the work to be executed must be regarded in the light of a great national project for facilitating the means of communication between the most important portions of the empire." Under these circumstances, they suggest the following amendments in the Bill, "with a view to combine public and local aid with private enterprise—while the responsibility of each party will (they say) be defined, and the Government expenditure made available for that most legitimate object—the employment of the people, without imposing on them duties which can be better discharged by associated bodies, than by the executive department of the State":—

"1.—That the liability of the county rates for the principal and interest of the loan advanced, be confined to the sums actually paid for the purchase of the ground required for the line in their respective districts, and that the property be vested in them accordingly, under such restrictions as are best calculated to secure the welfare and convenience of the public, on principles similar to those already recognised in the present Road Act.

"2.—That the selection of the line, and the execution of such portions of the work as consists in the tunnelling, cutting, and embanking, and the erection of bridges and viaducts, be entrusted to the Commissioners appointed by Government—the expenses to be defrayed out of the remainder of the loan, the debentures issued for which shall be secured by the authority of Parliament.

"3.—That the completion of the line—the laying of the rails, the working and maintenance of the road, be confided to the management of a joint stock company, to whom a lease might be granted by the Commissioners with the approval of the Treasury, for such rent and term of years as may be agreed on—adequate allowances being made for permanent improvements effected.

"4.—That the rent reserved be applied, in the first instance, to the payment of the interest of the loan advanced; any deficiency to be made good by the parties responsible, in relative proportion to the amount guaranteed by each; and in case there be any surplus, that it form a sinking fund for the liquidation of the debt; and whenever it is paid off, that the profits be divided between the Government and the respective counties in such shares as they shall be severally entitled to, according to the extent of the liabilities originally incurred in the undertaking."

Believing, with the authors of these hints, that the guarantee of the county rates would be entirely nominal, we see no objection to the first suggestion, except that the parties who are willing to advance the requisite capital might not choose to do so, unless the *whole* were secured as proposed in the Bill. Moreover, the land will form but a very small item in the cost of construction, and if security be thought necessary at all, it ought at least to apply to *the greater part* of the sum advanced. The third suggestion is one, however, to which we are decidedly opposed. In a country like Ireland, in which railway ground is as yet almost unbroken, it were strange indeed should Parliament sanction any system of joint-stock management of a public work. In England (besides that the capital has been differently supplied), there is no choice except by having recourse to that most unjust of all unjust proceedings, *ex post facto* legislation; but in Ireland, those concerned may profit by the experience which the working of the railway system in this country has evolved. And why should there be *middlemen* at all? Of course no "joint-stock company" would lease the line or lines proposed to be made, without a pretty good prospect of being well remunerated, and we see no reason why that remuneration should not pass undiminished to the liquidation of the original debt, and the general benefit of the country.

Two very good letters on the subject of railways in Ireland, and of the Cork scheme in particular, will be found in another page.

Since the above was written, we find that Lord ELIOT, in the House of Commons, stated, in answer to a question from Mr. FRENCH, that a number of propositions in reference to railways in Ireland "had been made known to him, and submitted to the consideration of her MAJESTY'S Ministers. He might say, however, that he had reason to think the Government would not sanction any measure relating to railways in Ireland which involved any outlay of the public money; but, nevertheless, it would be their object to give every facility and encouragement to private enterprise." Whether the Dublin and Limerick scheme, above referred to, is included in the "private enterprise projects" to which Lord ELIOT refers, remains to be seen.

Some interesting particulars will be found in our Supplement, with respect to a proposed connection between the Drogheda and Ulster lines.

IT is some time since a meeting of the Eastern Counties' Railway Company passed off so smoothly as did that of Wednesday last, the particulars of which will be found in another page; and on no previous occasion have the proceedings been such as to afford to the proprietors better grounds for believing that they will, ere long, reap the fruits of their persevering enterprise. The Eastern Counties' Company, in addition to the trials and troubles which for the last few years have beset railway undertakings generally, have had to struggle with difficulties peculiarly their own—difficulties to which we need not further allude, save to "point the moral," that integrity, and perseverance in a right course, must ultimately triumph over factious opposition, however disciplined, and however determined.

The Report of the Directors enters so fully and so satisfactorily into the state of the Company's affairs, that little more is required in this department of our journal, than to refer our readers to that important document. The traffic upon the 17½ miles of railway already in operation, is, it will be seen, steadily increasing—while there is every reason to believe, that ere many months have elapsed, a further extension to Colchester will have secured to the line a very large proportion of the trade of the populous and fertile counties of the east—a trade which, as yet, has been diverted in but a very trifling degree from its accustomed channels.

The arrangements which the Directors have adopted in the working of the railway, have frequently been mentioned to us in terms of high praise by parties who have travelled on the line, and a paragraph in the Report furnishes a remarkable confirmation of the efficiency of these plans. It appears that the average variation in the arrival of the trains during the last half-year amounted to four minutes and eight seconds only per train, including the loss of time at starting from the several stations! This fact, as the Directors observe, certainly reflects much credit on the officers of the Company, and, when generally known, cannot but prove satisfactory to the public. By punctuality alone can the freedom from accident, which this line has for some time past enjoyed, be maintained.

As regards the character of the works upon the completed portion of the line, Mr. BRAITHWAITE'S Report speaks briefly, but decisively, when he mentions, that notwithstanding the late unexampled weather, "*they have not cost the Company one shilling in repairs beyond the contract maintenance!*"

It will be seen, that to obviate the necessity of throwing upon the market the forfeited original shares, and the shares that have never yet been issued, it is proposed to create new shares, to be distributed rateably among the proprietors, at a discount sufficient to ensure their being taken up. This plan is to be submitted for the approval of a future special meeting, the Directors pledging themselves, in the event of its adoption, not "to issue any portion of the 16,000 shares and debentures in the Company's hands, without the sanction of a general meeting of the proprietors." The Directors confidently expect that the funds raised by this scheme will suffice to carry them to Colchester.

The extention of the line eastward of that place is, as our readers are aware, at present in abeyance. Some conversation on this subject took place at the meeting, from which we gather that the Directors have not finally abandoned the intention of proceeding further—although the difficulties which they have already experienced in procuring funds, very naturally deter them from undertaking additional responsibilities, until the work now in progress has been completed. Mr. COBBOLD, who, by the way, spoke in an apologetical tone of his connection with certain recent proceedings

Digitized by Google

against the Directors, complained that the districts east of Colchester should thus be deprived of railway facilities. We should certainly be glad to see the line carried forward, but the people of Suffolk and Norfolk have themselves only to blame for the delay or defeat of their hopes. Had they personally supported the project at an earlier stage, they would not now have had to lament their exclusion from those advantages which other districts are just beginning to enjoy. We are glad to find that at least they seem fully sensible of their error. May they profit by past experience!

SEVERAL of the topics brought before the meeting of the Northern and Eastern Railway Company, held on Thursday, were of considerable importance and interest, but our space will not allow us to do more than allude to them generally.

The principal and most gratifying announcement, was the arrangement with the Eastern Counties' Company for a modification of the toll on the short traffic. We hope and believe that the commutation will be to the advantage of both Companies, and no doubt its effects will be watched with extreme interest by the Greenwich and Croydon Boards.

The revelations made in the case of Mr. JOHN WILLIAMS, throw some light upon the share transactions of a few years back. We are glad, for Mr. WILLIAMS's sake, that further indulgence has been granted to him, but it seems very clear to us that the *whole* case has not yet been disclosed.

THE periodical meeting of the York and North Midland Company was held on Wednesday last, and the details which we elsewhere publish, testify to the continued prosperity of their line. It will be seen that Captain WATTS, whose attack upon Mr. HUDSON, the Chairman of the Company, drew down upon *us* some hard words from our gallant correspondent in consequence of what he deemed our uncalled-for interference, did not escape without notice.

THE *Morning Post* states that his Majesty the King of Prussia, before leaving this country, forwarded to the servants of the Great Western Company the handsome sum of 100*l*. The gratuity, we doubt not, was well deserved, but we trust the *whole* of it was not immediately dispensed. The institution of a fund similar to the "Adelaide Fund" on the Grand Junction Railway (arising out of nearly similar circumstances) would be a permanent memorial of the kind consideration of the donor, and a lasting benefit to the Company's establishment.

—o—

THE *Bristol Journal* states that a deputation from the merchants of Bristol, the Great Western Railway Company, and the Great Western Steam-ship Company, with memorials from those bodies, on the subject of the establishment of mail communication between Bristol and the south of Ireland, consisting of Mr. Charles Russell, M.P., Mr. Savage, Mr. Harding, Mr. Guppy, Mr. R. L. Jones, Mr. C. A. Saunders, Mr. Brunel, Mr. W. O. Hunt, and Mr. Robert Osborne, had an interview with the Chancellor of the Exchequer, on Wednesday [week], at his official residence in Downing-street. The people of Milford are taking the alarm.

—o—

WE learn with much pleasure that within four days after the 11th call on the proprietors of the Bristol and Exeter Railway became due (the 31st ult.), upwards of 80,000*l*. was paid into the hands of the Company's bankers. This affords a very favourable criterion of the soundness of the present proprietary.

—o—

AMONG those who have travelled during the present week by the London and Brighton Railway, are—The Duke of Rutland, The Earl of Chichester, The Earl of Liverpool, The Earl of Cardigan, Viscount and Viscountess Boyle, Lord George Seymour, Lady Graham, Sir Arthur Clifton, Sir Isaac Goldsmid, Sir John and Lady Key, Sir Jeffery Wyatt, Sir John Beckett, Sir John Quinton, Sir Hesketh Fleetwood, Sir William Gordon, Colonel Bentinck, Capt. and Mrs. Wyatt, Mr. Lyall, M.P., Mr. Martin, M.P., Mr. Montgomery, Mr. and Mrs. Vernon.

Charles Roderick Mackenzie, Esq., who has been the *ad interim* Secretary since Mr. Wood left, was on Thursday formally chosen Secretary.

The Brighton station, at Brighton, was most brilliantly illuminated with gas on Thursday night, in honour of her Majesty's arrival.

The Directors have fitted up a carriage very elegantly for any royal passenger who may please to patronise the line. We understand that Mr. Jefferies, the coach-builder, completed it in the short space of 36 hours.

—o—

SINCE the opening of the Great North of England Railway from York to Darlington, there has been (according to the *Carlisle Journal*) nearly two-thirds less of posting on the western road than formerly.

—o—

YESTERDAY week the House of Commons agreed to the following resolutions with respect to "Private Bills," among which, as our readers are aware, Railway Bills are reckoned:—

"Resolved,—That this House will not receive any petition for Private Bills after Friday the 25th day of this instant February.

"Resolved,—That no Private Bill be read the first time after Wednesday, the 23rd day of March next.

"Resolved,—That this House will not receive any Report of such Private Bill after Friday, the 27th day of May next."

—o—

THE following paragraph, which we copy from the *Preston Chronicle*, furnishes *another* proof of the great danger arising from level crossings on railways:—

"On Wednesday last, an action was brought in our County Court by the proprietor of a stone waggon, against the Directors of the Longridge Railway Company, for damages to the amount of 11*l*., recently sustained by his waggon and horse, consequent upon a collision with one of their trains from Longridge, there being no highway gates upon the line. The jury found a verdict for the plaintiff to the full amount of the damages claimed."

RAILWAY OFFENCES AND OFFENDERS.

AT Lambeth-street, on Wednesday, Isaac Davis, a workman employed on the Eastern Counties' Railway, was brought before Mr. Henry for final examination, on a charge of stealing a quantity of brass and copper metal belonging to the Company. From the evidence it appeared, that on Monday morning the prisoner offered 28 lbs. weight of copper and brass work for sale at a shop in the Mile End Road, and being suspected of coming dishonestly by it, he was given into custody. It was subsequently ascertained that the metal found on the prisoner formed a portion of an engine which had been formerly used for pumping water for the supply of the steam-carriage boilers, but which had been latterly in disuse owing to the removal of the station. The prisoner was committed to the treadmill for two months.

LAST week a man named Peter Hall was charged before the Rotherham magistrates, by Mr. Clay, of the Masbro' station, on behalf of the North Midland Railway Company, with trespassing on that line, by riding in the train from Leeds to Masbro', and defrauding the Company of the fare. Mr. Clay stated, that the prisoner came into the station to purchase a third-class ticket, from Masbro' to Sheffield, and was there taken into custody. Mr. Clay stated that they were willing he should be liberated, as he had expressed contrition, and promised to pay the expenses and 10s. towards their Friendly Society. The Bench coincided, and the man was convicted in that amount.

In a recent number of the *Gloucestershire Chronicle* we find the following:—

"A few days since two colliers from the vicinity of Littledean, in Gloucestershire, were returning from Cheltenham by the [Birmingham and Gloucester] railway—both, we suppose, tolerably "fresh"—when one of them, about a mile and a half from this city, knocked off his companion's hat with an umbrella, by way of frolic. Without an instant's hesitation, the hatless "Forester" endeavoured to open one of the doors of the carriage, in order to follow his property; but being unable to open it, in the hurry, he then, despite all that his friend could do, rushed to the other side, opened the door and sprang out, when the train was going at a very rapid speed! At the same instant an up-train passed on the other side, so that had the man succeeded in opening the first door he must have been, in all probability, knocked to atoms. As it was, he fell on his head amidst a quantity of cinders, but was able to immediately get on his feet, so slightly was he stunned to all appearance. His face was a mass of cuts and bruises; none, however, were of a serious character, and on finding that he was liable to prosecution for what he had done, he ran off, having recovered his hat, and made "a wide berth" of the station. Our informant states, that on returning home the reckless foolhardy fellow treated the whole matter lightly, and, we suppose, was soon able to resume his employment. Altogether, a more miraculous escape from serious or fatal injury under such circumstances has rarely been recorded."

We have no hesitation in saying that the Managers of the Company ought to have searched out and punished this fellow. Had death ensued, it would have been justly attributable to his own recklessness alone, but the effect upon the traffic might nevertheless have been serious. The public do not always take the trouble to distinguish between "accidents on railways" and "railway accidents."

The first naval pennant in Wyre water was hoisted on Monday last by Captain Denham, R.N., F.R.S., in virtue of a commission conferred on that officer by the Lords Commissioners of the Admiralty, under the authority and auspices of whom his surveys at and on the coast of Fleetwood will be completed. The seamen were regaled with a good old English dinner; and a ball given by the bachelors of Fleetwood at the North Euston Hotel in the evening completed the congratulation given to the gallant Captain. This is in connection with the Preston and Wyre Railway.

NORWICH AND YARMOUTH RAILWAY—VALLEY LINE.

(From a Correspondent.)

We have much pleasure in announcing, that all competition between the East Anglian Railway and the Valley line suggested by Mr. Stephenson between Norwich and Yarmouth, is now at an end; and that the latter measure is to be supported by both parties. A meeting has been recently held at Norwich, at which all differences between the two Companies were happily arranged, and we may now therefore congratulate the inhabitants of the district on the prospect of speedily having a railway constructed in their neighbourhood, which, independently of its manifest convenience, promises to be, in the words of Mr. Stephenson, "as prosperous as the most successful line of railway in this country." When we consider the extraordinary facilities presented by the country between Norwich and Yarmouth for the construction of a railway, and the great traffic already existing between those towns, the accuracy of the above opinion can hardly be doubted: but especially is the prospect of the speedy formation of this railway a matter of congratulation to the inhabitants of Norwich and Yarmouth, as affording the surest guarantee of the extension of the railway system in that neighbourhood at no distant period. Now they have taken the matter into their own hands, there can be little doubt that the inhabitants of that important district will not remain idle, in themselves prosecuting the extension of such measures without feeling wholly dependent on parties at a distance. Unanimity is what we recommend to them, and with that they cannot fail of success.

We are told that more than a fourth of the subscription list towards the Valley line has already been filled at Norwich and Yarmouth, and we sincerely hope that a premium in the shares will at no distant date reward the subscribers for their enterprize.

RAILWAY AND OTHER ACCIDENTS.

To the Editor of the Railway Times.

Sir,—I am every day more and more struck with the want of proper information with regard to accidents, not upon railways, but in other ways. I hear complaints every day of the bad management of *railways*, and the want of a proper system of Government inspection of *them*, but people never seem to think of other accidents. Within the last few weeks, there were *eleven* men killed by a wall falling from the effects of a fire. There was an account in *one* day's paper of no fewer than *three* children being burned to death, by being left in rooms with *open fires;* and a very short time ago an English vessel had five men washed over board in a storm, from the bulwarks not being strong enough to resist the waves. John Bull (who is so anxious for the safety of his fellow-creatures) does not, however, trouble himself much about these accidental occurrences; he does not prohibit the use of open fires (though there are probably more lives lost by *them* than by railway accidents); he does not oblige sailors to wear life-preservers, but he keeps himself in a constant agitation about railway travelling, which is well known to be by far the safest mode of travelling; and he will not be content until he becomes used to the very slight danger, which I allow exists, or until he is thoroughly convinced of the impossibility of *dying* in a railway carriage.

I think some of your numerous correspondents might assist in giving railways fair play, by taking notice of the 'innumerable accidents of a general kind that occur through the country.

I remain, Sir, your obedient servant,

S. R.

February 4, 1842.

BIRMINGHAM AND GLOUCESTER RAILWAY—GOODS TRAFFIC.

To the Editor of the Railway Times.

Sir,—I have been watching the correspondence which has taken place of late in answer to your correspondent signed "Observer." I was in hopes some one more able than myself would have undertaken to explain why the goods traffic is so comparatively small on this line. The comments of "A Well-wisher and Original Shareholder," in your publication of the 29th ultimo, are well worthy the attention of the shareholders. An arrangement ought most certainly to be made, so as to secure the coal traffic on the line, but under the present management I am fearful such an arrangement will not take place. This is only one of the numerous causes which have appeared before the public why the traffic is so small. I will endeavour to point out one or two more.

In the first place, for the conveyance of merchandise, the districts which the line passes through are much against the interest of the shareholders. The Directors appear to have avoided, as much as possible, *all* places likely to contribute to the benefit of the shareholders. For instance, Worcester, a city of no little importance, is entirely shunned. The station for that place is Spetchley, 3½ miles off. So long as Worcester is without a branch or deviation line, depend upon it but very small portion of the merchandise for that city and neighbourhood, and also Wales, will ever come on the line; the canal carriers can beat them in point of time and price. Goods from London, Liverpool, Manchester, &c., for Worcester, Hereford, Ross, Leominster, and other hours of equal importance, are all, or nearly so, worked by railway to Birmingham, and thence by water. I can fearlessly assert, that the merchandise traffic on goods for these places would amount to a third of the calculated traffic stated before Parliament, if the main line had passed through Worcester; and again, if such had been the case, the coal traffic could have been secured, and a larger quantity would have been received there than at Cheltenham, as Herefordshire is supplied through Worcester. My second complaint against the Directors is, their want of management with carriers generally. At the present time they ought to have had the whole of the merchandise for Bristol and the West of England on their line, and would, if they had acted at all with a liberal spirit towards the carriers; but no, they acted otherwise. Instead of throwing their line open, and soliciting carriers to come upon it, they threw every obstacle in their way—even became Severn carriers to Bristol, in connection with their line, in opposition to all the established Severn carriers. Why not have made arrangements with some respectable carriers—such as Pickford, or Dewey and Heath? The former house could have commanded the whole trade if they had been liberally acted towards by the Company, and would have been able to have arranged to have had a vessel leaving Gloucester daily, and ensured a *certain* delivery to the trade; instead of which they now have a vessel leaving *weekly*, or at most, three a fortnight, and therefore it is useless having merchandise by railway to Gloucester for the west, if they are to detain it for several days there. The carriers can here beat them in point of time and charge, and, in justice to themselves, are now doing all they can in opposition to the line. A wholesale linen house tried this route, to ascertain which would be the best mode to transfer their goods in future. They divided their purchase; by the rails to Gloucester, thence by Severn, and also by a canal and Severn carrier. Will you believe it, the water carrier throughout actually delivered twenty-four hours sooner than the Railway Company? We must all allow there is an improvement wanted in this part of the management, which I for one shall be glad to see take place.

ANOTHER BRISTOLIAN.

Bristol, February 9, 1842.

CARRIAGE OF MERCHANDIZE, CATTLE, AND AGRICUTTURAL PRODUCE BY RAILWAY.

To the Editor of the Railway Times.

Sir,—In reply to your correspondent, "A Farmer and Second-class Passenger," (page 59) who is "at a loss to imagine how the position is maintained, that little or no profit is derived from the conveyance of cattle, agricultural produce, and merchandise," I beg to say, that it arises, so far as agricultural produce and merchandise are concerned, from the principal Canal Companies having reduced their tolls, in some instances one-third, and in others one-half of the amounts they received, when the railway calculations of 1832 were made. With respect to cattle, there being but little canal competition, the cause, I conceive, must rest with the high charges by the railways, as compared with the old mode by drovers on the turnpike roads. The railways that successfully carry these articles have, in most instances, but little, if any, canal competition.

3rd February, 1842.

Proposed Redcar and Middlesbro' Railway.—We are glad to find that the projected Redcar and Middlesbro' Railway is likely to be proceeded with immediately, and that the great monied party at the Middlesbro' end of the line is anxious to promote its welfare, being fully aware of the advantages, both public and private, which must accrue from it. As a private speculation, few may compete with it, from the fact of the small sum required to complete it, and the great traffic it will be able to command in passengers, coal, lime, stone, and fish, the latter to any extent that may be called for. As a public benefit, the value of property, not only along the line, but in the vicinity, will be greatly increased, as wherever commerce exists wealth is thrown into the hands of all, from immediate markets and remunerating prices for merchandise. We cannot here, however, expatiate on the innumerable advantages which will arise from the completion of this line of road, but we heartily wish it well, and from the spirited manner in which it is already taken up by the public, and the apparent good managers, we feel confident that very soon this delightful watering place will have a railway communication to all parts of the kingdom.—Correspondent of the *Northern Times*, Feb. 5.

LONDON AND BIRMINGHAM RAILWAY COMPANY—GENERAL MEETING.

THE Half-yearly general meeting of the proprietors of the London and Birmingham Railway Company was held yesterday, at the Queen's Hotel, Birmingham, GEORGE CARR GLYN Esq., in the Chair.

The advertisement calling the meeting having been read,

It was unanimously ordered, that the common seal of the Company be affixed to the register of shares, which was accordingly done, in presence of the meeting; after which

The minutes of the last half-yearly meeting were read and confirmed.

The CHAIRMAN (having first apologized for the paucity of printed drafts of the accounts, which, as usual, were circulated in the room—a deficiency which had arisen from the necessity of having some of the figures altered at a late hour, in consequence of the detection of a clerical error) spoke to the following effect:—Those of you, gentlemen, who hold in your hands copies of the accounts now about to be submitted, allow me to congratulate upon the results which they exhibit. An attentive examination of the details thus furnished will I think satisfy you, not only that our receipts have increased—and this too in the face of a year which (I speak in the presence of commercial men) may truly be designated disastrous, and which as you are aware must inevitably have affected to a greater or less degree every undertaking of the kind—not only, I say will you find that our receipts have experienced a progressive and steady increase, but, what is of no less importance, and what has always been the aim of the Directors to attain, that our expenditure has been diminished. And let me assure you, gentlemen, that this desirable object has been effected not by any decrease in the efficiency of our establishment, for we should ill discharge our duty, towards you if, for the sake of any temporary popularity which might thus be secured at these our periodical meetings, we should lay before you figures exhibiting a seeming reduction of charge, when that reduction was certain in the end to prove detrimental to your interests, and a dereliction of our duty to the public. (Hear, hear, hear.) It will be in your recollection, gentlemen, that when we had last the pleasure of meeting you, a conversation took place as to the mode which the Directors had adopted in working out the depreciation fund. On that occasion, we stated that it was our intention—and such too seemed to be the wish of the proprietors—that previous to the present meeting an exact and regular valuation of our movable stock should be made by experienced persons, with a view to determine whether the per-centage which we had set apart for depreciation, were such as to meet the requirements of the case. That valuation has been made, and the result, gentlemen, is this, that the per-centage as agreed upon is insufficient to cover the depreciation. The valuation of our engines was made by Mr. Bury, checked by Mr. Hick, of Bolton; and of the carriages by Mr. Wright, the superintendent of that department, checked by Mr. Nathaniel Worsdell. And when I mention the names of these gentlemen, you will at once be satisfied of the accuracy of the calculations; for probably there are not four other individuals in the kingdom, more competent for such a task. But, gentlemen, although the result has shown that for the present our per-centage is insufficient, the Directors are not at this moment prepared to recommend any deviation from the principle of the measure—a principle which they feel convinced will, when carried out for a sufficient length of time, operate fairly, equitably, and satisfactory. It is right, gentlemen, that you should know that the item in which the greatest difference has been found to exist between the actual amount of depreciation and the per-centage set aside to meet it, is that of the carriage stock, and for this result the Directors were not altogether unprepared, because they were perfectly aware from the first that the depreciation in that department would be comparatively great. During the last eighteen months, the carriage stock has been rendered more efficient and satisfactory, and until the result has been seen in a further working of the per-centage principle, the Directors, I repeat, do not suggest an alteration. They hope, and believe, that if persisted in for a proper period, the per-centage hitherto set apart upon this line will fully and fairly meet the depreciation; but if when duly tested such should prove not to be the case, it will become their duty—and they will not, I am sure, hesitate to do so—to bring the matter forward for your decision. The result of the valuation to which I have adverted has answered the arguments of those who on a former occasion contended that our per-centage was too large, while it has equally disproved the assertions of others who maintained that such calculations are altogether unnecessary. I leave to other Companies who make no provision at all for the deterioration of their stock, the consequences which must inevitable ensue. It would give me satisfaction to have been able to report to you on this occasion, that our capital account was finally closed, but this is a desideratum which we, in common with other Companies, have found is more to be hoped for than easily to be realized. You will see, however, from the figures before you, that our outlay during the last six months has amounted to but a small sum, and this has been expended principally for purposes involving a direct earning of revenue—in adding to our stations—and in providing extra lines and sidings to the extent of 16 miles, required for the accommodation of the large and increasing traffic upon the railway. There is but one other subject, gentlemen, to which I will at present allude, and it is a subject which affords me, and I have no doubt will afford you also, unmixed gratification. By your liberality, gentlemen, the Directors were enabled to erect schools for the benefit of the large establishment at your central station, and I am happy to say, that nothing can exceed the satisfaction of the inhabitants with this arrangement. Already there have been instituted a boys' school and a girls' school, in addition to an infant school, all of which are open to persons of whatever religious denomination, under the superintendence of the resident clergyman; and in proof of the kind spirit with which your arrangements are regarded, I have the pleasure of informing you, that the body of Dissenters have placed their Sunday school under the charge of the clergyman. (Applause.) I should be extremely sorry, gentlemen, to forestal the details of the Report, but as allusion was made a few nights ago, in the House of Commons, to the unfortunate occurrence which several months since took place upon your line at Harrow, I would just call your attention to the Appendix to the accounts, now in your hands. I will not detain you by going into the figures, but I appeal triumphantly to that document in proof of the remarkable safety in travelling by this railway. (Hear, hear.) Such of you as have perused the evidence adduced before the coroner's jury, will at once acknowledge that the occurrence to which I have referred, though terminating unfortunately in the death of two individuals, was really and truly attributable to gross disregard of the express orders of the Directors. (Hear, hear.) It only remains, gentlemen, for me to announce, and I need scarcely say that I do so with pleasure, an increase in the amount of your dividends. In compliance with our Act of Incorporation, we are about to divide the net profit which has really been earned from the working of the railway in the last half-year, but to prevent future disappointment, I think it right to remind you, that the six months just expired are invariably the most productive months of the year, and it is extremely possible—although I know of no reason why we should not look forward to even still greater prosperity—but it is possible, I say, that the dividend for the current half-year may not prove quite so large as that which is now to be declared. It is, I repeat, solely to prevent the possibility of disappointment that I refer to this matter, for I hold in my hand a document which shows, that notwithstanding the great benefit which accrued to this line in the early part of the year 1841, in consequence of the long continuance of the frost, which caused the canal traffic to be transferred to the railway—that notwithstanding this, the receipts for the part of the present year that has already elapsed, exceed by 1,400*l.* those of the corresponding period of 1841. (Hear, hear) Without detaining you further I shall now, gentlemen, with your permission, request the Secretary to read the Report, after which I shall feel much pleasure in answering, to the best of my ability, any questions that may be asked, or in giving any further explanation.

The honourable gentleman sat down amid loud applause.

The SECRETARY (R. Creed, Esq.) then read the Report of the Directors, as follows:—

"REPORT.

"February 11, 1842.

"The operations of the last six months have been generally satisfactory, but so devoid of incidents requiring special notice, that the Directors have little of interest to report beyond the continued increase of the Company's receipts, and the decrease of their expenses.

"The accounts which are before the proprietors exhibit the following results:—

"The ordinary traffic exceeds that of the corresponding half-year of 1840, by a sum of 23,982*l.* 7s. 8d., and this increase extends over every head of receipt, but principally the conveyance of merchandize and cattle.

"The net rent of the Company's estate, in land and houses, exceeds by 1,392*l.* 10s. 1d., the rental of the corresponding half-year; the charge on the traffic, including parish rates, taxes, and an allowance of 14,643*l.* for depreciation of the Company's carrying stock (but excluding interest on loans) is 8,873*l.* 16s. less than in the half-year ending 31st December, 1840, notwithstanding an extension of the general business of the railway, and the running of additional trains.

"The balance of interest paid by the Company, is also less by 6,886*l.* 6s. 1d.

"Thus the aggregate increase of revenue and decrease of expense, show a total of 41,134*l.* 19s. 10d. in favour of the half-year of 1841. The net profit of 227,824*l.* 11s. 6d., added to the undivided residue of the balance of 30th June, 4,117*l.* 4s., gives an amount of 231,941*l.* 15s. 6d. applicable to the dividend; and the Directors recommend that out

Digitized by Google

of this sum a dividend be now declared on the Company's registered shares of

£4 15 0	per share, on	25,000	£100 shares	£118.750 0 0
1 3 9	.....	25,000	25	29,687 10 0
1 10 4 4 5ths	.....	31,250	32	47,500 0 0
15 4 4-5ths	*.....	41,598 new £32 (on £30 of which interest at the rate of £5 per cent. per an. has been charged)		32,030 9 2
			Which will amount to.....	£227,967 19 2

leaving a residue to the credit of the current half-year of 3,973*l.* 15s. 6d.

"The Directors, with the view of simplifying the Company's capital account, and avoiding repetition of the same entries in each half-yearly statement, have classed the expenditure under three heads, distinguishing that portion of it which properly belongs to the making of the railway and stations from the carrying stock of the Company, and again from the estate of the Company, in land and buildings, yielding rent.

"The amount added to the debit of the capital account in the half year, is 39,204*l.* 8s. 9d., of which, 16,677*l.* 14s. 5d. chargeable to the estate account, will yield rent.

"A detailed and careful examination which has been made of the Company's stock of locomotive engines, carriages, and merchandize waggons, since the last general meeting, fully convinces the Directors that the half-yearly reserve of 5 per cent. for depreciation, is the lowest that the Company would be justified in making for the present, if their carrying stock is to be maintained in an efficient state, and represent in value the sum for which it stands charged in the capital account.

"The charge of depreciation for the half-year ending 31st December last, namely, 14,463*l.* added to 14,545*l.* of the preceding half-year, having been carried to the account of carrying stock, the present cost is 278,227*l.* 15s. 4d., as stated in the capital account.

"A few statistical details intended to illustrate the progress of the Company's traffic will be found appended to the present Report. To this statement the Directors cannot invite attention without congratulating the proprietors on the important fact, that not a single passenger of the number who will be found to have travelled by the railway during the last twelve months has met with any accident, and that no casualty attended with loss of life has occurred to any passenger since the general opening.

"The Directors have to report the opening of the Birmingham and Gloucester Railway to the Company's Birmngham station on the 17th of August last.

"The Directors, in furtherance of their recommendation of support to the projected branch line from Leamington and Warwick to Coventry, have now to propose that power be granted to the Directors to conclude an agreement for renting the railway when made, at the rate of 5 per cent. per annum on the estimated cost, not to exceed 130,000*l.*, and subject to an equal division of the excess of profit over and above such rent, between the two Companies.

The following Directors go out of office at the present meeting, viz.—James Brownell Boothby, Esq.; Thomas Cooke, Esq.; Christopher Hird Jones, Esq.; Joseph Frederick Ledsam, Esq.; Christopher Saltmarshe, Esq.; and have offered themselves for re-election."

The Report was most favourably received, and on the motion of the Chairman, it was unanimously adopted, and ordered to be printed and circulated among the proprietors. The motion included the declaration of the dividend specified in the Report

The CHAIRMAN then brought forward a motion relative to the lease of the proposed Leamington branch line on the terms detailed in the Report. It was not necessary, he said, to dilate upon the benefit which must result to the London and Birmingham Company, from connecting Leamington and Coventry with the main line. There was an additional reason why the matter should at once be taken up, for if the ground were not now occupied, a rival project might probably be entertained, which would not be so advantageous to this Company.

The Rev. Mr. BEDFORD inquired what would be the extentt of the proposed lease.

The CHAIRMAN said, it would be for five years or seven; seven would be the maximum.

The motion was then carried unanimously.

Mr. J. D. BASSETT next proposed the re-election of the four Directors, noticed in the Report as retiring from office.

This motion also was carried unanimously.

The CHAIRMAN said, it might be satisfactory to know that the dividend warrants would be issued immediately, and the dividends paid on Thursday next. He had omitted to mention one thing in his previous remarks. Probably all who had travelled by the railway would have noticed the insufficiency of the Euston station. The Directors had from time to time deferred improving it, until it could be deferred no longer. It was probable, therefore, that previous to the next meeting considerable alterations would be made at that station; in fact, it never had been finished.

Mr. BASSETT expressed a hope that some of the local stations would be provided with further accommodation. He referred in particular to Leighton Buzzard, respecting which he understood that a requisition had been sent to the Directors from four or five noble lords.

The CHAIRMAN said, the attention of the Board had been particularly directed to the supply of further accommodation at the various stations along the line; and to that circumstance it was partly to be ascribed that the capital account was still open. As regarded Leighton Buzzard, orders had already been issued.

Mr. E. WILSON inquired when the next call would be made.

The CHAIRMAN said, a large number of debentures fell due in July next, which would render it necessary that the remaining 10*l.* on the 25*l.* shares should be called up. The next call after that would be in the following January, namely, the remaining instalment of 10*l.* on the original 100*l.* shares.

Mr. WILSON said, he was very glad to hear it.

The CHAIRMAN begged to remind the proprietors, that if they wished to pay up their shares in full, the Company would allow them 5 per cent. on the amount thus advanced. By thus paying up the 32*l.* new shares, the proprietors would be relieved from the interest with which they were now debited.

The CHAIRMAN having announced the business of the day to be at an end,

Mr. BASSETT moved, that the sincere thanks of the proprietors be given to the Chairman, and to the Board of Directors, for their most valuable services.

The Rev. Mr. BEDFORD had great pleasure in seconding the motion. He was sure there could be no dissentient voice on this matter. They might indeed congratulate themselves on possessing such a Direction.

The motion was carried by acclamation.

The CHAIRMAN returned thanks, and expressed the pleasure which his colleagues and himself experienced in thus from time to time having to meet smiling faces. The undertaking was in truth very prosperous, nor had that prosperity yet reached its maximum. (Hear, hear, hear.) Their dividends were satisfactory, but he hoped the proprietors would not—he certainly should not—rest content until they were still larger. (Applause.)

The meeting, which was well attended, then separated.

LIVERPOOL AND MANCHESTER RAILWAY.

To the Directors of the Liverpool and Manchester Railway.
